Germ Warfare

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. McCORMACK. Mr. Speaker, I herewith include in my extension of remarks a frank, forthright, informative, and timely statement made on Saturday last by Hon. James Forrestal, Secretary of Defense. His statement is one of particular interest to the American people, and, in addition, is one of world-wide interest. Secretary Forrestal is to be congratulated in making at this time such a clearly understood statement on the question of biological research or "biological warfare."

War inevitably brings with it the development of new and more effective weapons for the destruction of life or property. Such a new weapon was being developed by our enemies during World War II. This weapon was disease—the production of germs for deliberate introduction into enemy territory to cause sickness or death among its people and livestock or the destruction of its food crops.

Because of its nature the use of this weapon has been called biological warfare.

It is the responsibility of the armed forces of a democratic nation to inform the public of their activities as far as it is consistent with national security. With this responsibility in view, the War Department on January 3, 1946 released a report by Mr. George W. Merck to the Secretary of War.

This release informed the public of the combined efforts of American scientists and industry working with the armed forces, and in cooperation with agencies of our allies, to develop means for defense against possible enemy attacks by biological warfare.

Obviously in the press release concerning the Merck report (which subsequently was withdrawn from circulation), it was not in the national interest to reveal in any detail the extent of progress made in this new field of military research, or to attempt a definite evaluation of the capabilities and limitations of this new weapon.

The announcement was followed by a number of unofficial articles in newspapers and magazines and the subject was also discussed in domestic and foreign radio broadcasts. Owing in some measure to the limitations of official information, a great deal of this discussion was extravagant, inaccurate, and unduly spectacular in the light of present scientific knowledge.

Some was so sensational as to be completely misleading. Such treatment unfortunately overshadowed in the public mind those articles which presented more sober and reasonable reflections on the subject.

Therefore it is felt advisable that the American people be given an official statement concerning the potentialities of biological warfare.

Prompted by intelligence reports of enemy activities in this field during World War II, intensive investigations of the possibilities and potentialities of biological warfare were initiated in the United States in close collaboration with our British and Canadian allies.

These investigations were aimed primarily toward securing for this Nation adequate protection against the possible use of biological warfare by our enemies. Toward this end, Army, Navy, and civilian scientists, universities, private research institutions, industries, and several departments of the Government all worked together.

The Chemical Warfare Service, now the Chemical Corps, was made responsible for the program in the War Department with the cooperation of the Office of the Surgeon General on certain medical aspects. The Navy Department worked in close collaboration with the War Department in this field and made important contributions to the program.

Since these investigations involved many sciences and entirely new approaches, unique facilities had to be constructed to enable us properly to conduct our research.

Actually large-scale biological warfare has never been used by any nation. Our research indicated, however, that germs or their poisonous products could be used effectively as weapons of war.

It was also realized from the results of this wartime research that work in this field could not be neglected in time of peace and had to be continued on a sufficient scale to provide us with adequate defenses and to enable us to utilize this weapon in the future should it become necessary.

As a byproduct of the research on this subject during and following the war much information of great peacetime benefit to mankind in the medical, agricultural, and allied fields has been freely given to the public. Over 160 technical articles describing these investigations have been released through the medium of scientific journals.

Unfortunately, the public has been given an exaggerated impression as to the potency and state of development of biological warfare.

For example, it has been stated that a single plane with a small bomb filled with a biological agent would be capable of wiping out the population of an entire city with a single blow. Such a statement is not in accord with the facts as we know them today.

As a further example, in a recent article it was stated that one ounce of a particular biological material would be sufficient to kill 200,000,000 people. The facts are that it is impossible to spread an ounce of any kind of material for the purposes of warfare in such a manner as to affect even a small percentage of such a tremendous number of persons.

Many other exaggerated statements have appeared. One article stated that biological warfare makes it possible to kill the inhabitants of an entire continent very quickly. Another stated that it would be a simple matter to spread plague in the United States.

Still another maintained that a means is available for spreading various diseases among millions of people by dropping a few capsules from one airplane. Such claims are fantastic and have no basis in fact.

While it would be folly to underestimate the potentialities of biological warfare, there is no factual basis for extravagant claims of the existence of a biological superweapon.

Many articles have described biological warfare as more terrible than the atomic bomb. The fact is that these two weapons differ from one another so basically that a direct comparison is meaningless.

The atomic bomb destroys not only life but also buildings and other structures, and is in that respect similar to high explosives. In addition, atomic radiation may persist indefinitely in contaminated areas and produce serious effects on living matter.

Biological warfare agents, on the other hand, affect only living matter, do not destroy material structures, and, in most cases, are nonpersistent. Death, protracted sickness, or only temporary incapacitation might be produced in man by the selection and dissemination of the proper biological agent.

Biological warfare is an attempt to harness certain forces of nature for purposes of war. In such warfare either epidemic or nonepidemic diseases might be used. In the language of biological warfare, an epidemic disease is one that is easily and rapidly spread from person to person, animal to animal, or plant to plant.

A nonepidemic disease spreads less easily and therefore would be largely restricted to persons, animals, or plants directly exposed to the germs as they were distributed during an attack. In the case of epidemic diseases of man the factors governing spread are not completely understood, and in any case not all are controllable; hence, it is not at all certain that an epidemic of significant proportions could be produced at will.

Even if an epidemic were started, adequate public-health and sanitation measures and proper treatment methods promptly instituted would tend to limit the spread and minimize the effects. The distribution of nonepidemic disease-producing agents and toxins would have to be very widespread to have a decisive effect.

Biological warfare would not be instantly destructive of life and it should be appreciated that illness induced by biological agents may be counteracted by specific medical measures. An important defense against biological warfare lies in the early identification of diseases implanted and prompt

institution of appropriate countermeasures to prevent further spread and restore the health of those affected. But it is obvious that extensive preparation for such defensive measures must be made in advance of an attack.

During times of peace various governmental agencies are concerned with the control of natural outbreaks of disease. Not only our population but also our crops and animals must be protected. To this end the United States Public Health Service, the Department of Agriculture, other Federal and many State and municipal agencies are always on the alert.

The threat of biological warfare has increased their responsibilities and difficulties. If a biological attack were made, the above agencies, in addition to the armed forces would play an important role in counteracting the implantation and spread of disease.

We must guard not only against natural outbreaks of disease and biological attack in time of war, but also against the use of biological sabotage methods before a declaration of war has been made. Our food supplies would be particularly vulnerable to attack by saboteurs with biological weapons. We must, therefore, rely on the maintenance of our high standards of public health and sanitation, and on our protective measures for animals and crops as our first line of defense against any biological warfare attack.

Appropriate steps are being taken to insure the coordination of the activities of our protective agencies. In addition, an active research program on biological warfare including methods for the prevention and treatment of diseases which might be caused by such warfare is being conducted in the interests of national defense.

Tax Settlement Board

EXTENSION OF REMARKS
OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the following article from the New York Times on the proposed Tax Settlement Board, and to an editorial from the Wall Street Journal on the same subject.

[From the New York Times of March 6, 1946]

SETTLEMENT BOARD FOR TAXES BACKED—PROPOSAL OF REPRESENTATIVE MILLS TO SET UP NEW AGENCY IS VIEWED AS IMPORTANT, TIMELY—SEEN MEETING REAL NEED—WOULD ESTABLISH INEXPENSIVE, SPEEDY WAY TO RESOLVE DISPUTES, SPONSOR SAYS

(By Godfrey N. Nelson)

Whether or not Representative WILBUR D. MILLS, of Arkansas, anticipated that the United States Tax Court will be made a court of record, his introduction, on February 24, of his bill (H. R. 2983), in the House of Representatives, the purpose of which is to establish a Tax Settlement Board, is important and timely.

That the Congress will make the Tax Court a court of record appears to be only a question of time. The reasons therefore are impelling. But regardless of when this occurs, there is also a real need for the establishment of a wholly administrative agency whose functions would be to resolve controversies between taxpayers and the Bureau of Internal Revenue.

In his introduction of the bill on the floor of the House, Representative MILLS stated that its purpose was to establish a board "which could bring about speedy and inexpensive settlement of controversies between taxpayers and the Bureau." (CONGRESSIONAL RECORD, February 24, 1949, p. 1490.) The board would hear cases which, to the taxpayer, do not justify the expense of a lawsuit.

RECOURSE IS DIFFICULT

At present the taxpayer has, of course, the privilege of conferring with members of the bureau on any adverse treatment of items appearing in his income-tax return. If an agreement is not reached satisfactory to the taxpayer, however, he must either accept the Bureau's decision or incur the expense of filing a petition with the Tax Court. If he pays the asserted deficiency he may, subject to jurisdictional limitations, bring suit for recovery in the United States District Court.

"The proposed Tax Settlement Board," said Mr. MILLS, "would provide an impartial means of settling the dispute at minimum expense and loss of time to the taxpayer and to the Government." Representative MILLS observed that the idea of such a board is not new. He recalled that the Treasury Department had recognized in the early 1920's the need of such an informal appeals agency and recommended its creation.

Accordingly a bill was prepared by the Ways and Means Committee by which a Board of Tax Appeals would be established. Although the bill was adopted by the House, it was amended in the Senate so as to give the Board the formal characteristics of a court. The Treasury, however, had originally recommended a board within the Treasury Department in addition to an independent board or court. The first was intended to be an agency to settle tax cases and the second "to establish precedents for the disposition of other cases pending in the Department." (Quotation from testimony of A. W. Gregg, Solicitor of Internal Revenue, before the Ways and Means Committee.)

TO DETERMINE SETTLEMENT

Mr. MILLS' bill provides that the proposed "Tax Settlement Board shall not require the introduction of evidence and shall not make findings of fact or issue conclusions of law, but shall determine in its discretion what would be a fair settlement of the controversy, having regard to the contentions of the taxpayer and the Commissioner of Internal Revenue and the probability of establishing the correctness of such contentions in fact and in law." Based thereon, the board would determine and state the amount of deficiency to be paid by the taxpayer and the reasons for such determination.

Thereupon both the Commissioner and the taxpayer would be allowed 30 days in which to file notice of acceptance of the findings. Upon failure to file such notice the settlement would not be binding on either the Commissioner or the taxpayer, and the taxpayer would have the right to file a petition with the Tax Court or to take such other steps as are allowed by law as though there had been no proceedings before the Tax Settlement Board. No part of the proceedings before such board or the findings would ever be admitted in evidence in any court.

The proposed board would be composed of 25 members to be appointed by the President. Hearings would be held at times and places to be prescribed by the chairman of the board. Although the board would have limited jurisdiction, the members of the Tax Court would thus be relieved of many cases now being heard by them.

Under present practice a taxpayer who has filed a petition with the Tax Court may be permitted in advance of trial to review his case with the technical staff of the Bureau with a view to settlement. One of the effects of the bill would be to offer this opportunity in advance of filing a petition.

[From the Wall Street Journal of March 10, 1949]

FOR THE SMALL TAXPAYER

To protect the taxpayer who could not afford litigation, Congress, a quarter of a century or so ago, established the Board of Tax Appeals to which aggrieved taxpayers could resort without the expense of hiring legal counsel. Although the name of the board has been changed to the Tax Court of the United States its functions are unchanged and it has remained an administrative body and not part of the judiciary system. So well has the Tax Court fulfilled its functions that the Supreme Court a few years ago held in effect that its findings on questions of fact were final.

A bill (H. R. 2447) is now before Congress proposing to make the Tax Court a court in fact as well as in name. Testifying before a subcommittee of the House Judiciary Committee, Mark E. Richardson, chairman of the committee on Federal taxation of the American Institute of Accountants, opposed hasty enactment of the measure. The institute, he explained, had no objection to the idea of a special court to consider tax cases. It did object to leaving the taxpayer without an informal and inexpensive appeals agency.

Mr. Richardson suggested that consideration of the bill be delayed until another measure (H. R. 2983), creating an informal tax settlement board, is enacted. Unless there is such an appeals body, he said, the taxpayer would have no place to take a dispute without considerable expense. This, he suggested, would not increase the confidence of the taxpayer in the Government's fairness.

This newspaper agrees. Due to the growing complexities of tax law the creation of a regular court giving its entire attention to tax problems should be a distinct addition to our judiciary. But it is more important that the small taxpayer should have a tribunal where it will not cost him more to fight a tax dispute than to pay the amount claimed. And this tribunal, like the Tax Court, should be independent of the Treasury.

Oleomargarine

REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. RIVERS. Mr. Speaker, among many other mournful things the housewives of the Nation heard last week the butter lobby had triumphed again. It was something like the expected Dewey victory, it was unexpected. I want it to be known that I am not on the defense, I am on the offensive, as usual. The housewives of the Nation are, under that bill, holding the bag, the oleomargarine bag, if you catch the point. Thirty-five million of them now are expected to be deprived of the right to eat yellow margarine.

It reminds me of the little bit of poetry about the girl who said to her mother—

Mother, may I take a swim?
Yes, my darling daughter.
Hang your clothes on a hickory limb
But don't go near the water.

That bill does not object to the margarine's being manufactured, all it objects to is the American people's getting it and eating it. When that bill comes onto the floor we are going to knock it

into a cocked hat. We are not going to see the American housewife any longer deprived of the right to eat the poor man's spread.

Mr. Speaker, the following editorial appearing in yesterday's Sunday Star is of interest in this connection:

THE "BUTTERLEGGERS"

The dairy interests have come up with a scare word—"butterlegger"—in their effort to prevent or restrict as tightly as possible the sale of yellow margarine.

This is one of two main lines of attack being pursued by butter spokesmen. The other argument is an economic one. It is said that the price of butter would have to be cut drastically to compete with unrestricted yellow margarine, and that this would have a seriously depressing effect on the butter industry and on those segments of the economy allied with it.

Perhaps this is true. But if so, the corollary is that the butter industry can be maintained only at the price of depriving consumers of a cheaper but equally nutritious product. And that, in turn, would be the antithesis of economic progress.

The butterlegger argument comes down to a contention that yellow margarine is being palmed off on unsuspecting consumers as being butter, the dairy industry having made a survey in Arkansas which indicates that this is being done in a substantial number of restaurants in violation of State law. But if this is true the proper remedy would seem to lie in enforcement of the State law, not in forbidding any sale of yellow margarine.

It certainly is true that many housewives, given the price differential, would buy yellow margarine in preference to butter. Many of them are doing this today, and what the dairy interests really fear is not the butterlegger, but the prospect that with unrestricted sale housewives would willingly and knowingly buy yellow margarine on a scale which would substantially curtail the market for butter.

For years they have tried to prevent this through a penalty tax on colored margarine. But this device, in addition to being none too successful, has become rather thoroughly discredited. So a new tack has been taken.

Last Wednesday the House Agriculture Committee approved a bill which would lift all tax on margarine, but forbid its interstate shipment. An editorial in Thursday's Star erroneously stated that the effect of this would be to require housewives in the district and in 35 States which do not have their own manufacturing plants to continue to pay the old 10-cent tax on each pound of colored margarine.

Actually the effect would be much worse. Consumers in the District and the States lacking manufacturing plants would not be able to buy the colored product at all. In other words, to enact this bill would be to give butter a very substantial national monopoly at the expense of the consumer. Needless to say, it should not be passed.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under the leave to extend my remarks in the RECORD, I am inserting in the Appendix of the RECORD a resolution passed by the State Republican convention in Grand Rapids, Mich., on socialized medicine.

Mr. Speaker, it becomes more and more apparent that socialized medicine is not needed in this country. It would mean a lowering of the quality of medical care. It would not be satisfactory to either the doctor or the public. Before this Congress takes any action toward fastening a socialized-medical system on the American people, they ought to study more closely just what has happened in England.

In a few days, I expect to propose a resolution which will set up a committee composed of Members of both Houses of Congress, and others which will have for its purpose a thorough study of socialized medicine as it is practiced around the world, particularly in England. The committee will also study all phases of voluntary plans now being carried on in the United States and make such other suggestions as they see fit for the consideration of Congress.

The resolution follows:

RESOLUTION ON SOCIALIZED MEDICINE

Socialized medicine is not the answer to the country's health problems. Our medical and health problems will be better solved by enabling more qualified individuals to train for the medical profession by lifting educational bars to racial minorities so that they may participate in medical and dental training and practice, by relaxation of Federal taxation so that the States may handle their responsibility in this connection, and by the spread of private health service plans.

Basing-Point System "Bunk" and Hypocrisy, Says Important Member of Cement Institute—System Unfair to Small Business—Misinformation Disseminated To Create Confusion in Minds of Businessmen

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. PATMAN. Mr. Speaker, through the basing-point system, prices are fixed down to the seventh decimal point, as evidenced in the case of cement. The following statement, which was submitted in the trial of a case, is self-explanatory:

SPECIFICATIONS: SERIAL NO. ER-W911-36-219

Abstracts of bids for furnishing and delivering 6,000 barrels of cement, received in response to invitation for bids dated April 8, 1936, and opened April 23, 1936, at the United States engineers office, Tucumcari, N. Mex.

Balance available, appropriation 013028, emergency relief, War, Rivers and Harbors, flood control, etc., 1935–47: $998,769.95.

No. of bid	Name and address of bidder	Total price	Discount (days)
1	Monarch Cement Co., Humboldt, Kans	$3.286854	10 cents per barrel, 15 days.
2	Ash Grove Lime & Portland Cement Co., Kansas City, Mo	3.286854	10 cents per barrel, 15 days.
3	Lehigh Portland Cement Co., Kansas City, Mo	3.286854	10 cents per barrel, 15 days.
4	Southwestern Portland Cement Co., El Paso, Tex	3.286854	10 cents per barrel, 15 days.
5	Oklahoma Portland Cement Co., Oklahoma City, Okla	3.286854	10 cents per barrel, 15 days.
6	United States Portland Cement Co., Denver, Colo	3.286854	10 cents per barrel, 15 days.
7	Consolidated Cement Corp., Fredonia, Kans	3.286854	10 cents per barrel, 15 days.
8	Trinity Portland Cement Co., Dallas, Tex	3.286854	10 cents per barrel, 15 days.
9	Lone Star Cement Co., Dallas, Tex	3.286854	10 cents per barrel, 15 days.
10	Universal Atlas Cement Co., Waco, Tex	3.286854	10 cents per barrel, 15 days.
11	Colorado Portland Cement Co., Denver, Colo	3.286854	10 cents per barrel, 15 days.

Award made to bidder No. 3, Lehigh Portland Cement Co. One of 11 equally low bidders. Award made by lot.

I certify that the foregoing is a true abstract of all proposals received.

JAMES H. STRATTON,
Captain, Corps of Engineers, Assistant.

This is not just an accident; it is done all the time. Such identical bidding has been going on for 25 or 30 years in all contracts. The Supreme Court has finally outlawed it. Now an effort is being made to legalize such a system.

During the trial of the Cement case in New York City of June 7, 1934, there was inserted in the record a letter that was written a few days before by John Treanor, who was chairman of the Marketing Committee of the Cement Institute, a director of the Cement Institute, and the president of one of the principal members of the Cement Institute—the Riverside Cement Co., of Riverside, Calif. Mr. Treanor was a member of the committee designing the propaganda that was intended to cause Members of Congress, State legislators, county commissioners, county engineers, mayors, and city managers and city engineers to have the right attitude toward the cement trust. The letter accepted as evidence by the Supreme Court of the United States was written after the Federal Trade Commission had been attempting and after the Federal Government, including President Franklin D. Roosevelt, had pleaded with the cement industry to submit to the Federal Government f. o. b. mill bids so as to avoid price fixing. The letter was written to another director of the Cement Institute, B. H. Rader, the vice president of another one of the Big Five, the Lehigh Portland Cement Co., and also a director of the Institute in Chicago.

The letter is as follows:

COMMISSION'S EXHIBIT NO. 7A, A LETTER DATED MAY 17, 1934, ADDRESSED TO B. H. RADER, REGIONAL MANAGER, THE CEMENT INSTITUTE

DEAR BUD: I have been thinking about your telephone call, from which I get the impression that you sent a pretty unyielding telegram to Murray—as you say at least that you "did not intend to make any concession before the trading starts."

Now I would have conceded the mill price at once on Federal business and I would have indicated a very open-minded attitude toward the larger question; and this to create

the impression, deliberately, that something besides obstruction and short-range trading can be had out of the cement industry. I would have taken advantage of this great opportunity to lay a telegram on the President's desk which he would have read. We know he is watching the cement question. I would have tried to strike a new note of cooperation and reasonableness, in contrast with what Ickes and the Federal Trade Commission tell him about us. This could have been the beginning of a real campaign for that is why I am writing you. The only thing that I think has been lost is a neat opportunity to score our point with the President himself.

As a member of this industry, my fate is to a considerable extent in your hands, so that I have both a right and a duty to let you know my views.

If we were a generally well-regarded industry, we might be justified in taking a stiff trading position upon the President's request. However, we are anything but popular, we have a very difficult position to maneuver out of, and we should not gamble unnecessarily, running as we do the risk of a blast from the President's office that may be ruinous.

The f. o. b. mill price on Federal business is of no real importance, is entirely practical to grant, can and I think will, be forced out of us—therefore good trading would have been to give it without any trading.

Now, when it comes to the larger question of mill price on commercial business, much as I would like to think otherwise, I am convinced that we will have to maintain our basing-point position and refuse the President's request. It will not be an easy refusal to defend upon economic grounds. It will be almost impossible to persuade an unsympathetic Government that we are justified in our refusal. But the least we can do is to prepare the way by an initial showing of open-mindedness, which might entitle our later argument to sympathetic hearing.

NOTICE THE PHRASE "SHEER 'BUNK' AND HYPOCRISY"

Do you think any of the arguments for the basing-point system, which we have thus far advanced, will arouse anything but derision in and out of the Government? I have read them all recently. Some of them are very clever and ingenious. They amount to this however: That we price this way in order to discourage monopolistic practices and to preserve free competition, etc. This is sheer bunk and hypocrisy. The truth is, of course—and there can be no serious, respectable discussion of our case unless this is acknowledged—that ours is an industry above all others that cannot stand free competition, that must systematically restrain competition or be ruined. We sell in a buyers' market all the time. The capital cost, as distinguished from the out-of-pocket cost, of producing cement is extraordinarily large. In free competition this capital cost is whittled away and this means loss and ruin.

Now an industry in this fix needs some sympathetic understanding on the part of the Government. I think our case can be made out, but it is not going to be done by the route of hard-boiled short-range trading. We are either dealing with a very important large question of public relations or we are not. If we are not, we don't have to be so careful of our methods. If we are, then we had better approach the question in a large way; and the first approach is to acquire some good will in governmental quarters. All that we need for our reasonable prosperity is consistence with the President's original plan for NRA.

I haven't seen the telegram you sent. This letter may be unwarranted and is pretty sure to make you sore, but it is based upon your remark about "trading" and upon some general views of industry policy which I heard advanced by some of the very influential men of our industry.

Yours truly,

JOHN TREANOR.

Government Cost Goes Up, Up, and Up

REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. MACK of Washington. Mr. Speaker, today, as we approach the last day for the payment of 1948 income taxes, someone should say a word in behalf of America's forgotten citizens—the millions of income taxpayers.

During the first 3 years of our National Government—1789 to 1791, inclusive—the total amount of taxes collected to operate the Federal Government was $4,418,013. This, mind you, was for 3 years, not 1. In the fiscal year 1948 Federal tax collections amounted to $44,745,542,076 or 30,000 times the amount of taxes levied in any one of the first 3 years of the George Washington administration.

The amount of money our Federal Government collected in taxes in a single day in the fiscal year 1948 was sufficient to have operated the Federal Government for more than 100 years at the George Washington administration's rate of spending.

I admit the figures are not fair. The Nation's population is greater now than in Washington's time. So, let us look at the figures in another way.

In George Washington's administration the Federal Government collected 37 cents a year per capita from the American people. In 1948, our Federal Government collected almost 900 times that much per capita from its citizens, or an increase of 85,100 percent above the amount of taxes levied by Alexander Hamilton, who was Washington's Secretary of the Treasury.

This 37 cents a year per capita for Federal taxes in the George Washington administration had risen to only $1.59 a year per capita by the first year, 1860, of Abraham Lincoln's term as President.

By 1910 the American people were paying $6.78 a year per capita in taxes and by 1930, only 18 years ago, Federal taxes amounted to only $29.54 a year per capita.

Last year, Federal taxes collected from the American people was approximately $315 a person or about $1,260 for the average American family of four members.

The per capita taxes collected from the American people last year were 900 times those collected in Washington's administration; almost 200 times the per capita taxes of the first year of the Lincoln administration; 47 times the per capita taxes of 1910 and more than 10 times the per capita taxes collected in 1930.

MONEY UNLIMITED

An Ohio Member of Congress said to me the other day that he had heard someone remark that if all the annual Federal taxes which now are collected from the American people were paid in $1,000 bills that these annual tax payments would build a pile of $1,000 bills as high as the Empire State Building.

I asked a banker about this. He measured up a pile of 1,000 crisp new $1 bills, which are of the same thickness—or should I say thinness—as $1,000 bills. That measurement revealed that one thousand $1,000 bills, $1,000,000, would make a pile 4 inches high.

A billion-dollar pile of $1,000 bills therefore would be 1,000 times 4 inches in height or 4,000 inches tall or 333 feet high. Since our last year's Federal collection of taxes amounted to more than $44,000,000,000, it would require a pile $1,000 bills to a height of 44 times 333 feet or 14,652 feet high to contain $44,000,000,000. This would be a pile about 2½ miles high or 26 times as tall as the Washington Monument.

The national debt, now $252,000,000,000 is approximately six times last year's tax collections. To pay off that national debt would require a pile of crisp new $1,000 bills that, if neatly piled on top of each other would extend 15 miles into the sky.

Such being the financial climb that is ahead, before we Americans get out of the financial hole in which we find ourselves, Congress should begin pruning extravagance and wasteful spending wherever it finds it.

The Hoover Commission reports offer some happy suggestions as to many places where the pruning shears could be used to the great advantage of America's forgotten man—the taxpayer.

American Legion Pension Bill—Speech of Gen. John Thomas Taylor

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an address delivered over the radio on Saturday, March 12, by Gen. John Thomas Taylor, director of the national legislative commission of the American Legion, on the veterans' pensions bill, usually referred to as the Rankin bill, which General Taylor calls the American Legion pension bill.

I hope every Member of Congress, and especially the ones who have been misrepresenting this program, as well as everyone else throughout the country, will take the time to read this speech.

An article published in a local paper on yesterday shows the hand of the opposition to this veterans' bill. They are

trying to get legislation passed that will force the whole country under a program of social security, which would mean that the old World War I veteran, when he passes the age of his earning capacity, and has nothing on which to live, may seek refuge in the county poorhouse.

In that connection, I want to read you from a report by Frank Pace, Jr., Director of the Bureau of the Budget, under date of March 7, 1949, on this question.

Here is what Director Pace says:

Apart from these expenditures for veterans' programs—

Note that, Mr. Speaker, he says:

Apart from these expenditures for veterans' programs, the costs of the expanded social insurance system are expected to reach a peak of $15,000,000,000 to $18,000,000,000 annually by 1990.

That is many, many, many times as much as this pension bill could possibly cost, even at its peak. Remember that a large portion of that money is to come out of Federal revenues, and as I said, the old soldiers, and especially the World War I veterans, would be practically left out.

The rest of you can do as you please, but so far as I am concerned, I do not intend to see these old veterans go to the poorhouse in order to get something to eat in their declining years if I can prevent it.

General Taylor's speech reads as follows:

First, I want to make it absolutely clear that the American Legion, now numbering 3,500,000 men and women who honorably served in the armed forces of our country in the two great world wars, and the American Legion Auxiliary, with a membership of approximately 1,000,000, are wholeheartedly supporting the American Legion bill (H. R. 2681) providing service pensions for veterans of World War I and World War II, which was favorably reported to the House of Representatives by its Committee on Veterans' Affairs.

I make this statement so there can be no doubt in anyone's mind as to our stand on this important legislation, and also to counteract the whispering campaign conducted by some opponents of this legislation to the effect that the Legion is not in favor of pension legislation.

There is nothing new in the suggested policy of providing pensions for veterans of the two great world wars. In fact, the policy has been traditional, and was inaugurated in the early days of our great democracy, when service pensions were provided for veterans of the Revolutionary War. This policy has been adhered to by the country down through the years. Pensions were provided for veterans of the War Between the States, and at present pensions are being paid to all veterans of the Spanish-American War and their widows.

At the National Convention of the American Legion, held in the city of Miami, Fla., last fall, resolutions were adopted calling on Congress to enact legislation granting service pensions to veterans of World War I and World War II. In addition to service pensions to be paid all veterans at age 60 and 65, the Legion resolutions advocated nonservice-connected disability pensions for veterans below the age of 60. Companion bills H. R. 1692 and S. 596 were introduced for the American Legion in the House and Senate to carry out our mandates.

The first hearings conducted by the House Committee on Veterans' Affairs were on the Legion pension bill and other similar bills. Testimony was received by the committee from Members of Congress, officials of the Veterans' Administration, and representatives of veterans' organizations. The chairman of the Committee, Representative JOHN E. RANKIN, of Mississippi, presented the opportunity to be heard on these pension bills to anyone desiring to testify.

Following the hearings the committee ordered our bill (H. R. 1693) favorably reported to the House, as rewritten, with instructions to Chairman RANKIN to request speedy consideration and passage. The bill received the new number, H. R. 2681.

The bill reported by the committee provides a general pension for all veterans of $90 per month at age 65, regardless of physical or financial condition, who served not less than 90 days during World War I or World War II, and were discharged under conditions other than dishonorable. Such a pension is at present being paid to veterans of the Spanish-American War and, in addition, veterans of that war, upon reaching age 62, receive a $43.20 monthly pension. There is no provision in the Legion pension bill, as reported, for any pension for veterans under age 65.

The Legion bill further provides $120 per month pension to any veteran who, on account of age or physical or mental disabilities, is helpless or blind or so nearly helpless or blind as to require the regular aid and attendance of another person.

The bill also places widows of veterans of World War I and World War II upon the same basis, and the income limitation for widows and children without dependents is $2,000, and, with dependents, to $3,000.

As has been the case in the past, every time new legislation is proposed in the Congress providing any benefits for veterans a campaign is immediately developed by opponents of veterans' benefits, who have resorted to their usual policy of gross misrepresentation, and in the present case, to conducting a smear campaign unequaled in the past. Some newspapers and other periodicals, in their news and editorial columns, and in the writings of individual columnists, have not only failed to make an accurate report as the provisions of the pension bill, but have grossly exaggerated its estimated cost.

These publications and individuals opposed to the pension have uniformly referred to the proposed legislation as the "multibillion dollar pension bill." Their astronomical figures are arrived at on the basis that every single veteran of World War I and World War II will live to the age of 65 and receive the pension, whereas they know that at least 10,000 veterans of World War I are dying every month, and the number of deaths among these and the older World War II veterans will greatly accelerate during the next few years, thereby reducing each year the number of such veterans eligible for the pension. An estimated $2,000,000,000 was publicized as the cost of the pension plan for the first year, whereas the actual cost will be less than $65,000,000.

Other evidence of the desperation and unfairness of opponents of the American Legion's pension bill is the quoting and publication of tremendous figures covering the total cost of the pension plan over the next 50 years of as high as $200,000,000,000. Seldom do Government agencies quote ultimate costs of Government expenditures on specific subjects. Such gross figures are not used in other items in Government appropriations, such as social security, farm aid, national defense, rural electrification, etc. How then can an exaggerated accumulated figure be used in connection with a World War veterans' pension?

The latest development in the vicious and malicious campaign of opponents to the veterans' pension is the revival of an old and often discredited custom. Knowing that the Legion pension bill cannot be defeated on its merits, they are now resorting to personalities, unfairly attacking congressional supporters of our bill, particularly Chairman RANKIN, of the House Veterans' Affairs Committee, and the American Legion and American Legion Auxiliary. As stated before, they have deliberately misrepresented and falsified the Legion's stand, knowing very well that the entire organization of the American Legion and the American Legion auxiliary are definitely on record in support of the pension legislation, not only having actively supported but having originally sponsored the pension bill.

It has been stated by those opposed to the service pension that World War veterans in their declining years may enjoy the benefits of social security which veterans of previous wars did not enjoy. Only a small minority of the working people today participate in the benefits of old-age insurance, which means that only a small minority of veterans are participants in social security. Furthermore, the social security is a form of insurance paid for by its beneficiaries, and such veterans as may be covered are paying their full share for any benefits they may receive.

Now, let us briefly review the history of service pensions such as is provided in the pension bill. The country has always heretofore recognized men and women who served in the armed forces during conflict. On every occasion when the country has found it necessary to go to war men and women who entered the service, whether voluntarily or otherwise, were assured that a grateful Nation would remember them, that when they were disabled or aged they would never be in want. Some who gave this assurance in flowery oratory and comments in the press have already either forgotten or have retracted their promises, and are now resorting to every means they can conceive to deprive these same men and women of some security in their old age which a service pension would provide.

Another justification for a service pension is the fact that a very high percentage of disability cases among veterans are service connected, although there may be no direct evidence that the disability is service connected. Throughout the entire organization of the American Legion and the American Legion Auxiliary requests are received from disabled veterans seeking assistance in securing rights and benefits due them under the laws Congress has passed for their protection. It has been our experience that, in far too numerous cases, a veteran has been deprived of the full benefits of the law because of some technical, procedural requirement of the administrative governmental agency handling his or her case. The pension bill will be of much assistance in remedying this situation. It is designed to apply equally to all veterans and may be applied with a minimum of administrative difficulty.

A large number of veterans, particularly of World War I, have reached the age of 65. For nearly all of them it is impossible to secure employment and earn their own livelihood. They have not been able to accumulate sufficient worldly goods to provide for their care during their old age. They have become a charge and expense to States and local communities, where their names will be found on relief rolls. These are the same men and women who were sent off to war to the accompaniament of martial music from bands ringing in their ears, the cheers of the populace and the promises and assurances that they would never be forgotten.

The American Legion feels that the security of veterans in their old age is primarily the responsibility of the Federal Government. It is a much greater and far more deserving responsibility than the care and assistance granted to the peoples of a large number of foreign countries on which the

United States has spent, is now spending—and will continue to spend—for an indefinite period many, many billions of dollars.

On Wednesday, the 9th, the Rules Committee voted to take no action at this time on our bill, although we had assurance that more than a majority of that committee would vote to bring the pension bill to the floor of the House for consideration.

Heretofore, it has not been possible to bring bills before the House unless permission was granted by the Rules Committee. However, on January 3 the House changed their general rules in a way to strip the Rules Committee of its blockading powers, and provided if they refuse to grant permission for consideration of the bill within 21 days after the request has been made, then the chairman of the standing committee may bring the bill up on the floor of the House as a privileged piece of legislation. In addition, there is a 60-year-old rule of the House, which has not been changed, and which will permit the chairman of the Veterans' Affairs Committee to bring up the pension bill at any time. Under this old rule, pension bills were made privileged motions, and the committee chairman must be recognized when he is ready to offer one. Therefore, there are two rules under which Chairman RANKIN can secure consideration of the pension bill on the floor of the House, and unquestionably the bill will be given such consideration at an early date.

When the pension bill is considered, it is expected that opponents of the bill will use every trick in the parliamentary bag to defeat it. Numerous amendments will no doubt be offered, not to improve the bill, but in an effort to load it down in such a way that it will not pass.

The American Legion, the American Legion Auxiliary—and, I am convinced, the overwhelming majority of our citizens who believe the Government should fulfill its just obligations to our veterans—will be watching the actions and votes of our elected Representatives in Congress. They are convinced of the great need of such legislation to enable the country to fairly and adequately give our veterans the consideration and care which they have so nobly and courageously earned. They feel that the country owes a debt to our war dead and to our veterans that can never be paid in full. They feel that the responsibility of our Government to the veteran holds first priority among all governmental obligations and duties, and that the enactment of the American Legion pension bill would be an expression of the Nation's appreciation of services rendered.

They are confident that the Congress will ignore the vicious, unfair conduct of those who have fought the pension bill through a smear campaign of misrepresentation and vilification, and will carry on the long-established tradition of a grateful Government by promptly passing our bill to grant a pension to the veterans of our two great wars.

Seventy-five-Cent Minimum

EXTENSION OF REMARKS

OF

HON. HUGO S. SIMS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. SIMS. Mr. Speaker, under leave to extend my remarks I include in the Appendix of the RECORD an editorial which appeared in the Washington Post March 12, 1949.

As a member of the House Education and Labor Committee, I voted with the majority in a 13-to-12 vote which resulted in reporting out the 75-cent-minimum-wage bill. In the committee I attempted, by amendment, to modify the bill by providing that the 75-cent minimum would go into effect over a 7-year period. If my amendment had been adopted, the 75-cent minimum wage would be reached in exactly the same manner that the 40-cent minimum wage was reached as a result of the Fair Labor Standards Act of 1938.

The Post editorial is as follows:

SEVENTY-FIVE-CENT MINIMUM

The lifting of the minimum-wage rate from the present level of 40 cents to 75 cents per hour, as provided in the bill just approved by the House Labor Committee, is an adjustment made necessary by the great increase in living costs since enactment of the Fair Labor Standards Act. Representative BAILEY estimates that about 5,000,000 workers would benefit from the proposed increase in minimum pay, of whom a million and a half earn less than 40 cents an hour. If these estimates can be relied on, it is obvious that some employers will find it difficult, if not impossible, to meet the new scale of rates. In any case, the bill is defective in not providing for a succession of increases in pay that would allow time for essential adjustments, as was permitted under the original Fair Labor Standards Act.

The committee bill has been improved by discarding a plan incorporated in the original administration bill that would have permitted industry committees to raise the minimum rate of pay to the dollar level. That proposal would have opened the door to haggling over rates of pay and was not calculated to further the purpose of minimum-wage legislation. But in our opinion there should be some arrangement for administrative adjustment of minimum-wage rates to allow for future changes in living costs without an appeal to Congress for amending legislation.

While coverage is extended under the House bill to embrace 2,000,000 additional workers, a proposal to extend the wage-hour law to activities affecting commerce fortunately has been dropped, and exemptions applying to retail establishments have been clearly defined. The bill also provides that overtime payments must be calculated on the basis of regular rates of pay, so defined as to avoid overtime-on-overtime payments. Most important of all, of course, is the proposed change in the minimum rate. This ought to be approved, though it is to be hoped provision will be made for a step-by-step approach.

Some Straight Thinking

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Daily Journal of Sturgis, Mich., which appeared during the week of March 7, 1949.

Here is a country editor who has put his finger on some of the issues before the American people with unerring truth.

THE PRESIDENT FLOUNDERS

The plight of President Harry S. Truman today is indeed sad.

Congress is deadlocked over the filibuster and not a single item on his legislative program has been enacted.

Although there are Democratic majorities in both the Senate and House, Mr. Truman has lost control of Congress. In his Jackson-Jefferson Day dinner speech he threatened to stump the country to build a fire under Congress. Thus he plans to go over Congress' head and take the fight to the people.

When he claims that the Eighty-first Congress is what amounts to a do-nothing Congress, to recall a phrase, he is attacking his own party.

Mr. Truman has asked for trouble. He has jumped hastily into one program after another without conferring with congressional leaders of his own party. His stand on the North Atlantic Defense Pact couldn't be explained by Chairman TOM CONNALLY, of the Senate Foreign Relations Committee. Without sounding out opinions of the Democratic majorities, he presented a watered-down version of the Taft-Hartley Act which is getting nowhere. His minimum-wage legislation has been weighed down by so many Labor Department amendments that it is swamped in a whirlpool of confusion. He has outraged his own staff by such spontaneous public utterances as his "s. o. b." reference to Drew Pearson.

It is not pleasant to see a President flounder.

It is less pleasant to consider where his madcap policies are leading this country.

As a graduate of the Kansas City Pendergast machine, Mr. Truman realizes the value of a vote. He will stoop to any depth to get the vote—even as deep as selling the country down the river.

That is exactly where his socialistic program will end up—with the United States on the scrap heap. Mr. Truman proposes more Federal aid to all classes of voting citizens with the idea of perpetuating his own political crowd. His proposals run on the one-way street to socialisim and collectivism. Through taxation he would control and destroy production and would have the Federal Government take on such huge and widespread functions that the private citizen would be lost under perpetual inflation of ever-increasing taxes. Mr. Truman would make the State master of the citizen—just the reverse of the American tradition. Perhaps that is not the end he has in mind, but that is undeniably where he is leading us.

Because of the mountains of propaganda ground out by the bureaucratic agencies in Washington, John Q. Public often forgets that the American economic system pays the world's highest wages while selling at the world's lowest prices.

Mr. Truman would scrap this system and drag us down to the poverty level of the European socialistic regimes.

Private enterprise plus the profit-and-loss system make it possible for the average worker to earn a package of cigarettes in 9 minutes of labor. The British worker must toil 84 minutes for the same item, and Russian workers (those who get paid) have to work 124 minutes.

Mr. Truman is trying to sell the country on socialized medicine, not because the country is asking for it, not because it will improve health standards, not because it will reduce the costs of medical and hospital care, but because he sees a chance to grab more votes. Administrative whips are reminding Democrats of the latest English byelection at Hammersmith to show what socialized medicine will do for the politicians. In Hammer-

smith the Labor Party candidate was elected because he ran on the party's health-insurance record. Because of such policies the Labor Party has won the 48 last byelections in England. This they have done at the expense of reducing England to a second-rate power which must borrow from the United States time after time to forestall the inevitable bankruptcy that has befallen every planned-economy government in history.

Mr. Truman's policies would do these same things to the United States. They have done the same thing to France, Italy, Belgium, and Nazi Germany. World's best example of a planned economy is, of course, Communist Russia.

How could Mr. Truman bankrupt the United States? One way would be for him to continue to advocate that taxes be kept at their present high level so that the national debt can be retired while at the same time he advocates more Federal aid to States and local governmental units. How would this aid be paid? Not out of cash balances, because there are none available. Federal aid would be paid by selling more Government bonds, thereby taking more cash out of the hands of the public. To top off this madness, the President asks for more taxes in the form of pay-roll deductions for old-age insurance, unemployment insurance, and socialized medicine.

Last year Federal and local taxes grabbed 23 percent of all goods and services produced by this Nation. And yet Mr. Truman wants still a bigger share.

Those Americans who have the good of the country at heart must realize that the pendulum has swung as far to the left as it can possibly go without a catastrophe.

The time is ripe for the Republican Party to declare war on Truman's form of socialism and advocate a return to the freedoms which have made the United States of America the greatest Nation in the world's history.

Ideals, traditions, freedom, private property, free will, and the Nation are at stake. Let the Republican Party take the side of freedom and private enterprise. There is a great need for such action, for it will be the salvation of the land.—R. E. H.

Tennessee-Tombigbee Waterway

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. ELLIOTT. Mr. Speaker, the Tennessee-Tombigbee waterway, when developed, will be the most important inland waterway in the entire world.

It will tie Alabama's water transportation heart, the great port of Mobile, the great industrial city of Birmingham, and the coal fields of Walker County, Ala., by water highway to Florence, Sheffield, Tuscumbia, Decatur, Guntersville, Huntsville, Chattanooga, and Knoxville on the Tennessee; to Cincinnati and Pittsburgh on the Ohio; to New Orleans, Memphis, St. Louis, and Minneapolis on the Mississippi; to Chicago on the Illinois; and to Kansas and Sioux City on the Missouri.

But this does not tell the full story of this great proposed waterway. The Mississippi is the greatest waterway in the world for downstream traffic. The current is swift and for that reason boats and barges that move down the Mississippi are put to tremendous expense in navigating the current back upstream. This Tennessee-Tombigbee project would allow the boats and barges that come down the Mississippi filled with the commerce of the North and West to return to their destination by way of the intercoastal waterway to Mobile, thence up the Tombigbee to the Tennessee River. From that point these boats and barges can make connections with the cities and rivers already mentioned. The entire return trip from New Orleans to Cairo, Ill., would be in slack water to the Tennessee River and from the Tennessee River to Cairo, Ill., downstream. These boats and barges will, in my judgment, load themselves with the raw materials of the South, cotton, cottonseed, lumber from the magnificent hardwood and pine forests of the deep South, oil from the new fields in Alabama and Mississippi, salt from the newly discovered salt deposits of south Alabama, coal from the Alabama coal field, iron ore from Birmingham and Russellville, Ala.

One of the largest deposits of brown iron ore in the United States is located in Franklin County, Ala., where I was raised, and in the congressional district which I have the honor to represent here. These brown iron-ore deposits are less than 50 miles from this proposed waterway.

In fact, the territory through which this project would move is laden with raw materials, many of which are untouched and undeveloped. The building of this proposed waterway would stimulate the development of these raw materials and make the Tennessee-Tombigbee project an artery of inland-water commerce second to none in the entire world. There is no selfishness involved here. While this project would mean much in the years to come to the congressional district which I represent, yet it would undoubtedly mean as much or more to St. Louis, Minneapolis, Chicago, Pittsburgh, Cairo, Chattanooga, and Knoxville. This waterway will work to the great benefit of the people of the United States. Boats and barges serving the Mississippi River traffic downstream to New Orleans will be able to return to their place of origin at a saving of thousands of dollars in fuel bills alone. When you add to that fact the fact that these same boats and barges will be able to carry loads of our southern raw materials on the return trip, you have real economy and this project will save in freight rates in a very few years its entire cost of construction.

The Army engineers have said that the plan is practical; they have done the preliminary surveying and engineering work; they have recommended this waterway for construction.

The Tennessee-Tombigbee waterway would connect our great atomic-energy defense plant, covering many square miles, and using untold tons of raw materials at Oak Ridge, Tenn., to the Gulf of Mexico, through the port of Mobile, Ala., and cut the water distance between the two points by 800 miles. In my judgment, the Oak Ridge, Tenn., atomic plant will continue to be of the highest importance and significance for years to come. I am using it as an example because it strategically illustrates the need for this waterway development, and the benefit of such development to the people of this entire country.

The President did not see fit to include funds for beginning the construction of this waterway in the budget for the fiscal year 1950. But, believing that this project is of major importance, we are asking the Appropriations Committee for $10,000,000 with which to begin construction on this great waterway.

I do not oppose foreign spending where it appears to be necessary for the future security and safety of this great country of ours. But I do call your attention to the fact that we must use at least a part of our wealth to improve this country of ours for the benefit of our own people. This waterway will stimulate the development of business and commerce and its direct and indirect benefits will be, in 20 years, several times its cost. This project is primarily concerned with navigation. It will be accomplished by digging a canal about 25 miles long through a sand ridge, and the building of the necessary locks to maintain a sufficient depth of water for the boats and barges using the waterway.

The Army engineers say that the plan is practical and is economically justified. The Tennessee Valley Authority says that a direct connection to the Gulf by water would provide a new transportation route of great importance and would assist in the stimulation of commerce, agriculture, and industry in the Tennessee Valley.

There would be intangible benefits arising from the construction of the Tennessee-Tombigbee waterway, including the stimulation of new production of undeveloped raw materials, and the provision of a shorter water highway between the Gulf and northern inland cities. This waterway would be used in time of war for the movement of strategic supplies and materials and for the craft and munitions of war. Last, but not least, the improvement of recreational facilities and land values in the tributary area are beyond calculation.

I trust that the Appropriations Committee will recommend this appropriation, and that the House of Representatives will vote it.

The Old Slater Mill and Cotton Manufacturing in America

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. FORAND. Mr. Speaker, this year, 1949, marks the one hundred sixtieth anniversary of cotton manufacturing in America.

Because of the important part this industry plays in our Nation's economy, its

one hundred sixtieth birthday should not be allowed to pass without notice.

In the hope of focusing attention on this great industry, which provides the means of livelihood for hundreds of thousands of our people and clothing for millions of them to wear, I have introduced the bill, H. R. 3277, which provides that the Postmaster General issue, during 1949, a special postage stamp bearing a reproduction of the Old Slater Mill in Pawtucket, R. I., "the cradle of the American cotton industry."

While there exists interest in cotton manufacturing to a marked degree in 23 States that manufacture cotton, and this interest is also strong in cotton-growing States from Virginia to California, it is hoped that a full realization of the importance of manufacturing and growing of cotton can be brought to all our citizens. I know of no better way to do that than through the issuance of a special postage stamp.

We in Rhode Island have an extra special interest in the cotton manufacturing industry because it is the basic industry in our State. But further than that, we take pride in pointing out that the first cotton-textile mill in America is located in the city of Pawtucket, R. I.

The original building—the Old Slater Mill—still stands. It is being preserved, and plans are going forward to develop it as a museum of cotton manufacturing.

It is interesting to look back 160 years and to realize that the first cotton-working machinery in America was the brain child, so to speak, of Samuel Slater, who came from England to America with the deliberate intention of building cotton mills.

At the time Slater came to America, there were in England a few cotton mills operating by steam power. Arkwright and Strutt held patents in England on some cotton-working machinery but their patents were revoked by the English courts. It was estimated at that time that there were in England 30,000 cotton workers using machines and systems for which Arkwright and Strutt were largely responsible.

England tried to prevent export or duplication of the then existing machinery but Slater had what might well be termed a photographic memory and upon arriving in America began to build from memory—without the benefit of drawings or models—duplicates of the power-driven cotton-spinning machinery which Arkwright had developed so successfully in England.

Slater's efforts were crowned with success when in 1790 his dream became a reality and his cotton-spinning and preparatory machinery began to function. In 1793 all his machinery was transferred to a new factory building, on the shore of the Blackstone River, in Pawtucket, R. I., the very building which is now known as the Old Slater Mill.

We may be pardoned, I am sure, for taking justifiable pride in our claim to fame and for asking that a reproduction of the Old Slater Mill appear on a special postage stamp commemorating the one hundred and sixtieth anniversary of cotton manufacturing in America.

Seventy-five-Cent Minimum Wage

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. MADDEN. Mr. Speaker, the House Committee on Education and Labor is to be congratulated on its action of reporting favorably on the 75-cent minimum wage bill.

I am incorporating with my remarks a letter from an employer in Evansville, Ind., who endorses this legislation.

NATIONAL FURNITURE
MANUFACTURING CO.,
Evansville, Ind., March 11, 1949.

Hon. RAY J. MADDEN,
House Office Building,
Washington, D. C.

DEAR SIR: The evening newspaper advises that the House Committee on Labor and Education has passed on a 75-cent minimum wage bill, and I would like to go on record as saying that I feel this is a very good measure and wish to congratulate the members of the House committee for doing same.

I hope that the Senate takes favorable action on this bill. If favorable action is taken, it will mean that all manufacturers will have an equalized minimum base, and that an efficient plant will not have to suffer because of low wages paid by submarginal producers.

Thanking you for your consideration of the above, I remain,

Sincerely yours,

DAN F. CALDEMEYER, *President.*

Guns For Russia?

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. VAN ZANDT. Mr. Speaker, one of the many aspects of the North American Alliance and one which is very controversial is that of the United States providing munitions of war to western Europe.

Mr. Robert Boyer, editor of the Altoona Tribune, on Saturday, February 26, carried in the editorial column of his paper the following editorial—Guns for Russia?

Upon reading this editorial, I could not help but think of what happened in China not so many weeks ago when the Chinese Communists marched into Tsingtao, equipped with American-manufactured six-wheel trucks, weapons carriers, and jeeps. These American-manufactured necessities of war were taken from the Chinese Nationalist Army, whom we equipped with them.

Undoubtedly, Mr. Boyer, when he wrote the following editorial, had in mind that the same thing can happen on the continent of Europe that happened in China.

Mr. Boyer's editorial follows:

GUNS FOR RUSSIA?

A tremendously important aspect of the North Atlantic alliance and the program for this country to provide munitions of war to western Europe was mentioned by Senator TAFT the other day.

It is this: Is it wise to provide western Europe with all the equipment for modern war considering that the Soviet army could, according to most estimates, occupy the entire Atlantic-seaboard region of Europe within 1 or 2 months' time?

The estimates, of course, vary, for it depends, naturally, upon the time, and the state of Allied preparedness. But, if war were to come at this time, military men have said there is little to stop the Soviet armies in their march to the sea.

A dispatch from Finland announces that Russian troops have been moved up to the Norwegian border. It was further said that there was almost nothing to stop Soviet invasion of Norway and the Scandinavian Peninsula from the north.

Just prior to World War II, Holland assured Mr. Churchill, the former Prime Minister says in his memoirs of the war, that it could hold invading Germans for weeks by means of water barriers—flooding whole areas, from the dikes and sea walls.

But they didn't, said Mr. Churchill. They did not get a chance to open their flood gates.

There is every reason now to believe that if Russia wanted to bring her aggressive policy to the point of war, she could invade western Europe from the north and the south simultaneously, while her heavy central armies drove against our comparatively small occupational forces in central Europe.

Since it is reasonable to expect that it would be several years before western Europe could perfect armies sufficient to halt invaders, the question naturally arises as to the wisdom of putting large supplies of American war equipment in the path of prospective invading Red hordes.

It is said in Washington that the amount to be asked of Congress for rearming western Europe would be in the neighborhood of a billion dollars * * * probably nearer two, when the thing is done. This is in addition to an estimated $600,000,000 for arms for Greece, Turkey, China, and Korea.

American munitions are being spread around the world. Soon, Russia could take almost any sector and capture vast amounts of war equipment made in America, to be turned against us.

The value of trying to arm doubtful foreign armies in order to dissuade the Russians from war seems, indeed, to be a dubious prospect when viewed beside the ultimate threat that this country could aim at aggressors if our military strength were concentrated in dependable and maneuverable form.

The doubtful aspects of arming western Europe are emphasized by the statement of the French Communists that, in the event of war, they would back, not their native France, but Soviet Russia.

Could we count on a French Army, even though well equipped with American arms, as long as the Communists hold an influential place in French life and politics, as they undoubtedly do?

What reason have Mr. Acheson and other administration leaders to believe that western Europe could do a better job of holding the Russians than a prosperous, well-armed, and relatively well-off western Europe did against the Nazis in 1940?

Hitler hordes went through western Europe in a few weeks' time.

Western Europe is devastated by war. Its people are sick of war, and with little will to fight, according to every report we have seen from the Continent. It has no ready re-

sources, except what this country can provide.

It took America and Britain from 1941 till 1944 to prepare and launch an invasion against Hitler.

What better prospects would there be against Soviet Russia? And does that prospect warrant placing billions of dollars' worth of war equipment within range of Soviet armies?

Of course, the atomic bomb has been developed since then. But, for all we may know, Russia, too, has the atomic bomb. Guesswork is not adequate when dealing with such a terrible weapon.

Shall we arm western Europe, or save our strength?

A Personal Appeal Against a CVA

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a letter from J. Carl Baldridge, of Boise, Idaho, explaining his viewpoint on the President's proposal to authorize a Columbia Valley Authority. Mr. Baldridge does not represent any special interest and speaks only for himself and family.

BOISE, IDAHO, *March 4, 1949.*

Hon. JOHN SANBORN,
Representative from Idaho, House of Representatives, Washington, D. C.

DEAR MR. SANBORN: Local news items, as well as items in the press from a distance, for some time have had frequent references to the possibility of a Columbia Valley Authority for the watershed of the Columbia River and its tributaries.

I have been a resident of Idaho for nearly 45 years. During most of that time I have been and am now an owner of irrigated land. I realize that there are other things than control of the supply of water for irrigation at stake that are tied up with such an Authority. It seems to me that my own interests and those of others who are likewise situated lie in retaining the control, as we have now, of the water that is used on our lands for growing crops. As far as some of the other so-called advantages in relation to erosion control, forest, wildlife, etc., I cannot see how it would benefit the area which it is proposed to include in the Columbia Valley Authority, or that it would be any better off than it is now to have control entirely in the hands of some Federal bureau or board.

We have had plenty of experience with the Bureau of Reclamation, and in my trips over the State, and what is known as the western part of the United States, I find that the Bureau of Reclamation, for the purpose for which it was originally created by our Federal Government, is held in very high esteem. Large-scale developments for those things which it seems rather obvious that the Federal Government can do are already being done. Again I cannot see any advantage in putting other activities under any regional commission or board, however appointed, however administered, once it has been created.

I can speak for seven more men and women who are directly in my family, including my wife, sons, and daughter-in-law, in asking that you not only vote against such a proposal as CVA, if it should come to a vote, but that in the meantime you use your influence to combat any movement looking toward the establishment of such an Authority.

My work takes me almost continuously over the State, meeting people in many divers occupations and professions, and I do not think there is any real sentiment for the creation of the Columbia River Authority.

Yours sincerely,

J. CARL BALDRIDGE.

Trial of Protestant Churchmen in Bulgaria

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article covering the trial of 15 Protestant clergymen in Bulgaria by the Communist government:

TWO LOCAL CLERICS CONDEMN TRIAL—REVERENDS GOLIGHTLY AND WELD HIT SOFIA TRAVESTY

The trial of 15 Protestant churchmen in Bulgaria by the Communist government was denounced today by two of this area's most prominent Protestant clergymen.

Rev. Dr. William D. Golightly, pastor of Immanuel Baptist Church, and Rev. Dr. Hiram C. Weld, pastor of Elm Park Methodist Church, characterized the trial as a travesty of justice.

Dr. Golightly, who also is chaplain of Koch-Conley Post, American Legion, said the trial was part of a campaign in all iron-curtain countries to sever connections between the churches there with the outside world.

The statements followed developments in the trial yesterday when Rev. Nikola Naumov, head of Bulgarian Baptist churches, and Rev. Yanko Ivanov, head of Bulgarian Methodist churches, confessed that they had acted as espionage agents for the United States and Britain to provoke western intervention in Bulgaria.

In this 3-hour confession, Rev. Mr. Naumov pleaded guilty to all charges and recommended the security police as the best school for political reeducation of "waverers."

Dr. Golightly called the confessions "contrary to the character of the men." He said the confessions probably had been "wrung out of them by tortures that are a throwback to the Dark Ages."

CARDS ARE STACKED

Dr. Weld stated that the trial was a move by the Bulgarian Government "to curry favor with Moscow. Obviously the cards are stacked against the men, but the trial will be dressed up a little better than that of Josef Cardinal Mindszenty in Hungary."

Agreeing with Dr. Golightly that the Communists want to sever all outside ties between churches in their countries and the outside world, particularly the west, Dr. Weld said the next trial would occur in Czechoslovakia.

"American-controlled or Vatican-controlled churches will not be given freedom behind the iron curtain," Dr. Weld added. "Bulgaria thinks it has chosen the psychological moment to persecute these men in light of the Hungarian trial."

In their confessions the two Bulgarian clergymen repeatedly emphasized that they had been led into espionage through their connections with the west. Rev. Mr. Naumov said he had connections with the United States intelligence system through the Supreme Council of United Protestant Churches.

Dr. Golightly said that last night the executive committee of Koch-Conley passed a resolution calling on President Harry S. Truman and Congress to formally protest the trial.

Earlier this week a State Department protest was rejected by the Bulgarian Government.

Most Rev. Patrick A. O'Boyle, Archbishop of Washington and a former Scranton resident, called the trial a "mimicry of justice."

The United States and Great Britain have official observers at the trial.

Union Chiefs Unite on New Labor Bill

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of March 13, 1949:

UNION CHIEFS UNITE ON NEW LABOR BILL—DEMOCRATS ARRANGE BROADCAST TO STIR UP SUPPORT FOR ADMINISTRATION PLAN

(By W. H. Lawrence)

WASHINGTON, March 12.—Organized labor presented a united front tonight in a special broadcast arranged by the Democratic National Committee to stir up public sentiment for repeal of the Taft-Hartley Act and enactment of the administration's new labor law, which faces a hard fight on the Senate floor.

Brought together on a single program were William Green, president of the American Federation of Labor; James Carey, secretary of the Congress of Industrial Organizations; Harvey W. Brown, president of the unaffiliated International Association of Machinists; and George M. Harrison, speaking for railway labor as president of the Grand Lodge of Brotherhood of Railway Clerks.

Senator ELBERT THOMAS, Democrat, of Utah, chairman of the Senate Labor and Public Welfare Committee and sponsor of the administration bill in the Senate, was moderator. The program was broadcast by the American Broadcasting Co. network.

Mr. Green declared that the fatal error of the Taft-Hartley Act was that its major purpose was to make strong unions weak and weak unions weaker, thus eventually tearing down the high American standard of living which the unions have helped to build up over the years, not only for union workers, but for all the American people.

SEES UNIONS AS EXPOSING REDS

Declaring that the American trade-union movement had taken the leadership in exposing the hypocrisy of the Communist philosophy, he said that strong unions were America's first line of defense against infiltration and boring from within by Communists.

"Is it not, then, the better part of wisdom for our Government to protect this effective defense line, rather than to weaken it by oppressive legislation?" Mr. Green asked. "If for no other reason than this, Congress should adopt the Thomas bill without delay."

Mr. Carey said that the 1948 elections demonstrated the American public wanted the Taft-Hartley Act wiped off the law books and the Thomas bill enacted to reestablish sound, peaceful, constructive relations * * * between workers and their employers.

"Under the Wagner Act, the National Labor Relations Board handled more than 100,000 cases, and settled them," he continued. "Our unions grew; they won better conditions for their members; they helped strengthen our American democracy during peacetime and war.

"The Taft-Hartley Act, which replaced the Wagner Act, has turned us back from the

path of progress. It has weakened the rights of workers. It has limited their rights of free speech. It has weakened their security on the job."

Mr. Brown emphasized how the broadcast offered concrete evidence that all labor was united in support of the administration bill, which, he said, would help to restore friendly and peaceful labor relations in the United States and avoid many disputes so common under the Taft-Hartley Act.

The unions, Mr. Brown said, "are a breastwork against depression" and therefore "collective bargaining is a better policy for the United States than individual bargaining." That policy, he emphasized, was endorsed in the November elections, but since the election the defeated forces have used every trick they can conceive to confuse Congress and the people on the Taft-Hartley Act. He urged trade-union members to write their Senators asking them to vote for the Thomas bill without amendments.

Mr. Harrison sought to meet the argument that the new law would not adequately protect the public against work stopages in vital industries affecting the public interest.

Oil-Country Goods

EXTENSION OF REMARKS
OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. BECKWORTH. Mr. Speaker, as a member of the Petroleum Subcommittee of the Interstate and Foreign Commerce Committee, I have been very interested in the supply of materials used by the petroleum and gas industries. Our independent oil and gas men have had much difficulty in the past obtaining necessary supplies. We have had considerable shortages in oil-country goods. I desire to include in the CONGRESSIONAL RECORD the following letter which relates to the current supply of oil-country goods:

DEPARTMENT OF COMMERCE,
OFFICE OF INDUSTRY COOPERATION,
Washington, March 9, 1949.

The Honorable LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Following your talks with the Secretary and with Acting Assistant Secretary Blaisdell with respect to the oil-country-goods situation, the matter was referred to my office for the purpose of addressing you somewhat in detail on that subject.

In order that one may better understand the present situation in oil-country goods, it is first necessary to review the record of production of such tubular products over the past 13 years:

Production—oil-country goods

	Tons
1936	1,116,000
1937	1,419,000
1938	1,035,000
1939	1,005,000
1940	1,028,000
1941	1,050,000
1942	452,000
1943	675,000
1944	1,127,000
1945	1,118,000
1946	1,095,000
1947	1,399,000
1948	1,675,000

Last December the Interior Department presented the following revised basis of operations as necessary to meet the requirements of the over-all domestic economy for 1949:

	Interior Department objectives, year 1949	
	March 1948 estimate	Current estimate
Wells to be drilled	38,000	43,000
Footage to be drilled	134,000,000	150,000,000
Oil-country goods (tons per year)	1,501,000	1,680,000

At the time of the establishment of the original domestic objectives in 1948, the steel industry estimated its possible maximum production of oil-country goods for that year at 1,600,000 tons. It was determined at the end of the year that the actual production record of both integrated and nonintegrated tubular goods producing mills would be 1,674,876 tons. This production exceeded the stated requirements for 1948 domestic purposes.

It must be recognized that conditions during the past year in many areas of the oil country were far from satisfactory due to maldistribution of the steel products involved. It was alleged by some during the period of greatest hardship that the close customer relationships existing between the large producers of oil-country goods and the larger oil operating companies resulted in the latter's receiving more than their fair proportion of such products. This opinion was, of course, contradicted on many occasions by representatives of some of the producing mills.

The Independent Petroleum Association of America, as you probably are aware, has for some time been pressing for more favorable consideration of the requirements of the smaller and independent drilling operators. At the January 1949 meeting of the National Petroleum Council the Independent Petroleum Association of America presented a report of the results of a survey covering the distribution of oil-field tubular goods to representative oil operating groups in the United States. The essential facts then presented were based on a survey covering 249 oil operators in the United States using 275,082 tons of oil-field tubular goods in 1948. This is admittedly only a fraction of the total number of operators active in that year. Based on an actual production of 1,674,876 tons of oil-country goods, the survey represents the experience of only about 16 percent of the users of such products.

According to the report the weighted average purchases of tubular goods of all those reporting were the following sources:

	Percent
Regular suppliers	61
Gray market	12
Second-hand pipe	11
Conversion	9
Tie-in sales	7

The four groups—according to tonnage requirements—into which this study was divided secured materials from the following sources:

Number of operators	Regular suppliers	Gray market	Second-hand	Conversion	Tie-in
	Pct.	Pct.	Pct.	Pct.	Pct.
104 using 200 tons or less	42	20	25	1	12
96 using 201 to 1,000 tons	55	16	15	4	10
39 using 1,001 to 5,000 tons	64	10	9	6	11
10 using 5,000 tons and over	63	10	11	14	2

In an effort to correct the reported maldistribution of oil-country goods OIC recommended last spring a voluntary program to the Steel Products Advisory Committee covering the then anticipated maximum production of 1,600,000 tons with a certification of usage provision incorporated in the agreement. The purpose of the proposed agreement was to insure the continuing maximum allocation of materials to the integrated and nonintegrated mills producing these products. It also was to help in the equitable distribution of the steel products to all sizes of operators by requiring each order presented to the mills being accompanied by a certification to the effect that the products would be used in the development of a well within a reasonable operating period, for example, 60–90 days. The steel industry did not enter into such an agreement largely because it was considered as involving the policing of another industry. The OIC represented the proposal of a voluntary plan later in the year but the decision of the steel industry remained unchanged.

As to the current situation, reports have been coming to the Office of Industry Cooperation for some time that conditions in the oil fields are improving from week to week. The over-all situation was considered sufficiently improved last month that adjustments downward were considered as possible in the so-called tank and oil-field production equipment program. This voluntary agreement covers the end items used in the well-head equipment group. The units involved have a direct relationship to the amount of oil-county goods used in the gas and oil industry. The contemplated cutback in this program was based on a survey by OIC of the steel producers which are participants to the program in question. A review by the steel mills of the certified orders placed by the consuming participants disclosed the following:

Status of allotments under Public Law 395

Month	Total monthly allotment to industry	Certified tonnage placed	Tonnage not ordered
	Tons	Tons	Tons
January	16,530	13,592	2,938
February	16,530	13,602	3,928
March	[1] 18,530	[2] 15,003	3,527
April	[1] 18,530	[2] 12,330	6,200

[1] Allotment increased 2,000 tons per month to take care of 12 prospective additional consuming participants.
[2] Includes orders of 6 new consuming participants declared eligible to date (of 12 prospective new participants).

Before proceeding with a cut-back in the program the members of the industry advisory committee were contacted in the field for their report on the situation. All admitted a slowing down in well-drilling activities but recommended no cut-back since the situation might be temporary in character. The chairman of the tank and oil field production-equipment program then in the Oklahoma oil country reported to the Chief of the Petroleum, Gas, and Oil Negotiating Division of this office on February 11, as follows:

"As of the present writing it appears development work in the oil industry has been curtailed to a noticeable degree for the first quarter of the year 1949. This slowdown in operations will undoubtedly give the steel mills plenty of time to catch up on the back orders for oil-field tubular goods, and therefore I do not expect the Department of the Interior or the Independent Petroleum Association of America to be so persistent in their demands for more oil-country pipe.

"This decrease in drilling operations has not affected the business of the tank and oil field production-equipment industry to any marked degree as of the present writing; however, we will undoubtedly feel its effect in approximately 2 months' time.

"A large number of companies and individuals who had contracted for conversion steel, or who had actually purchased and had in possession appreciable quantities of oil-country tubular goods obtained at very high prices, have been very anxious to dispose of this material. It seems as though everyone who had any high-priced steel in their possession is putting forth a special effort to unload at the present time."

From the above it would appear that the domestic oil-country-goods situation is materially improved over conditions existent a year ago; in fact, we feel confident that the over-all situation will have improved to such extent that few critical areas may develop throughout 1949. Our staff has recently been advised by active oil operators that the maximum number of wells to be drilled during 1949 may not exceed the 39,000 drilled last year.

Should you have any further questions, I will be pleased to attempt to answer them.

Sincerely yours,

EARL W. CLARK,
Director.

Good American

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of March 16, 1949:

GOOD AMERICAN

Sol Bloom was a good Congressman. He saw America whole, not as a segment bounded by the lines of his voting district. He early caught the vision that America must play a world role for the sake of peace and he intelligently and realistically endeavored to block any backtracking to outmoded isolationism. But he did not go overboard. One of his last acts was to challenge the double talk of Henry Wallace before a congressional committee. Mr. Wallace was delivering a harangue on how Russia was reaching democracy through economic dictatorship. That was too much for Mr. Bloom. "Oh, stop kidding," he hurled at the fumbling Wallace.

He had the measure of Wallace because he himself was an outstanding authority of what an American should be. Put in charge of an effort to observe properly the two hundredth anniversary of George Washington, he made the Nation Washington-conscious on a prodigious and invaluable scale at a time when patriotism was taken for granted. From coast to coast, in every corner of the Nation, the character and accomplishments of the first President were revived through the unstinted energy and funds of one Sol Bloom. For this alone the Nation is indebted to a great Congressman.

Town of Chichester Decries Communism

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Hampshire Morning Union of Manchester, N. H., of March 11, 1949, entitled "Town of Chichester Decries Communism":

TOWN OF CHICHESTER DECRIES COMMUNISM

The good citizens of Chichester—and they are good citizens indeed—stood up at Town Meeting to be counted as stalwart Americans when they adopted a resolution reading: "We, the voters of Chichester, N. H., at our annual meeting on March 8 go on record as opposing the Communist Party and recommend drastic curbs on its activities."

Chichester has made wholly constructive history. Its awareness of communism's menace to this democracy, followed through by its support of effective countermeasures, should be emulated by towns and cities throughout the Nation. For the sad fact is that too many people minimize the danger of Red inroads, even those already made. They dismiss the Communist and his plottings as remote from their own lives and their well-being now and in the future. And even when the threat is recognized, few bother to oppose it, either as individuals or as members of combating organizations.

Chichester's recognition of the situation, however, gets down to grass roots, which is exactly as it should be. What the people of that town have said, in effect, is this:

We of this little republic have been brought up under the blessings of democracy, as were our fathers and their fathers before us. We want to preserve those blessings for our children and their children. We are free to worship God according to our own conscience. Freedom of speech is ours. We can choose our work in life. We come and go as we please. We can vote men into office—and out. Communism makes slaves of people. The Communist Party actually isn't a political party at all. It is a cell of so-called Americans sworn to destroy our freedom by overthrowing the Government which guarantees that freedom. We want steps taken to kill off communism before it kills us off.

If that thinking were unanimous—if only it were unanimous—this Nation would be prepared to meet and overcome Soviet subversive activity. Preparedness in arms is not the only need. Also essential is a people united in thought and action. Chichester's unity in demanding drastic curbs on Kremlin-inspired misdoings is a national must.

How To Start a War

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

HOW TO START A WAR
(By Irving Pflaum)

On page 16 you'll find stories from Walter Lippmann in Washington and Frederick Kuh in London which I urge you to read. They raise the issue which Protestant clergymen have been debating all week in Cleveland: The issue of war or peace. It can be stated thus:

How can our defense pacts become a mortal threat to Russia, the allegedly potential aggressor: Not to communism's assumed plans for future aggression, but a threat to Russian security, an attack on the safety of the Soviet fatherland? How, in other words, could our defensive, regional peace pact bring about a war?

Statesmen, who think they understand why nations fight, have an answer:

A defensive alliance always becomes a war threat when it creates military force in an area too close to the opponent's homeland.

Or, they add, when it completely surrounds the opponent and blocks his legitimate avenues of peaceful growth.

In today's dispatch on page 16, Lippmann (quoting John Foster Dulles in Cleveland) says our Atlantic Pact is heading toward the first mistake. Kuh hints that our other world-wide regional pacts are heading toward the second.

Both cite authorities who have no desire to appease Moscow. But these good Democrats fear Moscow's reaction to an arrangement that brings United States military power to places like Norway and Turkey.

I share their fears. It would be an error to back the Russians into a corner. For, as Lippmann says, we could then bring the cold war to a point where only a solution by hot war is possible.

And this we might do if, under the Atlantic Pact, we based our armed forces in Norway or Turkey.

The Norwegian Government has said it wouldn't permit this as long as Norway is not attacked or subject to threats of attack. But Norway is joining the Atlantic alliance and will receive United States lend-lease military aid.

Might not the suspicious Soviets believe that this means the establishment in Norway of powerful United States air and sea forces, and, so believing, subject the Norwegians to threats of attack?

No one can say this won't happen. And it could be the point when war became inevitable. Hence many American statesmen and militarists who see the danger want to avoid it while there is time.

But we can avoid it only by reassuring Moscow in the clearest and strongest way that we will not use Norwegian territory as a military base.

There must be no misunderstanding here, or about our determination to fight, if necessary, should the Soviets attack their neighbors.

President Truman and Congress can make our intentions so clear that Moscow will have no excuse. Dulles and Lippmann, and the European statesmen who talked to Kuh, may not be able by themselves to stop the car before it skids into the ditch.

One Year of the Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by E. F. Tompkins from the Detroit Times of January 12, 1949:

ONE YEAR OF THE MARSHALL PLAN
(By E. F. Tompkins)

Putting politics and ideologies aside, the new Democratic Congress should reconsider—and in fact should drastically revise—the operations of the Marshall plan.

The desirable purpose of the plan was to make western Europe self-supporting and to improve social and economic conditions in other parts of the world.

It was calculated that in 4 years—by 1952—and with American expenditures of $18,000,000,000, there would be no more need

for American aid which since the war has been costing us billions of dollars a year.

Approximately 1 year's experience, and an investment of more than $4,000,000,000, shows conclusively that the plan is not accomplishing its benign objective.

The 19 countries that are beneficiaries of our bounty are preparing a progress report that indicates anything but progress.

Their report is expected to say that $4,000,000,000 a year is not enough money and that 4 years is too short a time to rescue Europe.

The danger obviously is that, unless the plan is reorganized, such vast donations will be exacted from us, over so prolonged a period, as to bankrupt the United States, without achieving what we have set out to do.

The impending progress report from Europe puts us back where we were when the Marshall plan was first devised.

At that time western Europe was invited to draw up a rehabilitation program which America would endow.

The response amounted to a long-term draft on our production and financial resources aggregating about $30,000,000,000.

This country reduced the total by some $12,000,000,000, and Congress authorized the first year's disbursement, which has now been made.

That sum is irrevocably gone.

Because it went abroad mainly in the form of goods, its disposal has magnified our shortages and aggravated our inflation at home.

And it has not performed its mission in Europe.

Consequently, Europe wants to continue as our dependent for a much longer time than we had ever contemplated and at a vastly greater expense than we can safely sustain.

The situation into which our hillbilly statesmen and our doctrinaire planners have propelled us is really preposterous.

We could not reasonably be expected to save Europe if doing so meant ruining ourselves.

In spite of that, however, we are being inveigled into economic and social dishabilitation with the very evidence before our own eyes that Europe is not being saved.

The truth is, of course, that Europe does not want to be saved from its errors and illusions which are the root causes of its major ills.

Europe wants to be supported by American industry and American labor while it conducts an impoverishing collectivist revolution.

The $4,000,000,000 that we have dispensed could have been of enormous benefit to Europe had it been entrusted not to visionary politicians, but to capable industrial and financial rehabilitation commissions, and had it been honestly applied as new capital to revitalize production, to foster pay rolls in private undertakings, and to substitute sound monetary exchanges for managed currencies.

But these things could not be done well without releasing free enterprise from Marxian bondage—and thereby rewarding and stimulating the productive energies of the people.

And Europe, under its present managers, does not want free enterprise.

Europe—that portion of it that is not Communist—has gone completely Socialist and all of its governments are Socialist governments.

Hence the benefactions of American free enterprise are misappropriated to build socialism in Europe, not to enlarge the areas of democratic freedom and encourage the fruitful efforts of individual initiative.

Actually—and with our misguided connivance—Socialist Europe made certain that this would occur.

In its initial blueprint for accepting American aid, Europe stipulated that our grants and loans should be unconditional—that there should be no interference with Europe's internal affairs.

The demand was equivalent to asking a banker to risk loans, or a philanthropist to bestow charities, without the elementary and protective right to inquire how the funds would be applied—without any assurance that the accommodations would not be abused and that the donatives would not be misapplied and dissipated.

And the New Deal itself was so tainted with socialism that it received Europe's insolent dictation without demur.

The predictable consequence has been the costly failure up to date of the Marshall plan—a failure that can only become greater and more costly unless this country, as the source of its own gifts, either alters the Marshall plan fundamentally or else abandons the misconceived and misdirected adventure entirely.

What Policy for Peace?

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times of March 13, 1949:

WHAT POLICY FOR PEACE?

Last week the Nation's Protestant leaders, at a conference in Cleveland called by the Federal Council of Churches, heard a State Department explanation of the North Atlantic Pact and then declined to endorse it.

The church leaders did not actively oppose the pact, but neither were they ready to approve its principles or details. Their hesitations and doubts, we believe, accurately reflect the mood of a great many Americans.

Americans want peace. The vast majority of them fully understand that in order to maintain peace the United States must assume a leadership in world affairs which involves a commitment to defend by force, if necessary, the security of free nations from armed aggression.

It is no lingering isolationism that disturbs these Americans. Most of us have put side forever the illusion that we can have peace by turning our backs on the rest of the world. But many of us do want more information from our Government as to just what long-range policy we are following.

The core of the problem is the lack of a peace settlement in Europe. As Mrs. Eleanor Roosevelt recently told a Chicago audience, the United Nations is weak because the big powers have never made the peace which UN was designed to keep.

That is the reason for the cold war. That is the reason for the armaments race. That is the reason for the North Atlantic Pact and the revival of military lend-lease.

The core of the European problem is Germany.

Has our Government a clear and coherent policy on Germany? What is the policy? Is it one that will make a peace settlement possible? Is it one that will encourage general disarmament? Is it one that will free Europe from fear?

President Truman and the State Department, this newspaper believes, owe the people frank and full answers to these questions.

Three and a half years ago, when the Potsdam agreement was signed, our German policy was based on the idea of destroying the Nazi Party, eliminating Germany's military potential, reducing its economic power, and then erecting a federal state under which the Germans would run their own country, subject to four-power control of its basic industry.

That was supposed to be the policy of all the big powers at the time of Potsdam. It was taken for granted then that the peace settlement required a single German state which neither the west nor Soviet Russia exclusively controlled—a state over which the west and Soviet Russia would stand joint guard.

Today there are two Germanies, east and west, each under tight control of one of the two parties to the cold war. The division lines seem to harden every week.

Let us recognize that Soviet Russia was the prime factor in bringing about the division. It was Russia's policy in eastern Germany, and her obstruction of economic unification, that led to the split in the first place.

All that is history. The big question today is not how we got into the situation, but how we can get out of it with world peace, not world war.

The reason for getting out of it is that a policy based upon a perpetual partition of Germany seems to imply an indefinite military occupation of Germany, whereas the major objective of a peace settlement must be to bring about the evacuation of central Europe by both Russia and the west, under circumstances that give both west and east reasonable security.

What is our German policy today? Have we abandoned altogether the Potsdam idea of a unified Germany running its own affairs under four-power surveillance? If so, the State Department should frankly say so, tell the people frankly why and explain fully all that this implies.

Are we building up western Germany as a temporary measure only, intending to revert to the Potsdam idea at a favorable time? If so, the State Department should tell us that, and explain how eventually it is proposed to get back on the track.

Nobody knows, of course, whether Russia is now ready to reach a reasonable compromise on Germany. It is known, that ever since last summer Russia has been trying to maneuver the west into a conference on Germany which just possibly might lead to a solution. It is also known that the alternatives to a conference—the pact, the arms race, the continued cold war—may so crystallize the situation as to make later agreement impossible.

Our Government owes the people a convincing explanation of its objectives in Germany and Europe. If it gave that explanation, it might allay some of the doubts and fears which many Americans feel about other aspects of our policy.

A Threat to Child Care in the United States

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Rt. Rev. Msgr. John O'Grady, secretary, National Conference of Catholic Charities, before the Ways and Means Committee of the House of Representatives,

considering H. R. 2892, the Public Welfare Act of 1949, on March 10, 1949:

A THREAT TO CHILD CARE IN THE UNITED STATES

For more than a hundred years the care of dependent, neglected, and delinquent Catholic children has been the basic concern of Catholic charities in the United States. In the early days of the church in this country large numbers of Catholic children were reduced to dependency by the premature death of their parents. Most of the child-caring institutions of the church were built in order to save these children to the faith. In most of the large centers in the United States local governments were willing to contract with Catholic institutions for the care of Catholic children. They recognized that the care of children away from their own homes is a very serious responsibility. The agency that assumes this responsibility is really taking over the responsibility of parents. The same type of child-care programs that were developed by the Catholic Church were also developed by other religious denominations.

In many of the larger communities in the United States it has been a recognized principle for a century or more that Catholic children should be turned over to Catholic agencies for care, that no other agencies can provide the type of religious care that they need. In communities in which Catholic agencies were not developed, large numbers of Catholic children were turned over to governmental or other agencies and were lost to their faith.

Catholic and other religious organizations set up for the care of children away from their own homes have made far-reaching contributions to the welfare of orphaned and neglected children. They have constituted a large sector of American charities and social welfare. They have saved millions of dollars to the taxpayer by their devotion and self-sacrifice. Any effort or movement that undermines the great work of our religious organizations and institutions engaged in the care of orphaned and neglected children would be a serious threat to all the best traditions of American social welfare.

PROPOSED LEGISLATION A SERIOUS THREAT TO CATHOLIC CHILD WELFARE

The Ways and Means Committee of the House of Representatives has now before it a bill (H. R. 2892) which is a serious threat to Catholic child welfare in the United States. If the bill is passed, it will mean that large numbers of Catholic children now under the care of Catholic agencies will have to be turned over to public departments. These children are in Catholic institutions and Catholic foster homes. The church has expended millions of dollars in developing facilities for their care. Government has nothing to gain and everything to lose by discontinuing the use of these facilities and developing purely governmental programs. Such programs would cost the taxpayers several times the amount that is expended in the care of the children at the present time, and would offer no guaranty that the children would receive comparable care. We know the difficulties that governmental agencies now endeavoring to take care of Catholic children experience in finding Catholic homes. In these agencies we almost invariably find a considerable number of Catholic children being cared for in homes not of their own religious faith.

WHAT AMERICAN COMMUNITIES WILL LOSE BY THE WEAKENING OF RELIGIOUS AGENCIES

Proposals for turning over to governmental agencies children now under the care of Catholic charities would mean the weakening of Catholic charities in a large number of communities in the United States. The same is true of other religious child-caring agencies. The work of Catholic and other private children's institutions has been the basis of the powerful appeal made by voluntary social work in the past. If the work of caring for these children is turned over to Government it will mean that all private child care in the United States will lose a very large part of its appeal. We know very well what this appeal has done in keeping the spirit of Christian charity alive among all citizens. How can we maintain our spirit of Christian charity, our spirit of brotherhood, without the appeal of the great charitable institutions for the care of children?

HOW H. R. 2892 WILL INJURE CATHOLIC SOCIAL WORK

The bill before the House of Representatives will injure Catholic work for dependent children because:

First, it proposes to set up a public program for the care of children in every community in the United States. This program will replace a Federal program that was designed to provide governmental assistance to child-welfare programs in rural areas and areas of special need. When legislation for the present program was being discussed in 1935, the thought was that the large centers already had well-developed child-care programs and that it was unnecessary for the Federal Government to interfere with these programs; that the Federal Government should confine itself to areas that were not reached by existing programs, namely, rural areas and areas of special need. The bill now under consideration would bring the Federal Government with all its rules and regulations into every community in the United States to set up governmental programs for the care of children.

Secondly, the bill provides that the States must formulate complete State-wide plans for child care, but it really tells them what kind of plans they must have. If, for instance, as happens at the present time in a number of cities, a juvenile court has been committing children to Catholic agencies, this plan will have to be discontinued because, the bill says, that in every community there must be one agency that has entire responsibility for the care of children. In certain communities the care of children is under a different civilian agency from that charged with the administration of public assistance. Under the proposed legislation this agency would have to become part of the public assistance agency. If a community has decided to use voluntary organizations for the care of children, it will have to set up a public program.

The proposed legislation, H. R. 2892, provides that each and every State must contribute State funds to programs for child care. Now in a number of States it is questionable how far State funds can be used to purchase from religious organizations services for the care of children. This is very clear in the State of Pennsylvania. All funds for the care of children in Pennsylvania are now local funds. Under the proposed legislation Catholic and other religious child-care programs in Pennsylvania would be practically wiped out. While this problem has been solved by constitutional amendments in New York and by court decisions in some other States, it will still be difficult to maintain the purchase of service for the care of children with State funds in a considerable number of States.

The proposed legislation will affect not only the work of local voluntary agencies in the care of children to whose support local public funds are being contributed; it will affect the entire program of Catholic and other religious agencies. It envisages a complete governmental program that will virtually take over the entire field of child welfare. It proposes that governmental agencies take over the care of unmarried mothers, the placement of children for adoption, day care for children, all types of counseling service for both families and children. It really presents to the American people a false picture of the actual reality. We have already had a considerable amount of experience with the work of governmental agencies in dealing with families that are receiving aid to dependent children. Very little social service is being done in this field. Now it would seem more appropriate if the governmental agencies would achieve effective work in the areas in which they are now engaged before entering into new areas.

The enactment of H. R. 2892 would really be an announcement to the American people that the Federal Government now proposes to enter into the entire field of child care in the United States. The broadcasting of this news will in itself do a great damage to voluntary child welfare under religious auspices. The Government will be virtually announcing that it is ready to undertake a program for which it does not have the necessary facilities.

GOVERNMENT MIGHT CONCENTRATE IN AREAS TO WHICH IT HAS ALREADY BEEN COMMITTED

Under the Social Security Act the Government provides assistance to the States for the care of children in their own homes and in the homes of close relatives. The purpose of this aid-to-dependent-children program is to assist in the maintaining of family life. But in spite of the vast sums expended by the Government for the care of children in their own homes we find that more and more homes are being broken up and that the facilities of agencies engaged in the care of children away from their own homes are overtaxed. When Federal assistance was first granted to the States for the care of children in their own homes it was expected that there wouldn't be as much need for the care of children away from their own homes. What has happened, however, is that the governmental agencies engaged in the care of children in their own homes are not providing any program of service for the children or their families. It would be more desirable for the governmental agencies to concentrate in this field rather than to seek a wider field. If they have not developed the necessary competence in caring for children in their own homes how can they expect to develop the necessary competence for the more delicate task of caring for children who have been deprived of care of their own parents.

The Social Security Act provided assistance to the States for child care in rural communities and in communities of special need. But after 13 years we do not yet have any adequate programs of child care in rural communities and in many of our mill and mining towns. After 13 years this field still remains to be cultivated. It is more challenging now than it was 13 years ago.

THE FEDERAL GOVERNMENT AND GENERAL RELIEF

In his message to the Seventy-fourth Congress in 1936 President Roosevelt said: "The Federal Government must and shall quit this business of relief. Work must be found for able-bodied but destitute workers. I am not willing that the vitality of our people be further sapped by the giving of cash, of market baskets, or of a few hours of weekly work cutting grass, raking leaves, or picking up papers in the public parks. We must preserve not only the bodies of the unemployed from destruction but also their self-respect, their self-reliance and courage and determination."

At the time that President Roosevelt spoke, the social-security program had just gone into effect, and this program was designed basically to protect the workers against the hazards of life by a series of benefits based on rights. This was in harmony with the report of the President's Committee on Economic Security made in 1935: "The measures we suggest all seek to segregate clearly distinguishable large groups among those now on relief or on the verge of relief and to apply

such differentiated treatment to each group as will give it the greatest practical degree of economic security. We believe that if these measures are adopted the residual relief problem is apt to be diminished to a point where it will be possible to return primary responsibility for the care of the people who cannot work to the State and local governments." The measures that the President's committee recommended included old-age insurance and unemployment compensation—which were to provide the foundation stones of a social-security program—and supplementary programs including aid to the States for old-age assistance, aid to dependent children, and aid to the blind.

THE PROGRAMS AFTER 13 YEARS

The programs recommended by the President's Committee on Economic Security have been in effect for 13 years. We recognize that old-age and survivors insurance has not developed as rapidly as might have been expected. In the meantime, the public assistance programs have expanded at an enormous rate and as they have expanded the problems of administration have become more and more complex. Anybody who believes that the basic problems of administering aid to dependent children under the Federal-State program has been solved, is really not looking squarely at the facts. Some of us have reserved our criticisms of local administration because we were afraid that it would lead us into a worse situation. We had always expected that aid to dependent children would solve many of the problems of child dependency and delinquency, but we have been disillusioned. We have been disillusioned by the lack of service in families receiving aid-to-dependent-children benefits. On the local level we are endeavoring to get our Catholic groups to participate more actively in the administration of aid to dependent children. These volunteers have to keep constantly calling the attention of the workers in the public agencies to the wholesale neglect of the children in families receiving aid to dependent children. We hear well-founded complaints about mothers who call up the officers of local agencies to ask how much they could get if they divorced their husbands. Sometimes they find that they can get more in the way of public assistance than they can get from their husbands.

Many people all over the country are asking: "How soon are we going to find a substitute for this program of aid to dependent children?" People have asked me, "Why don't you study the Canadian family-allowance system and promote it in the United States—something that is more consistent with the dignity of the individual and the family than our present program?" It was our hope that the extension of old-age and survivors' insurance would take up an increasing number of mothers with dependent children. And it has taken up a considerable number. At the present time 570,592 children are receiving survivors' insurance benefits. On the other hand, a total of 1,176,198 are receiving aid to dependent children. It was hoped that under aid to dependent children child dependency would decrease, but we find that the problems of child care confronting our agencies are increasing rather than diminishing.

I have talked rather frankly during the past 6 months to many county officials charged with the administration of aid to dependent children in various sections of the United States. I have found very few among them who were satisfied with the program. They told me that they were bound by rules and regulations coming to them from the Federal Government, and they presumed from Washington. Among the ordinary citizens in these counties I found great dissatisfaction with the administration of the program. I am honestly convinced that year by year the program is going to become more expensive and more demoralizing to American families. I feel that it is necessary to speak thus severely at the present time, when it is proposed to carry the same program into much larger areas. I feel that the farther away we get from the present public assistance philosophy in serving the needs of American families the better it will be for all concerned. What was back of this statement that the late President Roosevelt made to the Congress in 1936 that "the Federal Government must and shall quit the business of relief." I talked to Harry Hopkins and his associates many times about this question. Why did the Federal Government get out of the business of direct relief? The answer was, "Costs kept on increasing, standards kept going down."

OLD-AGE ASSISTANCE CONTRASTED WITH OLD-AGE AND SURVIVORS' INSURANCE

According to the latest figures, we have some 2,469,000 persons receiving old-age assistance in the United States as compared with 2,254,000 receiving old-age and survivors' insurance. I know that generally speaking the people receiving old-age assistance get more than those receiving old-age and survivors' insurance, but does this mean that they are satisfied? On the contrary, I find very few people receiving old-age assistance that are really satisfied. It has been our hope that more and more of the aged will be covered by old-age and survivors' insurance as much more economical and much more in harmony with the dignity of the American citizen. Here we have a benefit to which the individual has contributed. He considers it his own and in accepting it he feels no loss of dignity and respectability. One cannot fail to note, however, that the ordinary aged person who has been self-supporting all his life is very sensitive about receiving old-age assistance.

The ordinary workers and the ordinary farmers receiving old-age assistance are really products of the depression, but I do not believe that the ordinary middle-class citizen of our country is going to be satisfied with old-age assistance as a means of protecting himself against the hazards of old-age dependency.

A GUIDING PRINCIPLE OF THE FEDERAL SECURITY AGENCY

Implicit in the whole thinking of the Federal Security Agency is the principle that the Federal Government is fundamentally responsible for getting to every American family everything that it needs on the basis of a careful and detailed budget analysis. Apparently the Agency does not accept the guiding principles of the Social Security Act. It is leading us more and more toward the concept of needs in contradistinction to a certain minimum protection against the basic hazards of life.

Let us think for a moment what this basic responsibility for supplying all the needs of American families on a budget basis would mean for the National Government and for the people of the United States. It would mean an analysis of the resources and needs of every family that needed assistance. On the basis of this principle several million wage-earning families would have to be included. As a matter of fact, at the present time many families receiving aid to dependent children are getting more than their neighbors who are working for wages. Of course, one can see that these families are in need. They can't supply all their budgetary requirements. This again assumes that they are bankrupt, that they do not have any initiative left. One might ask, what will this general subsidizing of the wage system do to wages? Will it not encourage lower wages? Again, what will it do to families? How far will it tend to demoralize family life in our country? How far, moreover, is it practical to apply the type of needs test indicated, to four or five million families. The resources and needs of families change from time to time. We would have to have a continuous study of families in order to apply the needs test effectively. It would require an army of workers to carry out the principles of the needs test.

MOUNTING COSTS OF PUBLIC ASSISTANCE

I am sure that the Ways and Means Committee of the House of Representatives will want to understand something of the costs of an enlarged public-assistance program. For the fiscal year 1945–46 Federal grants in the amount of $439,132,000 were certified for these programs; for the fiscal year 1946–47 Federal grants in the amount of $613,831,000 were certified; for 1947–48, $775,602,000 was certified. The estimate for 1949 is $842,961,-114, and for 1950 it is $1,078,000,000. It should be remembered that these increased expenditures have been made in a period of relatively full employment. One can readily appreciate what will happen if the Federal Security Agency extends its effort to the larger fields contemplated under H. R. 2892. One can readily hazard a guess that the relief expenditures of the Public Assistance Division will exceed $2,000,000,000 a year, and they will not stop at this point. They may well be increased by another billion within the next 5 years.

NATIONAL CONTROL OVER FAMILY LIFE IMPLIED UNDER H. R. 2892

I would like for a moment to examine another very important implication of the responsibility which the Federal Government assumes under H. R. 2892. Under this proposed legislation the Government is virtually going to guarantee every faimly what it needs on a budget basis. Every family that receives assistance under this formula will virtually be taken over in bankruptcy. What does this mean from the standpoint of national control over family life?

I know that the Federal Government has been trying to get away from this responsibility and it has been trying to get the State and local governments away from a serious consideration of its implications. Charges and counter charges have been made in community after community in the United States that the funds given to families have been abused and that the money given for the support of children is not used for their benefit. I have heard these charges made in one city after the other but the agents of the Government keep saying, "We are not responsible for the way in which families live. We have no responsibility for the way they spend the money we have given them." This certainly is a new concept in the administration of relief. I suppose it is an effort to get away from trying to control the lives of the families, but what are we going to do about the situation? We cannot overlook charges of neglect of children in large numbers of families that are supported by Government funds.

The difficulties to which we have pointed will be greatly multiplied if the Government should take over the larger part of the relief field.

When the Social Security Act was passed by the Congress, grants-in-aid were provided to the States for certain well-defined areas of public assistance, including the aged, dependent children, and the blind. It was assumed that as the insurances developed, the need for these categories would decrease. Nobody envisioned the expanding program that has been developed, especially through years of full employment. From the way in which the program is developing now it is beginning to look as if the Federal Security Agency wants to change the entire pattern, that it wants to give us a relief program rather than an insurance program. Many people have been raising this question. They have stated also that most of the thinking about social security has been done by a few people in the Agency. If one disagrees with them, he is supposed to be very unorthodox to say the least.

Some of the advisers of the Federal Security Agency on the outside do not make any secret about their desire to substitute a complete public-assistance program for a social-insurance program. This indeed would be a great tragedy for the American wage earner and for the American people as a whole.

I know some of our conservative brethern believe that relief is less expensive than social insurance; they believe that relief will be governed largely by local standards, but once we get the program envisaged by H. R. 2892, I doubt if assistance administration will be any longer determined by local thinking.

VARIATIONS BY STATES IN THE NUMBER OF PERSONS RECEIVING OLD-AGE ASSISTANCE

There is a great variation in the number of persons receiving old-age assistance in the States. Of every 1,000 persons over 65 years of age in Louisiana, 791 receive old-age assistance; in the District of Columbia, 47; in Oklahoma, 593; in Delaware, 58; in New York, 97; in Colorado, 464. This must mean that there is a great deal of variation in the needs test as it applies in the States mentioned. The needs test as interpreted by the Federal Security Agency means a complete study of the resources and needs of the individual and the making of a definite budget. However, the legislatures in States having a large number of persons receiving public assistance write a good part of the needs test. They try to define what resources are. They say that an insurance policy of a certain amount should not be considered; that a house valued at less than a certain amount should not be considered; that cash of a certain amount should not be considered. In other words, there is a struggle on between these States and the Federal Security Agency. The States want a pension; the Agency wants assistance. Now in the program envisaged by H. R. 2892 all the Federal grants are based on a general-assistance category. It would be very interesting to watch the reactions of the States that have set up what is virtually an old-age pension. Would they be satisfied to return their old-age-assistance recipients to a general-assistance category where they would receive only the same consideration and have to pass the same needs test as the recipients of general relief?

PROVISIONS FOR MEDICAL SERVICES

H. H. 2892 would set up a system of grants-in-aid to the States to provide medical assistance which is defined as "medical services for needy individuals, provided by the State agency through payments to persons, agencies, or institutions furnishing or procuring such services, but does not include medical services for individuals living in a public institution except as patients in a medical institution."

This would bring the Bureau of Public Assistance of the Social Security Administration and the State departments of welfare into a very large sector of medical care in the States. It is based on the assumption that medical services in the States at the present time are very inadequate and that grants-in-aid are necessary to enable local agencies to secure medical care for relief clients.

On the whole, medical care in communities in which there are adequate facilities, is fairly good. In the communities that I visited in Wisconsin, Iowa, Nebraska, and Illinois during the past 6 months, I found that medical care is looming very large in local expenditures. The greatest difficulty I find in other areas is the lack of adequate facilities for medical and hospital care in local communities. The hospital facilities are inadequate; the medical facilities are inadequate. Assuming there is an unmet need, there is a question whether this need should be met by adding to the responsibilities of State and local welfare departments. Isn't this definitely a health problem? We already have two divisions of the Federal Security Agency now interested in health, namely, the Public Health Service and the Children's Bureau. They are working with the States on health problems. Will this put a third division in the health field? Moreover, it is fairly well recognized today that our first step in any health program is to provide more adequate local facilities. We need more hospitals, more nurses, more doctors. We need more health centers in areas in which there are virtually no hospitals and no facilities for medical care.

One may very well ask today, in view of the general debate on a national program for medical and hospital care, whether the best approach from the standpoint of the Federal Government in dealing with the medically indigent would not be to concentrate for the time being on providing more facilities. I believe that it can be said that in the ordinary communities in the United States, outside of certain areas that do not have facilities, the medically indigent are receiving better medical and hospital care than the ordinary wage earners.

GENERAL PUBLIC ASSISTANCE ON THE FEDERAL LEVEL UNNECESSARY AT THE PRESENT TIME

At the end of 1948 some 33,000,000 people were covered by unemployment compensation. This number of people, therefore, with their families, were protected against the hazards of temporary unemployment. In three States—California, Rhode Island, and New Jersey—we have provision for temporary disability due to ill health. The chances are that before the adjournment of their present sessions a number of other State legislatures will have made provision for temporary disability. We have also in the States, rehabilitation programs which take care of a sector of the physically handicapped. We have some 15,000,000 people included in veterans benefits of one kind or another. We have the prospects of larger coverage under old-age and survivor's insurance to cover the permanently handicapped. We have the prospect of a large housing program that will help to improve the standards of life of large numbers of people in the United States. We have voluntary health protection of one kind or another covering 53,000,000 people. There is no reason therefore why the Federal Government should embark on a greatly expanded program of public assistance which will cost the people of the United States another billion dollars.

I am sure that nobody is looking ahead to public assistance as a means of protecting the workers against the hazard of continuous unemployment. We do not need to look ahead to any continuous unemployment during the next year. Even if we should have a large volume of unemployment, public assistance would be the poorest remedy we could devise for it. We learned that from our experience in the early 1930's.

It will be much sounder for the Federal Security Agency at the present time to look ahead to ways and means of improving the administration on the Federal level of the various benefits committed to its charge. A great deal of improvement is needed especially in the administration of aid to dependent children. There is general dissatisfaction throughout the country with this program as it is presently administered. The Federal Security Agency should devote itself to studying ways and means of preventing the abuses that have arisen, of providing more adequate service for the families receiving aid to dependent children, and of preventing that process of deterioration which is affecting the lives of so many of these families at the present time.

Under title V of the Social Security Act, the Children's Bureau is charged with the administration of child-welfare services in rural areas and areas of special need. The Children's Bureau might very well now study its experience during the past 13 years. Why is it that there is so little constructive social service in our rural communities? The Children's Bureau is expending considerable money at the present time in the training of workers in the field of child welfare. How many of these workers are qualified to deal with the programs with which the Children's Bureau is charged? How many of them are qualified for work in the country? If this work in the country is not undertaken by the Federal Security Agency through the Children's Bureau, it may be that the people of the United States will have to devise other means of providing welfare programs for the large number of families that need service in our rural communities. We cannot go on without a more adequate social-work program in the country. The Farm Security Administration made an excellent beginning in this field but its operations have been restricted and now there is nothing to take its place.

I am sure that our American wage-earners look to a social-insurance program that is in harmony with their dignity, that gives them a certain amount of protection against the major hazards of industrial life. They do not want a needs test. They do not want to admit that they have to be taken over in bankruptcy. They have a great deal of initiative and resourcefulness on their own. They want to be able to walk into the social-insurance office and secure the benefits that are coming to them as a matter of right; benefits to which they and their employers have contributed; benefits which are really a continuation of their wages during the periods in which they can no longer work.

Amendments to United Nations Charter

EXTENSION OF REMARKS
OF
HON. ABRAHAM RIBICOFF
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. RIBICOFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I hereby include a proclamation issued by the Honorable Chester Bowles, Governor of the State of Connecticut, relating to a referendum held in the State of Connecticut at the last election. The electors of the State of Connecticut, by an overwhelming majority, indicated their intention that the representatives of the State in the Congress urge the President and the Congress to take the lead in calling for amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war.

In pursuance of this referendum, a resolution, known as Senate Joint Resolution No. 15, has been introduced into the General Assembly of the State of Connecticut. This resolution urges the Connecticut General Assembly to make application to the Congress to take the necessary steps, under article V of the Federal Constitution, to amend the Constitution of the United States in such a manner as to make it possible for the United States to join a world federation which is derived from a strengthened United Nations, when and if it is set up.

It is my hope that any action which leads toward the strengthening of the

United Nations, so that it may more successfully grapple with the problem of assuring world peace, be given the serious consideration it deserves.

The proclamation of the Governor of the State of Connecticut is as follows:

PROCLAMATION BY HIS EXCELLENCY, CHESTER BOWLES, GOVERNOR OF CONNECTICUT

Whereas the General Assembly of the State of Connecticut, duly convened in special session at Hartford in August 1948, did enact the following act which was duly approved by the Governor on August 26, 1948:

"An act concerning question concerning charter of United Nations: Section 1871 of the 1947 supplement to the general statutes is repealed and the following is substituted in lieu thereof: The following question shall be voted upon at the general election to be held on November 2, 1948, and the designation thereof hereinbelow provided may be placed on the same ballot or voting machine as the names of the candidates to be voted for at such general election: "Do you, as a sovereign citizen of Connecticut and the United States of America, direct our representatives in the National Congress to urge the President and the Congress to take the lead in calling for amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting and enforcing laws to prevent war?" The designation of said question which shall be used on ballots and voting machine ballot labels shall be "Question re recommendation providing for strengthening of United Nations to prevent war, Yes" and "Question re recommendation providing for strengthening of United Nations to prevent war, No," and, in voting machine towns, shall be provided for use in accordance with the provisions of section 722 of the general statutes; and, in towns which do not use voting machines, the vote shall be taken in the manner provided by section 106f of the 1941 supplement to the general statutes. Said question shall be voted upon in accordance with the applicable provisions of law concerning voting upon the acceptance of amendments to the constitution of this State"; and

Whereas a copy of said question was, in pursuance of said act, transmitted by the secretary of the State to the town clerk in each town in the State, and said question was presented to the inhabitants thereof for their consideration, at a town meeting in each town, legally warned and held for that purpose on the second day in November 1948; and

Whereas pursuant to said act, the secretary, the treasurer, and the comptroller, as the board of canvassers, did, as provided by law, duly canvass said votes and did then transmit to the Governor their certificate under their hand in the words and figures following to wit:

"To His Excellency, JAMES C. SHANNON,
"Governor:

"We, the undersigned, having been designated by law to canvass the votes cast in favor of, and against the proposed world government referendum by the electors of this State at town meetings warned and held for the purpose of submitting said referendum to said electors, as specified by law, do hereby certify that we have duly canvassed said votes which were received from all the towns in this State as by law provided.

"The whole number of votes received and counted relative to said proposed world government referendum was 155,757, of which number 141,625 were in favor of the adoption of said referendum and 14,132 were against the adoption of said referendum.

"FRANCES BURKE REDICK,
"Secretary.
"JOSEPH A. ADORNO,
"Treasurer.
"FRED R. ZELLER,
"Comptroller."

And whereas it appears from said certificate that a majority of said votes are in favor of directing our representatives in the National Congress to urge the President and the Congress to take the lead in calling for amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war.

I do, therefore, herein so declare; and I do herein declare that a majority of the electors present at the town meetings aforesaid have indicated their intention that our Representatives in the National Congress urge the President and the Congress to take the lead in calling for amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war.

In testimony whereof I have caused the seal of the State to be hereunto affixed and have hereunto set my hand at Hartford on this 24th day of February in the year of our Lord 1949, and of the independence of the United States the one hundred and seventy-fourth.

CHESTER BOWLES, *Governor.*
By His Excellency's command:
[SEAL] WINIFRED MCDONALD,
Secretary of State.

Opportunity for GOP

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Tucson Star:

OPPORTUNITY FOR GOP

President Truman's address on the occasion of the Jackson-Jefferson Day dinner will give the country a good chance to see whether there is a Republican party, or Republican leadership, ready to play the necessary role of an opposition party. The President has handed the Republicans a perfect issue by demanding the passage of his vast legislative program and threatening to take the issue to the people of the country by a Nation-wide speaking tour. The Republicans, the opposition, could not ask for a better opportunity.

If, for instance, the people of the country realized the implications of the program the President recommends, what it means to the people out in the grass roots, the chances are that it would undergo a profound modification. The President in his proposed social and economic proposals is in effect asking he be granted virtually dictatorial powers over economic activities, and for so-called social legislation that will set up within one year new and gigantic government bureaucracies to regulate what are today numerous normal activities.

How many housewives realize that, under the extension of social security legislation, they will have to keep a set of books on household help they hire?

How many realize that they will have to pay taxes, make deductions from the pay to household help, and make regular reports to the collector of internal revenue?

How many small-business men realize that they, too, will face this same new burden of paper work and tax payments?

How many farmers realize that they, too, are included? How many of them realize that they, too, will come under the minimum hourly wage?

How many wage earners and salary workers realize that under the so-called health insurance program a new withholding tax will be made to pay for the bureaucratic insurance administration they will get in return?

How many workers realize that they will be called upon to pay for the medical attention that malingerers and others who "enjoy bad health" will get?

How many realize that this proposal will set up in every community of the country, not new hospitals nor more doctors, but a Federal bureaucracy to manage the routine of illness which is now carried on without any government expense.

How many realize that the proposed housing program calls for the creation of another vast bureaucracy, and the implied assurance that new and low-rent housing automatically follows from such a bureaucracy?

Here in Tucson the next year will undoubtedly show that the housing emergency, which follows every war, has been solved, and solved quicker than it would be if bogged down in the swamp of a government bureaucracy.

How many people of the country have stopped to note the lack of strikes under the Taft-Hartley bill, the increased productivity and the beginning of the lowering of prices?

How many have noted that labor unions are prospering, and so are their members, despite the charges that labor is being enslaved?

Those are just some of the ways the President's program is going to affect the people out in the grass roots of the country. But there are others.

The President's program with its vast allocation of personal power to him, and its vast extension of government controls over normal life, in effect forms a foundation out of the life of a free society.

Those who doubt this have only to look at history, both ancient and contemporary, to note how usurpation by government of authority over normal economic activities inevitably leads to an authoritarian state and its control over personal liberty and eventually personal thought and worship.

That is the challenge the American people face today.

Are they going to rise to meet it?

If they are, it will require political leadership opposing the President's program.

Normally that is the duty of an opposition party in a free society.

Are the Republicans going to meet the issue? Or are they going to do as they have been doing under present and past leadership and offer, "Me too, but not so much"?

Unless the Republicans openly and unapologetically organize opposition to the President's program, it will, through sheer default, prevail.—Tucson, (Ariz.) Daily Star.

Waterways of the Commonwealth of Massachusetts

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. HESELTON. Mr. Speaker, the Republican delegation in the House of Representatives from Massachusetts has instructed me, as its secretary, to insert in the Appendix of the RECORD copies of resolutions, petitions, and memorials

which may be sent to the entire membership of that delegation.

Under leave granted me to extend my remarks in the RECORD, I now insert the following resolution of the General Court of Massachusetts relative to the development of the waterways of the Commonwealth of Massachusetts:

Resolutions relative to the development of the waterways of the Commonwealth

Whereas the general court of Massachusetts favors and urges the development of the waterways of the Commonwealth, wherever feasible, for the production of hydroelectricity to free the Commonwealth from dependence on coal and other fuels which are scarce or nonexistent in the Commonwealth, to stimulate industrial enterprises in the Commonwealth, and to encourage the establishment of new enterprises in the Commonwealth: Therefore be it

Resolved, That the General Court of Massachusetts urges the Congress of the United States to enact such legislation and to take such other action as may be necessary to effect said development of waterways for the production of hydroelectricity to be distributed through private enterprise and municipal power and light plants; and be it further

Resolved, That the General Court of Massachusetts invites and urges the cooperation of the five other New England States and the State of New York in the development of waterways coming to the New England States and the State of New York; and be it further

Resolved, That copies of these resolutions be sent forthwith by the State secretary to the Presiding Officer of each branch of Congress and to the Members thereof from this Commonwealth to the Governor of each of the five other New England States and the State of New York, and to the presiding officer of each branch of the legislature of each of said States.

In house of representatives, adopted, March 2, 1949.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted, in concurrence, March 10, 1949.

IRVING N. HAYDEN,
Clerk.

Greek Kids Sing of Hate for United States

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

GREEK REFUGEE KIDS SING OF HATE FOR UNITED STATES

(By Alex H. Singleton)

BELA CRKVA, YUGOSLAVIA.—They sang as they marched—this Tom Thumb army of Greek refugee children who have found food and shelter in Yugoslavia away from their country's civil strife.

The songs were songs of hate. A youthful voice called the tune. A half thousand youthful voices, boys and girls, 7 to 14 years old, picked up the melody.

MARCH INTO YARD

"Out with Anglo-Americans from our country," they sang. "We don't want them. The Anglo-Americans, the new occupiers, came to our country and helped the Monarcho-Fascists kill our countrymen."

A thousand boots clumped with precision into the courtyard behind the spic and span white buildings which house 560 of approximately 11,600 Greek children in Yugoslavia.

Clad in powder-blue wool uniforms, modeled on GI battle dress, the youngsters marched three abreast from classroom to courtyard for their daily drill and organized folk dances.

Great Britain has charged many of these youngsters were kidnaped. Chiefs of Greek partisan factions denied this. So did Yugoslavia. Both claimed the youngsters were given sanctuary to save them from bombs and bullets.

FARING WELL

The Yugoslav information office arranged an inspection trip for foreign corrrespondents to the refugee center here, 80-odd miles from Belgrade. The Red Cross of Yugoslavia, which pays the bills, says the children's mental and moral training is left up to the Free Greeks.

The young Greeks are obviously looking good.

They are well-scrubbed and plainly but adequately fed. They are warm, in well-made clothes.

Nikola Georgiades, once a school teacher in Greece and now administrator of the children's center for the Greek commission, said education is designed primarily on the three R's.

Picketing the Courts

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Times-Picayune:

PICKETING THE COURTS

From a resolution unanimously adopted in Chicago on February 1 last by the American Bar Association's House of Delegates we quote this salient paragraph:

"Be It Resolved, That the American Bar Association condemns the picketing of courts as an interference with the orderly administration of justice, the purpose of which can only be to influence, intimidate, and coerce the courts in connection with matters prospective or pending before them, and such picketing constitutes a clear and present danger, as well as a major threat, to the integrity and independence of the judiciary and to our form of government."

The practice thus strongly condemned seems to be spreading. Courts have been picketed in Portland, Oreg., in San Francisco and Los Angeles, Calif., and now in New York City as one of the circus features of the current trial of 11 Communists indicted by a Federal grand jury.

These mob manifestations obviously can have no other purpose than to intimidate or influence trial judges, court officers, and juries. If that purpose could be accomplished, the administration of justice in this country would suffer irreparable loss in character, reputation for impartiality and in public confidence. Mob coercion of our courts would break down the principles and guaranties embodied in our Federal Constitution thus work disastrous change in our form of government.

No thoughtful and patriotic American can seek, or condone, that calamity. Whatever preventive action may be necessary should be taken by the courts themselves or by Congress now, before this subversive practice spreads further. The American Bar Association's protest and warning should stir these authorities to remedial action which can be sure of the support of public opinion.

Louisianians will note with special interest that the Louisiana State Bar Association was the first of such organizations to express its condemnation of court picketing, and that the resolution just adopted unanimously by the national association's house of delegates was presented there by two representatives of the Louisiana bar, Messrs. Cuthbert S. Baldwin and LeDoux R. Provosty.

The Current Indomitable Might of the Air Force, the Development of the Rocket, the Ram Jets, the Turbo Jet, the Mammoth B–36, and the Globe-Encircling Flight of the B–50 Bomber Are All Tributes to President Truman's Sagacity and Farsightedness in Appointing the Hard-Driving Hon. Stuart Symington Secretary of the Newly Established United States Department of the Air Force

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. BOYKIN. Mr. Speaker, a few short weeks ago we read much in the press and heard considerable misgivings over the air as to our ability to carry out strategic bombing missions unless more billions of dollars were voted the Navy to build superairplane carriers or else acquire more airfields and bases abroad.

Mr. Speaker, today, thanks to the youth, the verve, the drive, the will to do their bounden duty to insure both our national security and the American way of life, the United States Air Force has proven that today American air power is truly world-peace power.

Today the whole world acclaims another new and further accomplishment of our great Air Force.

Public demonstration has now been made that the United States Air Force medium and heavy bombing planes can actually roam the world at will. Furthermore, it has now been proven that in doing so and in the event of war they can ride so high in the heavens and above the earth, that they are practically without danger from either anti-aircraft guns or fighter plane interception.

Mr. Speaker, howsoever we might differ with respect to our political, our social, or our economic beliefs—whether we are pro-Army, pro-Navy, pro-Air or even anti-Air Force—every member of this

House thrilled upon learning of the marvelous feat of the United States Air Force in encircling the globe in a B–50 bomber.

Mr. Speaker, ponder on the fact that the B–50 has a loaded weight of 120,000 pounds, that it is a highly intricate precision machine, a superfortress and a worthy successor to the war famed B–29, a machine made of steel and of iron, of copper and lead, of tin and brass, of aluminum and magnesium, of cotton and wool, that it took off from the earth, roared eastward at an average speed of more than 4 miles a minute out across our great South country. It passed overhead within a few miles of this Capitol and then raced onward across the Atlantic. It had a rendezvous with a mother ship—a B–29 aerial tanker. High in the heavens, away off in the far-flung desert of Saudi Arabia and above the clouds, her gas tanks were refueled as she continued on her course.

I am advised that security reasons alone preclude disclosure as to the program and method of refueling from continental American bases.

Mr. Speaker, with several more such refuelings the United States Air Force B–50 did not put down until after encircling the earth she landed back in front of her own hangar at the headquarters of the Seventh Heavy International Bomber Wing located at Carswell Field in your own great State of Texas.

Its superb crew actually returned that ship with thousands of gallons of spare gas in her tanks to its home base within 2 minutes of the time it was scheduled to return.

I want you to envision the brain, the brawn, and the scientific skill of the American people built into the engines that powered that great flight. I want you to give consideration to the skills and the background of the young men who flew that ship.

They were skilled as navigators. They were skilled as pilots. They were skilled as bombers. They were so adept in communications that they kept that ship throughout its entire course in constant and absolute communication with its command, by use of an electronic device using scrambled frequencies of unique and peculiar wave lengths that defy detection and the most avowed attempts at interception.

Now, Mr. Speaker, when I say absolute communications, I mean to say that bombers of that type, when on strategic missions are equipped with one of the marvels of radio communications, a system that enables a crew to make its flight free from any thought of possible interception of its communications by any possible enemy.

I want you to envision with me the skill, the knowledge of navigation, mathematics, climatology, meteorology, astronomy and a host of other subjects possessed by the men that flew this ship on that remarkable journey, and around the world, in so short a time.

Moreover, Mr. Speaker, that was not a test flight. It was not a publicity or exhibition stunt put on by the United States Department of the Air Force.

I want you to know, however, that it did more than make good the statement of the Honorable Stuart Symington, Secretary of the United States Air Force, when he declared some several months ago that—

> We have learned that we can fly anything—anywhere—anytime—climate, mountains, oceans, weather—they cannot stop the United States Air Force.

Mr. Speaker, may I also recall to you and to my every colleague that under date of April 27 last year, and but 11 months ago, Secretary Symington, in an appearance before the Appropriations Committee of the House, told the members of that committee of what the Air Force planned to accomplish with the money which he asked them to provide for building the new B–50.

Well, Mr. Speaker, he made good what he said.

Refueling airplanes in flight is not a new practice to our Air Force. More than 20 years ago, Gen. Tooey Spaatz, the former Chief of Staff of the United States Air Force, himself conducted a refueling test. In that test and in "one of the crates" which he flew in those days—he remained aloft—and in continuous flight over the city of Los Angeles for a total of more than 151 hours.

Mr. Speaker, I am authoritatively advised that the B–50 flight which terminated at Forth Worth yesterday was not conducted or flown by any "high brass" of the United States Air Force. It was, in fact, simply the result of the ordinary extended daily practice flights such as the Air Force has been making in the United States Air Force training centers for months past. It was flown in its entirety by a regular and ordinary operating bomb crew consisting of 14 men and by but one of hundreds of such crews that are capable of repeating that same performance at any hour of any day or night.

I am satisfied that the eyes and ears of the world looked, listened, and marveled at this latest unsurpassed accomplishment of our Air Force.

Democratic loving peoples in every nation of the world have long since come to recognize the peace that would come to them with the invincibility of America in the air.

They will soon come to learn that American air power means not alone security to the peoples of the United States, but that it means peace—to themselves and to all the people of the earth.

Mr. Speaker, at about the time that the B–50 bomber was approximately halfway around the globe there was deposited with the Clerk of the House a report from the Commission of the Organization of the Executive Branch of Government, or the Hoover commission. The burden of that report pointed out: "Interservice rivalries, lack of teamwork, 'extravagance in military budgets, and waste in military expenditures' were noted by the Commission."

And so, Mr. Speaker, I am not one who views with any alarm whatsoever slight evidences of departmental rivalry such as we see expressed at the Army-Navy football game.

There real sportsmanship is expressed by the President of the United States. As Commander in Chief, he sits first on one side of the field with the Army for one-half of the game and then sits on the other side of the field with the Navy in the other half of the game.

Now, I am not saying that I for a moment would tolerate the least extravagance, waste, or the unwarranted expenditure of a single dollar of the taxpayers' money in order to foster petty jealousies or prejudicial departmental contentions, whether in carrying out their several missions or in trying to gain any undue percentum of congressional appropriations.

So far as economy of operations is concerned, however, I don't think that is a problem to which this House will have to address its attention with respect to any expenditures made by the newly created Department of the United States Air Force.

All one must do to satisfy himself as to that point is to critically scrutinize and evaluate the business administrative principles that have been inculcated into Government with the establishment of that new arm of our national defense.

Under the fiscal policies laid down by Secretary Symington every last dollar budgeted in the Department of the Air Force is subjected to a highly integrated and vigorously imposed system of cost control.

Likewise, Mr. Speaker, every dollar expended is equally subjected to most rigorous and constantly continuing system looking toward the control of costs in the expenditure of every dollar. Interdepartmental allocation of funds insofar as the Air Force is concerned, is not made to the branches of service per se—but commensurate with their operations, each branch is given the funds necessary to carry on the work that is to be performed by it in their accredited operation.

Certainly, Mr. Speaker, these new economic and administratively sound business principles now made applicable to the administration of governmental expenditures is an action program that we some day hope to see established in all governmental activities.

Moreover, Mr. Speaker, the newly established system of purchasing and procurement that has been adopted by the United States Air Force is a system that meets with the commendation and support of every Member of the Nation's Congress.

Efficiency and economy both in procurement and in operations have been the battle cry of Stuart Symington since the day upon which he took his oath of office. I, for one, feel that there is no private corporation in these United States which enjoys a more efficient, prudent, economic administration of its business affairs—through the application of progressive business principles—than does the newly created Department of the Air Force.

Mr. Speaker, it was the proven executive and administrative abilities demonstrated in the reorganization and management of private business enterprises that caused President Truman to appoint Stuart Symington for first Secretary of the newly created Department of the Air Force.

The current and indomitable might of our Air Force, the terrific speeds which have been achieved—the tremendous heights at which our aircraft can now fly, the veritable catalog of airplane types—military and mechanical improvements—the reduced costs—improved armament—the patent vigor and the drive that has been installed into this new infant department of our Armed Services—I hold are all directly attributable to the sagacity and farsightedness of President Truman in selecting Stuart Symington to organize and perfect the new Department of the Air Force.

That the Secretary of the Air Force has done a good job is acknowledged by every member on both sides of the aisle. Through him and the United States Air Force—President Truman is building peace of the world—first and foremost in the program to which President Truman has consecrated himself.

Mr. Speaker, let me quote a few lines from an editorial entitled "Around the World Without a Stop" carried in a recent edition of the New York Sun. I quote:

But the significance of this training mission, so quietly launched, so calmly completed, so dispassionately described, will not be lost on any part of the globe so neatly girdled.

Now, Mr. Speaker, I did not intend to take up the time of this House for so long a period in addressing myself to the great feat performed by the Air Force in encircling the globe.

Certainly there is no private business in the United States annually expending billions of dollars which is better or more efficiently managed than is our Air Force.

As to the other phases of the question of unification of the Armed Services, you all are going to hear more on that subject from me at some later date.

Why I Oppose an MVA Patterned After TVA

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. JENSEN. Mr. Speaker, during the past month or so several of my constituents have written me requesting that I inform them of my position regarding a Missouri Valley Authority like TVA.

Under leave to extend my remarks in the Appendix of the RECORD, I include an article from the Washington Post of March 13, 1949, and my letter in answer to those who have written me regarding an MVA, so that all may read and know why I am unalterably opposed to the establishment of powerful river valley empires to take the place of our 48 free and sovereign States, which comprise our great Republic:

[From the Washington Post of March 13, 1949]

TVA-TYPE PROPOSAL FOR NORTHWEST MARSHALS FORMIDABLE ARRAY OF FOES

(By Tom Humphrey)

PORTLAND, OREG., March 12.—The proposed Columbia Valley Authority, modeled after TVA, may look wonderful to Representative HUGH MITCHELL (D., Wash.) and his CVA League. But it doesn't look that way to the Governors of five of the seven CVA States, or to Oregon Congressmen or Northwest newspapers or to approximately 100 agricultural, industrial, and promotion groups of the Pacific Northwest. On the contrary, they're asking:

"What's TVA got that we haven't got?" And they're prepared to fight it out in the region and in Congress.

The CVA Leaguers have been having a field day since President Truman made his surprise CVA declaration and asked a five-agency committee to put it in legislative form. They're rallying around Representative MITCHELL, who has tried repeatedly to interest Congress in a TVA for the Columbia Basin.

They figure that what's good for the Tennessee Valley would be good for this region. And they're saying that with a CVA this region would get more Federal money, there would be no more floods like those of last year and there would be no power shortage.

Grange masters of Oregon and Washington, who will buy anything with a public power label on it, are whooping it up. Several labor leaders have climbed on the bandwagon. Representatives MITCHELL and JACKSON of Washington and Senator TAYLOR of Idaho, third party running mate of Henry Wallace, can't wait for Mr. Truman's committee to report. They're for introducing their own CVA bills.

Finally, Bonneville Power Administrator Paul Raver, strong advocate of coordinated development of the Columbia Basin but lukewarm advocate of CVA, went to Washington, talked to his boss, Interior Secretary Krug, former power manager for TVA, then came out wholeheartedly in favor of a regional agency in the nature of a CVA.

BACKS ENGINEERS' PLAN

And right there the opposition came to life. Governor Douglas McKay of Oregon demanded:

"What's the matter with the way we're doing now?

"I cannot agree with any plan for a Columbia Valley Authority under which the States surrender their autonomy and our natural resources pass into complete control of Federal bureaus," he wired President Truman. McKay urged the President to let the Army engineers complete the power, flood-control and navigation projects outlined in their master plan for the Columbia Basin.

Gov. C. A. Robins, of Idaho, said: "On the basis of past performance, of knowledge both special and general of the entire area, it is my belief that existing agencies can best develop the Columbia Basin."

Gov. Arthur B. Langlie, of Washington, started a backfire against CVA by sponsoring a senate bill giving his State authority to go into the power business at the wholesale level. He declared it would protect the State against the overpaternalistic interest of Federal Government.

Gov. Vail Pittman, of Nevada, and Gov. C. A. Crane of Wyoming, parts of whose States would be in the proposed 279,000-square-mile Columbia Valley Authority area, also oppose it. That makes five out of the seven governors on record against valley-authority proposals. Gov. J. Bracken Lee, of Utah, is expected to clarify his position soon, and Gov. John Bonner, of Montana, ran on a platform of Montana people.

MUNICIPAL OPPOSITION

Heads of the three outstanding municipal power agencies of Oregon and Washington also strongly oppose CVA.

E. R. Hoffman, superintendent of Seattle City Light, and C. A. Erdahl, Tacoma commissioner of public utilities and chairman of the Northwest utilities conference of public- and private-power agencies, say that existing agencies can do a satisfactory job in the development of power on the Columbia River and its tributaries, if given a free hand.

"I should be most unhappy to see any major part of this immediate (power development) program caught in the rip tides of politics," Erdahl said.

J. Frank Ward, superintendent of Tacoma City Light and former Bonneville engineer, added: "Coordinated development is desirable, but not so desirable that the people of the Northwest can afford to lose control of the development of their own area. I feel that will be the inevitable tendency of a large authority unless it is made very responsible to the people of the Northwest."

And R. R. Boals, general superintendent of the Eugene, Oreg., water and power board, said: "I very much object to a Columbia Basin Authority or to any other authority so far proposed."

Oregon Congressmen are almost unanimously opposed to a TVA-type CVA.

Senator GUY CORDON, who is a member of the Senate Appropriations Committee has waged a successful fight for funds for McNary Dam and other Army engineer projects, strongly opposes CVA.

Senator WAYNE MORSE, progressive Republican, says: "I am anything but convinced that we in the Pacific Northwest want any Government agencies in control of our rivers based upon the Tennessee Valley pattern. Our economy is entirely different and our people are strong believers in a maximum of local self-government."

Senator CAIN, of Washington, is not expected to go along with his authority-minded Democratic colleague, Senator MAGNUSON, when the chips are down. And Senator ECTON, of Montana, appears to be just as strongly opposed to CVA and a Missouri Valley Authority as Senator MURRAY is for them.

PRESS FIGHTS PLAN

Every major newspaper and more than 85 percent of all newspapers in Oregon, Washington, and Idaho are on record against CVA, strong as they are for development of the Columbia Basin. Every power-company president in the region, while favoring McNary Dam and other Federal power projects, is actively antagonistic to CVA, remembering, no doubt, that TVA has elbowed 32 privately owned electric utilities out of the picture in the Tennessee Valley, either in part or in toto. Every major chamber of commerce, including Portland, Seattle, and Spokane, is on record against CVA, recalling that TVA engages in 30 different business enterprises in competition with private enterprise.

And while Oregon and Washington State grange leaders are plugging for CVA, other farm groups are adamant in their opposition, including the Idaho State Grange. The Pacific Northwest Development Association of Portland says there are nearly 100 farm, industry, and promotion organizations on record against a Columbia Valley Authority. Even the tribal council of the Warm Springs Indian Reservation of Oregon is against CVA.

The reasons they give are varied.

The Pacific Northwest is one of the most progressive and prosperous regions in the United States, in marked contrast to Tennessee Valley States. It has the highest per capita income, while TVA States have only 60 percent of the national average despite

15 years of TVA. Oregon, Washington, and Idaho are among the top eight States in rural electrification, while Tennessee is forty-fourth. This region has cheaper power than TVA, the domestic rate in Portland under private company operation averaging 1.28 cents per kilowatt hour, while the average under the TVA is 1.58 cents.

Working through the Corps of Engineers and the Bureau of Reclamation, the Pacific Northwest has developed within 10 percent as much power at Bonneville, Grand Coulee, and other Federal projects as TVA has developed at 28 dams—and for less than half the cost. The Army engineers have provided ocean-steamer navigation as far up the Columbia as The Dalles, Oreg., 200 miles from the sea. The Bureau of Reclamation is developing at Grand Coulee the largest reclamation project in America—the 1,200,000-acre Columbia Basin project, Washington. And Bonneville and Grand Coulee are repaying every cent they cost, with interest, in 50 years—something TVA isn't doing and cannot do.

GROWTH REQUIRES POWER

The Pacific Northwest is short of power, all right. The fastest-growing region in America, it needs at least 6,000,000 kilowatts more in the next 10 years to keep pace with its needs. But it has 40 percent of the Nation's hydro sites and the Army engineers have just completed comprehensive plans for basin development. If they are approved, it can supply its power needs through Federal, municipal, and private company projects.

The Pacific Northwest has a flood-control problem, too, but again the Army engineers have plans that will cut flood damage to 10 percent of last year's figure.

On the other hand, TVA has a power shortage, too. Its hydro sites are exhausted. In fact, it stirred up a national controversy by asking Congress for $54,000,000 for steam plants.

And TVA still has floods, too, despite some $165,000,000 allocated to flood control. In fact, its 28 dams permanently flood more productive land than seasonal floods ever covered. And while the 1948 report of TVA boasts that its flood-control program has averted $13,000,000 worth of damage in the Chattanooga area, the fact remains that the people of Chattanooga appealed to Congress to authorize the Army engineers to provide flood protection TVA hasn't supplied.

Thus, the difference is that most of the people of the Pacific Northwest believe that the Army engineers, the Columbia Basin Inter-Agency Committee and the Bureau of Reclamation have done and can do a better job for this region for approximately $350,000,000 than TVA has done in the Tennessee Valley—despite the expenditure of almost $1,000,000,000.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 4, 1949.

DEAR SIR: I was pleased to have your letter which gives me the opportunity to state my position regarding a Missouri Valley Authority, or the Missouri Valley development program under the Pick-Sloan plan, which is now going forward in an orderly manner.

My criticism of the TVA set-up is that a Board of three men, appointed by the President, and not elected by the people, have, in effect, full and complete control over the very existence of the people living in the Tennessee Valley. We must bear in mind that he who has the authority to control the electric power and water resources of America, or any given area in America in this electric age, can completely control America or that area under such control.

Congress appropriates each session a lump sum for TVA to build power dams, transmission lines, flood control, forestry, navigation, and, in fact, for most everything to carry on the Federal functions in the valley. Then this Board of three men spend that money at will to run their empire, so you see in reality the TVA is a separate and distinct empire within our American Republic. Not only the people's elected Government officials have lost much of their authority, but this Board of three men have taken over too much of the States' authority, which was specifically delegated to the sovereign States by the Constitution.

Now if this kind of autocratic regional control is carried on to its ultimate conclusion in the 11 river valleys of America, the Missouri being 1 of them, 33 men could completely control America. The 48 States could very well be expected to lose their sovereign rights and identity, and we would have in their place 11 separate, powerful regions or valley empires. I am quite certain you do not know that program is the recommendations and hope of the Communist Party of America. They know that so long as our Nation is composed of 48 States that are free and sovereign, whereby the people of the respective States elect their public servants, communism can never completely take over here.

Under the plan known as the Pick-Sloan Missouri Valley development program, the Governors of the 10 States of the Missouri Valley, which are all or partly in the valley, are members of the Missouri Valley Board, and that board of elected officials meets with the Army engineers and the Bureau of Reclamation officials in open session at regular intervals to discuss with each other and any interested person about matters pertaining to the Missouri Valley development program. Surely no fairer, better, or safer program could be devised.

The Republican Eightieth Congress appropriated over twice as much for hydroelectric power dams and transmission lines than had any previous Congress. And so far as the Missouri Valley building program is concerned, the Interior Subcommittee of Appropriations, of which I was chairman during the last session of the Eightieth Congress, recommended and that Congress appropriated over $54,000,000 for hydroelectric dams, power producing facilities, transmission lines, and related facilities for the Missouri Valley development program, which the Bureau of Reclamation will expend on the tributaries of the Missouri River in the upper reaches, and almost a like amount was appropriated by that same session of Congress for the Army engineers to extend for like purposes on the main stem of the Missouri River.

Randell Dam in South Dakota, and Garrison Dam in North Dakota are expected to start generating power in the year 1953. Transmission lines will be built ready to carry the power as far south as Sioux City, Council Bluffs, and Omaha. The farmers and townspeople in that part of Iowa, located in the Missouri Valley, will have access to such power according to plans.

In conclusion I must say, in fairness to myself, that I was born and raised on the farm when we carried the old lantern morning and night, turned the corn sheller, corn grinder, churn, washing machine, separator, and everything by the man- and woman-killing strong-arm method, and let me assure you I have not forgotten it for a minute since I came to Congress. My record will prove however that I want progress in the safe and sound American way, and not at the expense of our God-given liberties. Many nations of the world accepted government control little by little, until they lost all their rights as individuals to a powerful centralized control. Now they have neither liberty nor security. I shall never be a party to that kind of business, whether in Congress or out of Congress. I give you my word on that proposition, and you can bank on it.

With kindest good wishes, I am,

Sincerely yours,

BEN F. JENSEN.

Something for Nothing—So You Think

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, the heat for Federal money continues to be put on Members of Congress, first for this, then for that. Congressmen would like to give everyone all he asks, but where can we get the money?

Through taxation you must furnish the money. Next week, I will give you some information about the taxes you are now paying, but at present let me show you the way in which Federal aid to States, municipalities, and to projects sponsored in part by the Federal Government, is being increased.

Here is a summary of Federal expenditures made as direct payments first, to States under cooperative arrangements, and second, payments within States to provide relief and other aid exclusive of grants and loans:

Year	Category 1	Category 2	Grand total
1932	$254,793,161	$14,632,091	[1] $269,425,252
1933	331,748,851	9,664,064	341,412,915
1934	[2]	[2]	1,826,013,207
1935	[2]	[2]	2,221,313,207
1936	[2]	[2]	2,171,861,084
1937	[2]	[2]	3,746,175,672
1938	[2]	[2]	2,952,068,617
1939	[2]	[2]	4,420,564,218
1940	[2]	[2]	3,922,290,408
1941	[2]	[2]	3,476,396,744
1942	[2]	[2]	3,225,636,378
1943	[2]	[2]	2,729,651,075
1944	612,868,891	1,149,242,041	1,762,110,932
1945	[2]	[2]	1,353,427,727
1946	847,328,443	442,778,740	1,290,107,183
1947	1,174,917,749	519,152,327	1,694,070,076
1948	1,592,515,224	3,958,538,822	[3] 5,551,054,046
Grand total			42,953,579,445

[1] In 1932, distribution of funds was under 18 objective classifications, and appropriations for direct relief or loans to States on account of floods, fires, hurricanes, etc., were not included.
[2] Not available.
[3] Includes $3,584,666,608 for Veterans' Administration and readjustment benefits under Public Law 346, and vocational rehabilitation under Public 16, and 56 other categories.

Now is not Uncle Sam a fine, generous, wonderful old boy? He sure is. But do not forget that, with this money, always, without exception, goes Federal control and finally those who receive a Federal dollar will be told when, where, and how to spend it. Farmers may shortly be told what, how much, and when they can sow, harvest, and sell. Other producers will have similar restrictions clamped down on them.

Oh, yes, and I almost forgot. You may wonder where the money is coming from. Maybe you have guessed. Just lay this away and next week I will tell you about that.

Tax on Freight Bills

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. SCUDDER. Mr. Speaker, on March 9, I introduced a bill to reduce the rate of tax on transportation of property, which I feel will equalize one of the most unfair and discriminatory taxes we have on our statute books—the 3-percent tax on freight bills.

In California we are so far removed from the center of consumption that our transportation costs of necessity are high. The application of a tax on a freight bill seems very unfair. This bill will not only be for great benefit to California, but will favorably affect the entire Southern States and all west of the Mississippi.

My bill provides for a tax of 3 percent on the first $100 of a freight bill; 2 percent on the second $100, and 1 percent on all over $200. While we will still be penalized, this bill will give great relief to the farmers in the shipment of their crops and will benefit everyone, as automobiles, machinery, and so forth, are billed f. o. b. shipping point, plus tax.

Of course, I would like to repeal the existing law in its entirety, but feel that we can justify the equalization of the tax burden without too great a revenue loss.

When Will the Secretary of State Act on German Immigration?

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. KEATING. Mr. Speaker, the State Department is not following the clear mandate of Congress. At the last session, it was provided in Public Law 774, enacted by an overwhelming vote, as follows:

SEC. 12. The Secretary of State is hereby authorized and directed to immediately resume general consular activities in Germany and Austria to the end that the German and Austrian quotas shall be available for applicants for immigration visas pursuant to the immigration laws.

This act was approved in June last year.

For 3 months nothing was done. This administrative delay was perhaps understandable and excusable. Then on September 17, 1948, it was announced that general German immigration, under the usual quota restrictions, would be resumed immediately by the acceptance of new applications for immigration visas.

This happened at a time when I was in Germany last fall. At that time I endeavored to impress upon the American consuls charged with responsibility in this matter the desirability of expediting in every possible way the actual departure from Germany of qualified persons, within quota regulations, desiring to emigrate to the United States for permanent residence. I realize, of course, that some delay was inevitable. I emphatically expressed to them the hope, however, that not later than the first of this year actual movement of intending immigrants would take place.

Only this week, however, I have been advised by the Department of State that not a single visa has been issued up to this time to a German national. In other words, 6 months have elapsed since the announcement of the reopening of German immigration without one person moving toward our shores from Germany. Indeed, 9 months have passed since Congress directed the Secretary of State to lift the suspension on receipt of visa applications.

The fault does not lie with the various consulates in Germany. The conclusion is inescapable that a policy has been adopted in Washington by the high command in the State Department to thwart the clearly expressed will of Congress in this regard. The injunction upon the Secretary of State to act immediately has been construed in this instance to mean to delay indefinitely.

During the very time when this colossal inaction on one phase of Public Law 774 was taking place, most strenuous efforts have successfully been made to implement the other provisions of the same law. Large numbers of displaced persons are now coming to our shores every week. This is not pointed out critically or unsympathetically. On the contrary, such action is in exact compliance with the law. Furthermore, I have at all times favored the principle that the United States should participate with other nations in a fair and humane solution of the distressing plight of these unfortunate people of Europe who have suffered so much at the hands of their oppressors.

What I point out is that the substantial progress made in the displaced-persons program, when viewed in the light of the complete break-down, at least to date, in initiating the program for general German immigration, demonstrates that the Secretary of State is pursuing a policy in this matter which is not only contrary to law, but decidedly not designed to create tolerance among our own people or further international good will.

Many of our finest and most loyal American citizens are of German origin. They have beloved relatives, many of them aged parents, war orphans, and others, who have suffered greatly and innocently from the horrors of war. They have long ago executed the necessary support papers and assurances to bring these relatives here under the provisions of the immigration laws. They have been told that Congress passed a bill and the President signed it last June to provide for the reopening of German immigration. Yet nothing happens, except that in some instances their loved ones in Germany may have received a piece of paper giving them a quota number. They cannot understand such treatment from their Government. I do not wonder. This closing of the door by the Department of State to German nationals accomplishes nothing except to arouse bitterness and disappointment and to increase human suffering at a time when our efforts should be unitedly directed toward creating a better understanding and relieving sources of tension and suffering.

Our immigration laws, properly administered, are designed to establish safeguards against the admission into this country of subversive elements, either of the right or of the left. Anyone seeking to enter this country should be subjected to a rigid screening process. We should, of course, exclude undesirables. We provide, however, for a certain annual quota of German nationals. Of course, during the war such immigration was suspended. Three years after the end of the war Congress directed that this suspension be lifted. Nine months more have elapsed since Congress spoke. Yet nothing has happened. When will the Secretary of State carry out the clearly expressed will of Congress?

Repeal the Taft-Hartley Act?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, petitions, letters, and postcards to the number of several thousands have come to my desk, asking that the Taft-Hartley Act be repealed, the Wagner Act and the Norris-LaGuardia anti-injunction Act be reinstated. Communications indicating opposite views have reached me.

Those asking for the repeal of the Taft-Hartley Act, the reenactment of the Wagner law and the restoration of the Norris-LaGuardia anti-injunction Act, with but very few exceptions, fail to point out the provisions of the Taft-Hartley Act which support their conclusion that it is an antilabor act.

Many of those who approve of the act sent in answers to the 18 questions carried on the leaflet of the General Electric and the 19 propositions stated by radio commentator, Fulton Lewis, Jr.

I am familiar with the Wagner Act, for I was here when it was written. Attended most of the hearings held by a special congressional committee—the Judge Smith committee—which investigated its interpretation and administration. I attended the 7-week hearings preceding the writing of the Taft-Hartley Act, and assisted in writing that act, both in committee and in conference.

In the main, the provisions of the Taft-Hartley Act come nearer to protecting the public, individual employees, and union organizations than any prior legislation. No one so far has cited any of its provisions which impair the rights of the worker.

As is always the case, there are some provisions in that law which should be amended, as, for example, the one which requires the officials of unions to sign anti-Communist affidavits, which should be broadened to cover employers and the officers of corporation employers.

The Taft-Hartley Act is an effort—

First. To protect the public health, safety, and welfare when threatened by labor disputes or strikes.

Does anyone contend that is wrong?

Second. To protect the individual employee, whether union or nonunion, from coercion from any source—from coercion on the part of the employer, the union, or the union official.

Third. To give equal privileges, such as free speech, to employees, to union officials, and to employers.

Fourth. To impose upon employers, employees, and union equal obligations to carry out the agreements which they have entered into freely and after due consideration.

Fifth. To give the individual the right to join or not to join a union, to work or not to work at any available job.

Sixth. To make certain, insofar as possible, that union policies shall be determined by the members of the union, rather than by union or international union officers.

The act does curb the arbitrary power of union and international union officials. That is justified on the ground that men and women who must work for a livelihood, who are dependent upon a pay check, should have restored to them the right to determine when, in view of the last offer of an employer, they should or should not go on strike.

I know that ultimately I must use my own judgment in voting for or against legislation. It is easy to be mistaken as to the merits or the justice of a particular bill, and because I wish to serve the interests of my constituents, I am asking that those writing me with reference to proposed legislation point to those provisions of the various acts which they either approve or condemn, which should be changed or modified.

Fish Imports

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. MACK of Washington. Mr. Speaker, imports of foreign fish and fish products are increasing so rapidly that these now threaten ruin for our American fishing industry and the hundreds of thousands of fishermen and workers it employs.

Recently, I wrote the Director of the Office of International Trade, for information concerning this increase in fish imports.

He supplied me with figures on our fish and fish product imports for the years 1939, 1946, 1947, and 1948.

These figures reveal that the United States in 1948 imported 472,427,000 pounds of fish valued at $110,954,000.

These imports were 40 percent larger by weight and 300 percent greater in money value than the imports of 1939, the last peacetime year.

Most of this great increase in fish imports came from South America, Japan, and Canada where wages and living standards are much lower than in the United States.

If these imports of foreign fish continue, our American fishing boats will be driven from the seas for our American fishermen cannot, and should not, be expected to compete with the fishermen of low-wage, low-living standard countries.

HEARINGS ASKED

Alarmed by these rising imports and the threat that these increasing imports are to our American fishing industry and its employees, and also to our American economy, I appealed to the distinguished gentleman from Virginia [Mr. BLAND], chairman of the House Merchant Marine and Fisheries Committee, to hold hearings on what can be done to protect our American fishing industry from the growing menace of increasing imports of foreign fish.

Under leave to extend my remarks, I include my letter to Mr. BLAND. The letter follows:

MARCH 12, 1949.

Hon. OTIS BLAND,
Chairman, Merchant Marine and Fisheries Committee,
House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: The Office of International Trade, at my request, has just supplied me with a statistical table showing that 472,427,000 pounds of fish and fish products, valued at $110,954,000, were imported into the United States in 1948.

This is an increase of approximately 50 percent in tonnage and 300 percent in money value over the fish and fish-products imports of 1939, the last peacetime year.

This alarming increase in fish imports from low-wage, low-living-standard countries, unless halted or decreased, means ruin for our American fishing industry, its cannery operators, and its fishermen, with the loss of hundreds of millions of dollars which they have invested in plants, docks, cannery equipment, fishing boats, and fishing gear.

I earnestly urge, in the interests of our tens of thousands of fishermen, that your committee hold hearings at an early date to determine what can and what should be done to remove the threat to our fisheries industry that is inherent in these alarming imports of fish from low-wage countries.

Sincerely yours,

RUSSELL V. MACK,
Member of Congress,
Washington, Third District.

BOTTOM FISHING INDUSTRY

During the war years, when the Nation appealed for more fish to replace our dwindling supply of pork, beef, and mutton, many Americans built fishing boats and went into the fishing business. If increased imports of fish are permitted to continue, these fishermen soon may be put out of business, and the millions they have invested in fishing boats and fishing gear made valueless.

We hear a great deal of talk in Congress about aiding the small-business man. Fishermen are small-business men. Most of the fish landed at American seaports are brought in by boats that operate with one- to six-man crews. The owners of these boats, for the most part, have their life savings invested in their boats and fishing gear. Many of them are still in debt. They are entitled to protection.

One of the great fishing industries which developed on the Pacific coast during the war years was that of bottom fishing. Bottom fish are the fish that are taken off the floor of the Continental Shelf with drag nets.

Species of bottom fish taken in our western waters are sole, cod, red snapper, and several other kinds. When the fish are landed, the meat is stripped from the carcasses of these fish and is sold as what we commonly call fillet of sole.

In the last peacetime year, 1939, only 9,426,000 pounds of these fillets, valued at $714,000, were imported into the United States. Last year, 1948, we imported 53,964,000 pounds of these fillets, valued at $10,752,000. This more than tenfold increase in this type of fish is just enough to ruin our whole bottom fishing industry.

TUNA IMPORTS

Last year—1948—we imported 17,431,000 pounds of tuna valued at $6,339,000 according to the figures supplied me by the Office of International Trade. Most of this tuna came from Japan and Peru where, as you know, wages and living standards are far lower than those prevailing in the United States.

The tuna landings at my own hometown port of Grays Harbor, in the State of Washington, in some recent years have been almost $2,000,000 a year. Most of these fish are caught by two-man boats. The small-business men who operate these small boats can and will be ruined if tuna imports are permitted to increase.

The ruin of American fishermen will have far-reaching effects for if they are forced out of business by Peruvian and Japanese competitors, the canneries which these American fishermen supply

also have to go out of business and many thousands of cannery workers will lose their jobs.

CRAB IMPORTS

In 1948, according to the figures supplied me by the Office of International Trade, the United States imported 1,341,000 pounds of crab meat valued at $754,000. More than one-half of all this crab was imported from Japan, where wage rates and living standards are notoriously low.

Prior to Pearl Harbor, the Pacific coast had no crabbing industry of importance. Eighty-five percent of all crab marketed in the United States came from Japan in those years.

When Japan, at Pearl Harbor, blew herself out of the American crab market, thousands of American fishermen went into the crab-fishing industry. Thousands of small crab-fishing boats were built by enterprising citizens. These boats and the gear they used cost all the way from $6,000 to $20,000 each. Many Americans went into debt to build or buy boats and gear. Some of them still are in debt. If they are not granted protection against Japanese crab imports they may be destroyed financially.

So will the scores of men who have built canneries to process the crab landed by American boats. Ruin should not be forced upon them. It will not only be bad for them, but likewise harmful to all those who have gone into the business of building fishing boats, manufacturing nets, crab traps, and other gear required by the trade. In short, the financial ruin of one class of workers will have far-reaching effects on many other groups.

Under leave to extend my remarks I include in the RECORD a table showing various classes of fish imports for the years 1939, 1946, 1947, and 1948 which was supplied me by the Office of International Trade. The table follows:

United States imports for consumption of fish: Total and leading kinds from Japan, 1939, 1946, 1947, and 1948

Item	1939	1946	1947	1948

Program of the Democratic Party

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. DAVENPORT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include a speech made by me over Station WLOA, Braddock, Pa., on Sunday, February 20, 1949, as follows:

The election of 1948 is now history. The people of the United States in a free election have raised their voices and spoken out in favor of the program of the Democratic party. They have given President Truman and the Eighty-first Congress a mandate to perpetuate and extend the program and hopes of our late, departed President, Franklin Delano Roosevelt.

Now that the election is over, we cannot consider the fight won. The legislative job still lies ahead. And we are going ahead to fulfill our promise to the American people.

We have a proud heritage. A strong and vital democracy. But it is not perfect. We are all aware of its shortcomings. That is one reason why we have elections. When we want things done we elect people to do that job. That is one reason why the present Congress is composed as it is today. The Eighty-first Congress is pledged to raise the standard of living of the peoples of our country; give every American full civil rights—and enforce those rights with all the authority of government; provide decent homes for all Americans; proper education; adequate medical care; social security; and full employment with jobs at fair pay.

There is an urgency to our job. For two years the Republican Party has been at work undermining the program of Franklin Delano Roosevelt. They have turned the clock back a quarter century as far American labor is concerned. They have proved their lack of concern with civil rights. They failed to act upon President Truman's fine civil-rights program when it was presented to them on a platter. Not only didn't they act upon this program, but they presented the Eighty-first Congress with a discriminatory displaced persons mess, with their anti-Catholic and anti-Jewish bill. They turned a deaf ear to the housing needs of the American people.

They allowed this country to go into the greatest inflationary spiral in its history. They tried to pass the buck to labor. What is the truth? Corporation profits after taxes were $6,400,000,000 in 1940. In 1948, they were $20,800,000,000. At the time of the election last fall, 31 percent of all American families were earning less than $2,000 a year. The Bureau of Labor Statistics said last fall that an American family required a minimum of $3,200 a year in order to maintain minimum food, clothing, and housing requirements. More than one-half all American families are below this minimum.

There is the Republican tax bill, giving the highest-income group an opportunity to pocket more of their all-time high earnings. And this at a time when Government expenditures were at a peacetime high. Our children need good schools and adequately paid teachers. The Republicans did not think so. Millions of workers are outside the coverage of our social-security laws. The Republicans opposed doing anything about it. And our old people. Who can live on the old-age benefits currently allowed them? The Republicans were not concerned with them.

This is part of the mess the Republicans have turned over to us, the members of the Eighty-first Congress. Many people are impatient. They say, "You fellows have been in Washington since the beginning of the year. The Taft-Hartley law is still in existence. Where is this health bill? And what about that slum clearance and public-housing bill?"

The Eighty-first Congress will not break its pledge to the American people. The first job of the Eighty-first Congress was to establish its committees to hold hearings and discuss the legislation in question. The committees and subcommittees have now been established and are at work. President Truman has forwarded to Congress legislation pertaining to the campaign promises of the Democratic Party. His bills are at the present time under study and discussion. Time tables have been established. Witnesses are appearing daily to testify for or against the bills. Under our democratic system we would not have it otherwise. Every American has the right to be heard.

The test of the pudding is in the eating thereof. Our Republican opponents, like the honorable Senator TAFT from Ohio, tell the American people that only minor changes will be made in the Taft-Hartley Act. They say the same thing about our intentions regarding civil rights, health, education, displaced persons, and housing. Are they so callow as to believe we would fail to carry through the mandate we have received from the people?

To attack the Eighty-first Congress is to attack the intelligence of the American people. The American people want peace, freedom, and security. They want it now. They want to work together as a Nation—as brothers—to increase our production and to raise the standard of living for all Americans. To work together as brothers means equal opportunity and equal treatment before the law and on the job. Our Negroes have not been treated fairly. Economic, social, and political discrimination has been common. Other minorities, to a lesser, degree, have known this discrimination.

The Democratic Party has pledged "The right of full and equal political participation." This means the end of the poll tax.

The Democratic Party has pledged "The right of security of person." This means an antilynching bill and the strengthening of our civil-right laws.

The Democratic Party has pledged "The right of full and equal opportunity of employment." This means a Federal FEPC.

The Democratic Party has pledged "The right of equal treatment in the service and defense of our country." This means no segregation and discrimination in our armed forces.

Seven States still have the poll tax. In the 1948 election only 14 percent of the eligible voters voted in poll tax Alabama. Only reaction can be maintained by such laws, which have as their basis the belief that only a small minority should vote and legislate.

Today the Federal Government is without power to interfere in lynching cases. And the States are not willing to use their authority to do anything about it. State courts throw out all lynching cases, although some go through the farce of having jury trials, with the decisions known before the trials start. Lynching is more than just killing someone. It is more than murder. It is a threat to a whole people that they had better do nothing to stand up for their rights under our Constitution. Only a Federal law can stop lynching.

The weapon of reaction in Congress today is the filibuster. It remains yet on the books. Another weapon of reaction, the seniority rights of poll-tax State legislators, has been weakened considerably by the Eighty-first Congress. In the past by stacking congressional committees with legislators from poll-tax States who are reelected without opposition time after time, liberal, constructive legislation had a hard time being heard. The Eighty-first Congress has overcome this handicap. The problem of the filibuster still remains. There is every indication that the Eighty-first Congress will take care of filibustering before the civil-rights program appears on the floor of the Senate.

Millions of workers in this country will not feel secure until the Taft-Hartley Act is repealed. The Taft-Hartley Act abridges labor's fundamental rights. We must return to the spirit of the Wagner Act. The Wagner Act had two main purposes. One was to permit workers to join unions without the fear of losing their jobs. The second was to make management bargain collectively with unions freely elected and representing a majority of the workers.

The purpose of the Taft-Hartley Act was to destroy unions. It was never intended to regulate labor-management relations. Even Business Week and Time magazine admit this. The Taft-Hartley Act permitted workers to ask the NLRB for a new election, on the ground that they really represented the workers of a plant and not the union. The Taft-Hartley Act also forbade the closed shop. With an increase of unemployment, the whole union movement could be destroyed legally in this country.

Americans have a right to be healthy. Our medical care is too costly. Families can't save for future medical expenses. Certain hospital treatments cost more than families earn annually. About 70,000,000 Americans have no savings today. An illness would be a serious financial burden on them. The cost of medical care is often the real cause of death in many fatal illnesses. People do not go to doctors when they should because they do not have the money. Often they wait until it is too late.

Our medical care is inadequate. Almost 1,200 of our 3,000 counties are without hospitals. We have 140,000 doctors. We need 200,000. Our medical care is not evenly distributed. Rural areas do not have the same proportion of doctors to population as do urban areas. The South does not have half the doctor-population ratio that the North has.

The American Medical Association is frightened today that the Eighty-first Congress means business. For the first time it has offered a program of its own—a sadly inadequate program, but an indication that it knows it has not been playing fair with us.

The bill the Eighty-first Congress is considering plans to double the number of medical-school graduates each year; to add 600,000 new hospital beds by 1960; to expand psychiatric, rehabilitation, and medical research. By a pay-roll deduction system matched by the employer and added to by the Government, all services would be provided to Americans. Doctors would be paid from the insurance fund and would be free to join the program or stay out, free to select their patients. The American Medical Association is spending $3,500,000 to defeat this measure before the Eighty-first Congress. They will not succeed in killing the national health bill.

We come now to the matter of housing. Under the administration bill, we hope to present an adequate and successful program to conquer our slum problem and make housing available to the lower-income groups. Our bill takes into consideration the needs of 2,500,000 families now living doubled up. The United States Census Bureau estimates that by 1960 there will be about 7,000,000 more nonfarm families requiring homes than there were in 1947.

About 3,000,000 farm dwellings would have to be rebuilt between now and 1960. There are about 6,000,000 nonfarm housing units that are substandard and will have to be replaced. Altogether it is estimated that we will need about 17,000,000 dwelling units by 1960. The Republicans would have us do nothing except end rent control and make more credit available for high-cost high-income construction.

Housing costs are so high today that it is prohibitive for all but the well-to-do to build homes. The administration's housing program would provide Federal loans and grants to local governments to eliminate slums and blighted areas. It would also authorize Federal financial assistance for more than 1,000,000 low-rent public-housing units.

The administration is pledged to increase the coverage of our social-security laws and to increase the benefits therefrom so that they will provide the security they fail to do today. The cost of living has gone up 75 percent since 1939. Benefits—inadequate in the first place—have not been increased. We need universal coverage. The present administration recognizes this and plans to do something about it. Only 40,000,000 of our labor forces of 70,000,000 are covered. There is no reason why farmers, farm workers, nurses, janitors, domestics, teachers, and Government workers should be excluded.

Unemployment benefits, old-age benefits, aid to the handicapped is below the minimum level necessary to be of real assistance.

The Eighty-first Congress recognizes that our educational system is inadequate. We do not have enough schools. Millions of children are forced to attend school on a part-time basis because of the shortage of facilities. We do not have enough teachers, nor are the teachers available adequately paid or trained. Some States provide better educational training than others. A child should not be penalized because he was born in Mississippi. Our schools are now a Federal problem. The States can no longer cope with the expenses of providing adequate service. They need Federal funds on a loan or grant basis.

The Eighty-first Congress is pledged to raise minimum wages. The present minimum wage of 40 cents an hour has been in effect since 1938.

The United States must expand its productive facilities and produce more goods for its growing population. This is something that cannot be left entirely to the whims of the market place. If we allow our national income to fall, plants will curtail production, unemployment will rise, and our standard of living will fall. Congress recognized the right of every man to a job when it passed the Full Employment Act. This is today a Government responsibility. We must insist on national democratic programming so that our industrial capacity will be sufficient to produce the goods we need. And we must make certain that raw materials are not squandered but are directed to their best use. When industry is unwilling to expand its capacity Goverment must act if the alternative is unemployment, inflation, and lower standard of living.

The Eighty-first Congress will accept the responsibility of our Government to develop and conserve our resources. When our country was young there was no need to have the Government concern itself with reclamation, reforestation, and flood control. But today it takes Federal planning and dollars to handle the immense job. We began as a nation with 8,000,000,000,000 board-feet of lumber Today we have only 1,800,000,000,000 board-feet. One-third of our 500,000,000 acres of commercial forest land is denuded or poorly stocked. Over a third of our topsoil has washed away, or the equivalent of 140,000,000 acres of land. A heavy flood on the Ohio River covers millions of acres.

These disasters are national. They encompass more than the boundaries of individual States. Twelve years of the TVA have proved

to us what the rest of the country has to gain by similar programs. The original charge of communism against the program has proved ridiculous. So has the charge that the people in the Tennessee Valley would lose their individual freedom.

The TVA has proved that flood control actually controls the wanton damage of unregulated rivers. It has proved that regional planning will raise the standard of living. It has proved that private power companies in this country charge too much for their power. It has proved that private power does not readily expand its facilities unless it feels competition.

In the past half century, every President has come out in favor of the St. Lawrence seaway and power project. The opposition has always given the alarm that we were not prepared for such action. "Let us study it some more," they cried. And today the St. Lawrence waterway project is probably the most-studied program ever put before Congress. The Republicans today would like to have the Eighty-first Congress continue studying it. But we know that it will provide cheaper and more power than the TVA and that it will add mightily to our industrial capacity.

The Eighty-first Congress is pledged to maintain farm prosperity. We are concerned with the problem of farm production and farm income. The Eightieth Congress would not pass the international wheat agreement, which would have provided our farmers with a floor price for their export market. These international agreements are necessary to cover all our farm commodities going to overseas markets.

The Eighty-first Congress wants to maintain high farm production and expand farm income. The answer is not to increase prices by cutting farm production. There are too many Americans who would suffer as a result. Abundance is what we want—and not scarcity.

The Eighty-first Congress is pledged to help western Europe revive so that free institutions can be strengthened there. The ECA program means an opportunity for western Europe to raise its productivity and compete once more in world markets. The ECA program means an opportunity for western Europe to raise its standard of living. The ECA program means that we are concerned with peoples elsewhere. We are our brother's keeper.

In his inaugural address, President Truman has pledged himself to develop the backward areas of the world. He did not mean the old type of imperialism of masters and natives. Nor did he mean giving everyone in the world a bathtub. Our new Secretary of State, Dean Acheson, has expressed it well.

"At home and abroad our aim is to enable the individual to attain the freedom and dignity and fullness of life which should be the purpose of all government.

"It is not that we believe that other people need or wish things for their own purposes merely to have these material things. It is not that material objects in or of themselves make a better or fuller life. But they are the means by which people can obtain freedom—not only freedom from the pressure of these other human beings who would restrict their freedom, but also help in the ancient struggle of man to earn his living and get his bread from the soil."

The Eighty-first Congress is pledged to help the new Republic of Israel get a good start in its career in the family of nations. Already the World Bank has made available $100,000,000 for developmental purposes and American research and scientific know-how will be made available to Israel. In time the Jewish population of Israel may reach 2,000,000 persons, and as such will be the third largest Jewish community in the world.

The road ahead is not smooth. Problems will arise and at times the Eighty-first Congress will feel the road blocks and fences are in its path. But with the mandate from the people and the desire to build a better America, the Eighty-first Congress will not fail. We are on our way.

Mr. Dulles on Scandinavia

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following column by Walter Lippmann which appeared in the Washington Post, Thursday, March 10, 1949:

TODAY AND TOMORROW
(By Walter Lippmann)
MR. DULLES ON SCANDINAVIA

It has been known for about a week in Washington that Mr. John Foster Dulles intended to say publicly at the Cleveland Conference sponsored by the Federal Council of Churches what he has been telling officials privately since before the election: That the United States should not seek military bases so close to the Soviet Union as to carry an offensive threat that is disproportionate to defensive value, and that that is why our fellowship with the peoples of western Europe, and particularly of Scandinavia, ought not to seem to bring United States military might directly to Russia's border.

Since the effort to unite Scandinavia in an independent defensive league has been torpedoed, and Norway with Denmark about to follow has joined the Atlantic Pact, is Mr. Dulles' warning a case of locking the stable door after the horse is stolen? Some who really agree with him said, when they heard he would speak out, that he is too late. In the sense that we now have a special commitment, which must be honored, to protect Norway and Denmark against the consequences, it is too late to undo what it would have been much better not to do.

But it is by no means too late to consider very seriously how we are to deal with the consequences. The pact is not an honorary society in which, once elected, the new member wears his decoration on gala occasions. Nor is the pact a simple case of our promising to defend—let us say Norway and Denmark—and of letting them buy weapons in return for their promise to go to war if the other members are at war. The pact is, as all the world knows, a legal framework within which the high command of the principal nations are to organize a strategical system.

The plan of that system is still under discussion, and that is why the intervention of Mr. Dulles has great practical significance.

His warning against seeking military bases so close to the Soviet Union must be read in connection with the Norwegian reply (March 4) to the Soviet Union. Norway, says the note, desires to reiterate most categorically that it will not grant bases for foreign military forces on Norwegian territory as long as Norway is not attacked or subject to threats of attack.

Were the full story of our Scandinavian policy during the summer and autumn as well known here as it is abroad, it would be clear that the Norwegian statement together with Mr. Dulles' warning are an attempt to stop the car before it skids into the ditch. For, as Mr. Dulles said, it can be assumed that the Soviet state would use the Red Army if its leaders felt that their homeland was imminently and seriously menaced * * *. It would, inded, involve a high tribute to Soviet leaders to assume that, under these circumstances, they would exercise more self-control than would our people under comparable circumstances, as, for example, if the Soviet Union had military arrangements with a country at our border.

This warning is timely not only in respect to the next steps in Scandinavia but also in respect to the extremely sensitive southern flank of the Soviet Union. In the past few days we have had from Turkey a little-noticed dispatch to the Times in London reporting that the Soviet Ambassador had made inquiries, similar to those made in Norway, about the Mediterranean pact, which is being considered in London and Washington.

On Tuesday there was a diplomatic denial from the Turkish Foreign Office. The report of the Times correspondent may be completely unfounded as to what has happened. But no one need think it is completely unfounded as to what is sure to happen.

Now there should be no misunderstanding about the position of those who, like Mr. Dulles, believe it necessary and wise to halt the quest for military bases on the borders of the Soviet Union. They are not, and never have been, advocates of appeasement. They have been among the first to insist that this country should by a show of force, backed by rearmament and conscription, make it unmistakably clear that any movement of the Red Army anywhere beyond the armistice lines would, without benefit of any pact but, as a matter of vital American self-interest be resisted. That policy, which was indicated by the dispatch of the battleship *Missouri* to Turkey 3 years ago this month, was a turning point in the east-west conflict. The American action restored the balance of power and, thereafter, the conflict was limited to a cold war.

The objection to the Scandinavian policy, which has changed the original character of the Atlantic Pact, is that it may, if it is not checked, bring the conflict to a point where only a solution by war is possible. That is what Mr. Dulles was talking about, in effect, that American power should be used to deter Soviet aggression but not to back the Russians into a corner. And what he was saying reflects the views of our most responsible military leaders. They are by no means pleased with the handiwork of some of their more impetuous colleagues in the Pentagon and of the foreign-service officers who are more strategically minded than the responsible strategists themselves.

Some of them, indeed, have not forgotten what General Eisenhower said on November 14, 1942, in a telegram to the War Department, now reprinted in his book, about the political advice he had received before the landing in north Africa from one of the principal figures in the Scandinavian affair—that existing French sentiment here does not remotely agree with prior calculations.

You'll Never Miss the Oil Till Well Runs Dry

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. WHITE of Idaho. Mr. Speaker, while we hear so much about conservation few people realize our absolute dependence on the use of petroleum energy

in practically every line of human endeavor. Every nation on earth recognizes that gasoline is indispensable in waging war. What would happen to our farming industry and our food supply if gasoline was unobtainable for even a month?

If there is any resource that should be conserved in this country it is our petroleum reserves. For the consideration of my colleagues there is inserted here a letter received from the Interstate Oil Compact Commission captioned "Dedicated to the conservation of oil and gas" with my reply thereto.

INTERSTATE OIL COMPACT COMMISSION,
Oklahoma City, Okla., March 8, 1949.

Hon. COMPTON I. WHITE,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN WHITE: We have received the copy of our statistical bulletin which you returned with your comments: "It is only a short time until the petroleum reserves of this country will be used up."

We do not know whether you are serious in this statement. Some good men believe this is true, but our information does not support it. Our known producible reserves are greater today than ever in our history, and at the same time we are producing more oil than there is demand for, so that above-ground stocks are increasing. In some States it has been necessary to cut back production in order to prevent waste. In addition, we have large reserves which are under known methods at this time not producible, but it is anticipated that they will be under future methods, and we have reserves in shale in the Rocky Mountains and other areas, sufficient to supply the Nation for years when it becomes economically profitable to develop the same, all of which indicates to us that our reserves will not be exhausted in a short time.

I take it from your returning the statistical bulletin that you do not care to receive future copies. At the request of a Member of Congress we placed all Members on our list to receive our statistical bulletin and our newsletter, Compact Comments, but we are removing your name from our mailing list.

The Interstate Oil Compact Commission, which is an association of 21 oil and gas producing States under a compact approved by the Congress, stands ready to furnish any information you desire at any time.

Yours very truly,

EARL FOSTER,
Executive Secretary.

Mr. EARL FOSTER,
Executive Secretary,
Interstate Oil Compact Commission,
Oklahoma City, Okla.

DEAR MR. FOSTER: It is reassuring to receive your optimistic letter concerning the permanence of our national oil supply obtainable from our petroleum reserves.

I'm told by the petroleum experts of the Department of the Interior it is estimated that we have in sight at the present time petroleum reserves to last another 12 years.

As secretary of the Interstate Oil Compact Commission, you must have observed how dependent the American people are on the use of petroleum energy (gasoline) in most every line of human endeavor. I shudder to think what will happen to our national economy when the source of this energy is exhausted. You say "We have reserves in shale in the Rocky Mountains and other areas, sufficient to supply the Nation for years," which is certainly on optimistic statement when you look over oil storage facilities over the country and estimate the size of the stream of gasoline that is being used to keep these tanks filled. It would seem that when our oil wells are exhausted that enough shales will have to be crushed and the oil extracted to fill a good-size river to supply the petroleum and gasoline needs of the Nation, when every airplane that flies, every boat that plies the sea, and most of our railway locomotives, to say nothing of the trucks, busses, and every automobile that rolls, is draining away the precious energy that we must depend on to plant, harvest, process, and transport everything we eat and wear.

We hear much about conservation while billions of gallons of oil are being burned, displacing coal, to generate steam, because it is a little more convenient to inject oil into the firebox than shovel coal. Now, we are hauling coal through the air by using gasoline in airplanes, to fuel a European city, about as large as Chicago.

I wonder what your grandchildren and mine will think when they come to know the wastefulness of the period in which we live, as I used to do as a boy on an abandoned plantation in the Deep South, when I heard of ease and affluence, the lack of economy of slavery days "befo' de war." Maybe you and I should not disturb the assurance and sweet dreams of the future and the opulence of America by speculating what will happen when our reserves of petroleum run out.

Sincerely,

COMPTON I. WHITE,
Member of Congress.

Another Rip Van Winkle

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 11, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, sure, better late than never, but it is interesting, as well as refreshing and encouraging, to note that some of the editors who have been asleep—not quite as long as old Rip Van Winkle—but for some 10 or 15 years, are awakening to the fact that "the public will not be damned."

For 10 years or more, I have been insisting in and out of Congress that the public, as well as employees and management, was entitled to fair labor legislation. For my efforts and as a reward, not a few left-wing columnists, some of them encouraged by Collier's, repeatedly attempted to take my hide off with smear paragraphs and articles.

I was branded as antilabor, as an old reactionary, as a has-been, as adhering to the horse-and-buggy philosophy, as a tool of the economic royalists.

And now, lo and behold, at last, when public sentiment seems to have swung that way, out comes Collier's, in their issue dated March 19, with an editorial which reads as follows:

COLLIER'S BELIEVES THE PUBLIC WILL NOT BE DAMNED

Collier's thinks the public is the party to protect in labor controversy. Labor is not downtrodden, not any more. Capital and management are neither helpless nor inarticulate. The public—all of us, that is, employed, employers, workers, consumers—is the one in need of help.

We pay the bills. We are the people about whom the Congress should be concerned. Right now is a good time to think about the public interest in labor controversy. Congress is making a new law. Why not remember the salient facts?

About 3 years ago we had a railroad strike. Two railroad brotherhoods, the trainmen and the engineers, rejected a settlement that had been reached through the machinery of the Railroad Labor Act. So they called a strike.

The United States could not stand a long-fought-out railroad strike. The people of every great city would be hungry and finally starve if railroad transportation were suspended too long.

Few cities have more than 2 or 3 weeks' supply of food, fuel, and medicines. People are not going to starve quietly because employers and employees cannot peacefully agree on wages, hours, or whatever they wrangle about. Make the public mad, and it will act violently and not necessarily reasonably.

Remember what happened when the railroad strike was called? We were inconvenienced for a day. Then people began to get angry. They got scared. Then President Truman asked Congress for authority to draft the strikers into the armed forces. By that time the union leaders were scared, too. They denounced Mr. Truman, but they called off the strike.

But the notion of breaking a strike by calling the strikers into the armed forces is surely not the final answer to protecting the public welfare at a time of labor trouble. Congress did not pass the bill suggested by the President. He possibly was glad not to be given the authority and the responsibility.

On the face of things the Army and Navy are not places of detainment for unionists who have an unsettled difference with their employers. The armed forces should not be asked to perform such a service, but they will be asked to do such things again and again if Congress does not provide more sensible ways of protecting the public health and safety.

The truth is that we have never faced the facts of our modern living. A general strike that would deprive the public of food, fuel, transportation or any of the essentials of life would be intolerable. No government, conservative, liberal, Communist, or even labor, could tolerate it.

A successful general strike in any important field would be a rebellion against the existing government. That government would fight it. If the strikers won, the government would be defeated and discredited. No government would like that. No public would permit it.

Consequently, Collier's thinks that in whatever changes the Congress makes in the Taft-Hartley law, it had better write something soundly and clearly about the public stake in labor controversy. It is not enough to rely upon the President to improvise a solution in the heat of battle.

Grover Cleveland had to call out the United States Army 55 years ago when the railroads were strike bound. Theodore Roosevelt had to improvise a settlement when the coal mines were shut down too long forty-odd years ago.

When John L. Lewis decided to challenge the authority of the National Government by forcing a coal strike, President Truman was not so helpless. A simple court procedure showed Mr. Lewis in short order who was bigger, he or the country. So by the reasonable means of negotiation an agreement was reached. It did no injury to the United Mine Workers.

It would be a step backward to wipe off the statute books the protection now given the public interest, unless something better is substituted. And that is not too easy. There is no facile solution of the conflicts of interest between employers and employees in a democratic republic of freemen. Compulsory arbitration, once hailed as a solution, has fewer adherents as time passes. The in-

tricate provisions of the Taft-Hartley law admittedly are not perfect. Whoever can find something actually better will be entitled to public gratitude.

The Taft-Hartley law has been so befouled politically that it has been very difficult for Congress or the public to approach it reasonably. Actually the congressional committee that was created to observe its operations and to recommend revisions has not found much bad to report.

The union leaders were against it. Among other things, the law made the union officials go back to the union members for authority. Perhaps the membership of the unions were not opposed to this.

At any rate, the law was an issue in the last Presidential campaign, and has been getting congressional attention because of this fact if for no better reason.

Collier's hopes that Congress will find a reasonable, democratic American way of safeguarding the national interest in time of great labor controversy. Collier's hopes that in whatever revisions are made Congress acts equitably in the public interest.—W. L. C.

Well, I remember the old saying, something to the effect that there was more rejoicing over the one sinner who repented than over the ninety and nine who never strayed from the fold.

A great publication like Collier's should be willing to lead, not just tail along in the wake of public sentiment.

The answer to strikes which injuriously affect the public health, safety, and welfare is not an injunction but a provision in the Federal law which will permit those in charge of industries and enterprises which must be operated in order to serve the public health, safety, and welfare to, after a reasonable waiting period, discharge the employees who do not want to work, hire others who do. It is as simple as all of that.

No End of Luxury

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial on excise taxes in the New York Daily Mirror of Friday, March 11, 1949:

NO END OF LUXURY

Among taxes that are unfair and self-defeating the most glaring examples are the wartime excise levies on various so-called luxuries.

These impose their burden on every family in America. They are killing off businesses. They are particularly destructive in the New York City area because here are situated many of the enterprises which these taxes directly attack.

This newspaper recently pointed out in a series of articles on the "20-percent death" how this excise blight is causing bankruptcies, creating unemployment, robbing the housewife and the workingwoman of a great deal of her allowance or pay check.

The mother who buys a bottle of baby oil or a jar of baby powder pays her 20 percent luxury tribute to the Federal Government.

GOVERNMENT'S VICTIMS

The purchaser of a handbag, a piece of luggage, cosmetics which are absolutely essential to the well-being of the modern woman, or a fur coat, which is a long-wearing, economical garment, hardly a luxury in today's living, suffers the same bite.

Make a long-distance telephone call, send a telegram—and the Federal Government sticks you for not 20, but 25 percent, above the cost of the service.

If the movies provide much of your recreation, as they do for so many city dwellers, just write off 20 cents added to every dollar as gravy for Washington.

Your electric light bulbs? Luxury. Ten percent.

It would seem reasonable that anything that goes by the name of the Fair Deal would be interested in lifting some of these unfair and discriminatory burdens off the backs of the people.

But Fair Deal is only a political slogan. Its fiscal agent, Secretary of Treasury John W. Snyder, says it would be dangerous to reduce the excise taxes without increasing other taxes to replace the revenue.

That's a familiar old New Deal-Fair Deal tune.

Probably the melody will linger on, but then—maybe not.

THE WAY TO RELIEF

There are evident some few glimmerings of hope in the growing bipartisan revolt against the Fair Deal spending program and in the support gathering for Representative JOSEPH MARTIN'S bill which would cut the excise taxes back to their prewar levels.

The outrageous telephone and telegraph taxes were originally intended only to help keep the wires clear for heavy wartime traffic.

Likewise, the doubling of the other taxes made sense in the war year of 1943, particularly as it was accompanied by the Government's solemn promise of a cut-back as soon as hostilities were over.

No Congressman, Democrat or Republican, can defend these asinine levies. So it seems to be up to us, the people, to make as much noise as it will take to get them knocked down to size. Best way is the time-honored "write your Congressman." While you're at it, drop a line to Representative JOSEPH W. MARTIN, House Office Building, Washington, D. C., in support of his bill.

We repeat: These taxes are a burden and a blight everywhere, but they are a particular plague in the great New York area, a plague from which we all suffer, an economic sickness that may wipe out your job, or your neighbor's job.

United States Foreign Service Academy

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent article that appeared in the Boston Sunday Post of March 13, 1949, by Lester Allen in reference to the training of persons for the Diplomatic Service of the United States:

UNITED STATES MAY TRAIN ITS DIPLOMATS—WE WIN OUR WARS AND LOSE THE PEACE BECAUSE WE NEGLECT THE FIELD OF DIPLOMACY

(By Lester Allen)

There is a persistent and quite erroneous American belief that given the opportunity almost any free citizen of this Republic could give a creditable performance as President, five-star general or admiral, captain of industry, Secretary of State, or what-does-the-country-need.

No one in his right senses would wish to change that circumstance for it is the essence of the American dream, the hope of a pure and unfettered democracy. There are no limits to what people can accomplish by their own efforts in the United States insofar as rising in the world is concerned. Whether or not the individual functions efficiently and for the greatest good of the greatest number in the exalted position is quite another thing.

At the moment the greatest obstacle to real unification of the security services of the Nation—the Army, Navy, and Air Force—is basically the rivalries imposed on the mores of students in the service schools which are carried through a lifetime. This has been one of the favorite arguments for a revision of the educational systems at Annapolis and West Point. The suggested changes, however, seem to tackle the problem from the wrong angle.

WE WIN AND LOSE

Representative THOMAS J. LANE, of Massachusetts, has proposed still another service school in a bill, H. R. 471—a United States Foreign Service Academy. In a few well-chosen words Congressman LANE has summed up the need for such a school. "Why do we win wars and lose the peace," he asks, "the losing of which breeds more wars? Because we train men—career men—in the military arts but leave our diplomacy to amateurs. Take a recent trend—a man became a successful soldier—a general with several stars; he has learned how to command. Then we appoint him to a diplomatic post where he must exercise the flexible and understanding talent of a conciliator. It just doesn't work. We might as well put a bull in a china shop. Or, a man has wealth, social connections, or political pull. These are supposed to invest him overnight with an intimate knowledge of international affairs and all these other special qualities of a profession requiring years of study and experience.

"Diplomacy is a vocation, not an avocation. In the United States, however, we have come to regard it as a delayed-action Cook's tour. We pick a man who is successful and a regular fellow. We put him in charge of an embassy which is like an American island put down in the strange sea of some foreign country. He knows nothing of the language, customs, political organization, and history of that country. He blunders—unintentionally, of course—and ruins the good will we have built up through the sacrifice of many American lives and the expenditure of much American wealth. Then he is transferred, and the people back home begin to suspect that something is lacking in such an arrangement."

That is exactly what has been happening, and it is an excellent argument for the training of diplomats in a service school, if the demonstrated defects of our service-school system are avoided.

Just what are the defects of the service schools as they are now operated? They do turn out great military and naval leaders. That much has been demonstrated. But, unfortunately, they turn out officers with a prejudiced cast of mind, whose thinking is channeled along the lines of the services they will enter—and not very well channeled at that.

It is the accepted practice, for example, for the top men of the graduating class at West Point to enter the Corps of Engineers—the elite corps in the Army. The chances are that the officer who rises to the top in the Corps of Engineers will spend the majority of his time on nonmilitary projects—rivers, bridges, harbors, public works. The infantry—so-called queen of battles—gets the

lower- or lowest-ranking members of the class, except in those few instances where the young graduate himself elects the foot-slogging branch of the Army, which he will not do if any other choice is offered. Nevertheless, the infantry officer is the backbone of the Army.

CHIEF DEFECT

It has often been proposed that all nominations to West Point and Annapolis come from the ranks. This would be possible and effective only if there were universal military training, for such appointments would then be truly selective and on the basis of merit and promise. There would still be no guaranty, however, that the service rivalries would be stopped, or whether it is desirable to stop the rivalry.

The chief defect as the system now operates seems to be in the original selection of individuals to be trained as eventual leaders of the Nation's services. As it is now any young man who can get an appointment, either in competitive examination or by favor of a Member of Congress, is taken into Annapolis or West Point and thumped into conformity with what the rival services believe that an officer should be regardless of whether the individual has aptitude for the kind of life he must live in following his career. The service-school authorities argue that the unfit are weeded out before graduation, but that is mere expedient argument. It is not true. The unfit with powerful friends in the right place can move right on up to five stars. Can and do.

It was demonstrated during World War II that in open competition in the armed services for key posts in the officers corps of all the services—reserve or nonreserve school officers—gave the trade-school boys a stiff standard of competence to meet. Of course, the trade-school clique set it up so that their boys were always on top, and they made certain that when the war ended their boys were still in the rail position. Not a voice was raised against the wholesale dismissal to civilian life of officers who had proved their superiority in war by the trade-school boys, with the result that, today, they are trying to lure back the younger reservists. But, what's the chore they want them for? To do the back-breaking job of training new conscripts and volunteers, not for staff jobs, you may be sure. Not for procurement, or economic mobilization, or any of the complex planning that keeps the Nation prepared.

Congressman LANE has proposed some requirements for the Foreign Service Academy that could very well be adopted by the armed-services academies. One is that in making original appointments of permanent officers in the Foreign Service, preference shall be given to graduates of the Academy—after they have served 2 years as temporary employees at foreign stations. It would be a great improvement if the midshipman or cadet were given preference for permanent commission in the United States Army or the United States Navy, Marine Corps, or Air Force after 2 years service in that force, and afford to non-Academy individuals the same chance for permanent appointment.

KNOW TOO LITTLE

Theoretically the reservist has the same chance, but in actual practice there are too many road blocks set up by the trade-school boys to make it effective. The fact is that the trade-school graduate is still raw material when commissioned. His real value to his country, and his ability are developed later, in the daily discharge of his duties, in special assignments, and in the staff colleges. The trade school merely prepares the man for what comes later on, but, so do any number of high-ranking colleges.

As it is in the Army and Navy, so it is in the United States Foreign Service. It is not a newly discovered condition. It has been known for a long time that there were too many American diplomats who knew how to balance a cup of tea but knew all too little about their own country, and less than that about the country in which they were stationed.

Congressman LANE has summarized the need in his bill, and he has pointed out that one of the objectives of the Foreign Service Act of 1946, was to insure that it was broadly representative of the American people, and fully informed in respect to current trends in American life.

This can be achieved by the medium of a foreign service academy which will make certain that such officers receive a thorough training in the traditions, the history, and the performance of our way of life as well as that of the countries to which they are assigned.

How many times have we felt that our colleges and universities as such, were taking the United States for granted, and were failing to provide that awareness of American culture and civilization, with all its accomplishments and its shortcomings which must serve as the basis of their occupations and their lives?

SERVICES DIVIDED

We cannot leave our Foreign Service to men and women who are not specially trained in Americanism first.

Many people do not know that our State Department and the Foreign Service are two distinct organizations, each with its own personnel, appropriations, and administration.

This dual structure makes the United States today the only major power with its foreign-affairs organizations divided into two segments, and often alienated, one from the other.

Our Foreign Service personnel, to keep in touch with their fellow Americans and the viewpoint of Americans, must serve in the United States for longer periods than actually is the case today.

This signifies in part that there is lack of a unified basic training for the Foreign Service.

In a one-world atomic age, we cannot rely upon cloistered scholars nor upon those who have acquired most of their formal education in foreign countries, to provide the personnel to represent us in diplomacy.

Our own colleges and universities, do not offer complete professional training in foreign service as a career.

Furthermore, they are limited in their approach because such training is a primary function of the Government and should be provided by the Government.

Eradication of Foot-and-Mouth Disease

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the Appendix of the RECORD, I wish to call to the attention of the Congress a matter which, in my opinion, is of the utmost importance to the Nation, and that is the control or eradication of the foot-and-mouth disease.

Mr. Speaker, in this connection, I would like to include in these remarks copies of two resolutions adopted by the Senate of the State of California which brings this matter forcibly and opportunely to the attention of the Congress, and I beg to submit the same as follows:

Senate Joint Resolution 8

Relative to the proposed International Animal Quarantine Station on Swan Island

Whereas the people of this State remember with the direst apprehension the outbreaks of foot-and-mouth disease in 1924 and 1929 and the paralyzing effect each of these outbreaks had upon the economy and welfare of California; and

Whereas the bulwark of protection against the introduction of foot-and-mouth disease into the United States or this State has been subdivision (a) of section 306 of chapter 497 of the United States Statutes of 1930, providing that if the Secretary of Agriculture of the United States determines that foot-and-mouth disease exists in any foreign country, he shall officially notify the Secretary of the Treasury and give public notice thereof, and thereafter, and until the Secretary of Agriculture gives notice in a similar manner that such disease no longer exists in such foreign country, the importation into the United States of cattle, sheep, or other domestic ruminants, or swine, or of fresh, chilled, or frozen beef, veal, mutton, lamb, or pork, from such foreign country is prohibited; and

Whereas restrictions on importations have from time to time been issued pursuant to the authority of Congress and by that means foot-and-mouth disease has been kept from the United States or any part thereof; and

Whereas chapter 592 of the United States Statutes of 1946 authorizes the Secretary of Agriculture, in his discretion, to establish and maintain on Swan Island, situate in the Caribbean Sea, an international animal quarantine station and permits the Secretary of Agriculture, notwithstanding the provisions of any other law, but subject to regulations prescribed by him to prevent the introduction into the United States of communicable diseases of animals, to permit animals to be brought into the Swan Island Quarantine Station from any country, including those in which the Secretary of Agriculture determines that foot-and-mouth disease exists and to permit the same to be subsequently imported into other parts of the United States under the regulations of the Secretary of Agriculture; and

Whereas on December 7, 1948, the Secretary of Agriculture of the United States gave notice of his intention to issue regulations relating to the Swan Island Quarantine Station, which regulations permit ruminants and swine to be shipped into the quarantine station if they originate in an area in a foreign country which has been free from foot-and-mouth disease for at least 60 days immediately preceding the date of movement of the ruminants and swine therefrom and after quarantine at Swan Island for not less than 90 days may be brought into the United States; and

Whereas the report on foot-and-mouth disease made to the Senate of California on March 18, 1948, by the Senate Interim Committee on Livestock Diseases, created by Senate Resolution No. 145 of the 1947 session of the California Legislature, shows that 316 Cebu bulls were landed on Sacrificios Island in April of 1946 and were removed from said island to the vicinity of Veracruz, Mexico, on the 28th of September 1946, and were thereafter inspected by two veterinarians of the Bureau of Animal Industry of the United States Department of Agriculture and found to be free from foot-and-mouth disease and 3 weeks thereafter foot-and-mouth disease broke out in the vicinity into which the Cebu bulls had been imported; and

Whereas the regulations for the operation of the Swan Island Quarantine Station pro-

posed by the Secretary of Agriculture can therefore not give any assurance that Swan Island will not become the avenue through which foot-and-mouth disease will be introduced into the United States; and

Whereas the California State Board of Agriculture at its meeting on January 17, 1949, attended by representatives from the California Farm Bureau, the California Cattlemen's Association, the California Wool Growers Association, California Farmers, Inc., the Agricultural Council of California, and the Agricultural Department of the California State Chamber of Commerce, adopted a resolution with the unanimous concurrence of those in attendance, that the regulations for the Swan Island Quarantine Station should prohibit the importation into the United States of animals susceptible to foot-and-mouth disease from any country in which it is determined that foot-and-mouth disease exists: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the President of the United States and the Secretary of Agriculture thereof that no action be taken for the use of Swan Island as a quarantine station with respect to the importation into this country of animals susceptible to foot-and-mouth disease from any country in any part of which exists foot-and-mouth disease, and respectfully memorializes the Congress of the United States to enact legislation to this effect; and be it further

Resolved, That the secretary of the senate is hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Secretary of Agriculture, the Chief of the Bureau of Animal Industry, and the Speaker of the House of Representatives, and to every Senator and Representative from California in the Congress of the United States.

Senate Joint Resolution 9

Relative to funds for the Joint Commission for the Eradication of Foot-and-Mouth Disease in the Republic of Mexico

Whereas foot-and-mouth disease, a major and devastating disease of livestock, is present in the Republic of Mexico; and

Whereas the Republic of Mexico and the United States of America have joined forces to control and eradicate the disease in Mexico; and

Whereas the chief instrument for the control of the disease is the joint commission established for that purpose and supported by the two nations with financial, scientific, and general ways and means; and

Whereas great strides are being made in the Republic of Mexico by the efforts of the joint commission toward the control and eradication of this disease, which is not known to exist elsewhere in North America; and

Whereas it is in the general welfare of the two contracting nations to continue the work of the joint commission without any slackening of effort or loss of research, program or planning: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the Congress of the United States to approve an appropriation of funds, and such other enactments as are necessary, to continue without interruption the work of the Joint Commission for the Eradication of Foot and Mouth Disease in the Republic of Mexico, and commends the Commission for its excellent work; and be it further.

Resolved, That the Secretary of the Senate is hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Secretary of Agriculture, the chief of the Bureau of Animal Industry, and the Speaker of the House of Representatives, and to every Senator and Representative from California in the Congress of the United States.

Mr. Speaker, in view of the fact that these resolutions emanate from the State of California, I am taking the liberty to suggest that the Members from that State look into the matter, and if, in their judgment it is proper that one of the Members from that State introduces legislation as is suggested in the foregoing resolutions, and if such legislation is introduced, I feel sure that Members interested from other States will join in the support of this important legislation.

Why I Am That Way

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, some of my colleagues have asked me why on occasion I voted as I did. My answer was that I was trying to vote my convictions and what I thought my constituents wished.

A letter received last week, which is typical of the letters from the district, will explain to the curious who care to read it the thinking of the average citizen of the Fourth Congressional District of Michigan. That letter reads as follows:

DECATUR, *March 7, 1949.*

DEAR MR. HOFFMAN: In reply to your request, I wish to say, that we are definitely in favor of the Taft-Hartley Act, as are many other with whom we have talked.

What is wrong with it? Most of the complainers let someone else read and interpret it for them.

There is too much of that being done. I fear that some day, when it is too late, many are going to awaken from their lackadaisical way of letting someone else do it for them, and realize to their sorrow what it is all about, and that day is far too close to be comfortable; in fact, we think it is already here in its first stages.

TAFT, himself, has said that "there probably should be some changes made," and has expressed a willingness to make them. What more can one ask? So far as we can see, this bill gives the worker the greatest protection he has ever had, including protection from the heads of unions where they need it most.

Would you not think they could see it? All anyone seems to think of is shorter hours, more pay, more insurance, more vacations—Harry included—larger pensions so they can spend more time in taverns and pool rooms—more, more. Do they not realize that sometime, somehow, someone had to work to accumulate what they had hoped and had pride enough to believe would be enough to take care of them when they no longer were able to work? And now this gang comes along and wants to take it all away by taxation, while they are on vacation, and put us where we, too, will need a pension. When that day comes—oh, boy—I'm all for big ones.

Another thing, Why tax us to fight communism, then continue to let them come in here to lecture and spread their dirty doctrine?

Yesterday's Chicago Tribune gave an account of booklets being published in Washington showing air views of strategic places, atomic plants, etc.; then selling them to Russia for a few cents each.

Why charge for them? I move that we make it an outright gift; we have given away about all else we possess; they even have a good start on the shirt on our back.

I often read or hear something that so riles me, I think I will write to you; then on second thought, I take pity on you and think—oh, no, dear God—let him rest while he would be reading my protest. After all, we do still have faith in you and confidence in your judgment. We believe that being right there on the job, where you hear both sides, that your judgment is probably much better than anything we might suggest; so just go on being a good American. Fight and vote for the T-H Act and all else that is good for us.

Decatur has been Republican; I am not at all sure there is a party any more.

Sincerely,

MAME BOPE
(Mrs. W. P. Bope).

You Can't Explain a Dead Cat Out of the Family Cistern

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. RANKIN. Mr. Speaker, the gentleman from Pennsylvania [Mr. RICH] has just told us of a large industry that is getting ready to leave the State of New York. He seemed to attribute its moving to the lack of a higher tariff.

Of course a tariff is an indirect tax on the consumer. The Fordney-McCumber tariff law, passed during the Harding administration, levied a tax on everything the average person has to buy, from the swaddling clothes of infancy to the lining in the coffin in which old age is laid away.

Then the Smoot-Hawley tariff law was passed during the Hoover administration which levied a tax on his tombstone by placing a tariff on granite.

Someone has said that was done for the benefit of the granite "growers" of New England.

But the gentleman from Pennsylvania [Mr. RICH] gave the wrong reasons for this industry's running out of New York. It is not the tariff, or the lack of a tariff, but the FEPC law—that communistic monstrosity that was forced on to the people of that State by the pressure of a racial minority, and signed by Mr. Dewey with 22 pens, that is driving this enterprise out of the State.

When Governor Dewey signed that crazy measure, he signed away the Presidency of the United States.

All the perfumes of Arabia would not have sweetened his little hand after that.

That vicious FEPC Act, which was first promulgated by Joe Stalin in 1920, is hanging like the sword of Damocles over the head of every American businessman in the States of New York,

Massachusetts, New Jersey, and Connecticut.

On last Friday, March 11, the gentleman from New York [Mr. MULTER] attacked my speech on this subject which I made more than 2 years ago; and in his attempts to defend this communistic piece of legislative monstrocity, he reminded me of the words of the great iconoclast, W. C. Brand, who once said:

You can't explain a dead cat out of the family cistern.

The racial minority which forced this vicious measure through the Legislature of New York, and which is now attempting to force it onto the rest of the Nation, does not give a tinker's dam about the Negroes. They are simply using the poor Negro as a smoke screen. They are doing the Negroes far more harm than good.

I said when Mr. Dewey signed this vicious measure that he had got his mustache in the wringer, and I did not believe he would ever get it out.

My predictions came true.

They put this proposition on the ballot in California in 1946, and it was defeated by a clear majority in every single county in the State. The majority against it in the State was more than a million.

They tried to ram it through the Legislature of Pennsylvania a short time ago, but the intelligent legislators of that great State killed it as dead as Hector.

They are now trying to ram it through the Legislature of Ohio, in the hope of lining that State up, and trying to impose it as a national proposition.

I do not believe the legislators of the great State of Ohio are willing to commit industrial suicide for that proud Commonwealth just to gratify the cupidity of an alien minority that is trying to force this communistic measure on to the whole country, because of the effect it is having on those States that have gone so far afield as to write it into their statute books.

They had better repeal it and save those States from disaster.

They are trying to do the same thing in Minnesota. I pointed out the other day that it would probably mean industrial suicide for the State of Minnesota, as it would for the State of Ohio; because I do not believe they can ram this vicious measure through the Congress, and force it onto the other States, from now until doomsday.

In this attempt to "explain the dead cat out of family cistern," the gentleman from New York [Mr. MULTER] presumed to take issue with some of the things I said, and admitting a large portion of them by omission. I simply took the record and read the regulations imposed on the people of New York under this measure into the CONGRESSIONAL RECORD.

Here is what I said then, and I stand by it today.

The speech referred to follows:

Mr. RANKIN. Mr. Speaker, I arose to discuss a measure introduced by the gentleman from Illinois [Mr. Dirksen] for the re-creation of the now defunct FEPC, or the so-called Fair Employment Practice Committee.

I believe Mr. Dirksen made a speech for such a measure in the last Congress.

It would certainly take a genius to reconcile that speech of the gentleman from Illinois [Mr. Dirksen] and this FEPC bill he has introduced with his recent speech against communism, especially since that FEPC is the chief plank in the Communist platform.

It is the most dangerous piece of communistic legislation with which this country has ever been threatened in all its history. I am going to show what it would do to the people of Illinois by pointing out what it is doing to the people of New York, where this vicious measure was written into the laws of that State without consulting the people who are suffering under it.

All these bills contain the same old bunk about making it a crime to discriminate in employment because of race, creed, color, national origin, or ancestry, etc.

Before Mr. Dirksen attempts to ram this monstrosity down the throats of the people of Illinois, and all the other States, I suggest he do as they did in California, let the people of Illinois vote on it. That is what they did in California in the last election, and it was defeated by a majority in every single individual county in California.

Now let us see what such a measure is doing to the people of the State of New York.

A man from New York said to me this morning, "You know this measure is being operated in New York simply by failure to operate it." The other night there were two men from New York in a taxicab here in Washington driven by a man who works here on the Hill. They got into an argument. One of them said, "I told you this FEPC would ruin the State of New York if they ever put it on the statute books." The other one said, "I did not think so. I thought it was a humanitarian measure. But I now see my mistake."

Then the other man said, "Here is what it has done to me. I own a good home," I believe he said "out on Riverside Drive, and I also own a house next to it which I bought for my own protection. I had a friend living in the other house, but his business took him to another section of the country and he had to vacate. Like a fool, I put up a sign 'For rent,' thinking that someone in the community whom I could afford to rent it to would apply. Somebody put a colored fellow up to come and apply for it and the court now says I must let him have it."

I bring this to you for what it is worth. I understand the Communists in New York are demanding that the same rule be applied to rooms or apartments for rent.

But I want to read you some of the regulations that are now being imposed upon the people of the State of New York under this vicious law. Businessmen from New York tell me that the way they are getting around this measure is by operating through employment agencies, because no intelligent businessman would go to a State with that kind of law on its statute books and attempt to establish a new business or a new enterprise, especially with the regulations or rulings under it which I am now going to read to you.

Remember the, put this measure on the ticket in California and the people voted on it in the last election; and it lost in every single individual county in California. It was beaten in the entire State by about 3 to 1.

You simply destroy business with a measure like this. That is what the FEPC did here. Men have gone out of business all over the country in the last few years because of the persecution that was carried on by this outfit here in Washington, the personnel of which I shall insert later on.

A few people are going around urging us to pass it as a national law, to put everybody else in the same predicament. These people who are carrying on this racial agitation are using the Negro as a smoke screen. They do not give a tinker's dam about the Negro. They are not trying to help the Negro. They are doing them more harm than anybody has in the last 50 years, and the decent, law-abiding Negroes know it.

But let me show you what they have done in New York, and let me give you some of the regulations or rulings, as they are called, and ask you if you would like to have them in your State. I want to ask the gentleman from Illinois [Mr. Dirksen] how he would like to have them in Illinois, or how you would like to have them in Ohio, Indiana, Pennsylvania, or in Missouri, or in any other State in the Union.

Here are the regulations, or rulings, issued by the State of New York. They are headed:

"State of New York Executive Department. State commission against discrimination. Rulings."

Here are some of the things you cannot do under the law of New York:

UNLAWFUL EMPLOYMENT PRACTICES BEFORE HIRING ANYBODY

Those words are written in capitals. Here is the first unlawful practice:

"Inquiry into the original name of the applicant for employment, whose name has been changed by court proceedings or otherwise."

If you inquire as to his name or what his name used to be you violate the law. You commit an unlawful practice. For instance, take this man who writes for PM, who calls himself I. F. Stone. His name was Isadore Feinstein, as Cordell Hull once pointed out. Suppose he comes to you asking for employment and you ask him that question. Then you will have committed an unlawful act.

Here is the next one:

It would be unlawful practice to make "inquiry into the birthplace of the applicant for employment, the birthplace of his parents, spouse, or other close relative."

How would you like that in Iowa, Illinois, Texas, or Nebraska? In California I know you do not like it, because you have just voted on it.

Here is the next "unlawful practice":

"Requirement that the applicant for employment produce a birth certificate or baptismal certificate."

That would be an unlawful practice under this FEPC Act in New York.

I was surprised to see Governor Dewey get his mustache in the wringer on this proposition. I do not see how he is ever going to get loose from it.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. What about this requirement during the war that every person employed in certain industries had to prove that he was born here before he could get a job?

Mr. RANKIN. Certainly. If we had had this law all over the country then, the Japs would have had a spy at the elbow of every man in a key position; so would the Germans, and so would every other enemy country.

I thank the gentleman from Illinois for his timely suggestion.

It is an unlawful practice in New York, under this law, to make "inquiry into the religious denomination of an applicant for employment, his religious affiliations, his church, parish pastor, or religious holidays observed. Inquiry into whether an applicant for employment is an atheist."

Inquiry into whether an applicant for employment is an atheist is forbidden, although you may be publishing literature for the Methodist Church, the Baptist Church, or any other denomination.

Another thing, an applicant for employment—and I am reading from the rules laid down by this commission:

"An applicant for employment may not be told that this is a Catholic, Protestant, or Jewish organization."

In other words, if you are in the business of publishing religious literature you cannot even give him that information under this law which the gentleman from Illinois [Mr. Dirksen] now proposes for the whole country, including Illinois.

Here is another unlawful practice:

"An applicant for employment may not be told that the following holidays will be observed by the firm and no others, naming the holidays; e. g., Decoration Day and July the Fourth, etc."

You cannot tell them under the laws, rulings, and regulations of the State of New York that they may observe the Fourth of July.

Here is another unlawful practice:

"An applicant for employment may not be told that employees are required to work Rosh Hashana and Yom Kippur."

Frankly, I did not know there were any such days until the last few years.

Another thing, it is an unlawful practice under this New York law to make "inquiry into the complexion of an applicant for employment."

Inquire into his complexion and you are likely to get yourself tangled up with the law of the State of New York.

Here is another unlawful practice:

"Requirement that an applicant for employment annex a photograph."

That would be an unlawful employment practice. You are not supposed to know how he looks.

Remember, this is not in Russia, but in New York.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. And yet the State Department in order to grant a visa requires a photograph of the person to be presented with his application.

Mr. RANKIN. Certainly, and they ought to do so. Much as I respect the distinguished gentleman from Illinois [Mr. MASON], I certainly would not want to employ him unless I knew how he looked. If I had never seen him, I would certainly want to see his picture.

Here is another unlawful practice:

"Inquiry whether an applicant for employment is a naturalized or native-born citizen; the date when the applicant acquired citizenship; whether the applicant's parents or spouse are naturalized or native-born citizens of the United States; the date when such parents or spouse acquired citizenship."

You cannot inquire into these questions under this FEPC law in New York.

Here is another unlawful practice:

"Requirement that an applicant for employment produce his naturalization papers or first papers."

He may lie to you and tell you that he is a naturalized citizen, but you cannot ask to see his papers.

Another unlawful practice in New York is to "inquire into the lineage of an applicant for employment, his ancestry, or national origin."

You remember a few years ago the Dallas News inserted an advertisement for a colored janitor, and this FEPC outfit down the street ordered them to take it out, said it was an unlawful practice.

One member of this FEPC outfit here in Washington went into the office of Swift & Co. in Chicago. This FEPC man asked them: "How many Negroes do you have on your board of directors?"

The answer was "None."

Then the FEPC man asked him: "Why haven't you?"

That was the FEPC down here in Washington a few years ago before it died because a few radicals could not browbeat Congress into perpetuating it.

But it is now in force in the State of New York.

Here is another unlawful practice under the New York law:

"Inquiry into the location of places of business of relatives of an applicant for employment."

It is an unlawful practice to make "inquiry into the place of residence of the parents, spouse, or other close relatives of an applicant for employment."

I am reading from the records at Albany.

Here is another unlawful practice:

"Inquiry into the maiden name of the wife of a male applicant for employment and/or inquiry into the maiden name of the mother of a male or female applicant for employment."

The other day we had the Eislers down here. One of them has been shown to be representing the Comintern, according to his sister's testimony. He has a brother out in California who seems to be poisoning the public mind through the moving-picture industry. He tries to defend his brother and refers to this woman as "my former sister." If you wanted to employ any of them and check the name of at least one of them as given here, you could not inquire into those names at all—if you are trying to do business in the State of New York—even though one of them has a half dozen aliases. You could not even ask where they came from or when they got here or when they changed their names.

Here is another unlawful practice, in New York:

"Inquiry into the general military experience of an applicant for employment."

I wish every ex-serviceman could read that, and the next one.

Here it is. It is an unlawful practice to make "inquiry into the whereabouts of an applicant for employment during the First World War; i. e., during the period from 1914 to 1919."

In other words, inquiry as to his whereabouts in the period from 1914 to 1919 is forbidden as an unlawful practice in the State of New York.

Is that what you want in Colorado? Is that what you want in Massachusetts?

Mr. GIFFORD. We have it.

Mr. RANKIN. Get rid of it, and we will help you.

Is that what you want in Kansas, in Ohio, and in other States.

Let your States vote on it. Michigan is going to vote on it right away. If you will tell the people of Michigan the whole truth, let them know the whole truth about this monstrosity, I will guarantee you they will beat it worse than they did in California.

Here is another unlawful practice:

"Inquiry into the organizations of which an applicant for employment is a member, including organizations the name or character of which indicates the religion, race, or national origin of its members."

I presume, if they should ask me if I am a member of the Masonic lodge, I could have them jerked up and brought before this inquisition board or probably prosecuted at various places throughout the country.

Mr. Speaker, I am not criticizing the people of New York. I have long since learned in going from one State to another that real Americans are about the same everywhere. I believe if they had a vote on it the people of New York would beat it, just as they did in California.

They are having a vote on it in Michigan because a little minority group has been attempting to browbeat the Legislature of Michigan into passing it. I dare say when it goes on the ballot in Michigan and the people of Michigan understand what it means they will defeat it more thoroughly than they did in California. The same thing would happen in probably every other State in the Union.

Mr. AUGUST H. ANDRESEN. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Minnesota.

Mr. AUGUST H. ANDRESEN. Will the gentleman tell us what the penalties are in New York?

Mr. RANKIN. In addition to being harassed to death with orders and directives to cease, desist, rehire, and so forth, there is a punishment provided of "imprisonment in a penitentiary or county jail for not more than 1 year or by fine of not more than $500, or by both."

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Massachusetts.

Mr. GIFFORD. I want to remind the gentleman that we have that law in Massachusetts.

Mr. RANKIN. I was afraid of that.

Mr. GIFFORD. I was thoroughly amazed when I looked into it; I had not learned what the rules were. But, perhaps we carried it too far. I am so sorry, and I have been, and I am not in favor of this, I can assure the gentleman.

Mr. RANKIN. I know the gentleman is not, and I am sure the people of Massachusetts would not favor it if they had a vote on it.

Mr. GIFFORD. Employers always inquire and must know whether you come from a respectable family or not. They are so careful. Perhaps they overdid it. But I think a man ought to be able to find out whether he came from a respectable family.

Mr. RANKIN. There are a great many questions that should be asked, which are forbidden under this law.

It will be remembered that this so-called FEPC was set up here in Washington by Executive order. But when we turned the pitiless sunlight of merciless publicity on to it, the Congress refused to appropriate money for the continuation of any such communistic program.

In that fight I made a speech against that vicious program, on July 12, 1945, which I am inserting at this point for the information of everyone who reads this RECORD.

It reads as follows:

Mr. RANKIN. Mr. Chairman, the passage of a law at this time legalizing this so-called FEPC would be a betrayal of the white people of the country. If every individual in the United States could understand just what it means, there would be such a roar of protest coming from every State in this Union that it would never see the light of day.

If every Member of Congress would screw his courage to the sticking place and vote his convictions on this so-called FEPC, it would not get 50 votes out of the entire membership of 435.

It is a most dangerous and brazen attempt to fasten upon the white people of America the worst system of control by alien or minority racial groups that has been known since the Crucifixion.

When I read the names of the personnel of this outfit you will understand what I mean.

To sanctify this organization by law would give the lie to everything we have told our American boys they were fighting for. Instead of coming back to liberty, freedom, and democracy, they would find themselves sold into this bondage, herded, humiliated, and regimented by alien influences directed by a foreign comintern representing the deadly doctrine of Karl Marx that is based upon hatred for Christianity and for everything that is based on Christian principles.

It is a manifestation in legislative form of that infidelity that has closed thousands of Christian churches in Europe and has been responsible for the murder of untold millions of Christian human beings.

This measure is not directed altogether at the white people of the South. If it were, you folks in the North would not have so much ground for alarm. We in the South know how to combat subversive elements. As Henry Grady once said, we wrested the South from such dominion "when Federal

drum beats rolled nearer and Federal bayonets hedged closer to the ballot box of the South than it ever will again in this Republic."

But you people in the North have not had that training, and this FEPC is likely to bring grief, strife, hatred, race riots, and chaos in your northern cities if this vicious agency is perpetuated and sanctioned by your votes.

Do not forget that the returning servicemen know what this thing means, and they are going to call you to account next year—beginning with the primary. They are not going to wait until the general election.

Do not forget that every businessman, every farmer, every professional man, and every other independent individual whose blood glows with the instinct of American liberty, is going to join these men, and those other patriotic forces that are fighting to save American institutions for which these boys have been fighting and dying upon every battlefield in the world.

If every man and every woman in the United States could just read the list of individuals that compose the personnel of this crazy FEPC, and its subdivisions throughout the country, I dare say there would not be enough of you left who vote for it, even if nominated in the primaries next year, to form a corporal's guard.

For your information, and for the information of the American people generally, I am going to read you the official personnel as it exists today. Remember, this list is taken from the official record. This is the group that wants to nose into and control every business in the United States. Remember, they can search the files and records of every business establishment in America where some disgruntled individual is willing to trump up a charge of discrimination. They can drag them all over the country and try them, and in that way destroy any ordinary business concern.

The next thing they are going to try to do is get control of your schools and force their communistic henchmen into the schools and teach your children their subversive doctrines.

Read these lists carefully, which, as I said, are taken from the official records here in Washington, and you will see that not 1 out of 10 on these rolls is a white gentile American.

Here is the official list:

Committee on Fair Employment Practice, Washigton, D. C., Office of the Chairman

Incumbent	Title	Race	Salary
Ross, Malcolm	Chairman	White	$8,000
Johnson, George M.	Deputy Chairman.	Colored	8,000
Hubbard, Maceo	Hearings examiner.	do	5,600
Bloch, Emanuel	do	White	5,600
Copper, Evelyn	do	do	5,600
Berking, Max	Assistant to Chairman.	do	3,800
Alexander, Dorothy	Secretary to Chairman.	Colored	2,600
Clifton, J. Jeanne	Secretary to Deputy.	do	2,000
Brooks, Mary	Clerk-stenographer.	do	1,800
Banting, Myra	do	White	1,800

You will note that in this office of the chairman, consisting of 10 people, there are 5 Negroes and 5 white people, most of whom have foreign names. One of the whites is a stenographer who receives the smallest salary of anyone on the list.

Remember that the members of this group preside over the destiny of every business enterprise in America, and are using their assumed powers to harass white Americans out of business.

This is the organization Members of Congress are being asked to perpetuate by the passage of this bill.

FIELD OPERATIONS

Here is the Division of Field Operations:

Field Operations

Incumbent	Title	Race	Salary
Maslow, Will	Chief	White	$6,500
Mitchell, Clarence	Principal fair-practice examiner.	Colored	5,600
Davidson, Eugene	do	do	5,600
Beall, W. Hayes	Senior fair-practice examiner.	White	4,600
Mercer, Inez	Fair-practice examiner.	do	3,800
Rogers, Eleanor	Clerk-stenographer.	Colored	1,800
Satio, Otome	do	Japanese-American.	1,800
Thompson, Mildred	do	Colored	1,800
Cornick, Emma	do	do	1,620

You will note that it consists of nine people—five Negroes, one Japanese, and three others—two of whom have records of affiliation with Communist-front organizations, according to the reports of the Dies committee.

Imagine this group going about over the country riding herd on the white American businessmen of the Nation, telling them whom they shall employ, whom they shall promote, and with whom they may associate.

It would be interesting, and probably enlightening to check up on these people and see how many of them are native-born Americans.

Members of Congress had better do this now before they get caught in this trap, because this question of un-American activities is going to be an issue in every congressional district next year, beginning with the primaries.

The people are not going to wait until the general election for someone who holds a commission as a result of the pernicious activities of Sidney Hillman and his gang to wrap the party cloak about him and shout to the people of his district that "I am a Republican" or "I am a Democrat."

More than 2,000,000 young men have already been discharged in this war, and they are organizing now to try to save America for Americans. They are going to read your records, and they are likely to ask you some very embarrassing questions when you get home.

REVIEW AND ANALYSIS DIVISION

Now look at this list and see who reviews all these records of racial discrimination when they come to Washington, and you will understand how the editor of the Dallas News felt and how other white gentiles feel, including Cecil B. DeMille, the great American movie producer, when they are harassed out of business.

Here is the list:

Review and Analysis Division

Incumbent	Title	Race	Salary
Davis, John A	Chief	Colored	$5,600
Lawson, Marjorie	Research analyst.	do	3,800
Golightly, Cornelius.	Compliance analyst.	do	3,200
Hemphill, India	do	do	2,600
Coan, Carol	do	White	2,600
Davis, Joy P	do	Colored	2,600
Hoffman, Celia	Clerk-stenographer.	White	1,800
Spaulding, Joan	do	Colored	1,800

You will note that it consists of six Negroes and two white people, one of whom is named Carol Coan and the other Celia Hoffman, a white stenographer receiving the lowest salary on the list.

Now, if you sign the petition to bring out this bill or vote for this monstrosity, do not forget that when you get home those white American businessmen who help to sustain this Nation in time of peace and whose sons are fighting its battles in time of war are going to want to ask you some questions that you may not be able to answer.

LEGAL DIVISION

But if you want a real laugh, look at this Legal Division.

Legal Division

Incumbent	Title	Race	Salary
Reeves, Frank D	Attorney	Colored	$4,600
Stickgold, Simon	do	White	4,600
Gordon, Jernevive	Clerk-stenographer.	Colored	1,800

You will note that this so-called Legal Division consists of two Negroes and a Simon Stickgold.

INFORMATION DIVISION

Now we come to the Information Division. If you want information about this outfit, write to this Division:

Information Division

Incumbent	Title	Race	Salary
Bourne, St. Clair	Information specialist.	Colored	$3,800
Whiting, Margaret	Clerk-stenographer.	do	1,800

You will note that it consists of two Negroes, one registered as an information specialist and the other as a clerk-stenographer.

BUDGET AND ADMINISTRATION

Now we come to the Budget and Administration Division. This Division not only makes up the budget but administers the regulations. Here is the list:

Budget and Administration

Incumbent	Title	Race	Salary
Jones, Theodore	Chief	Colored	$5,600
Jeter, Sinclair	Assistant administrative officer.	do	3,200
Baker, Vivian D	Clerk-stenographer.	do	2,000
Jackson, Bosales A	Clerk-typist	do	1,620
Paynter, Minnie A	do	do	1,620
Hollomon, Irving	Clerk	do	1,440
Selby, Ralph R	Chief, fiscal	do	2,600
Ross, Sylvia B	Voucher auditor	do	2,000
Nelson, Otelia	Accounting clerk	do	1,620
Carpenter, Elizabeth.	do	do	1,620
Brent, Pearl T	do	do	1,620

This outfit, which is composed of 11 Negroes, and no whites at all, not only makes up the budget for financing this aggregation, but it seems to have the power of administration. I hope you will read this list to your white businessmen, farmers, and ex-servicemen at home when you get back and ask for renomination in the primaries next year.

MAIL AND FILES DIVISION

Now, here are the ones that have control of the mails and filing system:

Mail and files

Incumbent	Title	Race	Salary
Douglas, Lela	Chief, Mail and Files.	Colored	$2,000
Welch, Selena	Docket clerk	do	1,800
Gamble, Jessie	File clerk	do	1,620
Phillips, Rose	do	do	1,440
Reed, Charles	Messenger	do	1,380
Mitchell, Regina	File clerk	do	1,440

You will note that this division is composed entirely of Negroes—six Negroes, and no whites at all. I wonder why they discriminated against the white race in setting up these two powerful branches of this most dangerous agency?

REGIONAL OFFICE, NEW YORK

Now, let us turn to the regional offices and see who is going to harass the business people back in the States. Here is the list for the State of New York:

Regional office, New York

Incumbent	Title	Race	Salary
Lawson, Edward H.	Regional director.	Colored	$5,600
Jones, Madison S.	Fair-practice examiner.	do	3,800
Jones, Robert G.	do	do	3,800
Donovan, Daniel R.	do	White	3,800
Irish, Miriam	Clerk-stenographer.	Colored	2,000
Asepha, Tillie	do	White	1,620
Schwartz, Sonia	do	do	1,620

This is the list that is going to help Governor Dewey harass the white American businessman of the Empire State. You will note that it is composed of four Negroes and three white people. Please read the names of the three white people and see if you can figure out their antecedents.

Businessmen of New York are going to have a hard time after this war without having all this communistic conglomeration to deal with, to say nothing of the one which Governor Dewey and his political henchmen have now heaped upon them.

REGIONAL OFFICE, PHILADELPHIA

Now, let us turn to Philadelphia, the birthplace of the Constitution—the "city of brotherly love." At the risk of causing glorious old Benjamin Franklin to turn over in his grave, I read you the list:

Regional office, Philadelphia

Incumbent	Title	Race	Salary
Fleming, G. James	Regional director.	Colored	$5,600
Greenblatt, Mildred.	Fair-practice examiner.	White	3,800
Manly, Milo A	do	Colored	3,800
Risk, Samuel R	do	White	3,800
Grinnage, Willard	do	Colored	3,200
Gorgas, Helen	Clerk-stenographer.	do	1,800
Klinger, Karyl	do	White	1,800
Brown, Grayce	do	Colored	1,440

You will note that it is composed of eight individuals—five Negroes and three whites, Mildred Greenblatt, Samuel R. Risk, and Karyl Klinger.

Don't you know there will be some brotherly love when that crowd gets going on the businessmen of the Philadelphia area?

REGIONAL OFFICE, WASHINGTON, D. C.

Now, here is the regional office in Washington, D. C., the National Capital, where there has been so much persecution of white gentiles in the last few years. Here is the list:

Regional office, Washington, D. C.

Incumbent	Title	Race	Salary
Evans, Joseph	Regional director.	Colored	$5,600
Houston, Theophilus.	Fair-practice examiner.	do	3,200
Kahn, Alice	do	White	2,600
Chisolm, Ruby	Clerk-stenographer.	Colored	1,800
Urback, Dorothy	do	do	1,620

You will note it consists of four Negroes and Alice Kahn. Just what chance a white gentile will have with this group is entirely problematical, to say the least of it.

REGIONAL OFFICE, CLEVELAND

Now, let us move out where the West begins and take a look. Here is the list in the Cleveland regional office:

Regional office, Cleveland

Incumbent	Title	Race	Salary
McKnight, William.	Regional director.	Colored	$4,600
Abbott, Olcott R.	Fair-practice examiner.	White	3,800
Glore, Lethia	do	Colored	3,200
Kelley, Berniza	Clerk-stenographer.	do	1,620
Wasem, Edna	do	White	1,800

You will note that this group is composed of three Negroes and two whites, Olcott R. Abbott and Edna Wasem.

Don't you know the white people of Cleveland will enjoy being dominated by them?

CINCINNATI REGIONAL OFFICE

Cincinnati seems to be largely under the jurisdiction of the Cleveland office since it only has two people:

Cincinnati

Incumbent	Title	Race	Salary
James, Harold	Fair-practice examiner.	White	$4,600
	Clerk-stenographer.		1,800

DETROIT REGIONAL OFFICE

Now let us move on to Detroit, Mich. Here is the regional office for Detroit:

Detroit

Incumbent	Title	Race	Salary
Swan, Edward	Examiner in charge.	Colored	$4,600
Sese, Doris K	Clerk-stenographer.	Japanese-American.	1,620

You will note that it is composed of one Negro and one Japanese. I know the businessmen of Detroit are grateful for this consideration.

I should like to hear some of the comments they will make to you gentlemen from Detroit when you get home next summer, if you support this vicious measure.

REGIONAL OFFICE, CHICAGO

Here is a list of the regional office in the Windy City:

Regional Office, Chicago

Incumbent	Title	Race	Salary
Henderson, Elner	Regional director	Colored	$5,600
Gibson, Harry H. C.	Fair-practice examiner.	do	3,800
Schultz, Joy	do	White	3,800
Williams, Le Roy	do	Colored	3,200
Zeidman, Penny	Clerk-stenographer.	White	1,800
Ingram, Marguerite S.	do	Colored	1,620

You will note it is composed of four Negroes, Joy Shultz, and Penny Zeidman. I am told that a representative of this group went into the office of Swift & Co. and asked how many Negro members they had on their board of directors. The answer was, "We have no Negro members on our board of directors." Then the question came back, "Why haven't you?" This just shows what the supergovernmental set-up is driving at. They want to communize America and destroy everything which our glorious ancestors have left us and for which our boys are now fighting and dying all over the world.

REGIONAL OFFICE, ATLANTA

Here is a list of the Atlanta office:

Regional office, Atlanta

Incumbent	Title	Race	Salary
Dodge, Witherspoon.	Regional director.	White	$4,600
Hope, John	Fair-practice examiner.	Colored	3,800
McKay, George D.	do	White	3,200
Chubb, Sally	Clerk-stenographer.	do	2,000
Ingram, Thelma	do	Colored	1,800

You will note that it consists of two Negroes and three whites; the most important post in this office, that of examiner, is held by a Negro. I wonder how the people of Georgia enjoy the domination of this group. I may have more to say about them later.

REGIONAL OFFICE, KANSAS CITY

Here is the list of the Kansas City office:

Regional office, Kansas City

Incumbent	Title	Race	Salary
Hoglund, Roy A	Regional director.	White	$5,600
Ormabee, Eugene	Fair-practice examiner.	do	3,800
Jones, Mildred	Clerk-stenographer.	Colored	1,620
Schlien, Helene G.	do	White	1,620

You will note that this office force consists of three whites and one Negro. You can read the list of whites yourself and then judge how many of them really represent the people of that area.

ST. LOUIS REGIONAL OFFICE

Here is the list of the regional office at St. Louis:

St. Louis

Incumbent	Title	Race	Salary
Theodore Brown	Examiner in charge.	Colored	$3,800
Morris Levine	Examiner	White	3,200
Armatha Jackson	Clerk-stenographer.	Colored	1,620

You will notice that it consists of two Negroes and Morris Levine. Just how they came to select these particular individuals to preside over the destiny of the white businessmen of the great State of Missouri I cannot understand.

REGIONAL OFFICE, DALLAS, TEX.

The members of the regional office at Dallas are as follows:

Regional office, Dallas

Incumbent	Title	Race	Salary
Castenada, Carlos	Regional director.	White	$4,600
(Vacancy)	Fair-practice examiner.		3,200
Gutleben, Willetta	Clerk-stenographer.	White	1,800

You will note there is one vacancy. Last year that position was held by a Negro, namely, Roy V. Williams. The other two members, Carlos Castenada, the regional director, and Willetta Gutleben seem to be in charge of the office at the present time. This is the regional office that attacked the Dallas News last year for carrying an advertisement for a Negro janitor. This fellow Castenada, the director, held the same position

that he holds now. If this set-up is made permanent, then I presume the rest of the white American businessmen in Texas may expect to be harassed just as the Dallas News was.

REGIONAL OFFICE, NEW ORLEANS

The regional office at New Orleans consists of the following members:

Regional office, New Orleans

Incumbent	Title	Race	Salary
Ellinger, W. Don	Regional director.	White	$3,800
Morton, James H	Fair-practice examiner.	Colored	3,200
Ronning, Evelyn	Clerk-stenographer.	White	1,800

You will note that there are two whites and one Negro in this office. As the Negro is the fair-practice examiner, just what the decent people of Louisiana may expect at the hands of this outfit is something to contemplate.

REGIONAL OFFICE, SAN FRANCISCO

The San Francisco office consists of the following individuals:

Regional office, San Francisco

Incumbent	Title	Race	Salary
Kingman, Harry L	Regional director.	White	$5,600
Rutledge, Edward	Fair-practice examiner.	do	4,600
Ross, Bernard	do	do	3,800
Seymour, Virginia	Administrative assistant.	do	2,000
Marzen, Jewel	Clerk-stenographer.	do	1,800

This is the only office we have found yet that consists entirely of white (?) people. Just what the background of each one of them is I am unable to say.

LOS ANGELES REGIONAL OFFICE

The Los Angeles regional office consists of the following:

Los Angeles

Incumbent	Title	Race	Salary
Hunt, A. Bruce	Hearings examiner.	White	$5,600
Brown, Robert E	Fair-practice examiner.	Colored	3,600
Lopez, Ignacio	do	White	3,800
Vetter, Vera G	Clerk-stenographer.	do	1,800
Lerna, Marie	do	do	1,620

You will note that there are four whites and one Negro in this office, the Negro being the fair-practice examiner. I do not know what consideration the white businessmen of the Los Angeles area are receiving at the hands of this group, but from what I can hear there is considerable gnashing of teeth over the situation.

Mr. Chairman, this FEPC is a super-government of commissars, with more power for evil than any other agency that has ever been created in this country. If Congress should ratify it and make it the law of the land, then we will have sacrificed and destroyed that sacred freedom for which our brave men are now fighting and dying on every battle front in the world.

We have no right to pass such a drastic, revolutionary measure that literally changes our way of life, as well as our form of government, while these boys are away from home in uniform, fighting to sustain American institutions.

As I said before, we are going to carry this battle against such un-American activities into every congressional district in the United States next year, in the primary, so that no one can crawl behind the party cloak and claim immunity at the hands of any segment of our people.

This is a battle for the survival of free constitutional government, for the survival of the American way of life, for the survival of free enterprise, for the survival of American liberty itself.

It is a battle to save America for Americans.

Retained Earnings of Industrial Corporations Serious Problem for Nation and Stockholder Who Is Becoming Forgotten Man

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. PATMAN. Mr. Speaker, before World War II, and during most of the period during the war, corporations (including trade, transportation, banking and utilities) paid to their stockholders two-thirds of their earnings and retained one-third.

Section 102 of the Internal Revenue Act contemplates that 70 percent of such corporations earnings should be distributed as taxable dividends. In 1948 these corporations earned $21,000,000,000 in profits after the payment of taxes. Instead of paying out to the stockholders $14,000,000,000, or two-thirds of the earnings, they paid to them only $7,000,000,000. If the other seven billion had been paid to the stockholders, there would have been more money available for these stockholders to go into small businesses of their own, or to invest in other small businesses, or to buy more stock of the corporations that paid them the dividends. The officers and directors, having kept this $7,000,000,000 in the funds of the corporations deprived the United States Government of around $2,000,000,000 in taxes, and at the same time dried up the capital market to the extent of $5,000,000,000.

Last week I had a press conference at which I proposed that these corporations should be required to distribute these earnings as customary before World War II. Since that time I have received quite a few interesting letters. I am going to quote from some of them.

The following letter from a citizen of New York is self-explanatory:

Naturally I am 100 percent in favor of your suggestions on margin reductions, but in a broader sense its contribution to the capital problems of small business, and even large as well, should be enormous.

I feel rather well qualified to make this statement, because in the last 20 years I have been selling listed securities to the public, I have never experienced sales resistance, the equal of the 1949 version, especially when securities judged by the yield and earning basis have never been more attractive.

And isn't it ridiculous to margin $12,000 worth of soy beans (trading dynamite) with $750, when it costs $11,100 to margin 100 shares of conservative widow-supported American Telephone & Telegraph.

Good luck to you, and my respect for your intelligent leadership. The country can use plenty of this commodity.

From another citizen of New York the following letter was received:

I was happy and very gratified to see someone at last voice objection to the policy of corporations in merely salting away dollars.

I believe earnestly with you that the Government is being bilked out of taxes and that stockholders are being grossly victimized by the policy of corporations refusing to pay out dividends and in using cash for such flagrantly selfish purposes as establishing enormous personal pension funds to aid the management over the bumps in their old age.

The management, of course, blithely ignores the fact that thousands of people in each large concern are now dependent on dividend income to carry them through each year in their old age.

* * * * *

There are corporations selling at one times earnings and one and one-half times earnings because of the dividend pattern established by the management.

The public, the investors, of whom there are millions in America, people dependent on dividend income, and the Government are all being coolly, calmly, steadily deprived of their revenues and their rights.

I hope and trust you will continue your fight successfully. Good luck to you.

From a citizen of New England the following letter:

Allow me to congratulate you on your courageous character and sound common sense in connection with your public statement in favor of larger dividends and smaller margin requirements. An analysis of stockholders of any large corporation will show that the small stockholders are in the majority, and they are the people who are with you 1,000 percent. Everybody I spoke to today was enthusiastic about your splendid statement, and it has been suggested that I write and thank you for starting something which is really worth while and has enormous public support.

From another citizen of New England the following letter:

Please accept my heartiest congratulations in your magnificent defense of stockholders.

The unfair treatment accorded stockholders by corporations today would be most adequately rectified by the acceptance of such a bill as you propose.

I am completely in accord with your proposal to penalize corporations at least 20 percent of their earned surplus. In that event stockholders would receive their just and fair dividends and I wholeheartedly extend my most sincere wishes for a very speedy acceptance.

From a lady on the east coast the following letter:

As one of the many thousands of small investors throughout the country, I would like to express my appreciation of your effort for congressional action to force corporations to distribute more of the profits to the stockholders. From experience I am frank to say the abuse is growing worse and should be stopped. May I cite one extreme example?

I am the owner of 50 shares—7 percent—preferred stock of the Marion Power Shovel Co., purchased April 13, 1927, date of the initial sale of issue. Without going into too much detail, there has accumulated $112 in unpaid back dividends. In 1946 the company earned $9 per share and paid nothing; in 1947, $94 a share was earned, and in 1948 estimated earnings are $110 a share after

taxes. In the last 2 years regular dividends of $7 a year were paid, nothing on the accumulative dividends in arrears.

On several occasions in the past 2 years, the company offered various unsatisfactory exchanges for the preferred stock; with each successive occasion additional inducement was offered. Evidently the present management is intent on acquiring this preferred stock at the lowest price possible, at the same time depriving their owners of any payment on arrears, the earnings being held as risk capital, on which the company pays nothing.

I am sure I am expressing the opinion of the multitude of small investors throughout the country, who make these investments in the expectation of a reasonable and fair break from management, that the Congress will do somthing to rectify this abuse of the distribution of profits to stockholders on the part of so many corporations.

The people in our great State of Texas are also interested. The following is self-explanatory:

It was very heartening to read your timely remarks today regarding lowering of margins and paying out of more profits to stockholders.

Have been in the brokerage business for the past 19 years, and have noted the gradual decline in new business for some time. The above recommendations that you have made would more than adequately offset the poor business we have been doing lately.

You've broken the ice for us.

Another letter from Texas is as follows:

May I take this means of expressing my approval of your recommendation that corporations pay out to the owners of the business a more substantial part of the earnings than what they have the last several years. You are certainly right in saying that the stockholder should get and be able to spend his part of the earnings in his own way. Retention by a company of 30 percent of the profits should be sufficient.

May I take the privilege of suggesting that you also consider the unreasonableness of the present tax law that penalizes a stockholder. As you know, a corporation very properly pays tax on earnings, and presently when a stockholder gets the dividend he has to pay a tax on same too. This seems unfair for a stockholder is obviously paying twice on the same company's earnings. This policy is discouraging venture money going into old or new enterprises.

As we all know, business furnishes employment, and if the "tools" are not furnished in this way, then there is bound to be a resultant unemployment with a depression following in its wake. The alternative would be "State" financing which in my humble opinion is un-American for it is socialistic.

At any rate I feel that your thinking is along the right lines, and I want to take this means to commend you for your views and your efforts in behalf of the forgotten man—"the small investor" who is greatly responsible for furnishing the capital of big and small businesses without which our wonderful country could not be the big industrial power that it is.

A very interesting letter was received from a citizen of New Jersey, a plumbing and heating contractor, it is as follows:

DEAR CONGRESSMAN: I thoroughly agree with your views on legislation to compel corporations to distribute larger amounts of their net profits to their shareholders, especially the ones who have invested their savings in the common stock of these companies.

It seems that the directors of the majority of corporations in recent years have adopted a set policy of retaining two-thirds of their net profits and giving one-third to the stockholders, but the selfish personal interest is shown by them by their increased salaries, long-term employment contracts with pensions along with incentive bonus payments, and many other schemes to eat up company profits to legally avoid income-tax payments in actual amounts of net profits earned.

These officers and directors forget that only a few years hence many of their companies were reorganized or were on the edge of bankruptcy but due to war contracts and the resultant business that came along with it they have made great progress in their financial structures, in many cases paid off their funded debt, modernized and expanded their plants along with building up huge reserves at the expense of our Government and the people who originally were the ones who made it possible to finance their business ventures, the common stockholder who should have been getting the two-thirds of the net profits.

This present-day procedure of dividend payments has driven the small investor out of the market of corporate financing because he has learned by sad experience that a reduction in profits mean less or no dividends to the common stockholder along with depreciated market value on his holding and eventual loss of his savings. The results are that it is practically impossible under the present methods of division of net profits to get people to invest in any form of corporate financing. So who are responsible for this condition? Not the people.

Your suggested bill to compel larger amounts of net profits to shareholders is sound business and good legislation that should have been enacted many years ago, there being no question about the increase in tax collections from the corporations and the individual investor.

I can picture the howl that is going to be made by those who are running our large corporations for the benefit of a few at the expense of the many people who hold common stock, along with the organized campaign that will be staged to oppose your idea, no doubt with flag waving by the big boys. Yours is one of the few practical, sound, beneficial proposals that have been presented in recent years for the maintenance of our American way of life and standards of living by giving moneys that belong to the people to spend in acordance to their own needs and ideas rather than an indirect managed economy by a few persons who sit on various boards of directors providing for their own personal future security at the expense of millions of common-stock holders.

Wishing you every success in this legislation as it will help business bring out idle money for investment, restore confidence, increase taxes, and at the same time help the corporations who have discouraged the investing public.

A citizen of Pittsburgh, Pa., writes:

Just read your article in the Pittsburgh Post Gazette regarding dividends and margin rates. This is the best news that has come out of Washington since election. It will be a great help to the small-business man and to people whose only source of income is from dividends and possible capital gain. More power to you and hope you can succeed.

A former Texan, but now a citizen of California, writes an interesting letter as follows:

My native State being Texas, and seeing an article in the paper, regarding large earnings for industries, and low payments in dividends to stockholders, felt you would be interested in concrete example.

Atlantic Refining Co., home office Philadelphia, Pa., (I have been in this plant) earned $12.68 in 1948—they paid the stock holders $2 for the entire year—this to me is an outrage. $10.68 went back in reserve funds, they should have paid at least $4.

This low dividend to stockholders reflects on the price of stock on the New York Stock Exchange. Should one wish to sell their holdings—stocks whose earnings, ranging from $6 to $8 a year are selling 5 to 10 points higher, due to a more liberal return to stockholders.

Standard Oil of Indiana, which paid dividends successively for over 50 years, earned $9.08 in 1948—they paid $2.50 to stockholders.

There are a few million people in the United States, such as school teachers, older people, et cetera, who are dependent on their return on odd lots they own, and if you could do something to see that such firms as mentioned above were forced to pay an extra dividend to stockholders out of their large 1948 earnings, I am sure it would not only be a feather in your cap, but many would bless you, and sometimes a good deed, to those in need, during these times of high prices brings blessing to the one who performs the good.

I happen to be one of these old "birds" from Texas who are dependent on dividends from some odd lots of stocks.

Hoping you may be successful, and with every best wish for personal success, I am with best wishes,

Another citizen of New Jersey wrote the following interesting letter:

Have read with interest your article in the New York Sun, dated March 9, relative to having corporations increase their dividends.

You are absolutely correct about your statement, and no doubt you will receive substantial support from many who will show their interest, as I am particularly concerned and you have my whole-hearted cooperation.

Only recently I communicated with a concern, after receiving their annual statement; their earnings were immense; they expanded immensely; their dividends (small) 15 cents quarterly; but their executive officers received enormous salaries. Where does the poor investor come in? With labor conditions, the wages are on a high scale, and the investor does not receive his ratio share; comparing with their earnings. Every investor likes to see the companies they invest in—that they grow—but as you write in your column: give the investor his share he is also entitled to larger dividends. Therefore, I urge you in every way to proceed with your program, as I certainly commented to several brokers that something should be done about the poor investor.

I, on the other hand, had to resign my position, due to death in family, and must take care of my invalid husband, who is unable to walk, nor speak well, as he suffers from the dreadful disease multiple sclerosis; naturally, placing yourself in my position, I must depend upon the small income, but, as you say, the dividends could be increased and would certainly help many people; either by reinvesting or other purposes, by supporting themselves.

SEVENTY-FIVE PERCENT RULE BROKEN BY BANKS

A member of the New York Stock Exchange from Ohio wrote the following letter:

It was indeed a pleasure to receive the press reports regarding your activities in reducing margin requirements for the purchase of listed securities on our various exchanges.

There is one thing, however, that I would like to call your attention to which is decidedly in error in this press report that states: "The Federal Reserve rule now is that brokers, dealers, and banks may give credit only for 25 percent of the market value of securities so that the investor has to put up 75 percent in cash."

May I call your attention to the fact that ever since this rule has been in effect, it has

been broken right and left by banks. The ones that we have had experience with have paid absolutely no attention to this regulation and have loaned investors, some of whom were carrying their accounts in our office, decidedly in excess of the amount allowed under this regulation.

This is known to everybody in the securities business as well as the officials of the Federal Reserve Bank, and I think you would be doing our industry a most constructive piece of work if the banks of this country were forced to observe this rule as strictly as do members of the New York Stock Exchange. It is most unfair to allow the banks to take customers away from brokers because they can loan them up to 80 percent on the value of a security where we are confined to the customary 25 percent.

You are on the right track, Mr. PATMAN, and I congratulate you for the efforts you have put forth so far. May they be crowned with complete success, and, if they are, you will make lots of friends scattered throughout the country.

I hope the members of the Board of Governors of the Federal Reserve System will take notice of this letter. It contains a rather serious accusation.

The following advertisement appeared in the Boston Herald, March 10, 1949, page 21:

STOCK TRADERS

We finance your stock market purchases and make loans on listed stocks. Twenty percent margin required.

Beacon Finance Co., 41 Beacon Street, Boston. LA 3-2155.

February 1, 1949.

It is typical of such ads appearing in other cities.

A citizen of Kentucky had the following to say:

I was gratified to read in the Cincinnati Enquirer on Thursday, March 10, an article in which you had recommended a larger distribution of earnings.

Congratulations upon your effort to help us small stockholders.

In the year of 1948 Cities Service Corp. earned $13.25 and paid stockholders $3; Sinclair Oil earned $7 and paid $2, so your statement is absolutely correct. How can the corporations expect public interest to invest their money in business on such basis as this?

I certainly appreciate your well-spoken words and trust you succeed further in your efforts.

TAX EVASION CHARGED

Another citizen complains in a letter that monopolies have evaded taxes through retaining earnings, as follows:

Permit me to congratulate you on your splendid effort to expose and clamp down on the monopoly capitalists in their greatest steal of the century. These monopolies have unquestionably evaded taxes through retained earnings. They have beyond any doubt plowed back many billions of dollars to their capital structures by robbing the stockholders as well as the Government.

These monopolies with their managerial despotism have denied the stockholders their rightly earned dividends and therefore your fine effort to invoke the taxing authority of the Nation to compel them to disgorge the stockholders' money is well justified. By your undertaking, you will benefit not only the stockholders but the corporations as well, as the stockholders will feel renewed faith in the corporations.

If you succeed, you shall have laid the foundation to a truly free-enterprise economic system. You will have earned the gratitude of millions of small investors who have put their life savings into these industrial enterprises.

One of the most interesting letters on this subject was from New York and is as follows:

I read with much interest the newspaper accounts of your calling for a law that would force corporations to pay out the greater portion of their earnings in dividends.

It is my belief that many corporations are piling up undue earned surpluses, not because they feel that the funds will be required for replacement or expansion facilities, but simply because those in control of the corporations have a large income and any additional current income would be swallowed up by taxes; this is, of course, to the detriment of the small stockholder.

As an example of this, and which may be of some interest to you, I am attaching the latest statement of ——— Manufacturing Co. It will be noted that their current earnings are practically nil, but they have accumulated an excessive surplus through past years' earnings and tax refunds. Three million dollars of the surplus came from a tax refund made to the corporation in 1947. Their present financial condition is all out of proportion to the volume of business and to any reasonable business requirement. You will note from the statement that their cash assets are almost $7,000,000 and is greater than their total annual sales volume.

DESIRE TO AVOID INCOME TAXES

Why don't they pay a dividend? The answer is given in the president of the company's letter to the stockholders dated April 12, 1948, which letter was issued as a rebuttal to a stockholders' committee, which was endeavoring to have a dividend declared from the unnecessarily large cash surplus. I have underlined the pertinent paragraph and you will see the only reasons that dividends are not declared is because of a desire on the part of the directors to avoid income taxes.

I and probably others who are small stockholders would like to receive the substantial dividend this corporation could afford to pay and would willingly pay the necessary income taxes, but unless someone like yourself champions the cause of the small stockholder, we are at the mercy of the controlling factions, who are not particularly interested in dividends during the high tax years, as their income from other sources has probably taken them into the very high tax-rate brackets.

Several months ago the Investors Digest, a house publication of the stock-brokerage house of Merrill Lynch, Pierce, Fenner & Beane, carried an article about the Income Tax Bureau case against the Trico Products Corp., of Buffalo, N. Y., wherein the Tax Bureau had levied a special tax assessment against them for failure to properly and adequately distribute their earnings as dividends and that the case was headed for the Supreme Court. It also pointed out that this was the second time this had happened to the same corporation, and that on the previous occasion the stockholders had been able, through the courts, to hold the directors responsible because of their failure to declare a proper dividend and avoid the extra tax penalty. Assuming that the present tax laws permit such extra levies, then the failure to enforce the law seems to be the trouble.

I hope that you are successful.

It will be noticed that a corporation was referred to as withholding dividends because the dividend would be taxable.

In a letter sent out by the manufacturing company on April 12, 1948, the following paragraph was included:

Careful thought has been and is being given by the directors to the possibility of effecting a distribution of cash on hand in excess of the reasonable anticipated needs of the business in a manner not subject to income or surtaxes. To date, no method has been devised which has obtained Treasury Department approval. The directors' efforts in this respect, however, have in no sense terminated.

This same complaint has been received from numerous people concerning many different corporations.

ARGUMENT AGAINST CAPITAL-GAINS TAX

The following letter from a person in San Francisco contains an interesting suggestion about capital-gains tax. I am trying to ascertain now how much is actually collected by the Government through this method of taxation. If the amount is as small as I have been told, it is doubtful that it is in the interest of the Government for the capital-gains tax to be retained. This letter contains an illustration typical of many that should receive consideration. It is as follows:

I note that you are interested in lowering the margin on security purchases. If I may make a suggestion, I believe a number of changes should be made in regard to the law governing securities.

Take my case as an example. Having been in business in the East, naturally I acquired eastern securities. Later, moving to California, I was desirous of selling the eastern stock and investing in Pacific coast securities, merely to have my assets where I live. This was practically impossible, because it happened that I hold securities for investment only, having bought them at a time when the market was considerably lower than at present. Thus I could not dispose of them and transfer my holdings to the Pacific coast because of the income tax involved.

I believe that the Government could get more revenue if they would charge a higher rate on transactions and eliminate the income tax on the profit made on sales. This would increase the transactions very considerably and help stabilize the market and would allow holders to switch their holdings whenever desirable.

In other words, capital gains should be treated as capital (like they are in England) and not as income (which they are not), and this should apply to any and all capital gains, whether they are the result of sale of securities, real estate, business, etc.

POLICY OF UTILITY COMPANIES

Since I am sure that the author of the following letter will not object to his name being used, I am inserting it in full. It discloses a policy of the utility companies that is certainly more favorable to the stockholders and the public than the policy that is used by large industrial corporations. The profit figures for all corporations include utilities and banks. If they were separated the industrial corporations would appear more vulnerable.

C. D. ROBBINS & Co.,
Newark, N. J., March 10, 1949.

The Honorable WRIGHT PATMAN,
United States House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have been in the securities business for 40 years and am a Republican. I want to take this occasion to congratulate you on your attitude on margin requirements on securities. Furthermore, I believe you are on the right track in your feeling that some law should be passed to tax undistributed profits up to a certain percentage. There is an Internal Revenue Bureau ruling now—section 102—requiring that corporations distribute up to 70 percent. This is not followed very carefully nor does it seem to be enforced. Large corporations retain, in many cases, 60 to

80 percent of the earnings belonging to stockholders rather than distributing and giving the stockholders, who are the real owners of the business, the right to invest their own money. If stockholders do not benefit in boom periods, they certainly are not going to benefit in the way of dividends in a depression. The money is used by corporations in a boom period for expansion and improvements at high costs. The public-utilities industry pays out a fair proportion of its earnings in dividends, usually from 60 to 80 percent, and when they have to do any financing for additions and improvements, they go to the stockholders and offer them stock at an attractive price, or they sell low-coupon bonds to raise part or all of the money. Utility companies endeavor to keep their stock and bond ratio in balance. Utility companies which have 20 percent or less in common stock in their capitalizations usually pay 50/60 percent of their net earnings in common dividends on common stocks. Those companies which have a ratio of stock to bonds between 20/25 percent usually pay from 60/70 percent of their earnings in dividends. Some of the companies which have above 25 percent in common stock pay about 70 percent. There are some utility companies with stock ratio to bonds of 40 percent or more which pay out as much as 80 percent of earnings in common-stock dividends. The stockholder is thus given fair treatment and the Government collects its just share of taxes. A formula somewhat like this should be applied to large industrial corporations.

I am glad that you have started the ball rolling on both of these matters and hope you will keep it going.

Yours very truly,

C. D. ROBBINS.

GOVERNOR ECCLES' STAND ON RETAINED EARNINGS

The United States News and World Report for January 3, 1949, contains an interview with the Honorable Marriner S. Eccles, member of the Board of Governors, Federal Reserve System.

In this interview, the following question was asked Governor Eccles by David Lawrence and his reply follows the question:

Question. What sort of tax increase then do you suggest?

Answer. I would prefer a tax on those corporate earnings which are not paid out as dividends. This would mean the equivalent of an increase in the normal tax only on that part of the corporate profits which is retained in any year instead of on all the profits. This is justified on the grounds that the Government does not collect personal income tax on these earnings, whereas on the earnings distributed, a large percentage is paid in individual taxes. The failure to have such a tax has induced corporations to retain an abnormal amount of their earnings. It is estimated that they paid out only 35 percent of profits in 1948 as against 50 percent during the war years and 70 percent in 1929. In order to avoid a penalty under existing law, section 102, corporations have had to show a need for the retained funds and this has made for inflation, particularly in the construction field, and has tended to bring about business concentration through the buying up of related property and businesses, especially small business. A 15-percent tax on the corporate earnings retained in 1948 would yield the Government about $2,000,000,000. In case such a tax induced corporations to pay out more of their earnings, the taxes collected by the Government would be substantially higher because the average rate paid by individuals receiving the dividends would be much higher than the 15 percent. The suggested tax would serve as a substitute for the penalty tax provided under section 102.

This kind of tax would also be especially good to have on the books during a depression period. Whereas in an inflation, as I have stated, business uses its earnings freely and adds to the inflationary pressures, the reverse is true in a depression. This tax would tend to put into circulation corporate earnings which otherwise, in a depression, might lie idle or be used unnecessarily to pay off debt, which is deflationary. Based on past experience, business becomes more liquid in depressions because of lower prices, smaller inventory, and reduced outstanding accounts, and there is less need for capital expenditures. They do not as a general rule have use for their rainy-day reserves when the rainy day comes. Therefore, they should not add to them and thereby add to deflationary pressures during a depression period.

Our Farming Must Change

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Mr. Nathan Koenig, executive assistant to the Secretary of Agriculture:

OUR FARMING MUST CHANGE

EUROPEAN COUNTRIES ARE TRYING HARD TO INCREASE FOOD PRODUCTION TO BECOME SELF-SUFFICIENT; THIS MEANS AMERICAN FARMERS MUST TURN TO LIVESTOCK PRODUCTION AS FOREIGN DEMAND FOR GRAIN FALLS OFF

(By Nathan Koenig, executive assistant to the Secretary of Agriculture)

(During each of the last 3 years, Nate Koenig spent several weeks in Europe, surveying conditions for the U. S. D. A. In this report on his most recent trip, he tells Successful Farming readers of the progress made and its likely effect on American agriculture.)

The European market for American farm products is beginning to close down.

Each year since the start of World War II, Europe asked for and received more and more food. This country shipped unprecedented amounts of bread-grains, canned and dried fruits and vegetables, fats and oils, and livestock products, including millions of pounds of dried eggs.

Today, countries of western Europe are figuring hard on how to pare down on what they buy from us. This shopping list gradually is being narrowed to bare essentials.

This turn is of real significance to American farmers who only a few years ago had geared their production to the skyrocketing demands of a world at war. It's the signal for a return to peacetime demand.

The problem

Our farmers face the problem of changing their pattern of farming, not only to improve the balance in agriculture, but also to maintain its prosperity. Fortunately, United States consumers will take more of our wartime increase if they can have it in the form of meat and milk. Farmers must turn more of their grain crops into livestock and livestock products. Today's real need is for greater emphasis on livestock in our peacetime farming.

Make no mistake about it, countries of western Europe need more food than they now produce. True, food is available from outside sources, but it takes money to buy it. That's the difficulty.

Dollar shortage

The most acceptable medium of exchange is the dollar, and all European countries are short on dollars. Because of this shortage foreign countries are cutting down on imports of goods from areas where dollars are required in payment. Instead, they are spending their dollars, as far as possible, for the purchase of raw materials, machinery, and related capital goods which will increase production and lead to their self-support.

How they are managing and what they plan for the future I learned first-hand during a recent visit to Europe. I saw a healthy change from the stagnation and gloom I found during visits in the summers of 1946 and 1947.

Good harvests this year, in Europe and in other parts of the world, and the very substantial help under the European recovery program have rekindled the hopes of western Europe's 280,000,000 people.

For the first time since the war's end they see enough bread in the world to keep them from being hungry until the next harvest. With this security in the food supply and with our financial help through ERP they feel that further progress toward economic recovery is a sure thing at least for the year ahead.

Fear hunger

However, the fear of future hunger still dominates the minds of people in western Europe. In the dollar-short countries, I found great emphasis is being placed on increased production at home in an effort to reduce the need for imports.

At the same time, these European countries are looking more and more to each other and elsewhere for food stuffs and other supplies in order to save their precious dollar credits. The idea is to obtain needed goods either with their own currencies or through an exchange of the increased goods they are producing.

Saving dollars

Until they can get more dollars through greater exports to this country, western European nations feel they must follow a belt-tightening policy on imports from the United States and other dollar areas.

In England I found the Government pushing a newly announced food plan. This plan would raise England's food and feed production by 1951–52 to a level 50 percent above prewar. This goal is 15 percent above the peak of wartime production reached in 1943–44, or 20 percent above the 1946–47 output.

Increases sought by 1951–52 would raise wheat production above prewar levels by 60 percent, 170 percent for barley, 56 percent for oats, 20 percent for potatoes, 31 percent for sugar beets, 23 percent for milk, 52 percent for eggs, and 10 percent for beef and veal.

In the case of flaxseed, a crop which was hardly grown in Great Britain before the war, the goal for planting is set at 400,000 acres. In addition to fiber, this crop is a valuable source of protein for cattle and oil for industrial uses.

In France the emphasis is on greater wheat production so that country won't need to depend upon imports. From the French Government's standpoint, that's good politics, in view of the importance of bread in the French diet. "Wheat, the noble grain," is the thought being driven into the minds of school children.

Switzerland intends to keep grassland, brought into cultivation during the war years, in crop production. Like Great Britain and Denmark, Switzerland has developed techniques for making silage and for artificially drying hay. This enables dairying to expand despite limited land area.

In Sweden I found a renewed emphasis on agriculture. During the early 1930's, Sweden began to stress industrial expansion. As a result, the farm population declined. Now she is paying greater attention to increasing agricultural production in order to reduce the need for food imports.

Wherever I went in Europe I found hopes of achieving greater self-sufficiency heightened by last season's good crops. During and since the war food shortages have made it necessary to eat grain instead of feeding it to animals. This cut flocks and herds in many countries.

Now, with more grain available, European farmers plan to increase livestock and poultry numbers. Farmers look upon this move as necessary for restoring a balanced type of farming. Livestock always has played an important role in European agriculture, and in most of the countries the increase will be mainly in cattle.

Because reduced livestock numbers cut the supply of manure, European farmers have had to rely more on chemical fertilizers. Although some still hestitate to use it, the use of commercial fertilizer has become very popular. As a result, demand still exceeds the increasing supply. High yields obtained with chemical fertilizers virtually insure their continued heavy use, even though manure becomes more plentiful.

The wartime need for more home-produced food also brought on another change in European agriculture. Farmers turned more to mechanized farming, with the United States supplying much equipment. With a shorter labor supply and higher farm income, European farmers are interested in machinery. Not only that, but the preference is for American-made equipment.

There is much room for better distribution and use of farm machinery; at the same time, the need is great for more of it.

In France and in England, I saw combines harvesting grain. The owners said they were not getting the maximum use out of them because of wet weather usually encountered at harvest time. What smaller European farmers need are more new grain binders. On larger-than-average farms in Denmark, there's a great demand for tractors, tractor-drawn machinery, and mechanical dairy-barn equipment.

In many instances, smaller farmers in a community have formed cooperatives for the joint purchase and use of larger pieces of equipment.

But despite future advances through mechanization of European agriculture, there's little chance for wide use of farm machinery in many countries, especially in western Europe. Most farms are small and must be operated intensively to provide only a fair return. These small farms always have been run with a great deal of family hand labor, and habits change slowly.

However, as long as the deficit food-producing countries of Europe hold their imports to a minimum, strong public support for increasing food production at home can be expected. And subsidies may be used even more generously as an inducement to step up food production. In the end, this will mean high-cost food and a low standard of living.

Another important factor is that agricultural countries of Europe, which normally exported grains and other foodstuffs, also are out to step up production. Denmark, the Netherlands, Italy, and Poland, and others behind the iron curtain not only aim to restore their agricultural output to prewar levels, but they are determined to exceed it in order to increase exports.

Thus, the foundation certainly is being laid for a clash of interests. Trade, instead of being broadened, will be narrowed. There are signs of it already

Here and there surpluses are cropping up. When this occurs, either the countries have more than enough goods from their own production, or other nations who otherwise would buy can't afford to.

For example, Italy and Holland last summer couldn't sell all their exportable fruits and vegetables. Some were shipped into Germany, on top of food supplies sent from the United States. While in Germany, I heard farmers actually complaining that these imports were reducing prices for their own good crops.

And Communists have been ready to take advantage of this kind of thinking. They have spread the line that the European recovery program is nothing more than a plan by which the United States hopes to dump its expected surpluses.

To farmers in Turkey or Greece, where surpluses of dried fruits and tobacco already are piling up, such an argument sounds reasonable. But, fortunately, the Communists aren't making much headway with it in western Europe.

It seemed to me that people in the ERP countries know more about the program's basic goals than the Communists will admit. Each day they see benefits from the program. They have more to eat and more to wear. Housing is improving. Their factories are turning out more goods; production is increasing; and employment is rising.

From the American standpoint ERP is a good investment in world peace. If, as a result, the countries taking part again become self-supporting, the program will have been a success. But self-support which provides the foundation for broad international trade is far different from self-sufficiency, which ultimately stifles such trade. That's what the United States and the ERP countries must guard against.

Looking ahead until the next harvest, this country should be able to export at least as much grain as we did last year when we moved about 580,000,000 bushels, including 480,000,000 bushels of wheat.

In fact, grain-export allocations already made for the 9 months July 1948 through March 1949 indicate that this total for last year will be reached 3 months before the end of the current shipping year. With European farmers eager to start expanding their livestock production, there is a good chance that our grain exports for this year will set a new record since we have corn to spare.

The difficulty, however, is with other farm products such as tobacco, dried fruits, and dried eggs. Extent of these exports is a question as long as Europe is short of dollars.

With foreign demand for our farm products starting to fall off, we are beginning to adjust production to peacetime needs. At best, such an adjustment must be gradual. But with the good corn crop last year, farmers must plan to produce more livestock and put more cropland into grass. This will be a help as grain exports decline to normal. Equally important is the opportunity this offers farmers to follow soil conservation practices and rebuild the soil.

But, from the longer range standpoint, we still will need export outlets for around half the wheat we have been shipping in recent years. We'll need foreign markets for around 4,000,000 bales of cotton, 500,000,000 to 600,000,000 pounds of tobacco, and for our surpluses of dried fruits, apples, pears, citrus fruits, rice, some corn, and for limited amounts of livestock products.

The fact that the big export demand for our farm products is falling off should not be a surprise to American farmers. Since the war began, we have been shipping foodstuffs abroad in quantities far out of proportion with normal world trade. For example, since the war's end our wheat exports have averaged about 50 percent of the total international movement. Before the war, our share was around 5 percent.

The big increase is largely because other sources of supply virtually had dried up, and we were able to fill the gap. Restored production in other areas gives us the chance we so sorely need to balance our own agriculture.

What concerns us now is how far European markets will close down after ERP ends and dollars are no longer being handed out.

The answer to that, it seems, rests largely on our willingness to import goods from these countries, so they in turn will be able to buy from us.

Water Improvements

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the New Leader of March 12, 1949:

THE RIVERS: OUR GREATEST RESOURCE—TVA FOR NEW ENGLAND

(By William E. Leuchtenberg, Boston director, Americans for Democratic Action)

Fed by hours of torrential rains and days of rapidly melting snows, the rivers of western New England roared over their banks early last New Year's Eve in the worst flood in a decade.

The industrial city of North Adams was isolated by the rain-swollen Hoosac River. All highways out of Pittsfield were flooded. In Great Barrington, where roads were a foot under water, the Housatonic rose 2 feet higher than in the great floods of 1938. Air-raid sirens sounded in the night to warn residents of the Westfield River Valley to evacuate their homes. Westfield, a town of 20,000, was cut off from the world. Water pollution was feared in Lee and Stockbridge, and typhoid serum was rushed to the area. Only the miracle of a sudden frost, which changed the rain to harmless snow, prevented a major disaster.

When the rivers subsided and the dreary work of reconstruction slowly began, the citizens of western New England counted four dead and over a thousand homeless. The idyllic Berkshire Festival towns of the Housatonic Valley were covered with silt and rubble. In one street in North Adams, rocks and dirt were piled 6 feet high. The total cost to Berkshire County alone was over $2,000,000. The floods left death, misery, and destruction.

The floods also left an aroused citizenry determined that it wouldn't happen again. In 1936 and 1938, when far worse floods had hit New England, efforts at flood control were damned as Government paternalism and a reflection on Yankee ingenuity. The embattled Vermont farmers regarded the attempts of the Army engineers to dam the West River Valley as a foreign invasion by a hostile power. When a four-State flood-control compact was drafted in 1937, three utility-company attorneys wrote a provision into the agreement to end Federal power control. An alert Congress preserved our Federal power policy by killing the compact, but as a result New England got neither flood control nor power.

Much has happened in New England since 1938. One important mill after another has been moved to the South because of the dearth of power in New England as well as the quest for cheap labor in the Carolinas. The power famine was so severe a year ago that naval vessels from Pearl Harbor were

anchored off the Maine coast to generate enough electricity to light the towns. Unemployment-compensation claims in New England have soared 52 percent in the past year. In any mill town in the Merrimack Valley, you can hear men talking anxiously about lay-offs at the plant or whether another factory will move away. As Seymour Harris' survey dolefully concluded: "New England is not developing new industries rapidly enough to take the place of tottering ones."

The moral is obvious enough. The same rivers that were flooding towns in Massachusetts and Vermont on New Year's Eve should be harnessed to provide the cheap power to keep New England's factories going. Since flood-control legislation was clearly imperative, this problem was tackled first.

The North Adams Transcript urged communities in the Hoosac Valley, where there have been four serious floods in the last 21 years, to demand a Hoosac Valley flood-control authority. Mayor James Bowe, of Adams, and his board of selectmen demanded a restudy of the $14,000,000 flood-control project which had been shelved just 2 years ago as unjustified.

The Boston Herald typified press reaction in blaming the floods on financial niggardliness and the lack of an interstate compact on flood control. Three weeks later, Governor Paul Dever asked the Massachusetts State Legislature for a $2,000,000 grant for flood relief in the Hoosac and Housatonic Valleys, and then took off for Washington to request Federal flood-control action.

Even more important, the States of Massachusetts, Connecticut, Vermont, and New Hampshire signed a Connecticut River flood control pact, while the States of New Hampshire and Massachusetts reached a similar agreement to curb the Merrimack. Unfortunately, the new flood-control compacts once more play into the hands of the private power interests, but the good faith of the respective State administrations cannot be questioned, and the compacts are expected to be rewritten with more attention to future power sites.

If the rapid action on flood control was a notable development in a region that had traditionally accepted floods resignedly, the change in attitude on public power has been even more striking.

In a special message to the Vermont Legislature, Republican Gov. Ernest Gibson asked for the creation of a State power authority with power to build generating plants, transmission lines, to buy and sell electricity, and to issue bonds and secure capital.

In New Hampshire, State Representative George D. Angus, of Claremont, introduced a bill early in January to establish a New Hampshire Power Authority to prevent power trusts from further use of water power resources. When Senator Eugene S. Daniell, Jr., of Frankin, N. H., attacked the Manchester Morning Union as a spokesman for the private utilities, the conservative editor hotly replied that "we have repeatedly attacked the electric-power utilities—in this case the Bellows Falls Hydroelectric Corp. and the New England System—for their wantonness in seeking to devastate the rich farm lands along the Connecticut River."

In Holyoke, Francis King, director of the municipal gas and electric department, found new adherents in his fight against the private utilities for control of the power site on the Connecticut, notably industrialist Roger Putnam, former mayor of Springfield.

Nor are flood control and power the only issues. Timber lands have been badly overcut, leaving desolate stretches of land in northern New England, where little brooks become swollen creeks, opening gullies and causing downstream floods in the major river valleys. Stream pollution completely spoils the beautiful Connecticut as a recreation center, and people in such large mill towns as Lowell and Lawrence are without adequate recreational facilities because the Merrimack, the lovely stream of Thoreau's voyage, has been turned into an open sewer for industrial wastes. Fishermen are bitter over the disappearance of the shad from the upper Connecticut, while salmon runs on the Merrimack are a thing of the past.

The idea of multipurpose river valley development, the TVA approach to floods and power and erosion, which had once been spurned as Government boondoggling, is receiving serious consideration in New England today for the first time.

On January 3, Representative THOMAS J. LANE, of Lawrence, introduced H. R. 463, to create a Merrimack Valley Authority. At least one bill will be introduced this month to establish a Connecticut Valley Authority.

Even Republican Senator HENRY CABOT LODGE, who led the fight against the St. Lawrence seaway in the Eightieth Congress, has introduced a bill (S. 353) "to provide for a comprehensive survey to promote the development of hydroelectric power, flood control, and other improvement on the Merrimack and Connecticut Rivers and such other rivers in the New England States where improvements are feasible."

While New England projects for specific valley authorities will continue to be pushed because, requiring less funds, they are more feasible politically, the ultimate solution for New England is an over-all regional authority. Moreover, a New England authority would ultimately have to be concerned with more basic economic changes in overhauling the New England economy than is the TVA, which has been concerned with a relatively undeveloped region where water resources are much more important than in New England today.

Julius A. Krug, Secretary of the Interior, went even further in a news conference in New York on February 2, suggesting a Federal power authority for New York State and New England, based on the development of the St. Lawrence seaway. Asserting that such a northeastern authority "would be as favorable from the viewpoint of cost as the Tennessee Valley Authority," Krug declared that Truman, who has come out flatly for a Columbia Valley Authority, will follow a policy of power distribution on a regional rather than State basis.

On April 21–23 in Washington, D. C., interest in regional planning in New England will be crystallized for the first time when delegates from six New England States to the first national conference on river valley development meet to plan the creation of a New England committee on regional planning.

Appeal From Western Union Employee for Cutting Excise Tax on Telegrams

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, Louis Carper, former Western Union employee, appeals for cutting of Federal excise tax on telegrams, which has reduced employment by Western Union in New York City from a force of 7,000 to about 1,500. His letter follows:

BRONX, N. Y., *March 11, 1949.*

Representative JOSEPH W. MARTIN.

DEAR SIR: Pardon my seeming presumption in taking the liberty to acquaint you with the plight of the employees at the Western Union, 60 Hudson Street, New York City.

The Western Union in New York City up to 1945–46 had a force of 7,000 employees; today, March 11, 1949, the force is about 1,500. You can't blame the officials of the Western Union. I attribute this to the excise tax which the people that normally would send telegrams, refrain from doing so. All the wires in the company are practically idle all day and night due to this burdensome tax. It is certainly a plague from which practically 5,000 people have lost their jobs, some of whom have been with the company 15 to 20 years and who are unable to obtain gainful employment in any other field.

Trust you and your Congressmen can see fit to lift this tax, so that we people who have lost our jobs could get to work again.

Very respectfully yours,

LOUIS CORPER,

Morse telegraph operator.

Watershed Management

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Kent Leavitt, presented as part of a panel discussion during the Fourteenth North American Wildlife Conference, Washington, D. C., March 8, 1949:

WATERSHED MANAGEMENT

(By Kent Leavitt, president, National Association of Soil-Conservation Districts)

Within the next 10 years, I believe we shall have under way in the United States a conservation effort of such scope, and such quality, that the future of our "renewable" natural resources will be assured. We still have our problems, of course, and some of us get impatient at times, but the long and hard beginning has been made. In my opinion, the United States is on the threshold of the greatest conservation progress the world has ever seen.

I do not believe I am being unduly optimistic. Conservationists are often given to being somewhat pessimistic. There is much in the history of our cause to warrant such an attitude. Nevertheless there have been major and favorable developments in recent years. While we have not moved ahead as fast or as far as we would like, there is reason for some satisfaction in the record. We need to recognize the source of our present strength in order to proceed in the future with purpose and confidence.

Consider some of our assets. We, as conservationists, are better organized today than ever before in our history. Numerically we are stronger. We have made a great deal of progress in actual conservation work. Our technology is steadily improving. We have more friends than we have ever had, and they represent all walks of life. More people understand what we are talking about and doing. More people share our aspirations. And perhaps most important of all, we are learning to make common cause.

The time is about past when the forester thinks only of forestry, the soil conservationist only of the land, the engineer only of his structures, and the biologist only of birds, fish, game, and other forms of life. We are

all coming to understand the interdependence of land, water, forests, and wildlife. They all fail or prosper together. The same is true of human beings. Our part in this situation is the most vital of all.

Conservationists, perhaps to a larger degree than any others, understand how directly our standard of living, our strength as a Nation, and our whole civilization depend on our natural resources.

In this connection, I believe the work of a great many conservationists, over a period of a great many years, is now bearing considerable fruit. The value of our resources, and their relationship to each other, is better recognized today than ever before.

As we make greater demands on our water supplies, the need for wise and comprehensive watershed management is becoming apparent to an increasingly large number of people. The soil is the greatest water reservoir we have, after the oceans. By utilizing all the science at our command and by applying all the proven and appropriate methods of resource management throughout our watersheds, we can put this great earth reservoir to work for us. The individual methods are too numerous to recount here. Together they constitute a powerful tool not only for water conservation, but all the related resources. Watershed management, based on use of the land in accordance with its capabilities and treatment of it in accordance with its needs, means improved agriculture, improved water supplies, reduced sedimentation, reduced flood hazards, protection for downstream engineering structures, more and better wildlife habitats, and improvements in range and woodland.

Word of the value of this kind of conservation work has gotten to Congress, too, and I think the fight for conservation there is on a broader and more constructive basis than it was in Teddy Roosevelt's day. Certainly there are a larger number of Congressmen better informed on true conservation today than we have had in the past. One of the really great friends of conservation will speak to you this afternoon—the Honorable CLIFFORD HOPE, of Kansas. The work that he and his associates on the House Committee on Agriculture have been doing in the field of conservation is pioneer work. It has tremendous significance and promise for the future.

Across the length and breadth of America, all conservationists can find another, and powerful, reason for some optimism about the future of our resources. I am referring to soil-conservation districts. There are more than 2,000 of these districts today and they cover more than half the land area of the country. Within their boundaries are more than three-fourths of our farms and ranches. Approximately 10,000 district supervisors—most of whom are farmers themselves—are managing district affairs. They are working with an ever increasing number of farmers, and the total already runs into the hundreds of thousands.

Most of you, I believe, know the story of soil-conservation districts. You know that the first one was organized in August of 1937. You know the manner in which they are formed and operated. Many of you have had some personal experience with districts. You know that the work being done is not restricted by any narrow concept of soil conservation. As we in soil-conservation districts see our job, we are working toward the goal of proper land use for America, and assuming our full share of responsibility as citizens for getting the job done.

Proper land use, as we see it, involves the wise and productive use of land, water, forest, and wildlife resources. To the largest possible degree, our work is being done on a watershed basis. We are well aware that any other basis is an artificial and unnatural one which only compounds the difficulty of the job.

As organized owners and operators of farm and ranch land, we are probably in a better position than any other single group of private citizens to make an actual, material contribution to the cause of soil and water conservation, not only on a watershed, but on a national scale. The cause of conservation is our cause. We have no other, except the larger one which consumes all of us—the cause of America and our way of life.

I think we may take pardonable pride in the accomplishments that districts have already made. Not only are they actually doing conservation work but they are telling others about it. Districts are proving that when people understand a problem, and are given an opportunity to do something about it, they can accomplish miracles.

I hope those of you who are in wildlife, forestry, and water-conservation organizations will recognize that you have a new and strong ally in soil-conservation districts. The men in soil-conservation districts are with you, and for you. They realize, I am sure, that all of us must stand together.

There are some fundamental aspects to watershed management, it seems to me, that all of us should consider. As our Nation has grown in population, and as more and more people have moved to large industrial areas, our conservation problems have become somewhat more complex. Families living in Detroit, Houston, New York, and Los Angeles seem far removed from the resources that actually support them. It seems hard for these families to contribute to conservation. Nevertheless, since more than three-fourths of our population lives in cities, a way must be found to make this possible.

One way we have found is through government. City people as well as farmers pay the taxes that support our conservation agencies and programs—Federal, State, and local. This is proper, because the American people as a whole have a vital stake and responsibility in keeping land, water, forest, and wildlife resources in good condition.

What happens to the individual land owners—the men who are custodians, or trustees, of most of our land and wildlife, as well as important parts of our forests and waters? Under the American form of government, the individual land owner can enter into a cooperative partnership with American society as a whole in order to accomplish mutually beneficial objectives, while expressly reserving for the individual a full and effective voice in the direction of that partnership.

There is, in short, a middle ground between regimentation and rugged individualism. This middle ground is a partnership shared by the individual and Government, without any loss of integrity on either side.

There is an almost unlimited opportunity for development of this partnership in the watersheds of the country. There is also a similar opportunity for this partnership to bring about accomplishments of lasting value to all the people of the Nation.

Our country is made up of watersheds and the character of each one has a real bearing on the welfare of the people living in it and below it. Some watersheds are hard to live with and some are easy. All watersheds, however, are susceptible to management, so that living with them is not only easier but more rewarding. By management I do not imply any controls that we can apply to nature, but rather an understanding and an adjustment of our affairs to the end that we can live in harmony with nature indefinitely.

Very often we have not recognized some of the simplest knowledge at our command, such as the fact that water will run down hill at great speed if no barriers are left in its path If bare soil is left exposed to the beat of rain or to the cutting power of rushing water, then soil will also be washed down hill. Neither flood control, irrigation, or power structures are safe against the threat of silt as long as erosion is permitted to continue unchecked on the watersheds behind such structures. Forest fires, exploitive timber cutting, wasteful use of surface and underground water supplies, disregard for the values of wildlife, and inattention to the quality and amount of grass on the range are other sources of trouble on our watersheds. These, of course, are not the only ones.

It is within our power, however, to solve every one of these problems and do so harmoniously with nature. It is also within our power to protect and develop our great natural wealth, including hydroelectric power, oil, minerals, land, water, forests, and wildlife, without doing offense either to nature or to our independence as individuals in a democracy. As a matter of fact, this is one of the big tasks ahead of us. All the weight of science and experience indicates that we must make our peace with nature on a watershed basis. And there is every reason to believe, also, that one of our greatest hopes for a richer life lies in the protection and wise development of these same watersheds.

We need to provide for the comprehensive development of the Nation's major river basins on the basis of a unified plan developed and carried out by existing Federal and State agencies, including soil-conservation districts, and without recourse to the delegation of extreme authorities to new agencies. In my opinion, there are a number of responsible nongovernmental agencies also in a position to contribute to the development and realization of such unified plans.

There is, I believe, a widespread endorsment of the need for watershed management and comprehensive valley development, but the public so far has been asked to choose between an authority approach on the one hand and a laissez-faire approach on the other. The choice is too limited. In my opinion, all the possibilities have not been fully explored.

The advocates of laissez-faire want us to leave things alone and promise that somehow things will turn out all right, eventually, in the end. The advocates of the authorities, on the other hand, say that we will never make the kind of progress that is needed until we set up a corporation and grant it complete power to take on a valley job single-handed, from start to finish. It is the only way we can get the necessary decisions, they say.

We know that Americans have never countenanced a timid point of view for very long. And we know, also, that Americans have never hesitated to vest especially selected citizens with the power of decision in the case of disputes among their fellows. We have courts, boards, and commissions vested with such powers today in varying fields and in varying degrees. In addition, we have a greater force—that of intelligent public opinion.

Somewhere between the two extremes we should find our solution.

We have the ability to manage our watersheds and develop them to the fullest extent. We can develop the plans. We can probably come to a nearly unanimous agreement on 80 to 90 percent of all the objectives. We can establish for each major basin a board or commission to make any necessary decisions arising out of disputes over the wisest course of action in any given situation. And we can carry out the plans we helped develop ourselves.

The question today is no longer over the wisdom of watershed management. Its value in the conservation of resources is widely accepted. The question now is wether we shall participate in the management or be the object of it.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. LANE. Mr. Speaker, on Thursday next, March 17, Hibernians in all parts of the world will pay homage to their patron, St. Patrick, and, in the light of present-day developments, I deem it most appropriate that the following editorial, entitled "St. Patrick's Day, 1948," which was published in the National Hibernian, official organ of the Ancient Order of Hibernians, a year ago this month, be reprinted in the CONGRESSIONAL RECORD, together with the poem, Valor of the Celt, written during World War II by James Patrick McGovern, of the District of Columbia bar, a captain in the Army during the First World War and a member of the Commodore John Barry Division of the Ancient Order of Hibernians:

ST. PATRICK'S DAY, 1948

The Apostle of Ireland was a man of peace. To the highly civilized but extremely warlike pagan Gaels he brought faith in the Prince of Peace. He conquered warriors without shedding blood. The secret of his successful mission is needed today as much as it was ever needed in the history of the human race. Just as the foundation of World War II was laid at Versailles in 1919, so the foundation of future war is being laid now. * * * St. Patrick was no appeaser. He knew exactly what he believed, and what he believed he clearly preached. We should formulate our aims with similar precision, in order that men of good will in all parts of the world may know them, and accept them, and work for their fulfillment. St. Patrick prayed. So should we. Even as we pray we shall be guided toward the wise, the unselfish, the successful way of peace.

VALOR OF THE CELT

What mean the neutral mandates of today
As long as Irish hearts, not laws, hold sway?
Two thousand years ago the Celts were bold
To prove their valor, never since grown cold;
For centuries their sons have heard drums roll
Abroad and home, and won the hero's scroll.

Who can recount each deed, recall each name
Enrolling Irish warriors in halls of fame?
Their spirit on every front has never ceased
To be among the allies a buoyant yeast.
The race itself stands now with vision clear
An international and stalwart peer.

No mortal power can cloud fair Ireland's brow;
As her men always fought, so they fight now;
They fill the foremost ranks where danger lies,
Spurred by the valorous will which death defies;
Impelled by native love for soil that's free,
Dauntless wherever they meet with tyranny.

For many flags, by land, in sky, on sea,
The Celtic race fulfills its destiny;
A hundred ships of war slip down the ways,
Each christened in an Irish martyr's praise;
And untold shrines in foreign, distant parts
Will keep Old Erin warm within true hearts.

—*James Patrick McGovern.*

Why Is Selective Service Kept Alive?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. VAN ZANDT. Mr. Speaker, much discussion is taking place as to why the Selective Service System is kept alive when inductions have been suspended. In order to clarify the situation, national headquarters of the Selective Service System has furnished me with the following statement, supported by the necessary statistical information. It is my hope that Members of Congress will analyze this information, keeping in mind the value of having a Selective Service System, and the relationship of that value not only to the active armed forces but especially to the Reserve components.

The statement is as follows:

In the spring of 1948, when it had become evident beyond question that the strength of the armed forces could not be achieved or maintained by voluntary methods, the President requested the enactment of the Selective Service Act of 1948.

Congress, in its response to this urgent situation, declared:

"The Congress hereby declares that an adequate armed strength must be achieved and maintained to insure the security of the Nation."

The mission given the new Selective Service System was in fact threefold;

First, by direct means the strength of the active forces was to be raised and maintained,

Second, by less direct means, the strength of the Reserve components of the armed forces were to be raised and maintained,

Third, the functions of the Office of Selective Service Records were to be assumed and continued, which include among other things the preservation of the records, the knowledge and the methods of selective service.

It is of the essence of the act of 1948 that the procurement of personnel for the armed forces be by voluntary means so long as such means are adequately effective, but resort to inductions in support of recruiting is authorized and intended.

With the passage of the act, voluntary enlistments increased immediately. Registration and classification were pressed rapidly to produce quickly the desired results. Inductions of comparatively small numbers of men occurred in November and December 1948 and January 1949. A total of 30,000 men so far have been inducted, but the enlistments in the active armed forces to the end of the first 2 months after the passage of the act alone exceeded 90,000. Enlistments in the active Army rose to the highest figure since September 1946, in which month the Selective Service System filled its last call under the 1940 act. Until the recent announcement that calls would be suspended, voluntary enlistments continued at rates far above any attained between September 1946 and the passage of the new act. With the suspension of calls the figures have dropped, but not to the level to which they fell when there was no Selective Service System to influence and support recruiting efforts. There is attached a graphic record of the influence of the Selective Service System upon voluntary recruiting.

The Reserve components (organized units) and particularly the National Guard, were direct beneficiaries of the reestablishment of selective service. Immediately it became certain that the act would be passed, and just prior to its being signed on June 24, 1948, enlistments in these forces reached record levels. Maintenance, however, of these vital strengths presents quite another picture in that the law provides for the deferment of these individuals "so long as he continues to serve satisfactorily as a member of such organized unit."

It was the influence of selective service which brought them in. It has been that same influence which has caused them to "continue to serve satisfactorily."

However, there is even now a very evident and quite disturbing tendency on the parts of many reservists and guardsmen to regard less seriously than they should the obligation they have under their enlistment contract. The growing belief that no more inductions will occur has resulted in too many separations because of unsatisfactory performance of duty. Adjutants General and commanders of naval and other Reserve units have reported this recent change in attitude. The President has called for the revitalization of the Reserves of the armed forces. Revitalization will be impossible if the right manpower is not brought into the Reserve components and by effectual means caused to remain there long enough to receive proper training. Unless the Selective Service System continues ready to resume inductions, unless the System continues to register and classify men of military ages, all that the past 8 months have accomplished will be lost and we shall stand again in that unenviable position in which we awakened in the critical spring of 1948.

Preservation of the knowledge and methods of selective service during the short period March 31, 1947–March 17, 1948, paid tremendously even though it was a period following immediately the big undertaking of 1940–1947.

When the President asked for selective service on March 17, 1948, there was one agency ready with positive plans of action. The Office of Selective Service Records (act of March 31, 1947), had preserved the knowledge and methods of selective service. It has preserved also a very small nucleus of trained officers who had made plans and had continued the training of key people in the States.

Had these things not been done, the reorganization of the System would have been very difficult, very much more costly than it was, and the immediate good results achieved would have been impossible.

In the real sense, national security is best served by preventive measures. The existence of selective service is at the same time a preventive measure and an active influence upon national security. It is far less important that we are not inducting than it is that we be prepared and ready to induct. At the moment, the very fact that we are not inducting is highly significant. It is proof of our effectiveness and sustains the logic of the President's statement on the subject:

"Although present recruiting rates indicate that only small inductions, if any, will be necessary under selective service, it is essential that such authority remain available in the event that voluntary enlistments drop. Moreover, it must be recognized that the existence of the Selective Service Act has in itself been a contributing factor to the current results of the recruiting programs of the services."

It is seen as the duty and the responsibility of the System to perfect and preserve itself in that position from which it may respond effectively in any emergency that may arise. The duties and responsibilities considered necessary to carry out this mission are as follows:

1. To register all male persons residing in the United States who are between the ages of 18 and 26, and who have not previously registered in accordance with the provisions of the Selective Service Act of 1948.

2. To continue to register all male persons attaining the age of 18 years. It is estimated that 1,200,000 during the fiscal year 1950 will attain the age of 18 years.

3. To classify registrants, particularly as such action applies to change in marital status, completion of military service, and changes in classification due to the registrant's attaining his twenty-sixth birthday.

4. To keep current the records of all registrants as required by section 15 (b), title I, of the Selective Service Act of 1948, which provides as follows: "It shall be the duty of every registrant to keep his local board informed as to his current address and changes in status as required by such rules and regulations as may be prescribed by the President."

5. To preserve and service the records of the former Selective Service System now assembled in the various Federal records depots in accordance with Public Law 26 of the Eightieth Congress. This function of the former Office of Selective Service Records was transferred to the Selective Service System by Public Law 759 of the Eightieth Congress.

6. To evaluate for preservation or destruction certain records of the former Selective Service System in compliance with the mandate of Congress (H. Rept. 2454, 80th Cong.) and the sorting and transferring of other permanent selective-service records to the jurisdiction of the National Archivist.

7. To furnish veterans and their designated representatives and authorized Federal, State, or local agencies, information from the selective-service records.

8. To perfect plans and to train the individuals necessary to an expanded effort in the event of a sudden extreme emergency.

Fiscal year	Public law No.	Public law Cong.	Amount appropriated	Other funds made available	Total funds available	Total expenditures	Lapsed or unused funds

INFLUENCE OF SELECTIVE SERVICE ON ENLISTMENTS INTO THE UNITED STATES ARMY, JANUARY 1946–DECEMBER 1948

According to the accompanying chart, based on total voluntary accessions of enlisted personnel into the United States Army in January 1946–December 1948, there is an obvious relationship between the existence of selective-service legislation and the number of voluntary accessions into the United States Army. As a rule, month-to-month variations in the number of enlistments also reflect policy variations, such as the size of the call, and the administration of selective service.

From a high point of more than 110,000 voluntary accessions into the Army in January 1946, the number of enlistments declined to a low point of around 15,000 in May 1947. The total remained low until the passage of the 1948 selective-service law and then increased very sharply to the level of around 50,000 per month.

There was a rapid decline in a number of these accessions in 1946. This was consistent down to a total of 50,000 in May. This does not appear to be due to the falling off of selective-service calls during this period so much as to the fact that the Selective Training and Service Act of 1940 was to expire within a short time unless extended by congressional action. An extension to July 1, 1946, was voted by the Congress in May of 1946 and there was an immediate increase in enlistments of about 15,000 in June. Studies of the trend of enlistment over a period prior to the passage of the Selective Training and Service Act of 1940 indicate, however, that a part of this June increase was probably due to a seasonal increase in enlistments during June, the result of students volunteering after the end of the school year. The Selective Service Act was also extended to March 31, 1947, the date of this enactment being June 29, 1946. In July and August there were no selective-service calls, and enlistments fell to a figure in the neighborhood of 40,000 per month.

Selective Service levied a call of 34,000 in September and an even larger one for the month of October, part of the latter of which was canceled on October 15, 1946. As a result of these calls the enlistment totals increased again to more than 30,000 in September and totaled about 50,000 for October. In November and December there were no selective-service calls and enlistments dropped to less than 20,000 a month, the lowest figures for 1946.

In January 1947, due again to a seasonal factor, the enlistment total rose to around 35,000. This seasonal factor appears to be the result of a lag in enlistments during the holiday month of December, which is compensated for after the turn of the year. Figures over a long period of time indicate this seasonal trend. Enlistments dropped to around 20,000 during the months of February and March and stayed below 30,000 the rest of 1947, during which time there was no selective-service law in effect, nor was there any being given very serious consideration by the Congress.

In the early months of 1948, probably due to the critical situation in Europe as the European recovery effort was getting under way and the cold war was constituting a serious threat to peace, enlistments rose slightly to around 30,000 a month. Part of this rise may have been due to the request by the President that the Congress pass universal military training and selective-service legislation. There was another decline in enlistments in May, however, and it was not until the selective-service law was actually passed in June that a pronounced increase occurred in voluntary accessions.

Italy and the Atlantic Pact

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from the national Catholic weekly, America, entitled "Italy and the Atlantic Pact," which will appear in the March 19th issue.

ITALY AND THE ATLANTIC PACT

It is a relief to learn that opposition to inviting Italy to join the Atlantic Pact is lessening both in the Committee of Ambassadors negotiating the pact in Washington, and in the Senate Foreign Relations Committee. Some opposition arguments have been insubstantial to the point of flippancy, such as Senator TOM CONNALLY's "This is an Atlantic Pact, not a Mediterranean Pact." The negotiators answered that one by including in the operative area of the pact Algeria, which extends for 650 miles along the

Mediterranean. If Algeria has been included, at least geographically, for strategic reasons, it is hard to see how Italy can be excluded. Italy is not only the "soft underbelly of Europe," in Churchill's pungent phrase, it is the soft under-belly of the Atlantic bloc as well. The French see that, and want Italy included.

The contention heard in Great Britain, Canada, and the Low Countries that there would not be enough United States military supplies to go around if Italy were included sounds selfish to us. The United States should be allowed to decide the point. In fact, the responsibility for the decision as to whether Italy should be invited rests squarely upon our Government. In this connection it is almost impossible to credit the report that at one stage of the negotiations the State Department passed the buck to the British, saying that the United States would go along with any decision they arrived at. Now that we have again assumed leadership in the discussions, the State Department will, we hope, prove that it has recovered from what Herbert Agar once called its neurotic inability to come to a decision.

The reasons for making Italy a partner in the pact are numerous and weighty. She has already been formally invited to join the Council of Europe, which is the political counterpart of the Atlantic military pact. If the legalistic argument that Italy is not a UN member and therefore cannot be brought into an arrangement based on article 51 of the Charter has any weight, then she cannot be included in the Council of Europe; and Russia's veto of UN applications would mean a veto on the Council of Europe as well.

While primarily military, the Atlantic Pact has loud political overtone. Unless they can be assured of security, the free nations of the west will hardly exert their full efforts toward economic recovery. This is perhaps especially true of Italy. What the moral, psychological effect of exclusion from the pact would have on the Italian people is not hard to imagine. On the de Gasperi government the effect would be nothing short of calamitous. On March 8 the Italian Cabinet voted unanimously in favor of the pact. It is undoubtedly counting upon unofficial American assurances that a request for admission would not be refused. The Communists and their allies, the left-wing Socialists, would not be slow to seize upon a refusal to bring about the overthrow of the Government.

Thanks to the iniquitous peace treaty, to which we were a party during our period of appeasement, Italy is powerless to resist aggression. She does not even have arms sufficient for internal security against the Communists. Military equipment, under the arms agreement of the pact, would bolster her powers of resistance and her confidence as well.

A considerable number of influential Italians sincerely believe, as Etienne Gilson in France seems to believe, that Europe would be safer if it remained neutral than if it accepted the "illusory protection" of the pact. This despite the formal pronouncement of the Holy Father last Christmas that "among these goods of humanity some are of such importance that it is perfectly legal to defend them against unjust aggression. Their defense is even an obligation for the nations as a whole, who have a duty not to abandon a nation that is attacked."

If we should exclude Italy from the pact, this school of thought would be immensely strengthened. This idealistic, anachronistic, and nostalgic yearning for neutrality will be exploited by the Italian Communists to sap the Italian will to resist, as the Nazis sucked the strength from prewar France. A neutral Italy would soon be a Communist Italy.

Truman's Wonderland

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer:

TRUMAN'S WONDERLAND

Once upon a time there was a kind, generous king who lived in a gleaming white castle surrounded by marble palaces. He had a storehouse of treasure which was the wonder of all the world. It was stacked with bulging chests of gold and silver and contained row upon row of bins heaped with precious stones.

One day the king summoned his counselors and addressed them as follows:

"My heart bleeds for my people," he said. "There are so many things they lack which only I can give them. They ought to have more medical care and more savings for old age, sickness, and unemployment. They should have better and wider roads to travel upon. They ought to have more steel, more electricity, and more irrigation. They ought to build better houses and more of them. They ought to have more schools and more teachers. The city workers need more wages because food is so expensive. The farmers need more storage space so they can hold their products off the market and get higher prices for them.

"So I shall share my treasure with my people. Let all of them come to my storehouse and each help himself according to his wants."

When the people heard these tidings, they praised their king for his kindness and generosity. According to the decree, each of the king's subjects went to the storehouse and took from it the amount of treasure necessary to fulfill his desires. And the people rejoiced, because they were getting something for nothing.

The next day the king went to his storehouse and found it bare. Again he summoned his counselors and spoke thusly to them:

"So that I may continue to minister to the needs of my people, it will be necessary to replenish my storehouse," he said. "In addition to payments necessary to safeguard the welfare of my people, the expenses of government have become very burdensome, and I have also promised to send gold and silver and arms to the people across the sea so that they may protect themselves from the barbarians who threaten them.

"Therefore, I have decided that all my subjects shall be taxed, each according to his means. From those who have little, little shall be taken. But from those who have much, much shall be taken, until all people are equal in the possessions they retain."

And so the tax collectors went forth and came to the houses of the people and demanded payment. And they gathered up the gold and silver and precious stones the people had taken from the king's storehouse, save that the poor were permitted to keep a small part of the king's bounty, while from the rich they took in addition their household goods and other possessions until they had left only as much as the poor.

The tax collectors kept some of the treasure themselves since, not being producers of wealth, they had no other source of livelihood, and gave the rest to the king. Soon the storehouse was full of treasure again, and the king was pleased, saying: "Have I not dealt fairly with my people?"

Some of the people were pleased and some were not. The poor said: "Why should we work any more? The king will take care of us." The rich said: "Why should we work any more when the king takes away from us the wealth we produce?"

And so the people worked less and produced less, and every time after that when the tax collectors came among them there was less wealth to divide. Instead of everybody getting more, everybody got less. But the tax collectors were happy, because they always got their share, and the king was happy because his storehouse was always replenished. "I have given everybody a fair deal," the king said.

This is not as fantastic a fairy tale as it sounds. As Henry Hazlitt wrote in a recent issue of Newsweek, the Government cannot distribute more under President Truman's fancy hand-out program than the people produce. And it is not the Government which produces wealth, but private enterprise. But before the Government can give part of this wealth to some of the people, it must take it away from others.

Citing the President's demand for "prompt Federal financial aid to the States," Hazlitt pointed out that the Federal Government has nothing it can give to States that it doesn't first of all take from the people of the States.

This is true of every instance in which the administration proposes to distribute Federal largesse. The money first must be taken from some people before it is given to others. Frequently it will be taken from the same people who are intended to be the ultimate beneficiaries.

But in no case do the people get back all that is taken away from them. The Federal Government gets a rake-off on every pot to pay the costs of administration and, incidentally, to support an ever growing Federal bureaucracy.

Such financial legerdemain eventually must lead to a tax burden which will devour the rewards of prudence, thrift, industry, skill, and foresight, and destroy the incentives to work and produce. We are farther along that road than we think.

Warmongering by Members of the Armed Forces Should Be Forbidden by Someone Who Has the Power To Compel Them To Keep Their Mouths Shut

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. JENNINGS. Mr. Speaker, the people of this Nation have poured out the blood of their sons like water and their treasure like sand in two world wars. We are now preparing to pour into Europe an additional $5,000,000,000 for European relief. We are financing the United Nations as a peace agency, and our Government is the chief factor in setting up an alliance between ourselves and the free nations of Europe to

keep the peace. It is highly important that to make this alliance effective against further Russian aggression, we help arm the European nations. The Russians understand the language of force. They comprehend and respect no other. All these things we are doing in defense of our country. Despite our efforts for peace, Russia may inflict the third world war upon us. These facts, however, do not justify anyone in our Government, clothed either with actual or apparent authority, to utter words or take actions calculated to lead to war. We may take a leaf from the book of our Texas friends, who have a saying that it is never wise in a situation of danger to "talk with your mouth."

I include as a part of these observations a timely editorial from the Washington Post, entitled "Warmongering."

From now on, in the words of Theodore Roosevelt, "tread softly," "carry a big stick," but speak softly, remembering that:

First. "A soft answer turneth away wrath, but grievous words stir up anger."

Second. "The tongue of the wise useth knowledge aright: but the mouth of fools poureth out foolishness."

WARMONGERING

It would be hard to convince a foreigner reading of the latest wave of publicity exploits by the Air Force that the United States is not hell-bent for war. First came the round-the-world flight of the B–50 and attendant interpretations of this country's ability to bomb any spot in the world. Then the story that the B–36 had flown 9,600 miles nonstop, carrying a bomb load 5,000 miles. Then the Air Force "finding" that Russia has no adequate defense against the B–36. Finally, there comes what appears to be an inspired leak to the effect that some 70 strategic targets in Russia have been earmarked as possible bombing objectives and that the Air Force has assured the Joint Chiefs of Staff that each of these cities could be attacked from bases on this continent.

Military strategists would be remiss if they did not have plans for hitting back at Russia—and any other potential aggressor—in time of war. By the same token such plans ought to be a highly guarded secret. To allow a description of them to be leaked into print is an utterly inexcusable piece of provocation. Even the blustering of the Russians has never approached this. Moreover, the rather dubious manner in which the "findings" on the B–36 were presented to the Joint Chiefs makes it look as if the Air Force was primarily concerned with headlines.

Such exhibitionism is of a piece with the military huckstering that has coincided with the congressional appropriation hearings. The effect, to anyone not cognizant with the facts, is to indict us as a Nation of warmongers where the military has run wild. What must be the reaction to such stories in Europe, where the very essence of our efforts is to counteract fears of war? How much more dangerous must be the reaction in Russia, if the Russians are actually the victims of an insecurity complex.

Is it not time to put an end to this juvenile swaggering which has no relation to legitimate defense preparations? One of the first jobs of the incoming Secretary of Defense ought to be to muzzle the irresponsible zealots before they talk us into war.

George Washington—The Heritage of Every American Patriot

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Hearst newspapers from coast to coast on February 22, 1949:

GEORGE WASHINGTON—THE HERITAGE OF EVERY AMERICAN PATRIOT

(By Harry H. Schlacht)

To remember Washington is to rejoice in freedom.

Today is the two hundred and seventeenth anniversary of the birth of George Washington. Today is sacred in the calendar of our patriotism.

It revives the inspiring memories of our history. It reawakens the echoes of '76.

Washington. How dear his name to the American heart.

It is the birthright of every American citizen. It is the heritage of every American patriot.

It is a theme of which poets have sung. It is a theme of which orators have spoken.

Let us repeat his story. Let us relate his services. Let us recount his virtues.

Wherever the name of America is known, wherever liberty or the desire for liberty dwells upon the earth, there his name and fame is hailed.

The eye shall kindle at the sight. The lips shall quiver at the thought. The heart shall leap at the remembrance.

He was the first General of the Army. He was the President of the first Constitutional Convention. He was the first President of the United States.

Washington was the greatest of good men and the best of great men in his era.

His memory is the poetry of our history. Its cadence blends in the cabinet consultation. Its truths are for the chamber of diplomacy, for the military council, for the academy of learning, and for the retreat of quiet study

These truths follow the free plowman as he stalks afield. They follow the pioneer into the Western World. They follow the mariner over foreign seas.

They penetrate the happy seclusion of our homes. They enter the cloisters of our inner life. They make lustrous the stars of our national ensign. They gild the spires which point heavenward from our public altars.

He was the genius of American liberty.

Today we must inspire our people with the spirit which glittered at Trenton, which gleamed at Valley Forge, and which glowed at Yorktown.

Today we hold in our hands the fate of unborn generations. Today we hold in our hands the fate of democracy.

If this western sun be struck out of the firmament, at what other fountain shall the lamp of liberty be lighted? What other orb shall emit a ray to glimmer in the darkness of the earth?

Today we face a question of whether the world shall be free or slave. Today we face a question of whether God's word shall remain inviolate together with the light of righteousness it sheds.

No force has been able to smother its radiance. No force ever will.

We are determined—142,000,000 of us—to battle for the freedom which was gained in '76. We are determined to stand reverently before the Declaration our forefathers signed.

We will expose the traitors in our midst who are clamoring for the abandonment of our traditional principles of liberty; who are clamoring for the creation of a totalitarian state wherein man would no longer be recognized as possessing inalienable rights.

We will rid America of fifth columns. We will keep America free from foreign isms.

This day shall have failed of its purpose, of its lessons, and of its meaning if we do not now resolve to be eternally vigilant and do battle with the dark and malignant forces which openly and covertly assail our freedom.

We solemnly affirm on this birthday of the Father of our Country that we shall stand behind our sainted heroes of '76 who, with high purpose in their hearts, with high hopes swelling in their bosoms, with high determination written on their faces, led our people from tyranny and oppression to moral and religious freedom, where the sunlight of heaven shines over all of us with the same compassion of love, justice, and equality.

May He who gave us Washington make us worthy of the gift.

We thank Thee, O God, for this home,
This beauteous birthland of the free,
Where wanderers from afar may come
And breathe the air of liberty.
Still may her flowers untrammeled spring,
Her harvests wave, her cities rise,
And yet till time shall fold his wing,
Remain earth's loveliest paradise.

Ambassador Lane's Book on Poland

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I include therein a recent address by Mr. Eugene Lyons, roving editor of the Reader's Digest, over Station WSPR, Springfield, Mass., in which he reviewed Ambassador Lane's cogent book I Saw Poland Betrayed.

This admirable address serves as another vivid reminder of the frightful injustice visited upon the gallant Polish people. Let us never cease our protests until this grievous wrong against humanity has been righted.

The address follows:

AMBASSADOR LANE'S BOOK ON POLAND

Ladies and gentlemen, I want to talk to you today about a man—and about a book. The man is Arthur Bliss Lane, one of the foremost American diplomats. The book is the one that he published last year under the arresting title "I Saw Poland Betrayed."

Now this is not just another volume of polite reminiscence by a man close to recent history in the making. The circumstances surrounding the birth of the book are as dramatic as its title. Mr. Lane, it happens, resigned from the State Department, after 30 years of continuous service, for the specific purpose of telling this story.

He wanted to tell it frankly, sharply, without official inhibitions, without concealing his heartbreak. That he could do only as a private citizen. Thus he faced a hard choice: between his career and his conscience. And he decided to throw up the career in deference to his conscience.

Our country, unhappily, has little cause for pride and ample cause for shame as it looks back on the ordeal of Poland. Allied policy—American policy—must share the blame for the present enslavement of Poland by its Soviet neighbor. Blundering confusion, political cynicism, the machinations of Stalin's fellow travelers in high places in Washington—all these contributed to the colossal tragedy that has engulfed 125,000,000 people in eastern Europe. It's not an appetizing picture.

But against this sordid backdrop stands Arthur Bliss Lane, an American who put duty above self-interest in a determination to crash through the complacency of his fellow countrymen. He provides the living proof that our national sense of justice has not expired, that sooner or later America will face up to its moral responsibility for the fates of Poland, Czechoslovakia, Hungary, Rumania, and the rest of the nations writhing under the iron heel of communism.

Mr. Lane had lived in Poland as our Ambassador for 18 months packed with shocking and tragic events. He had watched the systematic strangulation of a freedom-loving people whom we had light-mindedly delivered to the embraces of the Russian bear. He had done what he could to resist the swift and ruthless subjection of a great country. After the farcical elections in January 1947, he felt that he could no longer keep silent. And so he wrote to the State Department, and I quote:

"For all practical purposes my mission in Poland is ended. I believe I could do more by educating American public opinion as a private citizen than I can by remaining in Poland, where my continued presence would be considered as tacit acquiescence in the recent fraudulent election. I should therefore appreciate it if the Department would permit me to retire from the Foreign Service."

I Saw Poland Betrayed is his report to the Nation—his attempt to educate American public opinion. Though written in a quiet, sober style, it is in fact a stirring protest against smugness and a flaming indictment of political amoralism.

Betrayal. It's a word that has been so often invoked in recent years that it is a bit threadbare and trite. We have become calloused to its reproof. Yet, as one reads Mr. Lane's careful and detailed account of the betrayal of Poland, the word comes alive. It stings like a whip. It stirs up the embers of our national pride.

I shall not attempt to summarize Mr. Lane's book. Suffice that it rehearses every one of the tragic acts of duplicity and immoral appeasement which forged the chains in which Poland today is bound and gagged and helpless.

There is in his pages, for instance, the whole blood-curdling story of heroism and brutal betrayal which was the 40 days' Warsaw uprising under General Komorowski-Bor. "The incredible crime," Ambassador Lane calls it. Under the prodding of Moscow radio appeals, the Polish underground came out into the open, with its primitive weapons, to confront the immense mechanized might of the Nazi war machine. The Red Army stood at the gates, on the eastern bank of the Vistula. In a series of swift blows, General Bor's forces wrested most of Warsaw from the hands of the Hitlerites. They took it for granted that the Red forces would move in to finish the job.

Then the horrifying truth came out. The Polish heroes had been prompted to fight in order that the Nazis might destroy them. It was a trap, carefully set by the Kremlin, baited with patriotic appeals. A trap in which 250,000 men and women and children were caught and cornered and killed. In all the annals of human chicanery, there are few episodes to match this one for cold-blooded cruelty. Whatever may happen to Poland, whatever may happen to the terror regime centered in Moscow, the martyrdom of Warsaw will never be expunged from the record.

Mr. Lane traces the whole shabby history of allied appeasement of Stalin at the expense of the country which offered the first resistance to the Hitler scourge. Tehran, Yalta, Potsdam, San Francisco. I know, it's a familiar story. So familiar that we have ceased to feel its horror in our bones as we should. But in the pages of I Saw Poland Betrayed, the feeling is revived. We see how a totalitarian monster is fed chunks of Poland's flesh, then chunks of Polish sovereignty, then chunks of Polish freedom in the stupid hope of satiating its appetite for booty. We see how that appetite grew with the eating, until all of Poland was devoured, until not even the bones of its national freedom remained.

The Ambassador does not spare his own country and his own State Department in recounting the brutal facts. Again and again in the course of his 18 months in Warsaw, Mr. Lane pleaded with our Government to intervene, to insist on the fulfillment of obligations solemnly undertaken by the Big Three victors. Washington either did not hear or would not understand.

The primary responsibility for the crushing of Polish liberty rests on Hitler's Germany and Stalin's Russia. Of course it does. Who does not remember the shocking bargain in which the Brown and the Red dictators cut Poland in half between them with a bloody sword? But that does not exonerate British and American statesmen. It was their blundering and conscienceless attempt to buy peace by paying off the Kremlin with the freedom of small nations that helped finish the job started by Ribbentrop and Molotov.

The behavior of Soviet Russia was a crime. The behavior of America—its acquiescence in that crime—was a betrayal. The sooner we face that bitter truth the better for our self-respect and our immortal souls.

A large part of Mr. Lane's book, naturally, is devoted to the Red terror which preceded the so-called free and unfettered elections called for by the Yalta deal. He tells how the democratic parties were hounded and disfranchised, how leaders were arrested and tortured and killed, how the results of the election were rigged in advance.

Poland was the Communists' laboratory. The techniques of ruthlessness, having succeeded there, were in due time applied in Hungary, Bulgaria, Rumania, Czechoslovakia. What we watch in Mr. Lane's book is not merely the conquest of one country, but the pattern of conquest of all countries.

Perhaps the most shocking chapter in the tragedy was the conduct of our own administration. On the eve of the Presidential election of 1944, you will recall, Mr. Roosevelt assured a delegation of the Polish American Congress that he would defend the sovereignty and integrity of Poland to the bitter end. The cruel truth is that at the time Mr. Roosevelt had already agreed, at Tehran, to the dismemberment of Poland and its subordination to the Kremlin, though the outrage was still secret.

The history of American politics is filled with examples of double-dealing. Among them, I am sorry to have to say, that piece of trickery at the expense of the Polish people—carefully calculated to hold the votes of Americans of Polish descent—will forever have its place of dishonor.

I Saw Poland Betrayed is not a pretty story. It is grimly realistic. Nevertheless, Mr. Lane finds it possible to end on a note of guarded optimism. The Polish people, he points out, "are the most homogeneous in Europe today. They are almost all, he adds, of one race, language, and religion; they are closely knit by suffering and by tremendous devotion to their country. In the partitions of the eighteenth century they proved a most difficult country to subjugate. During the Nazi occupation they never lost their cohesion or their spirit."

It may therefore prove that the Kremlin has bitten off more than it can chew * * * certainly more than it can digest without violent abdominal convulsions. The reports in recent weeks of the arrest of new underground resistance groups is proof that Polish fighting spirit has not been fully crushed. Repeatedly the Communist quislings have announced the liquidation of Polish resistance. Then, a few months pass, and they are obliged once more to liquidate new opposition.

No; we must not despair. A lot of suffering * * * perhaps another war more destructive than the last * * * awaits Europe and the world. But in the end Stalin will go the way of Hitler and Mussolini and Tojo. Man's long struggle for freedom and human dignity is by no means finished. We have lost important battles—Poland was one of them. But we shall win the great conflict as a whole.

Meanwhile I Saw Poland Betrayed stands as a reminder for all democracies, and for America in particular, of their responsibility and their duty. As long as Poland and the other victims of Red imperialism are enslaved, none of us are free. The world has become too small for tyrants. Freedom and decency are now indivisible.

Recession in Connecticut

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Haven Register of March 6, 1949:

STATE IN GRIP OF RECESSION, DECLARES EGAN—LABOR HEAD SEES NO INDICATION OF HALT IN RISING JOBLESS FIGURE

HARTFORD, March 5.—Connecticut's jobless roll has jumped more than 10,000 in the past month, and the State is now definitely in the grip of a recession, according to State Labor Commissioner John J. Egan.

Egan said he saw nothing to indicate a halt in the steadily swelling unemployment figure.

JOBLESS TOTAL 56,120

There were 56,120 Connecticut people on the jobless list February 26, according to the commissioner. This represents an increase of 10,567 since January, he reported.

New lay-offs include 650 who were indefinitely laid off at the U. S. Rubber Co. footwear plant at Naugatuck. Another 520 workers were laid off at the Waterbury Tool Co., which announced it would suspend operations indefinitely starting next Wednesday.

Commissioner Egan added a further gloomy note with the comment that there may be a

buyers' strike in progress in Connecticut. Even persons with jobs are slackening their purchases, he said.

Egan pointed to the fact that lay-offs have principally been in consumer-goods industries, such as hats, shoes, clothing, tires, radios, toys, and silverware. So-called heavy-goods industries have not been so hard hit.

CAUTIOUS MANUFACTURERS

The commissioner said some lay-offs were due to cautious manufacturers who are uncertain of future price trends. These men do not want to be stuck with large stocks produced at fairly high costs, he said.

In an attempt to avoid this, Egan said, a manufacturer will close his plant for a few weeks, as a precautionary move. If his stocks do not appreciably drop during this time, the plant will remain closed a third, possibly a fourth week, and so on, until his inventory has been reduced.

NEW HAVEN LEADS

New Haven leads the State in the number of claims for unemployment compensation. That city's total of 9,172 claimants last week compares with 8,770 in Bridgeport; 7,073 in Hartford, and 6,274 in Waterbury.

New Haven's total represented an increase of 350 over the previous week. The latest total includes 275 workers at the Churchward boat yards in West Haven who have since returned to work however.

While there were no large lay-offs in the New Haven area last week, there were numerous lay-offs by small plants.

Congressman Sol Bloom

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Evening Tribune, Friday, March 11, 1949, Lawrence, Mass.:

HIS CAREER NOTABLE

The recent death of Congressman Sol Bloom, of New York, chairman of the important Foreign Affairs Committee of the United States House of Representatives, removed from the Washington scene a leading and beloved figure whose life story was an outstanding example of American opportunity. His service to his country and its people will not be forgotten soon.

A son of parents who were poor Polish immigrants, he was born in Pekin, Ill., 79 years ago this month and from that humble beginning rose to great riches, widespread popularity and respect, unusual success, and great prominence in national and world affairs. Virtually his only education was received by Representative Bloom from his mother, a Hebrew scholar. The family moved to San Francisco, Calif., when he was 8 years old and his working days started shortly afterward as a factory employee.

Initial success of the deceased was attained in show business as the creator of unusual acts, then as a writer and publisher of popular songs, proprietor of a chain of 80 music stores and sports promoter. His profitable business enterprises eventually numbered 25, but in 1910 while residing in New York Representative Bloom abandoned all other ventures to devote his entire time to real estate and building construction, in which he made a vast fortune that was retained until his death. Carrying his irresistible ways into the political field, as the Democratic nominee Bloom was elected to Congress in 1923 from the Nineteenth New York District, previously a Republican stronghold, and was reelected regularly every 2 years thereafter. He soon became an outstanding figure there and had been exceptionally prominent since 1939 as the House Foreign Affairs Committee chairman. Probably Representative Bloom's greatest work was in promoting American participation in the United Nations and he became one of the signers of the UN Charter as a delegate to the San Francisco conference in 1945.

Especially creditable to the deceased was his unbounded generosity to charitable institutions, which he aided readily and regularly without regard to religious denominations or nationalities. All that the Congressman cared to know was that the existing need was genuine and the money required was contributed forthwith. Saint Ann's Roman Catholic Orphanage in Washington was among his favorite charities, and Representative Bloom's birthday was the cause of an annual celebration there, with all expenses paid by him. Despite his death, this year's party will be held as scheduled, because the institution's officials feel the Congressman would have wanted it to take place. Undoubtedly they are right, because that is the sort of a man he was.

Crisis of Free Enterprise

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following timely and pertinent editorial from the Santa Cruz (Calif.) Sentinel-News:

CRISIS OF FREE ENTERPRISE

This may not be the dictatorship of the proletariat that Karl Marx wrote about, but it's dictatorship just the same, and it shows how far we have come toward the end of free enterprise, thanks to the lust for power gaining momentum in some unions.

A local meat market is being picketed at present because the union wants the owner to close down the counter at 6 o'clock. Not that the union butchers employed there ever had to work after that hour. No. They went home when the clock struck 6, and the owner, who is a master butcher himself, took care of the grateful customers who welcomed the opportunity to shop after their own working hours.

It's not a matter of working hours, then. It's not a matter of salary, either. The personnel of the meat market has been receiving full union pay, which incidentally is $90 per week. The top butcher has been receiving $110 per week, a full $20 over union scale. Salary also has been paid when a man was sick.

So it boils down to the sad fact that the labor bosses wish to dictate to a man what to do with his own time in his own privately owned property. By doing so, they are destroying the traditional spirit of enterprise and competition, and incidentally, they are breaking down a service now rendered to hundreds of housewives unable to shop until after regular working hours.

The one local example is relative unimportant. What counts is increasing interference with private lives and private operations by pressure tactics and outright coercion. The outcome is above all the removal of all incentive to do a bigger and better job, it heralds the glorifications of the clock watchers, and it leads to the point where a father may advise his son to become a hired butcher for $110 a week and put in his prescribed hours, rather than toil away from morning to night in the attempt to start a little corner shop which some day shall grow into a giant market.

Unfortunate society in which enterprise is strangled! Unlucky country where nobody can any longer be boss in his own house. Let such trends continue, and the guild system of medieval times will celebrate resurrection in the land of unlimited opportunities. Opportunity will then mean the obtaining of a union card. Prosperity will depend on the initiation fee. And the worker starting on a job may well be like the cartoon character who knows all about his wages, hours, vacations, sick leaves, and special bonuses before he ever found out what he is supposed to do.

There is a place for labor unions in our society. Let's not transgress and allow a good thing to become a vicious dictatorship.

America Needs a Lot More Kent Leavitts With Soil Conservation in Their Blood

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Kent Leavitt, president, National Association of Soil Conservation Districts, before the annual convention of the Mississippi Valley Association, at St. Louis, February 7, 1949:

You have conferred a great honor on me to ask me to attend this meeting of yours and visit with you and get to know more about you, but it is more than an honor. It is a great pleasure, because I know something of your work, and it is a pleasure to be associated here with you who have had the vision to undertake this program of assisting soil-conservation district supervisors. Not only have you had the vision, but you have had the energy and have raised the finances to carry out your part of this program. I feel that I am qualified to speak to you about it and what it means to America, because I have attended several of these meetings, these short courses which Mr. Winter has so energetically organized and run on your behalf.

I have attended them in five different States. I have worked with the supervisors at those meetings, and I know how much these short courses mean to the supervisors. Furthermore, I have visited other States that have not had the benefit of this program, and as I go along with this speech I think you will realize how much you have already accomplished and perhaps, too, how much there is yet to be done. But to me it is particularly important that you started this program here in the Mississippi Valley, that part of the United States that has such rich soil, where cash cropping is so easy, because it is in those areas where it has been easy to make a living off the land that people have been neglectful of protecting the land.

You have seen it back and forth across the valley as I have. Where once this heavy, black, rich soil lay, now you see the yellow

top soil coming through and it is in that area where you have started your program. It is a magnificent one. You know we are apt to lose perspective when we consider a program of this nature. We do some work for it, just as soil-conservation district supervisors do their work, and we often get tired and bored and wonder just where we fit into this whole picture. It is that which I wish to discuss with you this afternoon.

We know that between now and 1952, we will probably have 6,000,000 more people in our country. We know also, if we can believe the figures from the Department of Agriculture, that we will have lost about a million and a half acres by erosion.

I understand there are 5,000,000 acres in the Missouri Valley that can be irrigated. Those are figures I have heard. How long will it take and how many people will we have in this country by the time those projects are completed? Those are the problems that are facing us here in America and in which you are taking such an active part.

Before we go on to the development of this problem, just what is the stake of the businessman in all this question of agriculture? I would like to refer you to an article or rather an editorial that came out in the Country Gentleman last August. Basically, it points out this fact, that never in American history has more than 25 percent of the national income been spent for food and clothing in the United States. The balance, or 75 percent, of the national income is available for all those other things that we consider as our high standard of living, be it expensive government, the radios or hospitals, or churches or automobiles.

You businessmen and men of commerce have a crack at that 75 percent of our national income, but we, gentlemen, are the low man on the totem pole of the great nations of the world. No other nation spends so little for those essentials. No other nation has as much available for the other things that make up a high standard of living. Let's not take the figures today. They are so upset by the last war, but back in the thirties, France was spending 30 percent of her national income for food and clothing. England was spending nearly 40; Italy was spending nearer 50, and in India and China, 90 percent of the national income went solely for food and clothing.

How would you like to do business, how would you like to compete in a country where 90 percent of the national income went for food and clothing? That is your stake in this problem of our land, from which come those essentials to our high standard of living.

When a nation is faced with such a problem, more people and less land, what can it do as a nation to protect itself, to guarantee continuation of its civilization? To my way of thinking, there are three things, three basic things that a nation must do. In the first place, and let's stick to America, we must change our thinking about the ownership of land. The ownership of land today is given to you by State law, a title in fee simple, to do with as you see fit.

I do not want to see the State laws changed, but I do want to see a change in thinking, from one of ownership in fee simple, to one of trusteeship. If we as a Nation can think of land in the terms of a trusteeship, we have taken the first great step. Why? Because a trustee has only two duties.

The first duty of a trustee is to see that the life tenant gets a fair income. You can't take the capital of trust and invest it all in three-quarters of 1 percent municipal bonds and say to a life tenant, that is all you get, and your capital is safe. You can't do that. You have to deliver a fair income, the going rate on sound security. The second duty of a trustee is to pass the principal of the trust on to the ultimate beneficiary in as good condition or better than when received.

If we in America can think of the ownership of our land in such terms, we have taken the first great step in this national problem. There is a second job, and we have also done well in that. I should not say "also" because we haven't done very much about the first one, but we have done well on the second one. The second one is to develop a new science, the science of proper land use.

It is a very complicated science, but it has reached a high stage of development in America. It has been developed by good farmers and ranchers, by our State land-grant colleges and experiment stations and by our Department of Agriculture, and other departments of the Federal Government. If you do not believe that we are a leader in the world in this great science, go and look at the visitors' book in the Department of Agriculture in Washington and see the number of foreign countries that have sent their students, their commissions of agriculture, their important political figures to study this new science that we have developed in America. They have come to take back some of it to their own country.

This science is primarily concentrated in one great bureau of the Department of Agriculture, the Soil Conservation Service, where through an outstanding group of personnel and technicians, it is available in most parts of this country to any farmer and rancher who voluntarily seeks it. These farmers and ranchers can get it by forming soil-conservation districts under their State laws and then by applying to the Department of Agriculture for technicians to help them promulgate this science of proper land use.

I said, almost every part of the country. There is one part of the country where it is not available, and it is one thing that upsets me often. The Tennessee Valley Authority has seen wise to be sufficient unto themselves. They do not need the soil-conservation service; they do not want their farmers to cooperate with any other branch of the Federal Government. That is the only place, however, in America where if the farmers want it, they can't have it. Speaking about soil-conservation districts, leads me to the third great job that a country has to do if it is going to keep its natural resources. It must get this new science applied to the land, applied to every acre; that is what we must try to do in America without changing our form of government.

You may wonder at my saying, without changing our form of government. Gentlemen, to me it is one of the vital things in this program, because there are ways of getting this job done, I believe, but we would not end up with a democracy if we tried them. Let's take a look around the world and see what other countries are doing.

Most other countries in the world have decided that if they are going to do this job at all, they are going to do it by mandatory legislation, by domination. We don't want that here in America, but I am very fearful that we are closer to mandatory legislation than most of us think.

Constantly you see articles in the press. I have picked them up all over this country. The only way to get the job done, the editor will say, is to have a law about it. If we have a law about it, gentlemen, we will have the same thing that England has today. Today you can't farm land in England as you want. You follow the dictates of someone from the central government. Why? Pressure of people on the land and nothing else has made that true in a country to which we have always looked for liberal thinking. We have always thought of the British as liberal thinkers and of having a democratic form of government, but now today it is different. Why? Pressure of people upon the land. The result—socialism.

There is a second way that some people in America advocate doing this job. They want to do it by bribery, bribery from the Federal Treasury or the State treasuries. In other words, pay everybody to do everything. Put thousands and hundreds of thousands of more people on the Federal pay roll; spend billions of dollars per annum, not over a long time but per annum.

I have seen, gentlemen, the plans they have drawn up in Washington. They have been there for some time, and the excuse they give is that it is the only way to get the job done in time. A fairly plausible excuse until you stop to think it through; but those programs are now ready. It would be easy to slip it over on America, and there is only one way to stop it from being slipped over, and that is to have a better program; and I believe, gentlemen, we have a better program in America today, and that is the third point that I want to bring to you. The question of getting it done, applying the new science on the land in a democratic way. It must be a Nation-wide cooperative effort such as the one on which you have embarked. The one we are trying to do. But it is not just a farmer's problem. It is everybody's problem. All of us from every strata of our society must start thinking and working at this job of conserving our national resources. We can get it done without changing our form of government, and that is where soil-conservation districts come into the picture.

This question of getting it applied is a question of working from the grassroots on up. Before I go into a little detail, because I think you should know the detail of some of the program for which you have put up your money, I would like again to review it from a slightly different angle to show you what we have to work with, particularly here in this great central basin of ours in the United States.

Now, you know that one of the things of most vital interest to you is water, either too much water or too little water. What did the United States do as its history developed about controlling water? Well, basically, it went at it the wrong way. It started from the bottom up, perfectly logical, perhaps, in the light of history, that it did it that way. But certainly in the light of what we know today we wouldn't go at it the same way as we have in the past.

There is no need of my detailing that. I just wanted to bring it to your attention. We started from the bottom of the rivers and we are gradually working up to where the source of trouble is, not only the source of trouble, but the source of benefit. That point is where the water falls upon the land. That is where the program should have started. In controlling water resources you should start where the water falls.

We went at it the other way in America. We started with the great program of the Army engineers to protect our rivers. I bet there is not a man in this room that would like the assignment of protecting St. Louis against floods, no matter how much money he was given, if he had to localize his efforts in and around St. Louis, but that was the job handed the Army engineers. An impossible job, and then we took a step further and we developed the reclamation program, and now, finally, we have taken the last step.

We have added to those two great programs, the new Department of Agriculture flood-control program, which is designed to fill the gap between where the water falls and where the reclamation, dams, and irrigation work, power development, begin. I think that you will probably agree with me that if you were assigned the job from a clean slate, you would start at the top and work down, thus you would have less to control at the bottom.

I believe the new tripartite program is sound and unfortunately, we have been slow in getting to this point. We have now almost reached it. There are one or two things that I want to point out to you in regard to the

over-all program that faces us here in America today. You and I as citizens and taxpayers must do something about it. Think back a minute. It was only in 1936 that the Congress authorized the Department of Agriculture to make a survey of the great Missouri Valley to see what could be done about controlling water at the source, and as well, to control the land upon which it fell and over which it ran.

In the meantime, we have seen the merging of the two great programs we mentioned before: 1944 brought together the Pick-Sloan plan. From 1946 to 1948, the Department of Agriculture was given increased appropriations to develop their share of this plan, and while those Federal activities were going on, you had another very interesting thing, and that was that the 10 great States that make up the Missouri Basin got together, took an interest, and formed their Governor's committee, which has been very active. Their meetings have been very well attended.

I personally have talked with several of the governors of those great 10 States. Now, the governors have gotten together to see if the resources of the Missouri Valley could not be properly integrated and worked out, if the States and the departments of the Federal Government work together on the new plan. The Department of Agriculture, over the last 2 years with new appropriation, has worked consistently and constantly with the governors of these States and now the plan has been finished.

The plan is now in the Department of Agriculture. It has the approval of the governors of the 10 States, and I think that you should take an interest now and immediately for this reason. We now have a finished plan. The survey should be approved as is by the Department of Agriculture, and the Congress. All that is necessary is to have the Congress approve that plan. If Congress will approve the plan immediately and appropriate funds, then we can start on the final step of integrating the three great organization plans together. But, gentlemen, as so often happens, particularly in a bureaucracy such as we have today, everybody else wants to get aboard any sound project. I have heard rumors and I have seen signs, that now that this plan has been drawn up and people see how good it is and how popular it will be, we may fall into the trap of everybody else trying to climb aboard it. If you have any influence, and if you realize the importance of this Federal flood-control project, please use your influence to see that the plan is presented to Congress as it is now drawn and that Congress takes some action on it. It is only with this three-prong effort that we will get our water resources under control here in the Missouri Basin.

Let us return to the over-all picture of getting the new science applied to the land. Where do you and ourselves as districts come into this picture? What is a soil-conservation district? I have a basic definition that I am very fond of for a district. A district is no more than this. It is a group of farmers and landowners and operators who have banded themselves together with certain privileges and certain obligations under State law to do what? To cooperate with any organization or agency, be it Federal, State, be it private, that will help them get proper land-use practices adopted by the farmers of their area and put into effect.

That is all a soil-conservation district is. To me, it is terribly important because it gives a sound basis for democratic control of any program, be it Federal or State, that is wished on the people. We can control it from the grass roots up, if and only if the farmers who have taken on the job of running a district will assume their responsibilities and carry out the program themselves and not be dominated by any agency, be it Federal, State, or private.

In other words, if they will run their districts, if they will help draw up these plans; if they will go out and sell these ideas to the farmers around them; if they will show them it is profit-making, and, good for the future, then the program is democratic. That, gentlemen, is where the Mississippi Valley Association has done such magnificent work. Now, granted, you say that you are interested in 23 States and granted that you have only carried out this program in 5 States, but, gentlemen, you are leaders in America.

There is nobody else carrying out this type of program. I have sat at these short courses 2 days at a time, with supervisors of districts who at your expense or at theirs, have come in to learn more of what they can do and how to do it. Often you get districts organized, and men appointed or elected supervisors, yet they don't know what their duties are. It has been your organization in these five States that has backed them up, has helped them educate themselves, to do their work on a voluntary basis.

You have done it on a cooperative basis of industry and agriculture getting together, and I tell you, it is the soundest thing in America today, the very soundest thing. The very best form of government is this united effort to pull together to put across this program. I would like to say a word right here about Mr. Winter.

Everett Winter is full of enthusiasm, popular among the farmers, knows his subject thoroughly. I have seen him do it out in the States. I have also seen him in your Washington office. I have also seen him before congressional Agriculture Committees, and frankly, I have never seen him make a mistake. His work has been sound, it has been constructive, it has been energetic, and it just couldn't be better. I just can't say enough to compliment him and Miss Anderson for carrying out your wishes so well.

I only hope that some of you will take the time as these schools are carried on in the various States to go and see what you yourselves are doing in this program. These district supervisors should really act as catalysts, to bring other programs of the Department of Agriculture or of the States or private people together into one united effort. They are doing it, not only on a county basis, but on a State basis, and now fortunately for us, we finally have a national organization.

I would say this for our national organization. It has only appeared in Washington once and that was last year to testify, but these same fellows that you have helped to train, 45 of them, went to Washington at their own expense last year. They stood up before the Agriculture Committee of the House and the Senate and the Appropriations Committees, and they gave the Congress such a good, fair, unbiased, and unselfish picture that, I am told, Congress will probably never again attempt to pass any agricultural legislation without at least consulting the National Association of Soil Conservation Districts.

Why? Because they did not go to Washington and ask for anything. They went to tell Congress what is good for their country. They supported their testimony with knowledge which stems from hard work on the land and which you all have so magnificently assisted them in developing.

I have taken a lot of your time here, and hope that you have followed my thinking. In closing, I just want to beg of you this, that your association get behind this picture and stay behind it even more energetically than you have in the past, because I am sure you do not yet realize what a wonderful thing you are doing and how vital it is to America, that soil conservation districts be given the kind of assistance that you are giving to them.

Thank you very much.

The Chance for Enterprise

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the English publication Intelligence Digest:

THE CHANCE FOR ENTERPRISE

Observers of world affairs send in report after report of these staggering opportunities. Their reports often include a desperate lament that while the greatest chances ever open to enterprise stare us in the face, little is done.

Vast sums of capital are almost stagnating in America and Britain and bringing in absurdly little return. The deathly creed of security has eaten deep into the soul of merchants whose grandfathers would not have made a dime or a sixpenny piece if they hadn't boldly risked everything and then risked it again, and then still again, for the reward of supreme success.

Private enterprise still has it in its power to smash the present system of penal taxation, and to develop the untouched resources of the world with such vigor and success that not an argument remains to the leftist.

If enterprise used its resources boldly and gave to its workers what they ought to have before and not after it has been demanded, the world situation would be entirely transformed.

THE DEMAND FOR REDUCED TAXATION

There is growing demand for reduced taxation, although Mr. Truman has chosen this very moment to suggest that it should be still higher in America. Unless public opinion insists upon sweeping reductions, and in some cases complete abolition, enterprise will not, of course, get the vital incentive it needs.

The doctrinaire leftists well know this. Smash the spirit of enterprise by snatching away its profits—that is their basic theory. It is very sound.

The ideal that everyone should be ready to work to the utmost regardless of reward has never yet been attained, and is not even attempted by leftists when dealing with the workers. To them profit and inducement are enlarged constantly. Successful private enterprise, which helps to create a successful nation, depends upon inducement.

THE CONSEQUENCES OF REDUCING INCENTIVE

We already witness the disastrous consequences of reducing the profits of industry. Presently we are going to see the same thing happen in the professions. Nationalized medicine, for example, in which the doctor can never expect more than modest financial security, will deprive that great profession of the most adventurous and lively brains. It is true that a doctor must have a sense of vocation—but the rewards of great service have always been and always will be an attraction to most, though of course not all, of the best brains.

It is not fortuitous that in England, where the rewards in medicine were for a long time the highest, the greatest surgeons in history were produced between Lister and Trotter.

It is proven in every nonreligious sphere, that when the rewards are reduced or seized the effort declines and the best brains quit. It is this deeply fundamental fact which accounts for the phenomenon that all Marxist economic policy leads to a slow de-

cline and eventual national poverty, or dictatorship. If men will not work without profit, and a government refuses to face economic decline and won't restore free profits, then dictatorship must follow. And it has.

THE NEED FOR ACTON

It is elementary, therefore, that penal taxation must be smashed. Yet not one conservative party in the whole English-speaking world has had the courage to make an all-out offensive against it.

The people themselves could bring about a complete change within a few months if they exerted themselves. No government can stand against a really roused public opinion.

If, for example, every reader of this digest throughout the world wrote one letter of argument and protest on the subject of taxation and death duties to his or her principal newspaper, a major controversy would be created influencing every political party.

It is a cause of astonishment to observers that millions of intelligent people, and the directors of great enterprises, allow themselves to be slowly destroyed without active protest, and at a time of unprecedented opportunity.

Rent Control

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. RICH. Mr. Speaker, rent control was a wartime emergency, adopted during the days of expanding Army and Navy training camps, fluctuating population at industrial centers engaged in war production. We are now in the fifth year of peace, prices are declining, the administration is quoted as being concerned over a possible recession, but they demand that rent control be continued, and for a longer period. To date I have not received one single letter favoring continuation of rent control this year.

Note these figures released last year by the Federal Reserve System. With a base of 100 in 1941, living has advanced by 118 percent, apparel 100 percent, all other items 75 percent, and rent has advanced 18 percent. How can the landlord maintain necessary repairs, taxes, and upkeep on his property and yet rent at levels which prevailed early in the war? Who is going to invest in new rentals with the prospect of continuing tightened Government control? Remember the consequences of rent control in France, which has obliterated new home building and produced slums.

Everywhere the Government is eliminating free enterprise with subsidized competition—public housing, medical care, power projects, minimum wage. One more step on the road to socialism and dictatorship. Is not rent control the confiscation of property, and to confiscate real estate is only the beginning of the ultimate confiscation of everything. Somebody has said, "Why spend $15,000,000,000 to suppress communism abroad, and then establish it at home by law?"

Wake up, America, before it is too late. Do not kill the goose that laid the golden egg. Stop this steady march toward socialism here and now. Return to the concepts of freedom, liberty, and enterprise upon which this country was founded, which have given us the highest standard of living of any nation, and world leadership.

The rent-control law as administered is confiscation of property. It is un-American.

Another home owner, who is neither tenant nor landlord summed it up this way—"The greatest wrong being done in America is not the provisions of the rent control law. The great wrong is that there is any such law at all in America."

The following are good reasons for ending rent control. They were submitted to me from the Property Owners Council, 3315 Fairmont Drive, Nashville, Tenn.

WHY RENT CONTROL SHOULD END

1. Because it is unchristian, un-American, and unconstitutional.
2. Because it is against God and the Bible.
3. Because it is atheistic and Communist in origin.
4. Because it is unfair, unjust and discriminatory.
5. Because it is arbitrary and unprincipled and unbusinesslike.
6. Because it is dictatorial and tyrannical.
7. Because it is basically and fundamentally wrong. It makes orphans out of the tenants and slaves out of owner.
8. Because control has failed in England, France and Russia and everywhere else that it has been tried.
9. Because it destroys the incentive for industry and sacrifice to save.
10. Because it makes demagogues out of politicians and parasites out of the tenants.
11. Because it encourages the spendthrift spirit and destroys individual initiative.
12. Because it puts control in the hands of the politicians and destroys American statesmanship and high principles.
13. Because control destroys the American way of life to gain which our forefathers fought and died.
14. Because it discourages the tenant from standing on his own feet in meeting life's issues on the square.
15. Because it gives more money to the tenant to buy whisky, to gamble, and to throw to the wind.
16. Because it makes an object of charity out of the tenant when the landlord is forced to pay part of his rent.
17. If the poor people need help let's take it out of all the taxpayers' pocket, and not force the property owner to shoulder the whole load.
18. Finally because there is no need for rent control as there are many houses and apartments vacant and without tenants.

Speech of Dan W. Tracy, International President, International Brotherhood of Electrical Workers

EXTENSION OF REMARKS
OF
HON. CLINTON D. McKINNON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. McKINNON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address of Dan W. Tracy, president of the International Brotherhood of Electrical Workers.

Mr. Tracy is an outstanding labor leader and his organization has shown the way in maintaining peaceful and progressive labor-management relationship through a voluntary arbitration plan. His remarks on the Taft-Hartley Act are well worth noting.

The address follows:

This year, 1949, presents a challenge to labor and to management—a challenge and a rare opportunity to them as a team to solve the problems which face our economy.

Our President was mindful of this teamwork when he gave his State of the Union address to the Eighty-first Congress early in January. Mr. Truman said:

"The Government must work with industry, labor, and the farmers in keeping our economy running at full speed. The Government must see that every American has a chance to obtain his fair share of our increasing abundance. These responsibilities go hand in hand."

The President has lived up to the faith which the laboring people of the United States placed in him when they went to the polls last November 2. He has asked Congress for a repeal of the Taft-Hartley law and a reenactment of the Wagner Act, an increase of the minimum wage, higher benefits under social security, steps to combat inflation and promote production, adequate housing legislation, a strengthened Labor Department, and other measures which were part of the Democratic campaign promises. For these issues the President has spoken and as this is written, President Truman's friends—and labor's friends—in the House and Senate have started to push them through and have won the preliminary skirmishes.

The President has promised a Fair Deal for every segment and every individual in this vast Nation of ours.

And that is where we come in. A Fair Deal is all that labor ever wants. Trade-unionists have proved over and over that they can work as part of the team which we know as the American democracy. One of the most striking examples of this teamwork is found in the excellent record made by America's organized workers in this country in World War II. The American labor union is an untiring dynamo in the creation and preservation of American democracy because it is the basis of democratic life. This has been constantly revealed throughout the world during the last few years, dramatically during the last decade, and we know now that the labor union has the greatest stake in democracy. We have only to recall what happened to the labor unions in totalitarian countries with the coming of dictatorship by Hitlers, Mussolinis, or politburos. They were eliminated overnight.

Secretary of Labor Tobin acknowledged this stake which labor has in democracy, when he said in his New Year's Day statement: "American wage earners and their unions have contributed to the strength and welfare of the Nation."

Organized labor is chiefly responsible for the high standards of life which we have in our country. Fewer hours of work, accompanied by efficient production, have created more leisure for the American people than you will find anywhere else in the world. Increased wages have made possible the highest living standards in the world—not just for members of organized labor but for all our citizens. It has been proved without doubt that prosperity among the working people of a nation is the basis for prosperity for every segment of the population. And how are these improvements brought about? In the main by unions and fair, progressive-minded employers, working together under America's system of private enterprise and through collective bargaining.

Yes, in this country, labor has a stake in democracy, and management has a stake in democracy. They are partners—both working for the same goal—a better life for Americans in which all share. Working together they achieve this goal. It's the height of folly to fight your partner. Wrongs bring retaliation and retardation. The way to avoid difficulties is to get together—labor and management—and cooperate. Labor and management have grown up. They are mutually capable of looking the situation over and reaching a sensible understanding.

A year of the Taft-Hartley law has been a lesson to both labor and management. You can't force cooperation. The Bureau of Labor Statistics, in a recent report, states that there were more large strikes, involving 10,000 or more workers in 1948, the year in which the Taft-Hartley law was in full force and effect, then there were in 1947. In terms of idleness the Bureau declared, "last year's big strikes resulted in approximately 19,000,000 man-days or 56 percent of the total idleness for 1948, while in 1947 they accounted for 17,700,000 man-days of idleness, or about 50 percent of the total."

Voluntary cooperation and arbitration is the answer to our problems and we in the International Brotherhood of Electrical Workers are one labor union that is willing, yes, determined, to do our part to make voluntary cooperation work. We want to join with the employers of our members in setting up and maintaining a labor-management program that will work and will bring a peaceful and prosperous status to us both. And we believe the management side of our industry feels that way, too, and will meet us halfway in this endeavor.

In the electrical construction branch of our industry, we can speak with confidence of a program of voluntary cooperation and arbitration, for in our construction field such a program has been in operation and has worked successfully for years. Our council on industrial relations for the electrical construction industry was set up in 1920 by the National Electrical Contractors Association and the International Brotherhood of Electrical Workers, and it provided in cases of dispute that five members of the NECA and five members of the IBEW would meet, talk the situation over, until a unanimous decision, to be binding on both parties, had been reached. Through all the years since 1920 this council has decided the issues in dispute which have sprung up between us. We have never had a violation of a decision and gradually the electrical construction industry has come to be known as a strikeless industry.

Voluntary arbitration works and we are determined in this year of 1949 to make every effort to have it work in every phase of our industry—construction, manufacturing, utility, railroads, radio, telephone, wherever there are electrical workers employed. We are determined to do a good job for the industry everywhere, and we appeal to all employers in the electrical industry to join with us, and as a team we will make this the greatest year in the history of electrical production. We will do our part to keep America's economic machine running at top speed.

Labor has matured as an important force in our American life. Although labor has long been a potent factor, there were many who did not fully recognize the position and importance of labor until the elections of last fall. Labor's voice was heard at the polls at all levels—National, State, and local.

One of the most important results in this matter of having its voice heard is found in the fact that labor has many, many friends in Congress. Many of labor's old friends were reelected and in the places of some of the reactionaries are now found friends of labor. It is encouraging indeed, to run down the list of names in the Senate and the House and see the names of the new Members we know we can count as our friends.

But labor's interest in the workings of our Congress and our national democracy is not without consciousness of responsibility. And anyone who knows how labor feels about the problems of the day knows that this responsibility is not taken lightly. We are ready and willing to assume it.

Labor's responsibility can be found in Mr. Truman's theme—"a Fair Deal for all." Labor does not ask for more than a fair deal. We ask no special concessions for the part we played in helping to win the election; we did no more than our part as citizens of this great Republic in voting the way we felt was the best way to preserve it. We eagerly assume our responsibility this year in making democracy work—by consistency of purpose, alert initiative, unfailing determination, and honest work—a fair day's work for a fair day's pay. This responsibility we accept and we ask no special concessions, but neither do we want to be victims of unfair discrimination and legislation such as we have been under the Taft-Hartley era. All we want is an even break.

Labor realizes, as management should, that if our democracy is to be kept thriving and vital, we must all make contributions—contributions in work as well as good will, in active cooperation as well as fine phrases. The world is looking to our country. Here, it might be said, democracy is on trial before the world. If we succeed, as I am sure we can, we must and will prove that the best standard of living and the highest form of liberty and democracy come when man can work and live under the blessings of freedom and a system of unregimented economy.

If we fail to work together and if we fail to prove that teamwork between labor and management can be an effective operation, then democracy fails. Cold fear strikes deep within each of us when we think what might then happen to those precious freedoms we have so laboriously earned in the decades since the founding of the Republic should democracy fail.

Success of democracy is more important now than it has ever been before in the history of the world, since totalitarian systems threaten many parts of the globe, and these systems will threaten us unless we make our political and economic system work. But I feel that I can speak, not just for the electrical segment of organized labor but for all organized labor, when I say labor can be counted upon to contribute its full share in this business of making democracy work.

But making democracy work means giving attention to the workings of our economic and political machinery at all levels—local as well as national. We have seen an example of labor suffering a severe defeat because of State laws. And recent Supreme Court decisions have made it plain that only wiping these laws from the State legislature will solve our problems. These little Taft-Hartley's must go. They have turned back the clock of labor progress many years in the States where they have been enacted. Such a setback for labor is proof once again that labor must be ever vigilant in its rights and its gains in every forum—in the local precinct, in the city, in the State, and, of course, in the Nation.

As we look forward to the critical days ahead in our democracy, as we resolve that we are going to be dealt with in a fair-minded manner, we at the same time resolve that we are going to reciprocate in kind—that we are going to produce full value for wages received; that we are going to cooperate with our employers as we feel confident they will cooperate with us, and together we can work to the end that our Government can preserve a thriving democracy and keep our economic machine functioning at a high level of production and employment, creating a better living for all.

Unless cooperation obtains in all industry through sensible effort contributed by employer and employee alike, all that democracy stands for must fall. While the ugly head of totalitarianism has been smashed in parts of Europe, its nostrils still exhale annihilating flames consuming all liberties in the Russias and other segments of the world.

The employer who persists in blinding himself to the fact that totalitarianism is the antithesis of capitalism, and that labor enlightened and free is the first line of defense for our economic system, is in the unfortunate position of being as blind as those who will not see, and must eventually pay the penalty. If labor does not visualize, in the failure of cooperation, the destruction of its liberties and freedom, it is equally blind and is courting consequences. Let us all resolve to recognize each other's rights so that democracy will be safe for all who are willing to embrace it.

However, the basis for such cooperation is economic justice. The lion's share for labor would leave capital on lean rations. In either case the public—embracing those who labor and those who invest—would suffer. The flickering of Taft-Hartley candles is but a shadow in the brilliance of enlightened cooperation.

Plight of Jews Behind Iron Curtain

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. MULTER. Mr. Speaker, following are excerpts from the report on the plight of Jews in countries behind the iron curtain, delivered at the convention of the Jewish Labor Committee on February 27, 1949. It is further evidence of what minority groups may expect when they come under the domination of Soviet Russia or any of its satellites:

The Jewish Labor Committee has considered it its duty to gather all available facts and information on the present plight of the Jews residing in countries behind the iron curtain.

All delegates to this convention will receive a detailed written report on what has happened to Jews and Jewish institutions in countries controlled by Soviet satellite regimes.

About 5,000,000 Jews lived before the war in Poland, Czechoslovakia, Hungary, Rumania and the Balkan countries. This constituted 30 percent of the Jewish population of the world. In these countries the Jews have for centuries built their scholarship, religion and modern culture. Every city and town had Jewish schools, libraries and social and economic organizations. There also grew the mighty Jewish labor movement which led the movement for freedom and justice throughout the world. There also developed the mighty Jewish National movements which enriched Jewish life in all countries of the world.

Then came Hitler's war of extermination, resulting in the annihilation of millions of Jews. At the end of the war about 650,000 Jews remained alive in these countries. In addition there were 300,000 Jews in Siberia, in the displaced persons camps in Germany, and in the Allied Armies waiting for their return home. All these survivors were imbued with a burning desire to reconstruct their lives and institutions to spite Hitler and the home-grown anti-Semites, especially

those in Poland, Hungary, and Rumania. A substantial number of the surviving Jews chose to emigrate and leave their countries of birth forever, as they felt that the earth of these lands was soaked with the blood of their closest and dearest. Others, however, decided to remain and rebuild Jewish life on the ruins.

We of the Jewish Labor Committee gave aid to both groups—those who chose to emigrate and those who decided to remain.

Fate decreed that close to a million surviving Jews found themselves after the war in the Russian sphere of influence. Within a short period of time these Jews were turned over to those elements which years ago destroyed Jewish life in Russia. What has happened in the past 3 years to Jews in Rumania, Hungary, Czechoslovakia, Poland, and the Balkans? We are not including in our report the Baltic States, as these were immediately after the war incorporated as provinces in the U. S. S. R.

Let us examine, then, the situation of the Jews in these four Soviet satellite countries and start with—

RUMANIA

About 400,000 Jews out of a prewar Jewish population of 750,000 to 800,000 survived the world cataclysm. However, only 210,000 were there at the time the Germans were driven out. Seventy-one thousand returned from the camps in Transnistru. Some 13,500 returned from the Hungarian labor battalions, and between 20,000 and 25,000 returned from Poland, Bukovina, and Bessarabia, making a total of 400,000 living in Rumania after the war.

The economic plight of the Jews in Rumania deteriorated daily. At the end of 1946 only 27.5 percent of the Jewish population found employment; 150,000 Jews lived on relief, and at the end of 1947 50,000 Jews had no means of support. The decrees which the Rumanian Government issued nullifying all Nazi transactions and restoring to Jews their former possessions were never carried out, as those who were supposed to effectuate the laws were either themselves anti-Semites or were following the general policy of the Communist-dominated government not to antagonize the anti-Semitic-ridden population.

By the end of 1947 the Jews succeeded in occupying only 4,000 homes out of 18,000 which had belonged to them before the war. The government also failed to carry out the law for the return to the Jewish communities of possessions of Jews who had died leaving no heirs. These possessions amounted to $1,125,000,000. Poverty, unemployment, and homelessness became the economic fate of the Jews in Rumania.

In spite of the government's official opposition to antisemitism, the antisemitic feelings among the population have not subsided. The government apparatus was ridden with antisemitism and intolerance. The government also declined to mete out harsh punishment to those who were guilty of the destruction and spoliation of Jews during the war. Collaborators of the former reactionary antisemitic government such as Foreign Minister Tatarescu were taken into the government with the blessing of the Communists.

On June 29, 1941, a pogrom took place in the town of Jassy whereby some 14,000 Jews were killed. After the war, thanks to the Jewish organizations, 150 participants in this mass murder were located. The government evaded prosecution of these criminals, and only by the middle of 1947 brought them to trial. By that time about 65 had died or disappeared. The trial was dragged out for months, and by 1949 only a few of them were given minor punishments.

The Rumanian Government gave very little financial support to the suffering Jews, in spite of its numerous promises. At one time the then Premier Groza stated that the government's promises will be carried out if the Rumanian Jewish community will influence American Jews to grant Rumania $100,000,000.

Georgiu Des, vice premier of Rumania, stated at the opening of the newly elected Communist-dominated parliament that the Jews constitute a danger to the economic situation in the country; that they sabotaged production, that they are reactionaries, and that they have their eyes turned toward the west.

In 1947 and at the beginning of 1948 tens of thousands of Jews started an illegal trek out of Rumania through Hungary and Czechoslovakia. The Rumanian Government confiscated the possessions of the illegal emigrants.

Immediately after the war an intensive Jewish communal civic and cultural renaissance started in Rumania. The various Jewish political groups rebuilt their organizations; by January 1947 there were 114 functioning Jewish communities with 30 kindergartens, 65 public schools, 15 high schools, 60 Talmud Torahs, and 6 Yeshivas providing Jewish education to 15,000 children. A number of cooperatives and trade schools were established, and the ORT organization opened 54 vocational schools for 8,000 Jewish young people.

This situation did not last very long. The small minority of Communists among the Jews has at all times conducted an opposition against the Jewish communities and their leadership through a front organization called Jewish Democratic Committee.

The first victim of the Communist attack was the Social Democratic Jewish labor movement. This was followed with a blast on the Federation of Rumanian Jews. Subsequently the president of the Federation of Rumanian Jews, Dr. Filderman, was forced to leave the country, and in his place was appointed a Communist. As Chief Rabbi was designated a Dr. Rosen, also a Communist, who is today the religious leader of the Rumanian Jews.

In February 1948 the Communists took over the Federation of Jewish Communities and the Communist leader, Serban Libovici, became its general secretary.

The liquidation of Jewish civic, educational and cultural life then took place at a rapid pace:

1. During 1948 the Jewish communities and all Jewish civic institutions went through a drastic purge.

2. In the summer of 1948 the autonomous Jewish schools were forcibly liquidated.

3. At the end of October 1948 the police raided the offices of the Jewish National Fund, and Mr. Leon Itzko, editor of the Zionist weekly, Montuirea, was arrested.

4. On November 5, 1948, 19 Jewish hospitals of the Jewish communities were nationalized.

5. On November 5, 1948, the Federation of Rumanian Jews, which had existed for 40 years, was liquidated.

At the same time the Jewish communities were deprived of the right to manage their institutions, such as old-age homes and orphan asylums, and all sports clubs which bore Jewish names were ordered to change their names to Russian and Rumanian names. The Communist organ Unirea proclaimed that "the unjustified tolerance is over * * * the government has launched a fight against the Jewish bourgeoisie which is not an exception in the capitalist jungle." The political bureau of the Communist Party adopted a resolution that "Zionism is a political reactionary movement of the Jewish bourgeoisie which aims to hinder Jews from joining the progressive forces in the struggle against capitalism and their own bourgeoisie." Then followed a number of bloody fights which lasted for 8 days, resulting in the final liquidation of the Zionist clubs. The final upshot is that there are no more Jewish schools, Jewish cultural groups, Jewish communities, Jewish organizations. A small, powerful Communist group reigns over the Jewish community in Rumania.

HUNGARY

The second country where a substantial number of Jews remained alive after the war is Hungary. In 1941 about three-quarters of a million Jews lived in expanded Hungary; 400,000 on prewar Hungarian territory, 180,000 in the annexed part of Transylvania, 150,000 in occupied Carpatho-Russia, and 20,000 on Yugoslav soil which was turned over to Hungary by Hitler.

About 80 percent of these Jews were annihilated during the war, chiefly in the Polish death chambers. The number of surviving Hungarian Jews at the end of the war estimated at between 150,000 and 180,000. A number of Hungarian Jews are to this day interned in the camps of Russia. The economic situation of the Hungarian Jews has in the first years after the war been the worst in Europe.

Not less than 120,000 Jews had to obtain food from the American Joint Distribution Committee. The Jewish trading element was ruined because of inflation and deflation. Jewish possessions were not restored to the rightful owners in spite of the many promises by the government. Anti-Semitism which had strong roots before the war became more intensified in the postwar years. None of the parties, especially the Communist Party, dared launch a campaign against the anti-Semites, as they did not want to lose their popularity. The Communists as well as the Small Landholders Party vied for the favor of the anti-Semitic-ridden Hungarians, with the result that the government machinery was infested with bigots and anti-Semites. When the Communists obtained complete control over the country they declined to take drastic steps to restore property to the Jews, as this was contrary to their nationalization and collectivization plans.

The attacks upon Jews by anti-Semites became a daily occurrence; anti-Semitic literature was widely distributed among the population, and a number of Jewish cemeteries were desecrated.

Officially the government was committed to fight anti-Semitism; in practice, however, very little was done to put a stop to it. One of the basic causes for the growth of anti-Semitism was the fact that several Jews have occupied leading positions in the Communist Party. The anti-Semites utilized this and held the Jews collectively responsible for the policies of Communist government.

The truth, however, is that the Jewish population in Hungary is not pro-Communist. During the only more or less free election for Parliament which took place after the war, some 45 percent of the Jewish people in Hungary voted for the Small Landholders Party; 30 percent for the Social Democrats, and only 25 percent for all other parties, including the Communist Party. The so-called Jewish Communists have nothing whatever to do with the Jewish people, as they are assimilated Hungarians.

In spite of their bad economic plight and the rampant anti-Semitism, the Hungarian Jews demonstrated Herculean energy in rebuilding their Jewish cultural and social life in the land of their birth.

In the years after World War II they established communal institutions, societies, organizations, and by the beginning of 1948 there were about 20 Jewish religious and secular schools in Budapest. In July 1947 a Jewish museum was opened in the capital of Hungary, and the Zionist movement conducted intensive activity.

Officially the Government looked with favor upon zionism. The leader of the Communist Party, Mathyas Rakosy stated that the Government will allow every Jew to emigrate to Israel with his possessions.

This situation, however, changed subsequently, and by the end of 1947 two representatives of the Jewish Agency for Palestine were deported from Hungary. In an election for officers of the Jewish community of Budapest, one single united list of candidates was decreed by the Communists, with the result that complete control of the Jewish community was taken over by the Communists.

On June 11, 1948, all Jewish schools were nationalized, and all academic subjects were henceforth to be taught in Hungarian. In September 1948 the Hungarian Zionist weekly was, because of "a shortage of paper," closed down. Even the Jewish members of the Communist Party were finally purged with only a few remaining in its ranks.

CZECHOSLOVAKIA

In 1938 before the Munich Pact, 380,000 Jews lived in Czechoslovakia. After the Germans were driven out, about 40,000 Jews survived. When Subcarpathia was occupied by Russia the Jews emigrated to Czechoslovakia.

The democratic government of Benes and Masaryk was friendly toward the Jews. Upon the return of many of them from the camps they were given back their homes, and in 1945 a law was passed nullifying all transactions which had been imposed upon the Jews after 1938. The newly established Jewish community received 5,000,000 kronen as part of the property which was found in the German camps. Detailed laws were also passed for the restitution of all Jewish possessions.

A number of difficulties, however, were soon encountered by the Jewish population, especially those of Subcarpathia. The "crime" of the Jews of Subcarpathia was that when Czechoslovakia turned over Subcarpathia to its "great friend Russia," these Jews escaped into Czechoslovakia. The citizenship of these Jews was not recognized in Czechoslovakia, and the Communists launched a huge campaign against them. The Communist Minister of Information, Mr. Kopecky, denounced the Jews on March 27, 1947, for daring to "abandon the proletarian fatherland" and "for bearing animosity toward communism." He called the Jews "the bearded Szlamas, the Jewish good-for-nothings." The Social Democratic newspaper Prado Lidu protested against Kopecky's anti-Semitic remarks.

In August 1946 when the Communists held a conference of partisans in Bratislava—the so-called partisans of Slovakia consisted largely of Slovak Fascists who joined the Communist ranks—the partisans started a pogrom upon Jews which lasted 4 days, with the result that dozens of Jews were injured and Jewish stores were robbed.

After the Communist coup in February 1948, anti-Semitism was given greater impetus in the country. Although Jewish Communists do not play a leading role in the Government, anti-Semites point a finger at Rudolf Slansky, general secretary of the Communist Party, who happens to be a Jew. The name Slansky and a few others add fuel to the anti-Semitic fire.

In August 1948 there was a big pogrom in Bratislava which lasted from 9 in the morning to 10 o'clock at night. The highest punishment meted out to the guilty ones was 4 years' imprisonment.

It is not true, as the representatives of the Czechoslovak Embassy in the United States stated on numerous occasions, that all possessions have been restored to the Jews in Czechoslovakia. Only 2,600 of the 16,000 applicants have to date recovered their property. The Communist Deputy Kapun stated his party's attitude toward this problem in May 1947: "The restitution of Jewish possessions is a difficult thing. Before the war the Jews had Germanized themselves, and after that they escaped because of racial reasons. We cannot trust their patriotism. The pot in which food was spoiled once smells bad even though it has been thoroughly cleansed."

After the war the Jews have given a great deal of energy to the reconstruction of their civic and cultural life. By September 1945 there were 55 Jewish communities in Czechoslovakia, and the ORT organization established 15 vocational schools.

By the end of 1947 and the beginning of 1948 a so-called Jewish Action Committee, led by Laura Simkova, a member of the Communist Party, was organized. To this committee was given the task of purging Jewish life. The former president of the Jewish community of Czechoslovakia was dismissed and four other leading members were allowed to resign, with the Communist Alexander Knapp becoming the general secretary and the well-known Communist journalist Egon Erwin Kisch taking over the chairmanship.

A similar purge took place in Slovakia with many of its leaders fleeing the country. A purge also took place among rabbis, with Hanus Rezek, the chief rabbi of Prague, forced to resign from his position.

The government's attitude toward Zionism then changed radically, and the Czechoslovak borders were closed to the Jews fleeing from Poland and Hungary to the German and Austrian camps. During the latter part of 1948 a substantial illegal emigration of Czechoslovakian Jews was under way to the American zone in Germany.

POLAND

Jews have lived in Poland for more than a thousand years, and Jewish historians have justifiably called the Jewish community of Poland the heart of Jewry.

Since the end of the war some 300,000 Jews passed through that country and today there are only between 60,000 and 80,000 living there. At the beginning of 1948 it looked as though Jewish life in Poland was being stabilized. A few months later, however, everything turned in the direction of Communist totalitarianism. The leadership of the Jewish community in Poland has been in the hands of the so-called Central Committee of Polish Jews. There was a time when all Jewish groups and parties took an active part in this committee, and each had an equal number of representatives. Subsequently a change took place, and the Communists took over control, its members not having been elected but appointed by those who control Poland today.

In the few years after the war the Jews of Poland displayed valiant efforts and inimitable creativeness. Schools, vocational classes, children's homes, camps, sports organizations, newspapers functioned with considerable success. Jewish books were published and several theaters came into existence. Choral and dramatic groups and Jewish radio programs gave regular performances. As in the other countries, the Jewish Communists for a while were sympathetic to Israel. In the latter part of 1948 a statement on the Jewish question was published by the Communist Party of Poland in which the Jewish Communists were castigated for "considering the petty bourgeois utopian Jewish pioneers in Palestine as one of the factors which led to the birth of Israel. This has resulted in the underestimation of the role of the deciding factor in the birth of Israel, namely, the people's democracies headed by the Soviet Union."

The Jewish Agency for Palestine which organized emigration to Israel was then closed. Unable to win the support of the Jewish community, the Jewish Communists launched a campaign to liquidate the independent institutions and organizations and to terrorize all Jewish parties. They captured the cooperative movement, liquidated the schools, and turned them over to the government.

All non-Communist Jewish parties were smashed. The Jewish Labor Party known as the Bund was forced to purge its ranks and then adopt a resolution denouncing its past as a long chain of errors. At the end of 1948 at a meeting of Jewish Communist leaders a resolution was adopted confessing to a right nationalistic deviation for not being aware that the Jewish community is full of class enemies and for identifying the national liberation struggle of the people in Israel with the ideology of the Zionist movement.

They outlined their tasks for the future as follows: Struggle against the capitalistic elements among the Jews, fight against nationalistic ideologies, get the Jews closer to the Polish working masses, and struggle against nationalistic separatism.

A thorough purge is going on in all phases of Jewish life in Poland. Through various means, politically conscious people are being forced to liquidate their past and confess to errors which they never committed. Those who are able, flee the country.

The conditions of Jews residing behind the iron-curtain countries are fundamentally the same, though they may differ in some detail. On the one side we observed a spirited attempt of the Jews in the various countries to rebuild their culture and their institutions in the lands of their birth, and on the other side the success of the Communist regimes in destroying all independent thinking, and smashing Jewish life including their instruments of self-government and their very souls.

We have gathered this material so that the public may know the whole truth about the Jews residing in the eastern "paradise." What can be done for these unfortunate suffering Jews? The answer does not lie in our hands. The key to the problem lies in the world-wide struggle for freedom, democracy, and the dignity and honor of man everywhere.

National Pension System

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement which I delivered to the House Ways and Means Committee Tuesday, March 15, 1949, in support of H. R. 486, which would establish a national pension system to benefit retired citizens 60 years of age and over:

Mr. Chairman and members of the House Ways and Means Committee, security in old age is a necessity for all.

Unlike much legislation, which seeks to benefit a particular group, old-age pensions apply to that period in each life which more and more of our people will reach. It will even help to eliminate worry from the lives of those who through unforeseen accident or sickness may never attain the age of retirement.

I represent an industrial district where a majority of the people depend for their livelihood on the mills and factories which are subject to periodic lay-offs. Their ability to earn a living and at the same time provide for old age is beyond their individual control. They are at the mercy of economic factors which have outrun the doctrine of self-reliance. This is the realistic challenge that we must face and solve as a public responsibility.

The people expect this Congress to extend the coverage and increase the benefits of the

present Social Security Act. In my opinion this is just and inevitable.

But what of the millions of senior citizens who have not been employed and have not been insured? They cannot wait for the evolution of a program. Their problem is acute. It is here and now. Some are receiving old-age assistance which is totally inadequate for their existence needs. Others, through understandable and decent human pride, will not expose themselves to pauperizing routines now required of them and so suffer in silence.

They cannot wait much longer.

What are we going to do for them?

A national pension is the only answer.

In time of war we have accomplished the seemingly impossible because we had to. There was no other choice, if we were to survive.

The same issue of survival is before us. Communism is relentlessly attacking us with the charge that capitalism and Christianity are doomed because they failed to provide for the general welfare. We can answer in part by showing the 5,000,000 automobiles we produce in 1 year, or by adding up the number of our churches, or by pointing out notable examples of Christian character and conduct.

But, we cannot answer it by our neglect of the aged.

Only by facing the problem and solving it with a minimum of red tape can we prove by action that democracy works far better than any other system in the world.

If we were a poor nation, we could hide behind such an excuse. But, with all the material help we are pouring out with a lavish hand to help other nations, we cannot deny the claims of those who helped to make that possible; we cannot deny them some security in their declining years; and by them I mean the men and women who gave the best years of their lives to the building of our Nation.

We cannot rely on external, military strength alone for our security. It is but a shell if it is not supported by internal security built on the high morale of our own people. And morale will never come from pretty but evasive words. It requires performance.

Behind the bright and impressive window dressing of our main streets are the homes of America. On them we depend for our true security. Without the confidence that comes from a certain measure of independence, that strength is weakened. In the vast and complex industrial society of today, we must provide basic security for old age. Otherwise we offer a discouraging example of neglect to the young who will also be old some day. It would hardly offer inspiration to them.

The stark insufficiency of our so-called security program is cruelly revealed by the fact that a growing number of old-age insurance beneficiaries must also apply for old-age assistance in order to eke out a bare existence.

The increase in the number of aged recipients during the past year was due to the fact that those covered by contributory insurance had to seek extra help in the form of old-age assistance because the original program had not grown up to its responsibilities.

Why call it insurance when it falls so far short of that goal? To be honest about it and in the light of reality we should call it for what it is: one-half security or one-quarter security.

An assistance payment theoretically may be increased to meet higher living costs, but an insurance benefit once determined usually remains at the same amount for the period of benefit eligibility. After the upward revision in assistance standards that took place in most States when more Federal funds became available following the 1946 amendments, some additional persons receiving inadequate insurance benefits became eligible also for assistance.

Eligible? This implies that a person is qualifying for something higher and better. But in this case it goes into reverse. The beneficiary has been led to believe that as a result of special taxes collected from himself and his employer during the working years of his life he has earned a minimum of security. But when he comes to cash his Government check, he finds that the floor of security has collapsed, plunging him into the cellar. And then he must call upon the helping hand of old-age assistance to bring him up to the level that wasn't so secure after all.

In the process of getting this extra emergency assistance every last vestige of his pride is crushed. Social workers probe into every private detail of his life. His children, with homes and family responsibilities of their own, are hounded. The applicant in many cases must transfer title or control of his small cottage to the State or locality before he can become eligible for assistance. He must prove his residence, and in those instances where he has changed residence from one State to another in recent years he becomes the victim of buck passing as between the States.

That State which is finally responsible then proceeds to fit him into an Oliver Twist budget.

All this is very strange and contradictory in a nation where Government deliberately destroys or withholds food to maintain an artificial price level for the farmers.

"We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare." These are the opening words of that solemn dedication called the Constitution of the United States.

I am certain that the phrase "promote the general welfare" was inserted after sincere and careful deliberation. It did not contemplate the division of our people into haves and have-nots or that condescending charity which derives self-satisfaction from the crumbs it provides for those who are regarded, if not overtly classified, as paupers.

The modern term "social security" is but a protective device to silence our conscience if it fails to provide a decent and livable income for all who have reached the natural age of retirement.

As a nation, we woke up late to this need, and it required an economic disaster that brought us perilously close to outright revolution before we learned that the people must have a basic security to give meaning to their freedoms. They must have freedom from fear, and freedom from want, before they can develop the values of those positive and constructive freedoms which lead to progress.

There is a definite world-wide trend toward bigger social security programs, with higher benefits and higher taxes, but in the United States we lack many features which are offered elsewhere.

Even such democratic nations as Great Britain, Belgium, France, the Netherlands, Sweden, Switzerland, Uruguay, Australia, New Zealand, and Canada, have elaborate systems for providing individual security.

In Great Britain pensions start at 65 for men, 60 for women, also for invalids, widows, and orphans. There are cash sickness benefits and free medical and dental care. There are cash allowances for children, unemployment pay and provision for burial expenses.

In France there are pensions for workers at 60, also for invalids, widows, and orphans; cash sickness benefits, maternity and medical care; cash allowance for children; bonuses for children.

The United States zone of Germany has pensions for workers at 65, also for invalids, widows and orphans; cash sickness benefits and medical care; unemployment compensation.

Argentina gives pensions for men at 55, for women at 50, and for invalids and widows. The Government defrays the expenses of maternity care and is responsible for disability compensation.

In the United States, we are lagging behind, for we have scarcely pioneered into the realm of fringe benefits. Our main preoccupation is with the central problem of old-age security. In too many cases, we only provide token payments. We have made a beginning, but much remains to be done before the system has body, and living tissue, and function.

Always there is the danger that such a program may become so overweighted with hair-splitting details that the administration of it defeats the primary purpose of getting necessary income into the hands of the aged while they can still enjoy it.

I recommend H. R. 486 for your approval because it provides a simple and direct method of putting a just pension system into operation, implemented by a tax based on the ability to pay.

My bill is: "To establish a self-sustaining national pension system that will benefit retired citizens 60 years of age and over; to stabilize the economic structure of the Nation; and to induce a more equitable distribution of wealth through monetary circulation. This act shall be known as the National Pension Act. There is hereby levied a tax of 2 percent upon the gross dollar value of all business transactions consummated for profit within the United States. Wages, salaries, or commissions shall be considered transactions. In no case shall the pension be less than $75 per month or more than $100 per month. In case the total tax returns for any month are not sufficient to pay the minimum pension of $75 per month to each pensioner, the difference will be adjusted from the Treasury. Should the total amount received from the tax levy in any month under this act be more than $100 per month multiplied by the number of pensioners, plus the cost of administration, the surplus shall be paid into the general funds of the Treasury."

This, in brief, is the bill I advocate.

It is an over-all, direct-action solution to the problem. It will tie up the loose ends of our present system and provide complete coverage for the aged, with benefits in line with our higher-priced economy.

It will bring the United States up to date in a field where we have been deficient.

It will build unity, strength, and balance in our Nation, refuting those who point to our national neglect of the aged and will secure that steady progress which genuinely "promotes the general welfare."

Nebraska, North Dakota, and Oklahoma Experience Rapid Decline in Cow Population

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following information is taken from the testimony of Mr. M. H. Brightman, executive secretary of the Dairy Industry Committee, before the House Committee on Agriculture on imitation-butter legislation:

Cow population declines 2,731,000 from 1945—decline most serious in butter-producing States

STATES WITH AT LEAST 400,000 COW POPULATION UTILIZING LESS THAN 10 PERCENT OF MILK PRODUCTION IN BUTTER PRODUCTION

	Percent of milk into butter	Percent decline in cow population (since 1945)
New York	0.9	3.0
New Jersey		
Pennsylvania	1.8	1.0
Wisconsin	1.8	4.0
California	1.1	3.0
Ohio	9.0	5.9
Georgia	2.0	2.3
Alabama	1.4	7.6
Mississippi	3.5	12.4
Tennessee	5.8	5.9

BUTTER-PRODUCING STATES WITH MORE THAN 400,000 COW POPULATION

North Dakota	72.6	28.4
South Dakota	68.2	25.3
Iowa	65.3	16.9
Nebraska	58.5	24.7
Kansas	41.7	22.9
Minnesota	39.5	14.3
Colorado	33.1	14.3
Oklahoma	32.3	22.8
Missouri	18.8	12.6
Arkansas	15.1	17.0

These figures are especially interesting, as Mr. Brightman was formerly with the Dairy Division of the United States Department of Agriculture. You will note that the greatest reduction in dairy cattle numbers has been in the States where a large percentage of the milk is made into butter. If States like Nebraska, North Dakota, and Oklahoma have already seen their herds reduced by 24.7 percent, 28.4 percent, and 22.8 percent, respectively, during the past 3 years, just exactly what will the reaction be if Congress fails to pass a bill like the Andresen-Granger bill that will at least allow the States to decide by themselves how rapidly they wish to be put out of the dairy business?

Andrew Jackson

EXTENSION OF REMARKS
OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. PRIEST. Mr. Speaker, today is the one hundred and eighty-second anniversary of a very great man and a great Democrat. In observing the anniversary of the birth of Andrew Jackson, a ceremony was held at the equestrian statue of Jackson in Lafayette Park.

A wreath made of magnolia leaves from the Hermitage was placed at the statue by Mrs. Clifford Davis.

My colleague, the gentleman from Tennessee [Mr. EVINS] delivered an address and under leave to extend my remarks, I include here the text of that address:

Ladies and gentlemen, we have just witnessed a beautiful tribute to the memory of Andrew Jackson in the placing of this wreath of flowers at the base of the Jackson Monument and memorial here in beautiful Lafayette Park.

The members of the Ladies Hermitage Association who sponsor this annual ceremony are indeed to be congratulated for their good work in preserving the observance of the birthday of Gen. Andrew Jackson, of Tennessee. This strong and striking victory monument, placed as it is, here in front of the White House in the Capital of the Nation, is a fitting symbol and tribute to his memory.

I am very grateful for the privilege of speaking to you on this occasion here in the shadow of this imposing statue and in full view of the White House, where this illustrious Tennesseean and American dwelt during his dynamic tenure as the seventh President of the United States.

As a Nation that is still growing in its democratic establishment, we are proud to point to many men in our history and say: "There was a great man." But I doubt if the name of any one man whom this Nation hails as great is mentioned more often or revered more ardently than the name of this man whom Tennessee gave to the country, the world, and the democratic ideal.

It has been truly said that Thomas Jefferson gave the people the machinery of democracy, but that Jackson made it work; that Jefferson gave us the democratic philosophy—but that Jackson through his courage and with his sword made our ideal a reality. For service to the average man, Andrew Jackson stood ever alert and awake and in defense of democracy his sword was ever unsheathed. The people loved him because he loved them first. Into their timid spirit he breathed the militant fire of freedom, liberty, and dignity.

When Andrew Jackson soared like a blazing comet into our national life, he found politics to be an exclusive thing. He made it democratic. His pledge to the people he loved was that he would "never consent to any act or thing whatever that shall have a tendency to lessen the rights of the people."

In the critical first years of this nation's struggle to prove our glorious experiment in democracy, there was going on a bitter internal struggle—when the pressures of plutocracy came perilously near to overwhelming the uncertain and unskilled defenses of democracy. To Andrew Jackson, one of the most dynamic, most powerful voices of democracy that the world has ever known, goes the credit for strengthening once and for all the weakened bastion of the democratic state and ending the insidious encroachments of counter philosophy. He gave the government to the people for the first time. Prior to Jackson's day we had a republic. Since then we have had a democracy.

But let us review briefly once again in high tribute the life of Andrew Jackson. Its drama will enthrall as long as we revere the deeds of brave men.

Andrew Jackson was born of penniless Irish immigrant parentage on March 15, 1767, 182 years ago today, coming into a new world aflame with the zeal of liberty. His father was poverty-ridden, but of strong stock. He died shortly before the birth of his son, Andrew. No doubt this man had his dream of the new world and its limitless opportunity for any man of strong arm and heart. This dream reached fulfillment in his son.

We may be thankful that Andrew Jackson knew the devotion and inspiration for 14 years of an exceptional mother. We may believe that her courage and guidance fortified this husky lad when he was left without parent or penny in the unformed civilization of the frontier wilderness. Certainly, we can attribute to her a grace and gentleness which ever afterward was reflected in her renowned son's gallantry, his devoted part as husband, characteristics which gave him, despite his rough background and despite his unquenchable thirst for bold action, history's attribute as "the finest gentleman of the age."

At the age of 21, this tall, rugged youth took the covered wagon trail and pressed farther west and finally settled in the village of Nashville, Tenn. There, through his resolute courage and iron will, his integrity and common sense, he had in 10 years' time attained every office he asked of the people.

But prior to this new life, Jackson had received his emersion in blood in frontier feuds and with British mercenaries. From the age of 13 when he first shouldered a musket for the defense of his meager homestead, Andrew Jackson was first and foremost a soldier, the protector of defenseless people.

He was the first elected representative claimed by the State of Tennessee. Andrew Jackson successively served as senator, judge and once again as senator. From this latter high position he resigned as soon as he felt he had finished the work for which he was elected. It has been said that Andrew Jackson resigned more offices than were ever held by any other citizen of the Republic. The people whom he revered with an almost holy adoration gave him everything he asked of them.

As a major general of Tennessee Militia, from 1800 to 1814, Jackson made two contributions to our struggling country which have yet to be paralleled by another individual.

In the first instance, Jackson covered himself with imperishable glory and renown as commander of the Tennessee Militia and volunteers in the Creek Wars in the early part of the century. This triumph came at the moment when the British—still unreconciled to relinquishing what had been their richest colonial possession—were hammering with great effectiveness at the Atlantic port cities and, eventually, the Capital of Washington.

Without question, this war against the Creeks was one of the most important and bloodiest wars ever waged against the Indians on the continent. General Jackson's subjugation of the Creeks, who were given assistance and encouragement by the British and Spanish in Florida, made possible the western progress of the Nation.

What a shining achievement for this frontiersman whose only tutoring in the military art and science was actual and bloody combat.

And here, as a proud son of a great and glorious State, I must say that it was to the eternal credit of the State of Tennessee that she agreed to stand as sponsor and guarantor for the payment of this large force which made this stand for the growing Nation. It was in great measure Andrew Jackson's own persuasiveness that made this decision possible.

The second instance of Jackson's unmatched military achievement was at New Orleans. Pledged to revenge and to the recovery of its lost territory, the British in the War of 1812 dispatched for a determined stand at New Orleans some 12,000 of its finest regulars, veteran troops of Wellington, together with 1,000 cannon under Sir Edward Pakenham, who was second in military distinction only to Wellington himself. In addition, nearly 1,000 sailors in the finest congregation of vessels of the British Fleet were collected there.

Into such a scene came the courageous Jackson of Tennessee, with some 800 Regulars and other troops of those indomitable Tennessee volunteers—about 6,000 in all. They were ill-equipped and a heterogeneous lot of soldiers—with principles. They were not mercenaries but were as great a group of patriots as ever went to battle.

The rest is history—proud history. But we may say here, as it has been said many times before and will ever be repeated after us, that Jackson's magnificent and unbelievable triumph at the Battle of New Or-

leans ranks as one of the most glorious victories in the history of this country. The whole Nation rejoiced. To every man, woman, and child this rugged son of the frontier was an ennobled hero. Up to the time of the Battle of New Orleans, history tells us, the War of 1812 was a great humiliation and disappointment to the American people. Even our Capitol and the White House that stands before us in majestic beauty had felt the torch of the invader. By this victory, Jackson not only ended the menace offered by the British invasions but restored to our Republic its pride and dissipated its humiliation. His victory made possible our further growth and progress.

It would seem that the call of Andrew Jackson to the Presidency was inevitable. Yet the fact that he achieved this high position was further tribute to the qualities that he possessed and which make him a man almost unique in history for the continuity of victory. Jackson had many political enemies. This was inevitable in the light of his personal fire and the ardor of his philosophy of the dignity of the common man as opposed to the prevailing philosophy of the fitness of only the highborn and affluent to govern the people.

Not the least of these bitter enemies were those titans of the Halls of Congress—Clay, Calhoun, and Webster. They hated this so-called untutored ruffian of the frontier.

One of our historians has declared that Jackson's greatest achievements were not of military nature, but, indeed, of political nature. In the dramatic days of Jackson's Presidency, Henry Clay, John C. Calhoun, and Daniel Webster were mortal enemies, each of the other. Their animosity reached such state that the legislative process was virtually paralyzed into a battlefield for their personal feuds. But so strong was their individual and collective hatred of Jackson and his philosophy of absolute freedom for the individual that they buried the hatchet in their personal feuds and united in a brotherhood of opposition against Jackson. When the storm of legislative battle cleared, Jackson stood again triumphant, and his bitter political enemies had been put to shame, routed, and annihilated. His victories on the political battlefield were victories for his common people.

We may cite as still another of his victories the victory over the powerful and arrogant forces of the United States Bank, which was fast turning this young Nation into a plutocracy, with rule being the privilege of the mighty financiers. Jackson dared open combat with these powerful forces. He challenged them at every turn, declaring, "That is too much power for any one man or any one set of men to have in this country. I will take it from them." And he did.

In that smashing triumph—against the economic oppression exercised by the powerful United States Bank—the hold of the moneyed forces was broken and the financial freedom of the people was restored. Jackson was not, however, an enemy of business. He was only the outraged champion of the little people against the oppressions of wealth, monopoly, and vested interests. He discriminated between business and brigandage. He was so much the friend of business, we may say, that he fought to free it and to preserve it for the people of every walk of life.

Jackson also proved his abilities as a diplomat when most needed. At a critical stage—just short of war—in the trade and treaty controversy between this country and France, England offered to mediate. Jackson accepted the offer, with the Jacksonian proviso: that the decision must go our way. In the end of this ticklish situation, America, through President Jackson, scored a diplomatic triumph which earned for our struggling Nation the respect of the rest of the world.

In the field of diplomacy and statesmanship on the domestic front, Jackson also showed himself to be astute in the trying period approaching a domestic crisis. South Carolina, in those early days, threatened secession from the Union. Jackson thereupon addressed a communication to the people of the State of South Carolina—and although it is not known and has ever been the subject of controversy as to whether he was born in North Carolina or in South Carolina—he appealed to them in this communication not to secede. He said: "Gentlemen of my native State, I appeal to you. This Federal Union, it must be preserved." This appeal has become one of his greatest State papers. In a critical hour he stood for the preservation of the Union.

Although Jackson gained eminence and fame from the State of Tennessee—and he deeply loved Tennessee—yet he believed in the strength of the Federal Union and his entire career was one of making the Union great and strong.

Yes, withal, Jackson was a man of many parts.

He did not have the literary versatility of a Jefferson, nor of a John Quincy Adams, nor of a Woodrow Wilson. What he did have was hard, common sense; an almost unequaled natural ability; physical and moral courage that is perhaps unsurpassed in our history; and a will that was completely invincible. His will was nearer law in the United States for 20 years, we are told, than that of any other man for the span of even a year. He was most responsible for and influential in the selection of his two successors in the White House. He was the only man in history to rival Washington in the affection and adoration of the people.

Jackson was the most moral and continent of men, the tenderest of husbands, and the most loving of fathers to his adopted children. His devotion to his wife is, indeed, one of the great romances of the age; his chivalry was unexcelled, and he was ever the hero of good women and a gallant gentleman.

Jackson was the greatest Democrat of his day or any generation. He was truly America's first great man of the people and champion of democracy in its most inclusive meaning.

May we not remind ourselves now and always that he was the organizer of democracy; that he found the masses helpless and futile in the midst of their tools and taught them how to use these tools for self-government; that he mobilized the scattered forces of ordinary people, vitalized them with his energy, fired them with his faith, and stretched the sinews of democracy into every hamlet and village in the country. He organized the people everywhere in his broad country into political effectiveness and stirred their faith and belief in liberty and democracy as a lving, breathing thing.

We have heard that many visitors viewing Jackson's magnificent home, The Hermitage, at Nashville—which the excellent ladies of the Hermitage Association have so beautifully preserved for posterity—express amazement at finding that Jackson lived in a mansion rather than in a log cabin or some such humble home. They seem to have missed the point. Although Jackson represented the frontier and the common man, he was also the symbol of the heights to which any man of such humble origin can rise in this magnificent country of ours. He is truly the symbol of the victory of the common man in our democracy.

Yes, when Andrew Jackson vitalized and dynamitized American democracy he rendered a greater service to the Nation than he did through any of his splendid triumphs on the field of battle, great as were these achievements.

It is thus fitting that we should pay tribute to him—to his imperishable name, for his deeds and services to our Nation and to democracy everywhere.

An eminent historian has said of Jackson that he was the lover of liberty, and gave his blood to it; that he was a crusader of democracy, and gave his life for it; and that freedom and liberty in America will never die so long as the people treasure the memory of his battles and follow the shimmer of Andrew Jackson's sword in the defense of democracy.

Let us on this new anniversary of his birth resolve that the shining light of freedom and liberty shall be preserved—that this torch may shatter any oppression that may darken our beloved homeland—our democratic America.

A Tree Grows in Italy

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph G. Harrison, Mediterranean news chief of the Christian Science Monitor:

THIS WORLD—A TREE GROWS IN ITALY

(By Joseph G. Harrison)

ROME.—If the tree of sympathy and understanding for the west fails to root itself firmly in the Italian soil, it will not be the fault of James Clement Dunn. For few persons have worked harder to prepare that soil and water that tree than the United States Ambassador to Italy.

So unobtrusively that his efforts sometimes go unnoticed by the professional journalists here, Ambassador Dunn has spent 15 hours a day for the last 2 years in patiently encouraging Italy's economic efforts, in explaining United States motives for the Marshall plan, and in countering the propaganda spread at Moscow's behest about these American motives.

It has been a long, hard job; much remains to be done, but much also has been accomplished.

There is only one way in which the Ambassador could do the job he has given himself, and that is by leaving Rome, going into every nook and cranny of the country, and meeting the Italian worker and peasant face to face.

In the last 2 years Mr. Dunn has delivered no fewer than 50 major speeches outside Rome and a dozen here in the capitol. This is an average of more than two a month, and has meant, at a very rough guess, at least 20,000 miles of travel. When added to the task of running one of the most important American Embassies, this is a major achievement and an indisputable proof of the seriousness with which Mr .Dunn views his work.

VILLAGE-TO-VILLAGE TOURS

Within recent months he has minutely toured two of Italy's wildest, most poverty-stricken provinces—Calabria and Abruzzi. In Abruzzi, for example, he moved from village to village up and down the Sangro and Avezzano valleys, both of which were deliberately devastated by the German scorched-earth policy during the Nazi retreat. In each village he would stop in the tiny square, ask the crowd of villagers which instantly collected how they were getting on, and form his own opinions for reports to Washington.

In order to be able to do these things the Ambassador has had himself tutored regularly in Italian. He is now able to chat with

villagers in a pretty satisfactory manner, and has delivered his last four major speeches in that language.

These speeches and these tours also represent for Mr. Dunn a triumph over what, it would seem, are his personal inclinations. The Ambassador, for all his success as a diplomat, strikes some observers as lacking warmth and cordiality. He is very correct, very reserved, and quite unbending. It is rare when men with such characteristics really enjoy either hobnobbing with villagers or touring the countryside making speeches, which, after all, are bound to be rather repetitious. Such men generally prefer the more intimate type of work in chancelleries and around conference tables.

But any glance at the Ambassador's diplomatic career would quickly convince one that, regardless of possible personal preferences, if his job called for touring and speechmaking, he would do it unhesitatingly and well, for Mr. Dunn has the very great distinction of having started his diplomatic career as a clerk and having moved through some of the most important positions within the Department of State to his present rank.

Persons at the United States Embassy here with whom I have discussed Mr. Dunn's career can think of no other single example of a man who has risen from clerk to ambassador, and this achievement gives some clue to Mr. Dunn's ability, determination, and diplomatic savoir-faire. It is all the more remarkable when it is noted that in Mr. Dunn's official biography, as compiled at the Embassy, there is no mention of a college degree.

The Ambassador advanced through hard work and solid accomplishment—the same attributes which he is contributing to Italy's reconstruction today.

COUNTERS SOVIET PROPAGANDA

An example of the type of speech which Mr. Dunn is often called upon to make in Italy is that which he gave last year in the city of Bari when welcoming the three hundredth American relief ship to reach an Italian port. After cataloging the coal, wheat, and medical supplies abroad, Mr. Dunn said to his audience:

"A great effort is being made to delude Italians into believing that shipments of grain to meet the bread ration and coal to provide employment represent 'American imperialism.' * * * The American Government has asked nothing of the Italian people or their government in return except that Italians give their best efforts to achieve economic recovery."

Those are not words likely to inspire an audience with great emotion. But they are true, they must be said, and Mr. Dunn's patient reiteration of them has, without doubt, done much to convince important segments of the Italian people that American aid aims only at helping Italy help itself.

Mr. Dunn's ambassadorship to Italy may end his diplomatic career as he is nearing the retirement age. If he does, he can step out of Government service with the satisfaction of having done his best for America here.

Flood Control at Hamburg, Iowa

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. JENSEN. Mr. Speaker, here is a sincere thank-you message quite out of the ordinary. It comes from the hearts of a grateful people who asked their Government to help only after years of floods which they were unable to control:

MARCH 9, 1949.

Hon. BEN F. JENSEN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: This is to thank you personally, Congress, General Pick, and the Army Engineer Corps for the dike along the west bank of the Nishnabotna River which dike protects Hamburg. We have just escaped the greatest flood in the history of the Nishnabotna River by virtue of this dike.

We are all very, very grateful to all of you, and phrases of gratitude have been many and sincere from everyone whose home and belongings were safe from the floodwaters. For once Hamburg was dry.

Best regards to you, and please see that all of the people responsible know how we feel.

F. C. WEATHERHEAD,
Mayor of Hamburg.
MELVIN KEY,
President, Chamber of Commerce.
INTERSTATE NURSERIES.
KIWANIS CLUB.
VFW.
EDWIN A. GETSCHER.

Mr. Speaker, I wish to add my personal thanks to every Member of the Eightieth Congress, Gen. Louis A. Pick, and the Army engineers, not forgetting the American taxpayers, who furnished the needed funds to help the folks of Hamburg, Iowa, and vicinity, whom I have the honor to represent in Congress.

Knowing them as I do, I am sure they would want me to personally thank each and everyone who had a part in making it possible for them to receive this much-needed and deserved help from their Uncle Sam.

Radio Commentator Earl Godwin Commends Congressman Pat Sutton, of Tennessee, and Housing Bill Which He Sponsors

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a portion of a radio script by Mr. Earl Godwin, popular Washington radio commentator, concerning the housing bill sponsored by my colleague, Hon. PAT SUTTON, of Tennessee.

The radio script is as follows:

Good evening, folks: Up to Washington and into Congress this time came a young veteran, 33 years of age, named PAT SUTTON.

He must have been what we call a fightin' fool, because he has several high citations for combat and heroic action in both the Navy and the Army for World War II; wounded twice.

He comes from the Seventh District of Tennessee. He is an individualistic sort of Democrat who seems to have his mind on his people, for he has introduced into this Congress a bill which seems to pierce the bureaucratic fog surrounding the housing shortage. SUTTON'S bill appeals to the individual.

He simply wants to make it easy and more practical for an individual to finance a single home.

He has dropped into the basket in the House of Representatives a proposed amendment to the vast and extensive administration housing bill an amendment which for the first time appears to take into consideration the young couple who want to build their own home.

Most of the bills and plans are for millions of housing units, which means great cities of a thousand apartments each, financed by some vast corporation, O. K.'d by another vast housing bureaucracy at Washington, managed by some cold-blooded statistical experts—everything present but the home spirit.

Many of the low-income public housing projects have been badly built, super-expensively built, and are peopled by middle-class and high-income folks rather than low-income people, and it has been proved from time to time that in some of these projects the tenants were hand-picked families from the right voting list.

Again, there is a ground swell in Congress and among those who plan large public housing projects to put the Government behind a long-range financing plan that will stretch over 60 years, permit tenants to rent or sometimes even to buy homes at $50 or less a month.

The way some of these dreams are to be financed, the prospective purchaser would be paying interest for a lifetime and at the end of the 60 years these housing units would probably have caved in. They are not built as houses were in the days of our grandfathers.

I live in a section of Virginia where there are still forests to be cleared off when a couple want to build a house. Down the road a piece there is a young man and his wife who have bought an acre out of what, tradition says, was once a part of the George Washington ownership. Well, for that matter, so was mine, but I have found no cherry trees.

The point of my illustration is that this young couple bought the land and cleared it off with ax, bush-ax, horsepower, main strength, and awkwardness.

When they got to the point where they could build on the cleared space, they had character enough to borrow enough to get them going. And after that they shopped around, visited the local sawmills, lumber yards, hardware stores, and put their house together themselves as far as possible. That meant also drilling a well and installing a water system within the house.

This is the way to build a home and love it and appreciate it. Thousands of young folks can still do that—millions of others can't, I know, but wherever it is possible, the building of such a home is one more addition to the strength of the fundamental fabric of America.

It is difficult and perhaps impossible for young people to start building a home or buying a home under the current tight financial and loan restrictions. And yet there should come the day when any young man of character in the community can impress his banker enough to get the first cash to start a home.

I say, "any young man of character."

In the soft and easy years into which we have drifted through our short-sighted politics, millions of young Americans have been brought up to do without the sort of character that will entitle them to take somebody else's cash and use it properly.

The fact that we are arriving at a sort of automatic state that looks like security may be wonderful to talk about; but I'll bet you that one of these days something will happen to America and to the world which will

send us back painfully and with poverty in our pockets, hearts, and souls, back to the days when we learned the only advance was by thrift, common sense, and through the plain little lessons which came with the log-cabin era.

A lot of this is divine wisdom. In my book, divine wisdom is not necessarily the trappings of high church or low church or Sunday-go-to-meetin' attitudes. It is also plain common sense by which the world was created and the world of men developed.

When we employ high-falutin' methods to make the folks think we are on a merry-go-round that will never stop, let us remember that common sense is divine wisdom, and recall the words, "God is not mocked."

And that brings me back again to Representative PAT SUTTON and his bill to help the couples who are just starting out to build their own homes.

It is not labeled with that homely phrase; but is a proposed amendment to the vast housing program. It makes it possible and legal for the Government's financial strength to be put back of the financing necessary for a young man to build a house. It does not pamper him. It does not hand him anything for nothing. He has to go get the first few hundred dollars. But it certainly is a sweet little home-like bill in a desert of tremendously bureaucratic plans that would add to the people's regimentation and their dependence on Government.

A Gentleman From North Carolina Opposes the Ruination of the Dairy Industry

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, one of the outstanding witnesses before the House Agricultural Committee during the hearings on the Andresen, Granger, and Poage bills was Mr. George S. Coble, of Lexington, N. C.

He is one of the men who realize that the whole dairy industry is in jeopardy. These men also realize that if imitation butter is made legislatively equal to butter, filled milk, ersatz cheese, and other ersatz dairy products will follow.

If imitation butter, with 80 percent oil and 15-percent skim milk is equal to a 100-percent dairy product, then who can say that filled milk with 3½ percent oil and 96½ percent skim milk is not nutritionally equal to natural milk?

Please note in Mr. Coble's testimony that he states that dairy products income in North Carolina represents 24 times the income from cottonseed oil—used in oleo—in that State.

The testimony follows:

My name is George S. Coble. I am president of the Coble Dairy Products, Inc., with the main office at Lexington, N. C. I operate 7 dairy processing or manufacturing plants, 11 dairy products distributing branches, and 21 milk-receiving plants in the States of Florida, Georgia, South Carolina, Virginia, West Virginia, Pennsylvania, and North Carolina. These dairy-product plants employ about 1,200 persons and process the daily milk supply of about 10,000 dairy farmers. Moreover, I am an actual farmer with 2,100 acres and am presently milking about 250 purebred Guernsey cows. The total purebred animals on my farm number approximately 600 head.

I am a member of the board of directors of the International Association of Ice Cream Manufacturers, a member of the Milk Industry Foundation, the American Dry Milk Institute, and the American Butter Institute. I am president of the North Carolina Dairy Foundation and recent past president of the North Carolina Dairy Products Association.

I am appearing before this committee under joint sponsorship of the North Carolina Milk Producers Federation and the North Carolina Dairy Products Association. Of course, I also speak for the best interests and welfare of the 1,200 employees and 10,000 dairy farmers connected with my company.

At the annual meeting of the North Carolina Dairy Products Association in Winston-Salem on January 14, 1949, the following resolution was adopted:

We favor removal of Federal taxes on oleomargarine provided adequate legislation is enacted to ban the manufacture and sale in commerce of oleomargarine colored yellow in imitation or semblance of butter.

The same policy has been adopted by the Milk Producers Federation. Thus, the dairy industry in North Carolina favors passage of H. R. 1703 (ANDRESEN) or H. R. 2023 (GRANGER) or any other bills embodying similar intent.

Agriculture is of the utmost importance to North Carolina's economic well-being. Agricultural activities provide 42 percent of the employment in the State.

In 1947 the sale of dairy products in North Carolina accounted for 4 percent of the farmers' cash income. That is approximately 24 times the income that North Carolina farmers receive from cottonseed oil used in oleomargarine.

Consider further that one dollar out of every twenty-two is a dairy dollar in North Carolina. And bear in mind that five out of eight farmers in the State have an economic stake in dairying. Actually, according to the latest available official figures, there are 46,958 commercial dairy farms in North Carolina. This means that more than 16 percent of the farmers in the State would be seriously affected by any deflation in the marketing or price of dairy products.

Even though the major part of my business concerns the processing and distribution of milk and ice cream and includes the processing of butter, condensed milk, and dry milk, I have a real interest in maintaining a sound butter industry. Milk production varies seasonally in North Carolina as in other parts of the country. In order that my company can furnish consumers an adequate supply of milk on every day of the year at a reasonable price, it is necessary that we provide a market for the surplus milk and cream whenever it occurs. Because a ready market has been established for butter, and due to the fact that butter can be stored for long periods of time, cold economic facts dictate that our surplus be made into butter. Currently, our three churns are operating at top capacity daily converting surplus milk into butter because sales of fluid milk and cream, ice cream, and other dairy products have weakened. At our present rate of churning, I will manufacture between 5,000,000 and 6,000,000 pounds of butter per year. At present values, this butter from my company alone returns to the producer $2,310,000 per year, or a sum far greater than the total value of cottonseed oil used in the manufacture of oleomargarine in the whole State of North Carolina.

The milk producer in North Carolina is also benefited by a sound butter industry. In the first place, the value of fluid milk and all dairy products is based upon the price of butter. Secondly, with butter acting as the balance wheel, any extra milk supply does not glut the market, resulting in unduly low distress prices.

I am sure that the chairman of this committee will agree that North Carolina is the garden spot of the South or even the whole United States. We are blessed with plentiful sunshine and adequate rainfall to insure almost year-round pastures for our dairy cows.

Oleo propagandists have made a particular issue of the fact that some coloring is used in butter. Such practice is not followed in the State of North Carolina because of the green feed and plenty of cottonseed meal available for the cows. About half of the States making butter are in this same category—this butter is uniformly yellow throughout the year due to favorable milk-production conditions. Butter manufacturers in certain northern States add coloring to a minor degree in the winter months when cows are fed dry forage.

I think their use of added coloring is completely fair and honest with no intention to deceive the consumer. It is not colored to imitate any other food. The use of color does not result in making the product appear of greater value than it is since the yellowest butter does not necessarily contain the most vitamin A. Furthermore, the use of color does not enhance its price.

We are proud that dairying is rapidly growing in importance in North Carolina. North Carolina farmers received $745,428,000 for the products they sold in 1946. Of this total, oleomargarine accounted for only $1,244,000—or less than about one-sixth of 1 percent. Dairy farming on the other hand returned $34,000,000 to the North Carolina farmer. Out of $7,155,000 received by North Carolina farmers for the 1945 cottonseed crop, oleomargarine contributed $743,000. But cottonseed meal fed to dairy cows was worth $786,000. We are hopeful that this committee, conscious of the vital role of dairying will do nothing that could in any way deal a setback to dairying which will affect us of the industry in North Carolina no less than those in the North, Middle West, and far West.

Correcting the Record Relative to the Purported Position of Texas A. and M. College on H. R. 3

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. POAGE. Mr. Speaker, some days ago Dr. Charles W. Shepardson, dean of agriculture, from Texas A. and M. College, appeared before the Committee on Agriculture and testified as a witness in behalf of Congressman ANDRESEN, of Minnesota, against H. R. 3, which is a bill to remove all taxes and other discriminations against margarine of any color but which requires it to be positively and plainly identified wherever sold, including identification of each individual serving in public eating places. Dr. Shepardson made it quite plain that he appeared as the special representative of the butter group which has so long opposed free competition with table spreads made of the great vegetable oils of the South and the Middle West.

I do not question Dean Shepardson's right to hold any opinion on this matter, nor do I question his right as an individual to take any position he desires on any matter pending before the Congress. I do, however, definitely question his right to assume to speak for the A. and M. College of Texas without some prior determination that the views expressed are in fact those of the college.

The dean fairly stated that the views he expressed were his own, but he was carefully introduced as dean of the school of agriculture in the agriculture and mechanical college of the home State of the author of H. R. 3. Repeated reference to his connection with the college was made by those committee members who oppose the use of cottonseed products in competition with butter. The truth is that it is simply impossible for the dean to maintain his official position with the college and at the same time to disassociate himself with that position when he speaks on controversial public measures.

Mr. Speaker, I repeat that Charles W. Shepardson has a perfect right to his own views on the restriction of competition in the table-spread market or any other subject, but I seriously doubt that he should come to Washington as the special representative of either side—certainly not unless he could know in advance that he actually speaks the official views of the college.

I had thought to ignore the matter until the gentleman from Colorado inserted Dean Shepardson's statement in the CONGRESSIONAL RECORD and again indicated to the public that the A. and M. College opposed H. R. 3. While I had felt sure that the great agriculture college of my State had not taken any stand against the free use of a product of our State's greatest crop, cotton, I wired Dr. Gibb Gilchrist, the chancelor of the Texas A. and M. College system, as follows:

On page A1271 of the Appendix of CONGRESSIONAL RECORD Hon. WILLIAM S. HILL inserted a statement of the dean of agriculture at Texas A. and M. This article includes the statement "Interests of Texas * * * will be best served by legislation that will prevent the manufacture and sale of colored oleomargarine." I do not object to any conclusion of any individual but this statement was made with intent of leading congressional committee to believe this is official position of Texas A. and M. College. Will you wire me collect if A. and M. has taken any position on this question? Thanks. Regards.

On yesterday Chancelor Gilchrist replied as follows:

Re tel: The college administration has taken no official position on oleomargarine legislation. We prefer as a whole to keep A. and M. College and system free from partisan and controversial issues except when our own operations are vitally concerned. Dean Shepardson's views are his own. It is my opinion from hearing discussion of the oleomargarine matter about the college that his views as expressed to the committee represent only a small minority. The consensus of most seems to be that our industries to insure continuing success must be able to stand on their own without penalizing others. Personal regards.

Mr. Speaker, I submit that the entire purpose of the gentleman from Minnesota and of the butter industry in bringing Dean Shepardson before the committee and of inserting his statement—without the cross examination—in the RECORD was solely to give the impression that the Texas A. and M. College was opposed to my bill H. R. 3. I submit that in view of Chancelor Gilchrist's wire no such inference is justified.

Liberal or Conservative?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

LIBERAL OR CONSERVATIVE?

The terms "conservative," "reactionary," and "Old Guard" are today used rather indiscriminately to describe a class of citizens that through years of vilification has come to be widely regarded as public enemy No. 1. To be a liberal or progressive is to merit divine blessing and the everlasting gratitude of an admiring people.

Let us examine the reason for this. Both conservatives and liberals have as their objective the attainment of the greatest good for the greatest number. It is the method of accomplishing this objective on which they differ. Broadly speaking, a conservative looks to the individual to do the job, whereas the liberal looks to the Government.

The conservative points to the experience of the past as a justification for his position. The liberal ignores history.

The conservative is influenced by our experience with the New Deal, under which the Government has attempted to plan and regiment our economy. He remembers events already forgotten by many, such as the following:

A depression which started in 1929 and should, according to all normal experience, have ended within 2 or 3 years, was stretched to a full 11 years, and it took a war boom to end it. Throughout the history of our country there has been no depression to approach it either in length or severity. According to Dr. Carl Snyder, who for many years was statistician of the Federal Reserve Bank of New York, the cost of this depression to the people of the United States was the staggering sum of $150,000,000,000—an amount equal to the total investment in American industry at the beginning of 1941.

A comparison of the seven pre-New-Deal years, 1926 to 1932, inclusive, with the seven New Deal years, 1933 to 1939, inclusive, discloses that in the later period, in spite of a substantial increase in population, the average annual national income was 13 percent less, the tax rates were much higher, the cost of the Federal Government was 92 percent greater, the number of unemployed workers was 120 percent larger, wages and salaries were 20 percent less, farm income was 15 percent less, new capital issues were 82 percent less, and private construction was 64 percent less.

Between March, 1933, and January, 1941, the Federal debt was more than doubled, over $60,000,000,000 was spent by the Federal Government, in no year was the Federal budget balanced, and when the defense program started in the spring of 1940 we still had 10,000,000 unemployed.

During this period the functions and power of the Federal Government steadily increased at the expense of the States, and bureau after bureau was established in Washington, with a huge increase in the number of persons on the Federal pay roll.

From a study made by Dr. Carl Snyder, it appears that every 10 years from 1790 to 1930 the national income showed an average rate of growth not differing greatly from one decade to the next. The rate of growth was about 4 percent per annum, compounded, so for 140 years the national income doubled approximately every 18 years.

During the 11 years from 1930 to 1940 this astounding growth was arrested for the first time in the Nation's history. In no year during that period did the national income reach even the level of the last part of the preceding decade.

An excellent statement regarding this period was issued by a group of leaders of the American Federation of Labor on February 4, 1940, excerpts from which are attached hereto.

This, say the conservatives, is what government control does.

But, say the liberals, see what has happened since 1940. Since then we have had, they say, the greatest prosperity and the fullest employment in our history. True, I admit, but this has not been due in the slightest degree to the policies of the New Deal. It has been due to the most devastating war in all history, which created an unprecedented scarcity of materials and goods that is only just beginning to be overcome. There have resulted a national debt of $253,000,000,000, and an inflation that has cut the purchasing power of the dollar in two. This, with the unparalleled demand for goods to supply the shortages created by the war, has produced a national income of $217,000,000,000. At the same time, Federal expenditures have risen to unbelievable heights, with an existing national budget of $40,000,000,000, and a budget of $42,000,000,000 proposed for the next fiscal year. Compare these figures, if you will, with our highest peacetime budget prior to the war of $9,000,000,000 in 1940, and the budget of $734,000,000 in 1916, the year before we entered into World War I.

In other words, our present prosperity is false and artificial, and the bubble will inevitably burst, as it has done in every similar instance in the past.

These are some of the reasons why the conservatives think they are right and the liberals wrong.

The conservatives are also influenced by the following facts:

1. To improve the lot of mankind and to give people the things in life they want, the things must first be produced.

2. There are not enough things or wealth to give everybody what he wants and should have.

The liberals seek to improve the lot of mankind by the adoption of schemes to redistribute wealth, although the redistribution of existing wealth would add but little to the wealth of each recipient. The effect of these schemes is to destroy or lessen the necessary incentive to produce wealth, and thereby to defeat the objective. Only through the production of more wealth can the wants of the people be satisfied. In no other way can it be done.

In closing, let me call attention to the most remarkable transposition of terms that I know of in the English language, 700 years ago, the Barons at Runnymede wrung from King John the Magna Carta, regarded as the beginning of individual liberty among the English-speaking people. From that day on, a continuous struggle has been waged to free the individual from the domination of the state and to make the people, not the government, the master. Had anyone prior to 1932 suggested that King John was a liberal, and that the Barons at Runnymede and those who have since carried on the struggle to limit the power of the state were reac-

tionaries or conservatives, he would have been regarded as a fit subject for an insane asylum. And yet suddenly in 195.. we witness the phenomenon of those advocating an increase in the power of government being called liberal and their opponents reactionary or conservative.

No one has so well described this phenomenon as Dr. Henry M. Wriston, president of Brown University, who cannot by any stretch of the imagination be called a liberal as that term is used today. In his book, Challenge to Freedom, Dr. Wriston says:

"The proposals of this book are all radical; none of them looks toward any reactionary policy whatever. We have been living in a world where, by a kind of double talk, the vocabulary of liberalism has been stolen by the real reactionaries. Only in a world where values have become topsy-turvy would it be possible for Hitler to describe tyranny as a new order, or for bureaucracy to masquerade in the habiliments of liberalism, or for the planned economy to make a pretense of economic democracy. Government by bureaucracy, control of business by administrative regulation, manipulation of the economy for political purposes—these are stark reaction. Not all the cascades of beautiful words about new social goals, bold social engineering, security from the cradle to the grave can wash away that ineradicable fact."

ROBERT B. DRESSER.

PROVIDENCE, R. I.

EXCERPTS FROM A STATEMENT BY A GROUP OF LEADERS OF THE AMERICAN FEDERATION OF LABOR ON FEBRUARY 4, 1940

For 7 years a great experiment has been undertaken by the Federal Government upon the industrial and social economy of the United States.

* * * * *

It has been an experiment on the lives of 125,000,000 Americans. It has profoundly affected the conditions and the relations of the worker and the employer. It has affected trade and finance, industry and agriculture, government and business.

* * * * *

Innovation after innovation have followed upon each other so fast and furiously that only a trained few could keep abreast of changes. If, after 7 years, the situations of labor, industry and agriculture had materially improved, if happiness and progress, hope and confidence had resulted, we could conclude that the experiment had been worthwhile.

* * * * *

Instead we find labor torn into warring camps. We find industry depressed and capital on a strike. We find 10,000,000 of America's workers unemployed. We find youth discontented and age discouraged. We find not only widespread material suffering, but in every walk of life we find fear for the great intangibles of America; fear for the liberties that Americans have cherished for more than a century and a half.

* * * * *

Experiments are costly luxuries. For the upkeep of innumerable boards, bureaus and authorities, for the maintenance of persistent relief rolls, and the building of new and imposing Government enterprises, the cost has been met by increased taxes and increased public debt.

* * * * *

One of the great drags upon industry during the past 7 years has been the burden of taxation that has been imposed upon big and little business. There are literally thousands of industrial and commercial concerns which have been forced into red figures by the taxes which have been imposed on flagging business.

* * * * *

Of all the factors upon which the prosperity of industry and labor depend, none is more important than confidence. Confidence in the stability of business and of jobs. Confidence in the permanence of the rules and regulations under which business can operate. Confidence in the Nation's currency. Confidence in the fairness and good will of those who are clothed with official authority over management and labor. The most tragic result of the 7 years of experiment has been the destruction of confidence by incessant tinkering with established forms and procedures.

* * * * *

Tinkering with the hours and wages of labor under the NRA. Tinkering with the cost of labor's food under the AAA. Tinkering with property rights in the confiscation of private gold savings. Tinkering with the foundations of American Government in the attack on the Supreme Court. Scarcely a month has passed without action, or rumors of action, which would alter the plans and the outlook of labor and industry. And overhanging all has been general awareness of a national debt of $40,000,000,000 as a mortgage on the future of America.

* * * * *

With money taxed or borrowed from the people the Federal Government has set up a multitude of public and semipublic corporations, which have gone into the States to weaken the authority and the financial soundness of the States.

* * * * *

In many of these instances the Federal corporations and agencies have gone far beyond the intention of the authority which was granted to them by the Congress. But steadily and surely they have undermined the sharp line between State and Federal authority to increase the concentration of power in Washington.

* * * * *

As labor and industry survey what has happened to labor and industry in those lands where all powers have been concentrated in the central authority, they fear and oppose the steps which thus far have been taken here, to enlarge the dominion of the Federal Government over the lives and fortunes of the American people.

* * * * *

It is not a problem for labor alone, or industry and agriculture alone. It is a problem which must be solved by an awakened citizenship. It is a problem to be discussed at every fireside, to be dealt with by every publicist, to be prayerfully considered by those Americans who this year will be called upon to draft the platforms of both political parties.

* * * * *

The hour has come for Americans to recognize the dangers that confront them, and to join in a united effort to halt the drift toward national insolvency and industrial collapse, and to extend opportunity for the Americans of today and tomorrow.

Northwest Does Not Need Government Subsidy

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. SANBORN. Mr. Speaker, Tom Humphrey, one of the outstanding journalists of the Northwest, wrote an article which was printed in the Washington Post March 13, 1949, on the proposed legislation for the establishment of a Columbia Valley Authority. The article is so well done and points up the differences of the TVA and CVA I commend it for your reading:

TVA-TYPE PROPOSAL FOR NORTHWEST MARSHALS FORMIDABLE ARRAY OF FOES

(By Tom Humphrey)

PORTLAND, OREG., March 12.—The proposed Columbia Valley Authority, modeled after TVA, may look wonderful to Representative HUGH MITCHELL, Democrat, of Washington, and his CVA League. But it doesn't look that way to the Governors of five of the seven CVA States, or to Oregon Congressmen, or Northwest newspapers or to approximately 100 agricultural, industrial, and promotion groups of the Pacific Northwest. On the contrary, they're asking:

"What's TVA got that we haven't got?" And they're prepared to fight it out in the region and in Congress.

The CVA Leaguers have been having a field day since President Truman made his surprise CVA declaration and asked a five-agency committee to put it in legislative form. They're rallying around Representative MITCHELL, who has tried repeatedly to interest Congress in a TVA for the Columbia Basin.

They figure that what's good for the Tennessee Valley would be good for this region. And they're saying that with a CVA this region would get more Federal money, there would be no more floods like those of last year and there would be no power shortage.

Grange masters of Oregon and Washington, who will buy anything with a public power label on it, are whooping it up. Several labor leaders have climbed on the bandwagon, Representatives MITCHELL and JACKSON, of Washington and Senator TAYLOR of Idaho, third party running mate of Henry Wallace, can't wait for Mr. Truman's committee to report. They're for introducing their own CVA bills.

Finally, Bonneville Power Administrator Paul Raver, strong advocate of coordinated development of the Columbia Basin but lukewarm advocate of CVA, went to Washington, talked to his boss, Interior Secretary Krug, former power manager for TVA, then came out wholeheartedly in favor of a regional agency in the nature of a CVA.

BACKS ENGINEERS' PLAN

And right there the opposition came to life. Gov. Douglas McKay, of Oregon, demanded:

"What's the matter with the way we're doing now?

"I cannot agree with any plan for a Columbia Valley Authority under which the States surrender their autonomy and our natural resources pass into complete control of Federal bureaus," he wired President Truman. McKay urged the President to let the Army engineers complete the power, flood-control, and navigation projects outlined in their master plan for the Columbia Basin.

Gov. C. A. Robins, of Idaho, said: "On the basis of past performance, of knowledge, both special and general of the entire area, it is my belief that existing agencies can best develop the Columbia Basin."

Gov. Arthur B. Langlie, of Washington, started a backfire against CVA by sponsoring a senate bill giving his State authority to go into the power business at the wholesale level. He declared it would protect the State against the "overpaternalistic interest of Federal Government."

Gov. Vail Pittman, of Nevada, and Gov. C. A. Crane, of Wyoming, parts of whose States would be in the proposed 279,000-square-mile Columbia Valley Authority area, also oppose it. That makes five out of the seven governors on record against valley authority proposals. Gov. J. Bracken Lee, of Utah, is expected to clarify his position

soon, and Gov. John Bonner, of Montana, ran on a platform of "Montana water for Montana people."

MUNICIPAL OPPOSITION

Heads of three outstanding municipal power agencies of Oregon and Washington also strongly oppose CVA.

E. R. Hoffman, superintendent of Seattle City Light, and C. A. Erdahl, Tacoma commissioner of public utilities and chairman of the Northwest Utilities Conference of public and private power agencies, say that existing agencies can do a satisfactory job in the development of power on the Columbia River and its tributaries, if given a free hand.

"I should be most unhappy to se any major part of this immediate power development program caught in the rip tides of politics," Erdahl said.

J. Frank Ward, superintendent of Tacoma City Light and former Bonneville engineer, added: "Coordinated development is desirable, but not so desirable that the people of the Northwest can afford to lose control of the development of their own area. I feel that will be the inevitable tendency of a large authority unless it is made very responsible to the people of the Northwest."

And R. R. Boals, general superintendent of the Eugene, Oreg., water and power board, said: "I very much object to a Columbia Basin Authority or to any other authority so far proposed."

Oregon Congressmen are almost unanimously opposed to a TVA-type CVA.

Senator GUY CORDON, who as a member of the Senate Appropriations Committee has waged a successful fight for funds for McNary Dam and other Army engineer projects, strongly opposes CVA.

Senator WAYNE MORSE, progressive Republican, says: "I am anything but convinced that we in the Pacific Northwest want any Government agencies in control of our rivers based upon the Tennessee Valley pattern. Our economy is entirely different and our people are strong believers in a maximum of local self-government."

Senator CAIN of Washington is not expected to go along with his authority-minded Democratic colleague, Senator MAGNUSON, when the chips are down. And Senator ECTON of Montana appears to be just as strongly opposed to CVA and a Missouri Valley Authority as Senator MURRAY is for them.

PRESS FIGHTS PLAN

Every major newspaper and more than 85 percent of all newspapers in Oregon, Washington, and Idaho are on record against CVA, strong as they are for development of the Columbia Basin. Every power company president in the region, while favoring McNary Dam and other Federal power projects, is actively antagonistic to CVA, remembering, no doubt, that TVA has elbowed 32 privately owned electric utilities out of the picture in the Tennessee Valley, either in part or in toto. Every major chamber of commerce, including Portland, Seattle, and Spokane, is on record against CVA, recalling that TVA engages in 30 different business enterprises in competition with private enterprise.

And while Oregon and Washington State grange leaders are plugging for CVA, other farm groups are adamant in their opposition, including the Idaho State Grange. The Pacific Northwest Development Association of Portland says there are nearly 100 farm, industry, and promotion organizations on record against a Columbia Valley Authority. Even the tribal council of the Warm Springs Indian Reservation of Oregon is against CVA.

The reasons they give are varied.

The Pacific Northwest is one of the most progressive and prosperous regions in the United States, in marked contrast to Tennessee Valley States. It has the highest per capita income, while TVA States have only 60 percent of the national average despite 15 years of TVA. Oregon, Washington, and Idaho are among the top eight States in rural electrification, while Tennesee is forty-fourth. This region has cheaper power than TVA, the domestic rate in Portland under private-company operation averaging 1.28 cents per kilowatt-hour, while the average under the TVA is 1.58 cents.

Working through the Corps of Engineers and the Bureau of Reclamation, the Pacific Northwest has developed within 10 percent as much power at Bonneville, Grand Coulee, and other Federal projects as TVA has developed at 28 dams—and for less than half the cost. The Army engineers have provided ocean steamer navigation as far up the Columbia as The Dalles, Oreg., 200 miles from the sea. The Bureau of Reclamation is developing at Grand Coulee the largest reclamation project in America—the 1,200,000-acre Columbia Basin project, Washington. And Bonneville and Grand Coulee are repaying every cent they cost, with interest, in 50 years—something TVA isn't doing and cannot do.

GROWTH REQUIRES POWER

The Pacific Northwest is short of power, all right. The fastest-growing region in America, it needs at least 6,000,000 kilowatts more in the next 10 years to keep pace with its needs. But it has 40 percent of the Nation's hydro sites and the Army engineers have just completed comprehensive plans for basin development. If they are approved, it can supply its power needs through Federal, municipal, and private-company projects.

The Pacific Northwest has a flood-control problem, too, but again the Army engineers have plans that will cut flood damage to 10 percent of last year's figure.

On the other hand, TVA has a power shortage, too. Its hydro sites are exhausted. In fact, it stirred up a national controversy by asking Congress for $54,000,000 for steam plants.

The TVA still has floods, too, despite some-$165,000,000 allocated to flood control. In fact, its 28 dams permanently flood more productive land than seasonal floods ever covered. And while the 1948 report of TVA boasts that its flood-control program has averted $13,000,000 worth of damage in the Chattanooga area, the fact remains that the people of Chattanooga appealed to Congress to authorize the Army engineers to provide flood protection TVA hasn't supplied.

Thus, the difference is that most of the people of the Pacific Northwest believe that the Army engineers, the Columbia Basin Inter-Agency Committee and the Bureau of Reclamation have done and can do a better job for this region for approximately $350,-000,000 than TVA has done in the Tennessee Valley—despite the expenditure of almost $1,000,000,000.

Worcester's Museum of Miracles

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. DONOHUE. Mr. Speaker, I desire to bring to the attention of my colleagues an article by Carol Heggen entitled "Worcester's Museum of Miracles," which appeared in a recent issue of the magazine Coronet.

This story graphically unfolds a picture of how an inspired, energetic director of a little-recognized natural-history museum, can, in a comparatively short period, arouse the consciousness of an entire citizenry to the potentialities of the invaluable contribution such a museum may project into the community welfare.

In well-deserved tribute to Mr. Richard C. Potter, director, his loyal staff, his civic-minded corps of voluntary assistants, and for the emulation of other American communities, I am pleased to include this story in the RECORD:

WORCESTER'S MUSEUM OF MIRACLES

(By Carol Heggen)

On a snowy morning last winter, the phone jangled in the office of the Edgeworth Street School in Worcester, Mass.

"This is the Dix Street School," said the caller. "Please tell Miss Wahlstrom not to send her seventh-graders over for manual training. The teacher can't be here today."

"But the boys and girls have already left here," was the reply.

"Well, then, we'll just have to send them back."

Accordingly, Miss Esther Wahlstrom was told that her youngsters would be returning early. But after waiting 45 minutes, her tolerance changed to worried concern. Just then, her chattering young truants filed back into the classroom.

"Dix Street School called," she told them sternly. "We've been expecting you for an hour."

"But Miss Wahlstrom," one youngster explained, "on our way back we stopped off at the Natural History Museum for a little while."

In almost any other city such an excuse would have been suspect. But in Worcester, the idea of school children browsing in a museum of natural history seemed so probable that Miss Wahlstrom murmured smilingly to herself, "Why, of course, I might have known that's where they'd go."

For Worcester's Museum of Natural History is a highly popular and remarkable institution. Not because of unusual exhibits—many other museums have rarer collections. Not because of its scientific achievements—with its tiny budget, the museum has no funds for exhaustive research. Not because of a fine building or large staff—the museum is housed in a shabby old mansion, while its paid personnel consists of a director, plus two full-time and one part-time assistants.

No, the popularity of this museum, with children and adults alike, rests solely on its lively program—a program which cannot be surpassed by any similar institution for originality, vitality, and community influence. To the 199,000 residents of this bustling New England city, the museum plays the role of teacher, friend, host, counselor or answer man with equal aplomb.

The well-attended classes range from nature stories for kindergarteners to lectures on astronomy by Harvard professors. Museum projects include everything from settlement-house work to magazine publishing, from maintaining a gift shop to running a summer camp. Also, the museum sponsors such diverse hobby groups as an herb club, an organization for coin collectors and a bicycling club for teen-agers.

School children and retired teachers, Junior Leaguers and workmen's wives, bankers and mechanics are on the roster of regular visitors. The museum maintains a weather station and gives daily forecasts by means of flags flown from the roof; it produces a weekly radio program for WTAG, the local CBS station. Even puzzled gardeners seeking an antidote for insect pests, and summer vacationists plagued with poison ivy bring their problems to the museum.

Indeed, the institution could well be described as being all things to all men. Its benign, 60-year-old director, Richard C. Pot-

ter, is generally regarded by fellow Worcesterians as a sort of latter-day Thoreau, blessed with the financial wizardry of a Rockefeller—the annual budget of only $10,000 covers salaries, maintenance and expenses—and the administrative talent of an Eisenhower—some 177 volunteers give thousands of hours of free time each month to the museum.

But it was not always thus. Eight years ago the museum was a relic of the past, standing in venerable dignity on a quiet side street. Its community influence was negligible. Then, in February 1940, Richard Potter, erstwhile teacher and forester, took over as director.

That first morning on his way to work, Potter decided to experiment. Walking along Worcester's main street, he stopped 10 people at random and asked: "Can you tell me where the Museum of Natural History is located?"

Seven had never heard of the place. The other three gave vague answers. This confirmed Potter's belief that most people think of natural-history museums as repositories for dead fish and stuffed birds.

His interviewing that first morning strengthened his resolve to make the Worcester museum different—to give it purpose and vigor. First, the institution would belong to the people who visited it. Second, it would serve the community in vital and tangible ways. Finally, and most far-reaching, every museum activity would stress an underlying philosophy—the need for conservation of America's natural resources.

Potter started making changes the first day. The building which had been open only for 2 hours in the morning and in the afternoon was suddenly opened to the general public for 12 to 14 hours each day, admission free. Annual attendance rose from 7,000 to the present figure of 87,000, of whom 60,000 are children. Membership in the society increased from a staid 300 to four times that number. And as more and more people came to see what was happening at the museum, they lingered on to work.

To help make the museum a youth center, Potter arranged a program whereby the children published their own mimeographed newspaper, "The Natch" (juvenile slang for naturalist), and sold it from door to door. Proceeds were used to buy paper, scissors, paste, laboratory equipment, and other items needed for nature classes.

Then Potter ran into trouble. Mrs. B. Larz Newton, a Worcester matron, learned that her small daughter was vending papers, and became indignant. Calling Potter, she charged that the museum was exploiting children to make money. He listened quietly, then inquired: "Mrs. Newton, have you ever visited our museum or seen one of our nature classes?"

She admitted she had not.

"Well, then," he said genially, "why not come in and see us? I'd like to talk more about this."

As a result of the interview, Mrs. Newton, the irate critic, became Mrs. Newton, the stanch ally. Also out of that interview grew plans for a group of volunteer women workers known as the director's council, which Mrs. Newton has headed since its inception and which, more than anything else, has helped Potter realize his dream for a truly unique museum.

To these volunteers, Potter promptly managed to convey his enthusiasm and vision. He talked of many plans—for example, of his hopes for a loan department so that the many fine exhibits—birds, plants, and wildlife specimens—could be sent to schools, summer camps, Boy and Girl Scout groups, garden clubs or any organization that needed such material for educational or display purposes. He told of his idea for an official museum publication—not a dry scientific report but a readable little magazine for local newsstands, which would reflect the warm, informal atmosphere of the museum. But he also discussed budget limitations, and explained how each project must, to a large degree, be self-supporting.

The loan department is now a reality, sending out an average of 600 exhibits a month—sometimes to spots as remote as Texas, Delaware, Ohio or Colorado, but more often to Worcester schools and organizations. The magazine, Nature Outlook staffed by able volunteers, is now rounding out its sixth year of publication, and is self-supporting by virtue of enthusiastic patronage of local advertisers.

More and more the museum has fulfilled Potter's dream of serving the community. It has become a second home to Worcester school children, what with free movies, special tours, an annual pet show and classes in all branches of nature study, directed by capable Mrs. Maude Young, curator of the children's department.

Under the leadership of volunteer teachers, the museum's evening classes for adults and hobby groups have made service to the community a part of their programs. The Photo Color Club, for example, not only gives amateur photographers an opportunity to discuss their work, but members also visit shut-ins and old people's homes, using color slides to brighten drab lives.

Still another high light in the museum's program is the Nature Training School. This summer-day camp, devoted to creating young nature leaders, was the first of its kind in the country. Each year, some 200 Worcester youngsters attend daily sessions at the school's outdoor classroom—a 40-acre tract given by Mrs. Frank C. Smith, Jr., and members of her family.

Mrs. Walter E. Masters, director, says that the best measurement of the school's value is the reactions of the children themselves. "The look of wonder on the face of a small boy staring in fascination at a bullfrog, or the cry of delight from a 10-year-old girl when she recognizes the call of a bird, tells us we are accomplishing our aims," says Mrs. Masters.

Establishment of the Piedmont Extension Center, sponsored jointly by the Junior League and the museum, was another milestone in Worcester history. In 1946, Potter decided that neighborhood branches of the museum were needed to reach more people. But he didn't look for the finest neighborhood first; he looked for an area where need was greatest. By checking income groups, delinquency reports, and recreational facilities, he picked his spot—a section where tenements lined crowded streets.

Groundwork was laid when Potter began making anonymous visits to the neighborhood. Dressed in old clothes, he chatted with work-worn housewives, talked with men on their way home from work, watched gangs of young hoodlums playing in the streets.

Convinced that a neighborhood center would receive wholehearted support, he took his project to the director's council. Everyone agreed that it was a wonderful idea—but what about money? Potter, always amiably optimistic, suggested that they go ahead, and the money would take care of itself.

A committee of 32 mothers and fathers from the Piedmont neighborhood formed a governing board for the center. Then they took over an old plumbing shop which had stood vacant for years. Working under the guidance of Luke Barton, Potter's assistant, they attacked the years' accumulation of grime. The men used gallons of paint remover; the women scrubbed floors and walls. They begged and borrowed furniture, and what they couldn't get any other way, they made themselves out of rough lumber.

Then, when the center was getting under way, the Worcester Junior League, seeking a suitable new project, asked local organizations to submit plans. In competition with 17 others, the center program was selected for financial backing.

Now in its second year, Piedmont Center is a thriving though unpretentious community center (the old plumbing shop still serves as quarters). The youngsters have organized football and basketball teams. Parties and outings are held regularly. In one 2-month period, aggregate attendance was more than 6,500. As for concrete evidence of the center's community value, here are sample comments.

A local shopkeeper: "Nothing stolen for weeks—no windows smashed either."

A policeman: "My job is easier now that the kids have discovered new interests."

An official of the Animal Rescue League: "We get fewer calls about pets being mistreated. This used to be one of our worst areas."

Thus in eight short years, Richard C. Potter has given Worcester's museum a new and dynamic personality. A short, rotund man, with a fringe of gray-brown hair and eyes that twinkle behind spectacles, Potter expends more energy in a day than most men do in a week.

The story of Potter's life begins in Littleton, Mass., where he was born in 1888. Along with five brothers and three sisters, Dick grew up in neighboring Concord. There, in Thoreau's beautiful Walden Pond country, the boy fished, camped, and hiked. Later, he earned his tuition at Massachusetts State Agricultural College by doing farm chores—or, as he puts it, "I milked my way through college."

Soon after graduation, Potter became a high-school teacher at Derry, N. H. Then he married Bertha Bodwell from Nashua, and the two moved west when he took teaching jobs in Wisconsin and Illinois. After serving in the Army during World War I, he went into forestry and conservation work, and the Potters with their son and two daughters moved from place to place throughout the Midwest, the South, and New England. In 1940, he came to Worcester to be interviewed about the museum directorship at the suggestion of his brother, Dr. David Potter, professor of biology at local Clark University.

Today, the brothers live on adjoining farms near Auburn, Mass., a 30-minute drive from the museum. It is no life of "gentleman farming," since Dick, with no help except during haying season, raises all his own food, including meat. In summer, he gets up at 4: 30 a. m. to do the chores before reporting to the museum at 9. In winter, in addition to his farm and museum work, he often makes as many as five speeches a week before local groups.

Even with this superschedule, Potter still has time to dream of new museum projects. He hopes to see the day when there will be not one, but six, extension centers serving every section of Worcester. He has visions of an experimental farm, run by the museum, where conservation lessons can be taught in the most practical and memorable way.

That he will reach these new goals no one who knows him doubts. As one of his Worcester friends says: "When Dick Potter took over as director, our old museum got its soul lifted."

Corn Price-Support Program

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. BOGGS of Delaware. Mr. Speaker, at the request of Mr. Leland M. Reichert, of Townsend, Del., I am placing

in the RECORD his letter of March 4, 1949, relative to the corn price-support program.

This letter speaks for itself and indicates concern and dissatisfaction with the administration of the price-support program. Mr. Reichert's letter is as follows:

LELAND M. REICHERT FARM,
Townsend, Del., March 4, 1949.

Representative BOGGS,
Washington, D. C.

DEAR SIR: I am calling to your attention the corn price-support program which the United States Department of Agriculture is failing to activate fairly and effectively in New Castle County, Del.

The price requirements are clearly set forth in law, and in conformity the local AAA committee had before last election announced through the press and notices mailed direct to farmers, a support price through loans and purchase agreements of $1.59 per bushel ear corn stored on or purchased at the farm basis.

They have never made good in a single instance on this announced price support.

They insist that applying farmers accept an additional 2 cents over the announced $1.59 ear corn on the farm basis, which changes the loan agreement and purchase agreement from the original announced ear corn on the farm basis to a shelled-corn basis, delivered to a specified rail siding or loading point, at a time specified at the demand of the Government, at the expense of the farmer.

In my case this 2 cents would just about cover the cost of moving the corn from storage to a truck, without any shelling, hauling, or loading at the siding. The best estimate I can get of hiring this work done is 20 cents per bushel.

In other words, by this tricky change of basis, they have successfully evaded their announced obligation of $1.59 per bushel ear corn on the farm basis, making the actual effective support price a variable which changes with the varying costs encountered by each individual farmer as he performs these enforced unannounced extra obligations, in no case can it equal the actual lawful support price.

On the purchase-contract agreements in addition to the cited change of basis, they set some vague unnamed time far in the future when they will activate their obligation of price support by actually taking possession of and paying for the grain.

This results in what is actually a complete abandonment of their obligation of price support of corn prices in New Castle County, Del.

I believe a check of the records of the Department of Agriculture will show they have not supported corn prices by loan in New Castle County, after early December 1948, and that they have never supported corn prices under a purchase agreement in this county by actually paying for and taking possession of one bushel of corn.

It may or may not be a coincidence that the prices received by farmers at the farm for ear corn from dealers approximately equals the lawful support price minus the costs he will encounter from handling if he deals with the Government.

They have also set up certain storage standards, without regard to the quality or complete curing of the corn offered, which prevent loans on completely cured dry corn unless it is in their specification storage suitable for moist fall corn.

By these arbitrary and unreasonable standards they avoid their support-price obligation on completely cured dry corn stored on a dry ventilated barn floor under a tight roof.

Yours truly,

L. M. REICHERT.

Reducing Excise Taxes

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. MICHENER. Mr. Speaker, the people residing in my section of the country are much concerned about present high taxes. They are perfectly willing to pay all necessary taxes, but they want the Congress to be sure that these taxes are necessary In short, they want elimination of waste, efficiency in government, and a return to a peacetime spending and taxing basis. I agree with them just 100 percent.

My attention was called this morning to an editorial appearing in the Jackson Citizen Patriot, one of the larger out-State dailies in Michigan, and that editorial reads as follows:

Despite the fact that President Truman has asked for an increased tax yield to carry out his proposed program, the Republican policy committee of the House has endorsed a bill offered by Republican leader MARTIN to reduce excise taxes to their prewar level. Such a measure will meet popular approval.

We have become accustomed to the social-security tax and the income tax, but many people still protest when they find they have to pay a war levy when they're buying an alarm clock, or a piece of luggage, or a needed toilet article. All these still carry the extra war tax, although we have had peace 3 years.

Nor are many of these things luxuries. It was once an accepted theory that luxuries like tobacco and liquor and jewels should pay an excise tax. But now electric-light bulbs, which everyone must use for everyday living, are taxed 20 percent. Fifteen percent is collected as a war tax on all telephone bills, and 20 percent on all transportation tickets and movie tickets, 10 percent on sporting goods, and last year the administration took $498,000,000 from automobile traffic by its wartime tax on gasoline. It also added to the price of new automobiles with a 7-percent tax.

These excise taxes last year paid almost four billions into the National Treasury. If the administration's program goes through, they will have to be increased.

Comparison of Communism With Democracy

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 8 (legislative day of Monday, February 21), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address delivered by Mr. Justice William O. Douglas, of the Supreme Court of the United States, at a dinner of the Associated Friends of Occidental College, California Club, Los Angeles, Calif., February 18, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Marx and Engels embraced the theory that in general "the mode of production determines the character of the social, political, and intellectual life." That was the core of their historical materialism. To it they hitched dialectics and marshaled all of man's ingenuity in an endeavor to prove the truth of their thesis, by promoting it. "The materialistic doctrine that men are the products of conditions and education," wrote Marx, "forgets that circumstances may be altered by men and the educator has himself to be educated."

The Soviets have put this system to work. They have supplied it with a political framework, furnished it with propagandists schooled in the art and religion of dialectical materialism, equipped it with secret police so that heretics might be easily ferreted out, and backed it with a mighty army that can impose the program on people or bolster it when it falters.

It is important that we understand the operation of this system.

Dictators have a way of setting down their programs and purposes for all to read. Democracies, for some reason, have a way of ignoring or disbelieving the dictators. We recently had our lesson from the totalitarian right. We waited almost too long before reading Hitler's Mein Kampf. We should not make that mistake today. Like Hitler, the Communists have given us their plans. Before it is too late, we must read and understand the works of Joseph Stalin—such books as The October Revolution, The Problems of Leninism, Foundations of Leninism.

We can put to one side the problems of communism in Russia. We the democrats will be the first to defend the right of any people to live under the government of their choice. When they confine their totalitarian regime within their borders, they are entitled to tolerance in working out their own experiments.

The Russian borders, however, do not mark the orbit of communism. Stalin announced in his book, The October Revolution, that the Russian revolution constituted "the beginning and premise of the world revolution." We have seen much of that prophecy come true. The plan is to undermine all the democracies. The aim is to win by default, if possible, but to win under any and all circumstances and at any price. That is what the current Soviet propaganda means when it says, "There is no power in the world that can prevent the death of capitalism, the growth of the indignation and struggle of the working people against the reactionary bourgeoisie. * * * This is what Leninism, the Marxism of our epoch, teaches us."

The techniques whereby the Communists plan their domination of the world reveal at least three basic and irreconcilable differences between their philosophy and ours.

First, Marx and Engels wrote that "the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself the nation." That has often been taken to mean that the political power of the state was at last to be transferred to the people. The common man was to come into his own. All the people were to have a new charter of liberty. Indeed the current Soviet propaganda in this country is that communism is "a society in which the people themselves are the master and determine the fate of their country."

Lenin, however, made clear that the proletariat and the people were not synonymous. He announced that the dictatorship of the proletariat "has meaning only when

one class knows that it alone takes political power into its own hands, and does not deceive itself or others by talk about popular, elected government, sanctified by the whole people." By Lenin's dictum the political power of the state was to go into the hands of one class and one class only. Everyone else would be disenfranchised.

Today's Communists have gone Lenin one better. They have not placed the political power in the hands of even one class. They have given it all to one select political clique. It is that small group that declares war, makes peace, and establishes the party line that dictates the conduct of their agents in all the countries of the world.

Here we have the first deep and fundamental difference between Communists and democrats. It is the very antithesis of democracy to have the political power of a nation vested in one group—whether it be a man, a corporation, or a class. The struggle of the democracies of western Europe through the years has been to get rid of that kind of dictatorship. We followed that course in this coutnry. We experienced life under a monarchy; and mild as it was compared with Communist totalitarianism, our fathers expended lives and treasures to be rid of it.

We disperse political power among all groups. By doing so we have some guaranty that no one group will permanently acquire the upper hand over others, that no one group will use the sanctions of the law and the power of government for the exploitation of others. When one group acquires all the powers of government, freedom can be had only through revolution. That is, I think, the head and front of all the revolutions the world has seen.

Society by definition is the aggregation of many, diverse pressure groups. The secret of wise government is to leave room for each group to live and express itself. The democratic way, by wide dispersion of ultimate political power among all the people, makes it impossible for any one interest to get and keep, at least for long, the authority to exploit the others.

The Communists defy this principle and by putting all political power in the hands of a few repudiate the basis of free government as we know it.

The Communists do not come to us with any scientific blueprint for a machine age. They, therefore, do not offer us the key to the problem that both here and in the other democracies is most pregnant with potential conflict. Yet even if we could be sure that they offered us an economy of abundance, we could not accept the offer. As we have seen, they substitute rule by one select political clique for Lincoln's concept of "government of the people, by the people, and for the people." They trade our political heritage—our right to franchise—for a police state.

This is a matter on which we, the democrats, can never compromise. The difference between us and the Communists at this point is fundamental and irreconcilable.

Second. We come to the second basic difference between the two philosophies. The Communists need a police state because they try to pour man into one mold. It's been tried before—by all the czars, and kings, and Hitlers that have tramped the earth. It has never succeeded for long. And it never will. For man was born for freedom, not for slavery. Man cannot be standardized like automobiles, or screws, or nails. God gave man the same amazing diversity that He gave the flowers in the mountain meadows.

Soviet Russia, with its police state, defies that fact. News is a standardized product issued by a central government bureau. There is no room for a crusading journalist to expose the failings of those in office. Art, music, and literature are weapons of political warfare. They are called subversive if they depict the sad side of the Communist society or raise doubt concerning the wisdom, or virtue, either of the system or the officials who manage it. Like the press they must follow the party line. Defections from it entail severe penalties. There is no free trade in ideas such as Holmes talked about. The solution to every social and economic problem, the answer to every question must meet the approval of the ruling clique. No other answers are tolerated. There is only one road to salvation. All other roads lead to concentration camps.

In the democracies, imperfect as they are, we have great diversity—from art to politics. Some democrats are Socialists, some are capitalists. We are committed to no single panacea for all our problems. We can have a TVA in Tennessee or on the Columbia without nationalizing all the enterprises along Main Street. We can proceed by trial and error and undo 4 years from now what we do today. We can let man express himself in art and the letters. He is restrained only by the laws of libel and obscenity. We can let man give vent to his views, however noxious they may seem to those in power. We can experiment with new techniques unrestrained by commitments to any one political faith.

The Communists have no such freedom or flexibility. Their religion is dialectical materialism which permits of no compromise. All must conform or perish.

We the democrats of the world cannot compromise with that philosophy. To do so would be to discard our Bill of Rights and to place ourselves again in the chains that we struggled for centuries to remove.

Third. A third basic and irreconcilable difference betwen the Communists and the democrats is in their political techniques. Ours is a civic genius described by William James as the tolerance of one political party for the other. The party in power is on probation only. It has its innings and it stands or falls on the record of its performance. No police or army suppresses an opposition or keeps the winner of the last election in office.

The Soviets have no such tolerance for the opposition. Up to the time the Communists win an election, they talk and even act like democrats. They adopt the tactics of parliamentary government. The words and slogans they use are familiar and appealing to democrats. They believe in free elections. They plead the cause of justice. They are against the exploiters of human beings. They pose as champions of every oppressed person or group. But once they take office, it is for keeps. When they take over, the liquidation of all opposition parties commences.

But it is often said that the Communists must be on the side of the angels, since they are identified with every cause that seems to champion human rights. The Communists, however, plead the liberal causes for quite a different purpose than do the liberals. Their purpose is to seduce the liberals, mislead the conservatives, and confuse everyone. A truly liberal government is an anathema to them and their aim is to destroy it. They do not want reform for others. They want power for themselves. That is why they speak in favor of socialism but against the socialist regime in England. Their chance of getting power disappears if democratic government is strong and reliant. Their real hope lies in fostering conditions that breed discontent.

It is important that this technique be understood. Stalin makes it clear in his Foundations of Leninism and the Problems of Leninism. The Soviets plan two revolutions. First, the bourgeois revolution and, second, the proletarian revolution. With the bourgeois revolution the Communists take over existing democratic institutions. That's what happened in Czechoslovakia. That's what they have been trying to do in Italy and France. To gain control of existing democratic governments they use democratic tactics. They talk and behave like democrats and proclaim the democratic virtues even more loudly at times than the democrats themselves. But they take control of a democratic government for only one purpose—to destroy it. Its destruction and the appropriation of its powers by the central body in Moscow constitute the second step—the proletarian revolution. Both revolutions take place without moving an army or dropping a bomb. They have indeed the outward appearance of constitutional government in the democratic sense.

Between these revolutions the Communists bring into play two ancient political techniques designed to eliminate all political opposition—techniques borrowed from the Czar—techniques that have been the political tools of tyrants from time immemorial: Murder and terror.

The use of murder and terror makes fear the dominant, overriding influence in public affairs. Once fear grips the hearts of the people the Communist ranks become swollen.

The political techniques of the Communists stand condemned by the standards of the democrats. We refuse to accept fraud and deceit as standards of public conduct. We reject murder and terror as political weapons.

These then are three of the basic and irreconcilable differences between the philosophy of the Communists and that of the democrats. They pose for us problems on both the domestic and foreign front. They make it necessary that we fashion articles of our own faith and adopt a positive, aggressive program to combat the ideology with which the Soviets bombard the world.

On the domestic front the course is easy:

1. We need not today fear the Communists in this country, for their numbers are small. What we should fear is our susceptibility to their propaganda. Our first duty then is to understand their purposes and methods. If we do that, their influence will be no greater than their numbers. It is only when we do not understand, that the Communists exert an influence far out of proportion to their strength. It is important to remember that the Communist influence in the democratic state is essentially divisive. Their aim is to pit one liberal against another, conservatives against liberals, race against race, labor against management. We, the democrats, must not fall victim of that strategy.

2. We must restore integrity to our own political tactics by putting an end to the shameful practice of branding as a Communist everyone who espouses a liberal reform or promotes a program for the underprivileged. If the late George Norris were alive today, promoting his beloved TVA, some would label him a Communist by showing that in Russia power projects are nationalized. By that reasoning the great Labor Party in England would also be communistic. Yet we know that a socialist-democratic regime is an anathema to the Communists.

When liberals are pilloried as Communists, the Communist influence grows and spreads. For then the liberals and Communists are driven closer and closer together. Thus do conservatives play the Communist game of breaking the ranks of the democrats, dividing a nation into camps that become more and more hostile.

We must keep our country a place where men are not afraid to think and read and speak freely and without restraint.

3. We must become politically more conscious. The Communists through the use of their principle of democratic centralism confine their differences within their ranks. Once the party line is fixed, they present a united front to the world. In that way they make the most effective use possible of their minority position. They also are the most active political agents of all time. While the rest of us relax, the Communist workers are busy ringing doorbells, writing literature, and spreading their faith. We cannot throw

away our political independence and intellectual integrity by fixing our own party line and compelling allegiance to it. But we must take our politics more seriously. If we throw our full energies into political organization and activity, the Communists will be impotent in our affairs. They could not then win by default; and it is only by default that they can gain a strategic hold on important groups in this country. Labor unions have taken the lead in showing how that result can be avoided.

4. Effective democratic government is the political antidote to communism. Reactionary governments nurture the conditions on which communism feeds. The kind of democratic government that will submerge the Communist influence is a liberal, progressive government that recognizes the human rights of all citizens, raises the standard of living at all levels of society, eliminates the insecurity of this industrial age, and wipes out the poverty that has plagued man from the dawn of history. Nothing short of this kind of political program will defeat the aims of the Communists.

On the foreign front the choice is not between war and appeasement. Neither will solve the problem which confronts us. A war would produce a world in ruins with poverty and illness on every hand and suffering and dislocations of life unequaled in history. That is the environment in which virulent ideas flourish. That is when the Communists or Fascists come into ascendency. On the other hand appeasement means that the Communists are encouraged by our default to undermine flourishing democracies.

1. The answer to the Communists on the foreign front, as on the domestic front, is a political program. We must be equipped and prepared to meet the political program of the Communists at whatever point in the world they may select for action. We must ourselves regain the initiative by promoting in our own areas of influence tried-and-true political antidotes to communism.

Our greatest error would be to fashion our foreign policy merely in terms of anticommunism. We will fail miserably if we do no more than that. For then we will end by railing at the Communists, taking no steps to eliminate the conditions on which Communists thrive. If we follow that course, war will soon appear as the only alternative.

2. Our foreign policy must espouse and promote liberal, humanitarian programs for the masses of people of the world. It must strengthen the democratic forces in other nations and not entrench reactionary interests that thirst for power.

Most of the areas of the world are bleak and desolate when measured by the living conditions of the people. At times the people live under a serfdom of poverty and disease. At other times it is an industrial or political serfdom. The Communists are artists in exploiting these conditions. They can promise pie in the sky—in fact the whole world—to those who will enlist in their political army. Revolution may indeed seem a welcome relief to those who have been exploited. It may to desperate men have the appeal of a swift and cleansing purgative that sweeps before it all the rot and filth of the old tyranny that has oppressed them.

Those impulses cannot be controlled by talk and promise of vague and remote democratic ideals. America's voice, if it is to be powerful among the masses of people, must do more than talk of the glories of democracy. If we want the hundreds of millions of the peoples of the world in the democratic ranks, we must show them the way with practical programs of social reconstruction as are embodied in the European recovery program.

The real victory over communism will be won in the factories and rice fields of the world rather than on the battlefields. The fight against communism depends for its ultimate success on the people of the various nations, not on their governments. Thus we must support those who represent democratic values and who have practical programs for political action. When we prop up governments that are self-seeking, corrupt, or Fascist, we lose ground in the world-wide struggle against communism. When we stand behind the liberal and progressive forces in other countries, we become identified with their interests in the eyes of the peoples of the world. Then the democratic cause gains strength and character. Then the flood tide of communism will begin to recede.

4. This course requires the backing of a strong, alert, and mobile military machine. For weaklings have never yet won a campaign—political or otherwise—against dictators.

These should be our articles of faith. Success is assured if we are true to ourselves. We have a system which, though far from perfect, is strong with idealism. It gives elbow room for men of all races and all beliefs. It is vital and dynamic. And it works. We have the means of shaping the world in our pattern. If we do, freedom will be assured for all men. The decision is in the hands of this generation. It is a challenge to our political competence. For western civilization it is the greatest challenge of all time.

How Bureaucracy Swindles the Taxpayer

EXTENSION OF REMARKS

OF

HON. J. HOWARD McGRATH

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. McGRATH. Mr. President, recently there appeared an article in the Reader's Digest entitled "How Bureaucracy Swindles the Taxpayer." This seemed to me to present a rather unfair and erroneous picture concerning the Veterans' Administration. I submitted the article to General Gray, the Veterans' Administrator, for his comments.

These comments seem to me rather enlightening, and I feel that they may likewise be of interest to my colleagues in the Congress. I, therefore, request that they be included in the Appendix of the RECORD.

Mr. President, I am informed by the Public Printer that the article would occupy five pages in the RECORD, at an estimated cost of $355. I still feel that the article will be very beneficial to my colleagues. I, therefore, ask unanimous consent that the article may be printed in the RECORD, notwithstanding the cost.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

COMMENTS ON READER'S DIGEST ARTICLE, HOW BUREAUCRACY SWINDLES THE TAXPAYER

The caption, subcaption, and much of the article are made up of unsupported generalizations designed to create a state of mind where the reader will accept opinions as facts and half truths as truths.

In this particular case a more serious—even dangerous—aspect of this approach is that it forces into being the very conditions it is deploring, in that it lowers the morale of employees as well as wipes out confidence and lessens the cooperation to be had from veterans whose assistance is essential if they are to receive the services provided by law.

Paragraph 1, page 61: "The inefficiency of the Veterans' Administration is a national disgrace and is sure to become a national scandal when the facts become widely known."

VA comment: This is a summary paragraph, designed to condition the mind of the reader and present opinions to be supported later by facts. It can only be answered categorically, which would accomplish nothing. The alleged facts will be analyzed as he presents them.

Paragraph 2, page 61: "Its records are inaccurate; thousands of veterans' papers have been lost or destroyed; many insurance-premium collections are hopelessly muddled. Thousands of veterans or their widows are forced to wait and wait for money due them; on the other hand, other veterans have been paid nearly $50,000,000 more than they were entitled to."

VA comment: Except for the last statement about the $50,000,000 in overpayments, this paragraph is, like the first one, a summary of intentions. These will be taken up as we come to them.

When he says "veterans have been overpaid nearly $50,000,000 more than they were entitled to," he indicates how little he really knows about the subject. Veterans have been overpaid approximately $179,000,000 more than they were entitled to. Of this, all but the nearly $50,000,000 referred to in the article has been recovered by negotiation. Agreements have been made with veterans for the recovery of another $8,000,000 and negotiations are under way for the recovery of additional millions.

The reasons for these overpayments are indicative of some of the problems that have been faced. In paying subsistence to veterans under the GI bill, the VA was faced with the alternatives of making overpayments and anticipating recovery or of delaying payments to veterans until their purpose was nullified. The decision reached is believed to have been in keeping with the intent of the law.

This condition came about as follows:

The law says that veterans enrolled in education or training shall be paid subsistence while taking courses. It further provides that while a veteran is in on-the-job training the combined amount of what he earns plus his subsistence shall not exceed a specified amount. The purpose of this is to provide financial assistance to veterans while fitting them for civilian activities.

When a veteran enters school and VA is advised his subsistence payments start. They are continued until VA is notified that he has discontinued. Sometimes he is out of school for several months before VA is notified. This results in an overpayment. If a veteran is in on-the-job training, he submits periodic estimates of his anticipated income and is paid subsistence on this basis. Should he get a raise during this period, it results in an overpayment.

Considering the intent of the law and the rate of recovery the VA believes results have justified its approach to this problem.

Paragraph 3, page 61: "Gen. Omar Bradley, who did so much to better the medical service of the VA, was unable to make a dent in the imperturbable bureaucracy of other divisions. Carl R. Gray, Jr., his successor, a distinguished railroad executive, accustomed to directing big organizations, also finds the going difficult. Many capable and enthusiastic men General Bradley brought into the Administration became discouraged and have left."

VA comment: We can find nothing in the statements of either of the Administrators referred to that in any way supports the contention they were dissatisfied with the

progress being made in accomplishing the unprecedented task of the VA; or that they had been unable "to make a dent in imperturbable bureaucracy."

Of course some capable and enthusiastic men have left the VA. Capable and enthusiastic men will continue to leave the VA and all other branches of government so long as the conditions of employment restrict their effectiveness and pay rates are far below those offered by private business. Within the period covered by this article one small service in VA has lost three top-flight men to private business. Every one of them increased his income by more than 50 percent.

Paragraph 4, page 61: "Proof of these charges is to be found in reports made by the House Appropriations Committee, in testimony by Veterans' Administration officials themselves and, most recently, in reports made to the Hoover Commission on Organization of the Executive Branch of Government. That Commission put Franklin D'Olier, retired president of the Prudential Insurance Co. and first commander of the American Legion, in charge of an investigation of the VA conducted by professional management engineers from the Trundle Engineering Co. The Trundle task force spent 6 months in the VA offices and then turned in a shocking report."

VA comment: This paragraph is so general it will have to be answered as the points are reached in the article. The reports referred to as being made to the House Appropriations Committee have not been made available to the VA, nor has this Administration been advised as to their findings.

Paragraph 5, pages 61 and 62: "The Veterans' Administration spends $6,000,000,000 a year, 15 percent of the entire Federal budget. More than 200,000 employees—1 out of every 6 on the Government pay roll—work for it directly. The agency fans out from Washington into 13 huge branch offices where the unwieldy central organization is largely duplicated, and from these into 70 big regional offices and 539 local offices with more duplication."

VA comment: This paragraph is true in its facts and utterly untrue in its implications. It is an excellent example of how half truths or twisted truths mislead a reader.

The author says the VA spends $6,000,000,000 a year and implies that this money is spent on 200,000 employees spread out in central office, branch offices, regional offices, and others blanketing the country in duplication of effort. The implication is untrue.

Let's look at the money. The VA does spend approximately $6,000,000,000 a year. Of this amount about 5 percent is for general administration, the rest is for direct and indirect benefits for veterans as provided by law.

In the current year general administrative costs are $372,234,800.

Medical and hospital care, which are indirect benefits, cost $564,520,200.

The appropriation for this year was $6,327,920,861, out of which the balance of $5,391,165,861 was paid, as required by law, in direct cash to veterans and their dependents.

The branch offices referred to by the author were eliminated as supervisory units before the article was published, so there appears to be no reason to discuss whether or not they duplicated effort. In these locations VA has centered all field work on insurance and death claims. This work is done at no other point, so it cannot be included in the charge of duplication.

The 70 regional offices have all records other than insurance and death-claims. These are records about which veterans call in person so they are located near the veteran's home where they can be easily reached.

The other 538 offices are small, usually 1 or 2 men, subdivisions of the regional offices established as a convenient means of contact for veterans and their families.

The duplication is not apparent.

Paragraph 6, page 62: "The VA directly touches the lives of 20,000,000 veterans. It handles more than 7,000,000 life-insurance policies valued at more than $43,000,000,000. The $436,000,000 collected annually in premiums is the veterans' own money. They are entitled to as good service as they would get from a private insurance concern. Yet the Trundle investigators found that the 17,000 employes in this VA division fail to keep the veterans' records accurately. They misfile premium payments. They write to the veterans in language which even the writers do not comprehend. They bill veterans for premiums after their policies have lapsed."

VA comment: The exact number of veterans whose lives the VA touches can only be estimated, as no exact figures are kept on this and it is not clear just what the author means by the word "touches." In one sense the VA touches the lives of every person in the United States. However, the number of veterans cannot be 20,000,000, as there are less than 19,000,000 living veterans of all wars and peacetime service.

VA agrees entirely with the statement that the money collected in insurance premiums is the veterans' own money and they are entitled to as good service as they could get from a private insurance concern.

We do not know what part of the Trundle investigation report is referred to by the author. Quotations from this investigation we have seen do not bear out his statements. VA does not know what part of the Trundle investigation report is under discussion. VA never has seen copies of any findings of Trundle investigators, and it has no information that the Trundle report has been accepted by the Hoover Commission. If it has, it was not specifically mentioned in the printed recommendations of the Hoover Commission with regard to VA organization. The statement "17,000 employees fail to keep records accurately. They misfile premium payments" conjures up a picture of complete confusion. Nothing could be further from the truth.

Never in the history of insurance—Government or private—has there been such a gigantic mass of records as took place following demobilization of World War II veterans. At that time there was nearly the confusion implied in this article. Twenty-one thousand employees were put to straightening it out. There were inaccuracies. Some premium records were misfiled. But these were certainly the exception rather than the rule. The same things happen in private concerns. This is not said in justification. They should never happen anywhere, but they will so long as people are fallible.

Since that time records have been consolidated and straightened out. The number of employees has been reduced to some 15,000; which in itself indicates progress.

The insurance business of the VA is different from that of other insurance companies. VA has no agents. Its business is conducted almost entirely by mail. Customers cannot be questioned by agents when information is needed. Because of this it is of greater importance that full information accompany all payments. When it does not, long correspondence may be necessary to straighten out accounts. Veterans are learning this and are making use of forms the VA provides. This has resulted in correcting errors and putting the activity on a basis where it is comparable to any commercial activity with similar operating problems.

It is not at all unusual for VA to receive communications from veterans and beneficiaries saying they have received better service from VA than from a private company. This is not mentioned as a criticism or to invite comparison but to indicate that the facts are not all on one side.

As for letters being in "language which even the writers do not comprehend," we do not believe this to be true in any case. Insurance correspondence is often highly technical and must be phrased so as to be exact in its legal significance. VA is making serious efforts to simplify its insurance correspondence and forms. Classes are conducted to impress letter writers with the need for simplification.

An example of the progress that has been made is to be found in the 1,500,000 policies recently mailed out to veterans. Some of the country's outstanding insurance executives assisted in making these about the clearest and most easily understood insurance policies ever issued.

The author says VA bills veterans for premiums after their policies have lapsed. This does sometimes happen. The bulk of these insurance premiums are payable on a monthly basis. A grace period of 31 days is granted from the day a premium is due. If the veteran fails to pay his premium on time, it is in force for this extra period and he gets another bill for the following month. If he fails to pay the premium due, his policy is lapsed under the law and he gets no more premium notices, but he does get a notice of lapse.

Paragraph 7, page 62: "A check-up last June 30 showed that the policies of 27,000 men, who had paid to convert their wartime term insurance to straight life, had not been processed. Frequently this processing so lags that premiums become in default; sometimes the policies actually lapse without the veteran knowing it, if he waits for a bill. It takes times to revive such a lapsed policy and if the veteran dies during this period his widow may collect no insurance. More than half of VA conversions have been unnecessarily delayed and a quarter have been mishandled. Yet VA employees handle only 12 conversions a day whereas clerks for the Prudential Insurance Co., for example, clear 32 on the average."

VA comment: Here the author implies that delinquencies in the VA result in conversion lags which are followed by defaults and the loss of insurance protection. This reasoning is difficult to follow.

On June 30, 1948, the date selected by the author, there were 27,000 policies on which conversion applications had been received and which had not been processed. Exactly a year earlier there were 181,800 pending conversions and by February 15, 1949, this number had been reduced to 17,311. An important factor ignored by the author is that of the 27,000 policies he cites, only 8,251 could be processed. The balance were being held pending receipt of additional data or funds from the insured. Of the 17,000 conversions pending in February 1949, only 6,537 could be processed without additional information or money. The normal processing time for the 6,500 conversions on hand, which can be processed, is approximately 10 days. A very different picture from that presented by the article.

As for delay in conversion causing lapse or loss of insurance, it takes a far stretch of the imagination to follow this. When each application is received it is acknowledged. This acknowledgment gives the insured his converted insurance number, and tells him where to mail his premium. It also warns him that it is of the "greatest importance that you continue to make premium payments, without regard to notices in connection with insurance."

The number of conversions on hand at any one time during the past year has not exceeded a normal working margin. During the last 10 months of 1948, the VA processed more than 300,000 conversions. This is at the rate of 30,000 a month. The charge that

a quarter of the conversions has been mishandled simply bears no relation to the facts.

When the author says "VA employees handle only 12 conversions a day whereas clerks for the Prudential Insurance Co. clear 32 on the average," he is drawing a comparison which is odious without being significant. Conversions made by VA are received by mail, reviewed, processed, and completed in the home office. Additional correspondence frequently is required. To compare this with conversions of a private company, which usually are prepared in the field under the guidance of an experienced insurance agent, is impossible. It is obvious that conversion cases verified in the field by an expert insurance man, where only the final action has to be taken at the home office, can be handled more rapidly than cases developed entirely by mail. Certainly, if such a comparison is to be attempted the time of the agent must be considered, which apparently was not done in this article.

Paragraph 8, page 62: "Spot checks disclosed that a veteran's monthly premium often was credited to another person. One employee habitually did this because, she said, climbing a ladder to reach the proper record cards made her dizzy. Accounts were marked 'lapsed' where premiums had been paid for months ahead. More than 268,000 veterans who had sent in their premium payments had not had their accounts credited. The employees were 17 days behind in this bookkeeping. But many of these payments probably never would be credited; the basic records covering 167,289 cases could not be found."

VA comment: In an operation the size of VA insurance it is not surprising that payments are occasionally credited to the wrong account. If by his use of the word "often" in this connection the author means to imply it is the usual thing, he is wrong. In numbers there have been too many payments improperly credited. Percentagewise there have been very few. It is impossible to cite exact figures either way.

When the author says one employee habitually credited a veteran's payments to another person because climbing a ladder made her dizzy, he has quoted a story often heard in connection with filing but never proven to VA officials. In any case, the employee would have been foolish to climb the ladder, as all posting trays are at desk level where the clerks may do their work while seated. All the writer seems to have alleged here is that VA had an irresponsible clerk. It is entirely possible such type of person has been employed by VA Insurance Service. That is not sufficient grounds for attacking the loyalty and capability of every VA insurance employee * * * one rotten apple doesn't prove the entire barrel is bad.

The author points out that more than 268,000 veterans who had (at some unstated time) sent in their premium payments had not had their accounts credited. This appears to be intended to point up the inefficiency of the operation as he adds, "The employees were 17 days behind with this bookkeeping." Premium payments do not come in a steady flow; they are more apt to arrive in waves which seem to conform more or less with pay days. It is not at all unusual to have as many as 268,000 payments to be posted. It is about a normal load, and does not represent a 17-day lag.

The VA is geared to handle 2,225,000 premium payments monthly. Considered on the basis of 21 working days to the month, the 268,000 premium payments referred to represent only 2½ days' work, not 17 days.

In his next statement, which is considered important enough to italicize, the author says many of these payments probably will never be posted, as the basic records covering 167,289 cases could not be found. The VA has no idea what he is talking about. It has not and has never had any information or indication that "167,289 cases cannot be found." The system of cross references maintained by VA make it difficult to imagine how such a loss could occur.

There is a remote possibility the author may be referring to "unapplied remittances." If he is, his work in developing his article is quite as inefficient and inaccurate as anything he finds in VA.

One of the most difficult jobs the VA has faced has been to get veterans to identify themselves when sending in insurance premiums. There is a form known as a postal note which, if not signed by the veteran, is no more identifiable than currency. Yet VA has received thousands of these notes, and in addition thousands of envelopes containing currency or checks, with no accompanying information to identify the sender. It has also received thousands of communications from parents and relatives which read somewhat as follows: "Enclosed please find $6.15 to pay my son's insurance."

It is impossible to credit these payments without investigation, sometimes long and involved research. At one time VA had almost two and one-half million such remittances which had not been credited. This number is now less than 200,000. If these are the accounts referred to, the VA can no more be held responsible than could the gas company if you stuck a dollar bill in a plain envelope and mailed it in to pay your bill.

Paragraph 9, page 62: "Some of these records disappeared in the VA's postwar expansion when insurance operations were dispersed to 13 branch offices. Some records went into the trash or were thrown into toilets because employees were irritated at the moving task. When a veteran moves to a different branch jurisdiction, the VA insists upon sending his records after him. With these documents being sent continually around the country and with clerks filing these in the wrong indexes, still more of them are being lost."

VA comment: Since the author repeats the charge that records have been lost, it may be well to repeat that VA has no knowledge of any large-scale loss of records at any time. It may be well to point up that VA insurance records are so kept that should any be misplaced or lost they can be reconstructed.

Since the author specifically points to the transfer of records from New York to the 13 branches, let us specify every instance that endangered records at that time about which the VA has knowledge.

Some time before the move was undertaken a small fire broke out in the New York office. Some records were damaged, but all were reconstructed.

During the move a railway car containing records was sidetracked for some days. It was found and rerouted, with no loss of records. Also during the move a truck containing records overturned on the highway, but none of the records was destroyed or damaged in the accident. In another instance papers were found in a water closet, but these were work sheets and not vital records.

When a veteran moves to a new area, his records are transferred to the office serving the area in which he resides. This is done to give more efficient service to the veterans. Close controls are maintained, and there is no reason to believe there is any likelihood of loss or damage to the records. As for clerks filing these transferred records in the wrong indexes, VA has no knowledge of this happening and does not believe it to be true. There is no reason to file them wrong when it is just as easy to file properly.

Paragraph 10, pages 62 and 63: "John S. Powers, a Government economist, killed accidentally in line of duty January 6, 1948, left his widow a $10,000 policy. Mrs. Powers knows her way through most of Washington's red tape, for she had worked for the State Department and has influential friends in Washington. Yet she and her three children were thrown on the charity of her friends because neither she nor they could work their way through the VA's bureaucratic maze. Nearly 11 months after her husband's death, she still had been unable to collect a dime on the insurance. VA continued to mail monthly bills demanding payments of premiums just as if Mr. Powers were still alive. The widow's plight eventually came to the attention of President Truman through an article in the Washington Post. He personally interceded."

VA comment: This was a bad case. What the author says is a reasonable presentation of events. The fact that it has been quoted so often is an indication that such cases are fairly unusual and are not to be picked off every tree.

Some of the contributing factors in this unfortunate case were:

That Mr. Powers was residing in Berlin and was killed near Paris, which necessitated information being obtained from both Berlin and Paris through military channels.

That Mrs. Powers did not write the VA until 3 months after the death of her husband.

That Mrs. Powers' original letter did not contain sufficient information for payment to be made on the claim.

That VA had to write her for additional information. That this letter, which was sent to the address of record, was returned as unclaimed from Berlin, Germany; the VA meantime waiting to hear from her.

That Mrs. Powers moved from Germany to the United States without informing the VA of her change of address.

That she had a friend in the VA who was an inexperienced adjudicator, and he sidetracked her husband's file in a sincere effort to help her by speeding a pension claim.

That because of these and other factors the VA was unable to get the necessary papers together until mid-August 1948.

That by the time the papers were assembled the case had become so complicated it took a full month to straighten it out.

The mailing of premium notices did continue for some months after the death of Mr. Powers because VA insurance people did not know he was dead. They were discontinued when VA was informed of his death.

Paragraph 11, page 63: "A sample check of the time consumed in clearing 85 death claims in one office disclosed a routine that would require 42 days for form filling by the beneficiary and 73 days of processing by the VA—115 days in all, on the average—before a payment would be made. Most insurance companies settle claims within 15 days. Investigators found that one private insurance company with fewer employees than VA has in a comparable office handled 7 times as many policies, twice as many premium notices, 6 times as many address changes, 8 times as many changes in beneficiaries, and 12 times as many death claims."

VA comment: The figures cited by the author in these 85 cases are correct. There are, however, two points that deserve consideration:

1. There is no specified time required to complete any step in processing a claim. The periods of time cited are simply how long it took on an average in a selected number of cases.

2. Averages in discussing claims settlements are completely misleading. A claim is considered as pending from the instant it is filed and is so carried until it is settled. The length of time it takes claimants to supply required information is an important factor. VA has cases pending that are more than 3 years old; others have been settled in under 2 weeks. An average of these cases would be misleading.

A check of 51 other cases was made in the same office mentioned by the author. It showed an average of 60 days from date of death to delivery of check. This average time breaks down to 29 days for the beneficiary to supply evidence and 31 days for

VA to adjudicate the claims. The shortest period for settlement of a case in this check was 31 days and the longest 102 days. Beneficiaries took up to 45 days to inform VA of death and up to 68 days to supply evidence after it was requested.

Since VA has no first-hand knowledge of the private companies mentioned by the author, it is impossible to make any comparison. But it may be well to remember that required evidence is usually supplied private companies by field agents whereas VA must wait to get this information by mail.

Paragraph 12, page 63: "Officials were proud that by this year they had managed to reduce the backlog of conversion cases by a third—to 17,600—and of the increased payments by a fourth—to 202,000. But in the same time the veterans awaiting reinstatement of their policies rose from 13,000 to more than 24,000. And the veterans awaiting insurance refunds due them increased from 5,000 to 228,000, throwing this work 2 months behind."

VA comment: The conversion cases referred to here were discussed in connection with paragraph 7, but some of the other figures cited have not previously been mentioned. The "increased payments" which he points out as having been reduced by a fourth, to 202,000, are not understood, so cannot be commented on.

The increase in the number of reinstatement cases awaiting processing results from liberal laws expiring and an educational program launched by VA to inform veterans of the value of their insurance. In the last 10 months of 1948 VA processed 1,009,929 applications for reinstatement. This is more than 100,000 a month. At this rate the 24,000 cases used by the author as the pending load represents less than a week's work at most.

The author's statement that "the veterans awaiting insurance refunds increased from 5,000 to 228,000, throwing the work 2 months behind" is statistically correct. But it is only because of VA action anybody found out there were any refunds to be paid.

During the past few months the VA has been conducting a review of its premium account records on both active and lapsed cases. This was done in preparation for the payment of a dividend. This review disclosed that many veterans, while in the armed forces, had paid slightly more on their insurance than they should have. VA is refunding these overpayments at the rate of 4,000 to 5,000 a day. In the majority of cases the veterans do not know these refunds are due them. This is especially true since almost all of the refunds are in connection with policies that have lapsed.

Paragraph 13, page 63: "But most depressing was a backlog of more than 6,000 insurance death claims. With the office which handles these settling them in November at the rate of but 355 more per month than the number of new cases being received, it will require 18 months to catch up."

VA comment: Much that is significant in this paragraph was covered in the discussion of paragraph 11 dealing with claims.

In determining that the pending load of insurance death claims will be cleared up in 18 months the author simply divides 355 into 6,000 and comes up with a miracle.

It isn't that easy. These pending cases cannot be settled until the necessary evidence is submitted. Some of the cases cited may have been settled. Others may be settled next week and others may hang fire for months. Many cases have been pending for years. No claim can be settled until all the evidence is in. The case is listed as pending the minute it is received and continues in that classification until settled.

The fact VA is settling more cases every month than it is receiving indicates it has sufficient personnel to handle the current load, in addition to the older cases that may be ready for adjudication each month.

VA has settled almost 600,000 World War II insurance death claims since 1940. This is at the rate of 75,000 a year or 6,250 a month for about 8 years, which does not suggest indifference to service.

Paragraph 14, page 63: "The causes of this woe which afflicts the entire gigantic agency are basic in VA personnel and management. Many employees are so supported by political sponsors whom VA does not want to displease that they are above ordinary administration authority. And, as in any socialized insurance venture, many of the clients have not the slightest conception of their own responsibilities. Checks arrive without proper identification, without even notation as to what they are for. A mother will send in money with a message such as 'Please put this to my son's account—Mrs. Smith,' with the New York postmark the only clue as to who is who."

VA comment: VA is not a political agency. Employees qualify for their jobs under civil-service regulations and retain them under those same regulations.

The comments on the failure of clients to recognize their responsibilities are apparently prompted by the number of unidentified remittances received. These were discussed previously, at which time it was pointed out they once piled up until more than 2,000,000 were on hand. These have now been reduced to less than 200,000. Simplified forms and an educational program have assisted in securing the cooperation of the insured.

Paragraph 15, pages 63 and 64: "VA must handle its every procedure in strict accordance with a variety of rules and regulations and laws, whereas private business ventures need only remain within the law. Because public money is involved, officials must go through elaborate procedures to prevent cheating or go to jail for losses which businessmen would charge off rather than become involved in red tape."

VA comment: The author is correct in his belief that officials must maintain strict accountability in the expenditure of public funds.

Paragraph 16, page 64: "Some 24 veterans' organizations are officially recognized as having the right to represent individual veterans who have business with VA. Approximately 3,600 of these representatives have space in VA offices, sometimes doing business on a basis which enables favors to be repaid with favors. There are instances where these representatives actually are permitted to screen the cases to be handled by VA officials."

VA comment: Recognized veterans' organizations are provided space by VA by virtue of Public Law 268, Seventy-ninth Congress. These representatives do valuable work in preparing the cases of their clients for presentation to VA. In order that they may do this work they are given access to the basic files of the veterans they represent.

If the author knows of any abuses or improper actions in connection with this system VA would appreciate having them reported in detail so corrective steps may be taken.

Paragraph 17, page 64: "The veterans' organizations had so infiltrated the personnel that, in March 1947, VA had to circularize its employees, forbidding them to become officers of organizations recognized in presentation of claims. Scant heed has been paid to the order. The ranks of VA contact officers, adjudicators, and training specialists have been found to be stuffed with elected officers of local posts who thus are in a position to favor their own organization's clients."

VA comment: Veterans make up the great majority of VA employees. They are free to join any or all veterans' organizations for which they are eligible. The so-called order did not prohibit membership or holding office in organizations. It warned against holding office where an employee would be resolving cases presented by his own organization.

Paragraph 18, page 64: "Civil-service rules make it difficult to discharge a VA employee for incompetence. Consider the case of John Doe, who, when his supervisor could abide him no longer, had to be formally accused of 'conduct unbecoming a Government employee.' That was May 1945. For 2 months thereafter the boss, not the employee, was on the hot seat while a VA committee investigated the charges. The final result was a decision that the man should be fired. Instead, though, the Veterans' Administrator put him on probation, instructing his boss to make another report as to his progress in April 1946. This report showed no improvement as to Doe's work and attitude, so a month later all the old charges plus new ones had to be drawn up. This time, after weeks of deliberation, Doe was ordered fired as of June 13, 1946. He appealed, carrying his case to the Civil Service Commission. As a result five VA officials had to spend hours writing affidavits as to their knowledge of the case. That fall 4 days were consumed with hearings requiring the attendance of high VA officials. In March 1947 still more hearings were held. Finally, on December 4, 1947—2 years and 7 months after his boss had tried to fire Doe—the Civil Service Commission notified the Veterans' Administration that Doe could be discharged."

VA comment: Since the author does not name the employee, VA cannot discuss the case. The subject of the paragraph is actually civil-service requirements under which VA must operate and not the VA itself.

Paragraph 19, page 64: "The new executives brought into the VA by General Bradley have often found themselves in the untenable position of having responsibility without authority. Many have quit in disgust, leaving the field clear to prewar mossbacks. The ranks of these old fogies are solidifying, owing to promotions which the investigators found are almost always based on length of service rather than ability. Thus the top of the VA is clogged with executives who, being unfamiliar with modern methods, bitterly oppose them."

VA comment: Until branch offices were eliminated February 1, 1949, the organization of VA was exactly that set up by General Bradley and under which any people who came with him entered VA. In view of this it is difficult to see what the writer has in mind. Actually this paragraph seems to be devoted principally to name calling, an easy way to avoid specifics.

The idea that length of service disqualifies a person is rather unique. Seniority is generally recognized and rewarded outside Government. The author's conclusion that VA opposes modern methods does not jibe with the facts. Thousands of able executives from outside Government have entered VA since the war, and the organization is using "machine methods" in many operations where they have been found effective.

Paragraph 26, pages 64 and 65: "The investigators found that the lower strata of executives take their cue from those above, adding to their importance and ratings by splitting jobs into infinitesimal parts so that they require retinues of assistants, then resist any action reorganizing their activities which will reduce the number of people under them. Moreover, because of the difficulty of discharging an undesirable employee, the bosses are reluctant to initiate disciplinary action. The far easier way is to give excellent efficiency marks to the most incompetent workers, thus qualifying them for transfer to better positions."

VA comment: This paragraph represents the conclusions of the author or the investigators whom he mentions. Its value would have to be determined on the basis of his qualifications to have an opinion. On this

point VA has no knowledge. It is used chiefly as a springboard to the next paragraph.

Paragraph 21, page 65: "The result of such practices is poor morale and an exodus of employees who are good enough to find jobs elsewhere: 42 out of every 100 employees hired by the VA refuse to stay employed as long as a year."

VA comment: The author says 42 out of every 100 employees hired by VA refuse to stay hired as long as a year. This is offered as a horrible example.

VA figures show the annual turnover to be 34.8 percent, an average of 2.9 percent a month for 1948. This was the average for the entire Government.

Bureau of Labor statistics figures show that it compares with an average turnover of 4.4 percent per month for private industry.

Paragraph 22, page 65: "Such a situation makes of VA a sanctuary for the incompetent. Yet the investigators found that VA's organizational plan is unworkably complicated. The legislation which says a veteran is entitled to educational benefits under certain conditions fills less than nine pages of print. But the VA bureaucrat who has to determine whether veteran John Smith is eligible has to consider 497 pages of regulations, 120 pages of correspondence from the Washington office, plus 77 pages of regulations from his branch office and 300 pages from his section chief—many of them in difficult, obtuse wording. Altogether he has 994 pages of instructions to ponder over and a choice of 69 forms which he can throw at a veteran."

VA comment: The statement that the VA "organizational plan is unworkably complicated" is patently untrue. It is working. Its organization is certainly unusual in Government. VA is very nearly the only Federal agency that has an integrated organization. The others are confederacies of bureaus. The functions of VA originally were conducted by five separate bureaus or agencies. This arrangement was found so unsatisfactory that these agencies were brought together and integrated by act of Congress.

There are four separate and distinct educational programs being administered by VA. The laws setting these up are not quite so simple as the author suggests. He is entirely right, however, when he says the directives of various kinds are much more voluminous than the laws. The laws grant veterans the right to undertake training under certain broad conditions. The regulations must fit these conditions to specific situations, of which there are many. When the program first began expanding, at the time of demobilization, VA was required to fit the laws to many different situations and prescribe procedures for each. Simplification of these regulations and directives has been under way for months. All but a handful of service and station letters have been canceled. Branch office directives are being canceled as rapidly as possible. But there will always be more pages of regulation than there are of law. Every amendment to the basic laws must be implemented by new regulations.

The statement that the "VA employee has a choice of 69 forms to throw at the veteran" is incorrect. The veteran fills out one form when he applies for training and on entering his course fills out from one to three additional forms. The exact number depends on the type of course to be followed.

Paragraph 23, page 65: "Little people who are displeased with their lives sometimes make the most of their miserable authority by pushing veterans around. The investigators note there have been 'improper practices by regional offices in discouraging veterans with legitimate appeals from submitting them, and canceling appeals without proper authority.' This is extremely serious. No one knows what heartbreak has resulted from this denial of legitimate opportunity."

VA comment: If the practices outlined in this paragraph are being followed they should be reported specifically as they would be violations of both regulation and law. VA regulations require that when a veteran's application is disapproved he must be informed in writing of his right to appeal the decision to the Administrator. This right of appeal is granted the veteran by law.

Notices of this kind are mailed to veterans from VA offices throughout the country daily. Any violation is punishable by discipline or dismissal.

Paragraphs 24, 25, 26, page 65: "It must not be concluded from all this that everyone in VA is incompetent or lacks conscience. At the request of the House Appropriations Committee last year, J. R. Galbraith, chief of VA's Inspection and Investigation Service, told of many things wrong with the VA and made recommendations for correcting them.

"Galbraith declared that in VA offices some employees not only 'flagrantly' violate rules requiring them to put in a full working day, but habitually arrive late, bringing magazines and newspapers so they can better while away their time. Such goldbricking, he said, involves all classes from clerks to lawyers and doctors.

"Galbraith suggested 'radical surgery' on the 13 branch offices, stating that they 'have attempted to expand each and every service beyond needs,' that like the central office they have been 'aggressive in staffing' with 'indications of a desire to build an empire.' "

VA comment: Mr. Galbraith never testified before the House Appropriations Committee on the things attributed to him in this article. Here are the facts: He was asked by an official of VA to submit his personal views of what was wrong in VA and what should be done about it. This confidential communication, which was the opinion of one man, was submitted to a committee investigation at his request and in confidence. The one constructive suggestion contained in the quoted portion has to do with the elimination of 13 branch offices. This has been done.

Paragraph 27, page 66: "The Hoover Commission investigators contend the Veterans' Administration could be conducted a lot more efficiently if branch offices were consolidated and thousands of employees were eliminated. The Trundle Co. experts have evolved a reorganization program which would streamline the top-heavy agency. They calculate that by doing away with unnecessary office space and firing 7,000 surplus supervisors and 14,100 other employees—21,100 in all—the veterans could obtain better service at a saving to the taxpayers of $75,000,000 a year. That is 25 percent of the present pay roll."

VA comment: The branch offices again. They have been eliminated; in fact were eliminated before the article appeared; and virtually everybody in VA had been certain for at least 6 months they were going to be eliminated. This elimination calls for a reduction of 2,500 employees before the end of this fiscal year. The proposed budget, now before the Congress, calls for a further reduction of 10,000 man years. This same budget calls for a reduction of nearly $90,000,000, approximately 24 percent from the current fiscal year in funds for general administrative expenses.

Paragraph 28, page 66: "Summing up, however, the Hoover Commission's representatives view the situation pessimistically. They say that firing people alone as the result of outside pressure never can result in the remainder doing more work unless these people can be 'welded by some magic of top personality into a working team.' "

VA comment: The author says these are the conclusions of the Hoover Commission. If so, they have been or will be presented to the Congress of the United States for action. The Congress will decide upon their acceptability.

Paragraph 29, page 66: "In another decade it is estimated that the number of veterans and their dependents will have grown from their present 46,000,000 to include 62,500,000 persons, or 40 percent of the entire population, with Congress likely to expand rather than contract the benefits. Under existing laws our veterans alone received nineteen billions through 1947. It is estimated that the cost of maintaining the current program through just the next 10 years will require an outlay of forty-seven billions."

VA comment: This paragraph suggests a certain amount of crystal gazing and involves national policy in the future. VA does not feel qualified to comment on it.

Paragraph 30, page 66: "The least which can be demanded is that the Veterans' Administration be compelled to increase its efficiency so that veterans shall receive that which Congress intended for them and the Nation not go bankrupt because of a fantastic bureaucracy."

VA comment: Even if you accept everything the author has said previously you would still have to "swallow a camel" to go along with this paragraph.

One basis for determining the efficiency of an operation is the relationship of handling costs to the total volume of money handled. On this basis the VA is operating on less than 5 percent which is more efficient than most commercial or industrial organizations.

VA contends that veterans are and have been receiving the benefits the Congress has voted for them.

VA further contends that one of the most fantastic conclusions in the article is that the Nation that can stand the more than 95 percent of future benefits voted for veterans will go bankrupt because of the less than 5 percent needed to operate a fantastic bureaucracy.

Paragraph 31, page 66: "People who regard the pension, insurance, hospital care, educational aid, and other benefits being given veterans as idealistic forerunners of a new socialistic order for the entire population would do well to ponder what is happening at VA."

VA comment: VA agrees with the writer that the entire Nation would do well to ponder anything on which it spending billions of dollars. The VA is the creation of the people acting through their Congress, and the VA believes both the people and the Congress did ponder carefully before providing the benefits that have been granted veterans.

VA is exactly what its name implies * * * the administrator of laws enacted by the Congress for veterans, their dependents and beneficiaries. It is responsible to the people of the United States for its fidelity in carrying out those laws. It fully recognizes this responsibility and welcomes comment or criticism that will help keep the people fully and honestly informed as to its activities.

Addresses on the Occasion of the Conferral of the Degree of Doctor of Humanities on the President of the United States by Rollins College

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. PEPPER. Mr. President, on the 8th of this month one of the great colleges of this country, Rollins College, at

Winter Park, Fla., conferred upon the President of the United States, most fittingly, the degree of doctor of humanities. The degree was conferred by Dr. Hamilton Holt, president of Rollins College. The public orator on that occasion was the distinguished Governor of Florida, Hon. Fuller Warren. I ask unanimous consent to have incorporated in the Appendix of the RECORD the outstanding, fitting, and distinguished addresses made on that occasion by the Governor of Florida, as public orator; the president of Rollins College; and the President of the United States, as the recipient of the degree.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY THE PRESIDENT OF THE UNITED STATES

Governor Warren, President Holt, distinguished educators, and all the friends of this great school:

This is for me a very happy and a very solemn occasion. The Governor's address was a masterpiece. He has stated admirably the problems with which we are faced.

This visit brings to realization a hope that I have long entertained. I am deeply sensitive of the honor which this college has bestowed upon me.

Rollins College has served the State of Florida and the Nation faithfully and well through more than three score years. I shall always treasure the memory of this day and the parchment which admits me into the noble society of Rollins alumni. The men and women which this institution has given the world now for sixty-odd years have upheld the ideals of democracy wherever they have found their life work.

It gives me special pleasure by my presence here today to bear witness to the debt which we owe to the man who has guided the destinies of Rollins College for almost a quarter of a century.

Since he assumed the presidency of this institution, Dr. Holt has made it a focal point in our effort to educate American youth in principles of freedom under true democracy. You know, there is not a word in any language that has been so severely abused during the last 10 years as that word democracy. Some people make a travesty of the word. It is one of the greatest words in the history of the English language and it should stand for just exactly what we mean when we say democracy, and not for a counterfeit.

Dr. Holt has brought to his work distinguished leadership with a background of accomplishment in many fields. Although he will soon retire from active academic work, he will continue his labors for peace and international good will.

Never before has this country needed as it does today the leadership of thoroughly trained men and women. We must have leaders inspired from their earliest years with the ideals of true democracy.

Education is our first line of defense. In the conflict of principle and policy which divides the world today, America's hope—our hope—the hope of the world, is in education. Through education alone can we combat the tenets of communism. The unfettered soul of free man offers a spiritual defense unconquered and unconquerable.

We may not know what is behind the iron curtain, but we do know that the intelligence of the people in the embattled democracies of Europe, who live in front of the iron curtain, is the world's best hope for peace today.

Education is the most important task before us. The Congress should enact legislation authorizing Federal grants to the States to assist in meeting the operating expenses of elementary and secondary schools. There is general agreement that such aid can be given without interference with State responsibility for the scope and content of the teaching.

If our country is to retain its freedom in a world of conflicting political philosophies, we must take steps to assure that every American youth shall receive the highest level of training by which he can profit.

A soundly conceived Federal scholarship program in our colleges and universities is a necessary step in attaining this goal.

Education has been defined as a bulwark against the acids of fascism and communism. Neither of these totalitarian forms of government can survive examination by educated men and women—men and women free to search for the truth and imbued with the principles of liberty set forth in the preamble to the Constitution of the United States—the greatest document of government, in my opinion, that has ever been written by the hand of man. That Constitution gives us the rule by which to live together in peace. It gives us the means to see that justice comes to every man, be he big or be he small, be he rich or be he poor.

If this great institution will continue to turn out leaders, I am not at all afraid of what the next generation in the world will bring forth. We are working for peace. We want peace. We pray all the time for peace in the world. And to attain that peace, we must all learn how to live together peaceably, and do to our neighbors as we would have our neighbors do to us. Then we will have a happy world, and that's what we want.

ADDRESS BY HON. FULLER WARREN, GOVERNOR OF FLORIDA

A man who has been elevated to the highest position in the gift of the Nation by the untrammeled suffrage of all the people needs no introduction to this or any other American assembly. Whether the name of Harry S. Truman will echo down the corridors of time, whether he is marking or making an epoch in human progress, will not and cannot be decided today. Contemporary praise or blame is not the verdict of history.

But this we do know: The man who holds the office of President of the United States occupies the most exalted political position on earth. Not only is he the chosen leader and the servant of a free people, but he is their constituted spokesman in the affairs of the world.

Whether in politics, economics, ethics, or religion, a man may think and act as a reactionary, a conservative, a liberal or a radical. President Truman is liberal. What are the great liberal issues now before our people and all peoples that must engage the attention of statesmen? At least three of these are transcendent, and in each one of them President Truman has already played the role of leader. They are, in brief, the race issue, the economic issue and the peace issue. They are all fundamentally issues of justice.

The race issue is the issue of how to substitute helpfulness and hopefulness for hatefulness and despair in those regions here and abroad where two or more races live together in the same or proximate territories.

The economic issue is largely the issue of distribution. The human race can now produce enough to feed, clothe, and shelter every man, woman, and child in the civilized portions of the earth. But we have not yet learned how to distribute these blessings equitably. Surely the brains and the will power exist to work out an economy which will bring our people and all peoples to a planned and disciplined plenty, and this when accomplished will banish the curse of poverty from the earth.

The peace movement is nothing but the substitution in the international realm of law for war. We have substituted law for war within nations. But between nations the only final way for a sovereign state to assure its rights is by use of force, when applied by one nation to another is war. In other words, the nations of the world are in that state of evolution where, without a qualm, they claim the right to settle their disputes in a manner in which they would put their own subjects to death for imitating. Surely in an atomic age the peoples of the earth will not cease working for a "more perfect union," whose goal will be some sort of a world government with sovereign powers over states and peoples.

But its history, by its material power, by its moral prestige and by the genius of its people the United States is the key to these great issues. President Truman, by virtue of his office, is the key to the United States. It is for these reasons we have assembled here this morning to honor our President for giving his all in his commanding, but lonely, office to lead our country, and through our country the world, to higher and happier levels where justice and peace abide.

Mr. President, I have the honor to present to you Harry S. Truman for the honorary degree of Doctor of Humanities.

ADDRESS BY DR. HAMILTON HOLT, PRESIDENT OF ROLLINS COLLEGE

Harry S. Truman, it is not because you have put social ideals above material considerations; it is not because you have understood the human and spiritual problems of the millions of unknown men and women both here and abroad whose voices seem never to be heard; it is not because you have already followed the vision of a better land and a better world; it is not for these considerations alone that Rollins would honor you today. It is rather because of our faith in what you are yet to do that we, the representatives of Florida's seven institutions of higher learning, unite this morning to honor you.

As a pledge of our faith in laws yet to be drafted, in State papers yet to be written; as a pledge of our faith in your continuing and enlarging statesmanship-to-be, Rollins College confers upon you the degree of doctor of humanities and admits you to all its rights and privileges.

Time To Discuss Atlantic Treaty Demanded of Senate by Churchmen

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article that appeared in the Christian Science Monitor under date of March 15, 1949:

TIME TO DISCUSS ATLANTIC TREATY DEMANDED OF SENATE BY CHURCHMEN

The Protestant community in the United States has demanded that the American people be given ample opportunity to discuss the proposed North Atlantic defense pact before final action is taken by the Senate.

This demand was voiced by the 465 delegates who attended the National Study Conference on the Churches and World Order. These delegates were drawn from 48 Protestant communions and allied religious organizations, and came together at the call of the department of international justice and

PLAY LIBRARY
FEDERAL WORKS AGENCY

good will of the Federal Council of the Churches of Christ in America.

The assembled churchmen, following a 2-hour off-the-record presentation by Charles E. Bohlen of the State Department, made clear the fact that many questions would have to be answered before a final judgment could be given on this crucial issue of American foreign policy. With the Right Reverend William Scarlett, of St. Louis, in the chair, the conference declined to take a stand for or against the pact.

APPEAL TO SENATE

"The Atlantic Pact is now in the process of negotiation," the conference said. "We do not take a position with regard to that proposed pact because its final text is not now available to us and because there is no opportunity for this conference to study its principles and consider its implications.

"We call upon the United States Senate not to take final action on this pact until the American people have had opportunity to gain full understanding of its meaning."

From this point the Protestant churchmen went on to declare that regional pacts could add to the total of common security if they are genuinely within the universal framework of the United Nations; if they are based upon a natural community of interest and are, in fact, designed and operated to promote the general welfare of participating nations. Conversely, it was the unanimous judgment of the conference that "such pacts can add to insecurity if their words conceal what is essentially a military alliance which might validly appear to others to be aggressive."

The proposed pact was only one phase of the broader problem of Soviet-American relations discussed by the conference. In their message to the churches the Protestant religious leaders affirmed their conviction that war with the Soviet Union is not inevitable. Such a war was held to be improbable "given proper use by the United States of its power."

"The just society," it was said, "is impregnable to communism, which, although it may lift some burdens, fastens upon the common people other burdens grievous to be borne. Our major attention, accordingly, should be directed to establishing justice within the conditions of freedom throughout the earth."

DULLES GIVES KEYNOTE

Earlier in the keynote speech of the conference, John Foster Dulles, Presbyterian layman and member of the United States delegation to the United Nations, had declared that "so far as it is humanly possible to judge, the Soviet Government, under conditions now prevailing, does not contemplate the use of war as an instrument of its national policy. I do not know any responsible high official, military or civilian, in this Government or any other government, who believes that the Soviet state now plans conquest by open military aggression."

With this judgment the conference agreed. There was a disposition, however, to be critical of what was felt to be the undue influence exercised by the military in the formulation of American foreign policy.

"We do not reflect upon the patriotism nor the sincere desire for peace of the leadership of our armed forces," it was said. "Their professional training, however, does not qualify them to lay down the strategy for peace and to calculate the risks that always have to be taken for peace if we are to win it just as risks have to be taken in war for victory."

The conference deplored the seeming lack of a basic national strategy for peace. Lacking, too, it was said, is coordination sufficient to insure that all forms of official activity, whether military or civilian, fit into that strategy to insure its success.

KEEP DOORS OPEN

Bishop G. Bromley Oxnam, of New York, who presided over the conference section on The Churches and American Policy in Europe, urged that the doors of direct negotiation between the Soviet Union and the United States be kept open. In addition to formal diplomatic negotiation, Bishop Oxnam proposed an interchange of religious, educational, business, and labor leaders between the two countries.

No skepticism regarding the achievements of the United Nations was heard during the 4 days of the Cleveland conference. Delegates called upon the people of the United States to give the United Nations their moral support and to make apparent to the Government their desire that the United Nations be not by-passed at any time. Delegates voiced approval of the policies pursued by the United States in the United Nations on questions related to the independence of the Korean and Indonesian peoples.

It was also affirmed that the goal of multilateral and balanced reduction of armaments, subject to adequate international inspection and control, should be kept at the forefront of our National policy.

CONFERENCE REFUSES

Several delegates sought to have the conference declare itself in favor of one or another of the world government proposals currently being debated across the country. This the conference refused to do. That section of the conference dealing with the United Nations, while conceding that world government was a goal to which the churches should aspire, insisted that the agitation to establish world government now was a dangerous procedure.

Waltham Case Seen Tragedy

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. DONOHUE. Mr. Speaker, I desire to call the attention of my colleagues to an article by Lawrence R. Goldberg which appeared in the Boston Sunday Post newspaper, Sunday, March 13, 1949.

This story graphically depicts the disintegration of the American watch-manufacturing industry to the particular detriment of our vital national defense resources.

It is my earnest hope that every Member of this House will carefully read this article and be convinced that this Congress is morally bound to adopt adequate measures for the protection of our American working people and the preservation of our vital defense structure.

The article follows:

WALTHAM CASE SEEN TRAGEDY—CONTINUING WATCH FIRM ESSENTIAL TO NATIONAL DEFENSE—FORCES NEED SPECIAL TIMING INSTRUMENTS

(By Lawrence R. Goldberg)

The more one delves through the fact file of the American Watch Institute, the more one becomes convinced that the closing down of our Waltham Watch Co. is one of the top tragedies of the American system of watch manufacturing.

The truth of this becomes evident when one realizes that although all types of manufactured goods, such as automobiles, electrical appliances, etc., have been produced in important quantities in all industrial countries of the world, the United States and Switzerland are the only two who have succeeded in developing a jeweled watch industry of any importance.

Continuation of the Waltham Watch Co. is essential to the defense of not only the United States but of the whole western democratic world. This can be seen clearly in the following facts:

UNABLE TO FUNCTION

Without special timing instruments of extremely high precision, a modern military establishment would be virtually unable to function. This is true in an absolute sense in the case of long-range air and naval operations. (The basic concepts of modern Western Hemisphere defense.)

Such timing instruments can be produced (in quantity, at any rate) in only two countries of the world, the United States and Switzerland. Should the productive capacity of either of these be allowed to decline, or disappear altogether, the worldwide balance of military potential would be seriously altered.

Switzerland is in the opposite hemisphere from the United States. In the past war, all shipments of military timing instruments from Switzerland to the Allies were cut off. It may be said, then, that the defense of the United States and of the community of nations associated with us supposes the existence and dictates the growth of the American jeweled watch industry.

ONLY CONTACT OF SUBS

Accurate timepieces are indispensable in the operation of military aircraft and submarines. When a submarine is submerged, its time instruments are just about its only contact with things in the outside world. Without a drift sight and meter, the radio compass, the octant, and accurate timepieces, a long-range bomber would be helpless. An aerial navigator is generally equipped with two master navigation watches and a hack (wrist) watch.

The master watches must be accurate to a fraction of a second, and are checked regularly with the time signals from Greenwich or the Naval Observatory in Washington. (The fact that the navy maintains an observatory demonstrates the fact that time is of the essence in naval operations. If a navigator's watch should be as little as four seconds off when he takes a celestial shot with his octant, his plane would be a mile off its course.

In an artillery barrage, seconds of time may mean the difference between success and failure, even of life and death, to our own forces who may be required to move into an area synchronously with the forward creep of the bombardment. The same is true of integrated air-ground attacks.

START INSPECTION SYSTEM

In fact, virtually all operations of a mechanized nature, whether military or otherwise, must be founded on a precise measurement of time. In the 1880's, when the mounting number of railroad accidents was shocking the Nation, one of the first and most effective remedies found was the establishment of the watch-inspection system. Today a railroader must own a watch which meets certain specifications (it must, incidentally, be an Elgin, Hamilton, or Waltham) and he must submit this watch for inspection every 2 weeks. The critical importance of timing was thus recognized in efficient and safe railroading.

The story of marine chronometers is, perhaps, the most vivid illustration of this necessity. Modern naval operations (and ocean navigation generally) requires that ships be equipped with timekeeping instruments whose rate is constant to the minutest fractions of a second.

The marine chronometer, a special timepiece of marvelous accuracy, was first developed around the middle of the eighteenth century to serve this purpose. Up until the time of the United States entry into the last war, the navies of the world depended

largely on Switzerland and England for their supply of marine chronometers.

They were individually designed and made carefully by hand; the yearly production scarcely exceeded 300 or 400. After Pearl Harbor, which was the signal for the unparalleled expansion of our naval forces, Switzerland, the major sources of supply of marine chronometers, was entirely cut off. If this eventuality had not been anticipated, the situation would have been of crisis proportions.

The only place to turn was the American jeweled watch industry, which until then had never manufactured a marine chronometer. But to the immense relief of the United States Navy (and Allied navies) an American watch manufacturer, alerted in 1940, had had time to tool up and was able to produce thousands of chronometers in an unbelievably short time.

PROVIDE MANY ITEMS

The first, in fact, was delivered only 3 months after Pearl Harbor. The American manufacturer also improved the design of marine chronometer and the American-made instruments have set an entirely new standard of excellence for performance in the field. By 1945, a second American company was ready to produce marine chronometers had they been needed.

The essentiality of the American jeweled watch industry in national defense is not limited to the production of accurate military timepieces alone. Dozens of items of direct military consequence were manufactured for the government or its contractors during the war by the jeweled watch industry. Many war implements require precision manufacture of which the jeweled watch manufacturers alone are capable.

Other industries, such as aircraft, automobile, and one or two more, work occasionally to tolerances as close as those habitual in the jeweled watch industry, but this industry alone uses these tolerances in the manufacture of tiny parts, so tiny that they can scarcely be grasped by the naked eye. No other industry has this know-how, nor can obtain it short of long years of manufacturing experience.

From 1942 to the last months of 1945, the American jeweled-watch industry manufactured no watches for the civilian market but devoted itself exclusively to the production of war materials. Despite this fact, this industry in some cases needed as much as 2 years to meet the engineering and tooling requirements on certain new products which were needed by the military forces and which no other industry was qualified to undertake. If the industry had been large enough to support a greater management engineering and tooling organization, these products could have been supplied much faster and the military striking power of the Allies enhanced in a critical hour in history.

The evolution of the American system of watch manufacture can be illustrated by a single comparison. In 1809, Luther Goddard began the manufacture of watches in Shrewsbury, Mass. By the time he had retired in 1817, he had produced about 500 watches. This was the largest number of watches ever produced by an American manufacturer up to that time. By 1905, a single American watch manufacturer was able, through the use of power-driven machinery, to produce several thousand watches in a single day.

INDUSTRY REVOLUTIONIZED

Within that span of years the art of watchmaking had been completely revolutionized. It was the work, of course, of many hundreds of engineers and technicians. One man among them, however, was particularly notable, a New Englander, Aaron L. Dennison, who is generally celebrated as "the father of American watch manufacture."

In watch manufacture over 700 different sizes of materials and over 140 different metallic alloys are employed.

The base plate or foundation of a watch contains 42 holes, many of which must be accurate in size to one ten-thousandth of an inch and accurate in their location on the plate to three ten-thousandths of an inch. Over 100 operations are required in making such a plate.

The smallest screw used in a watch looks like a speck of dust to the naked eye; it is twenty-sixth one-thousandths of an inch long, weighs one and one-third one-hundred-thousandths of an ounce. Twenty thousand of them will barely fill a thimble. Yet each must be perfectly threaded and slotted.

The wire used to manufacture hairsprings for a lady's watch is approximately four-thousandths of an inch wide and three-quarters of a thousandth of an inch thick. The tolerance on width is five one-hundred-thousandths of an inch and on thickness the tolerance is one one-hundred-thousandth of an inch. Five strands of this wire stacked together would equal the thickness of a human hair.

FOUR THOUSAND OPERATIONS REQUIRED

There are about 4,000 operations in the manufacture of a fine American watch, of which a large percentage are necessary inspections. As one American manufacturer puts it, "almost half of the operations are inspections, of which 20 percent are inspections of inspections. In this plant there is one inspector for every six production workers."

Over 60 American companies have started out in the manufacture of jeweled watches, but only three—Elgin National Watch Co. (Elgin and Aurora, Ill., and Lincoln, Nebr.), Hamilton Watch Co. (Lancaster, Pa.), and Waltham Co. (Waltham, Mass.) have survived. All are over 50 years old.

Four American manufacturers of clocks and other time instruments make clock-type wrist and pocket watches, most of which are nonjeweled. These are General Time Instruments Corp., E. Ingraham Co., New Haven Clock & Watch Co., and United States Time Corp.

Bulova Watch Co., an importer of movements from Switzerland, manufactures an undisclosed number of jeweled watch movements in the United States.

The following figures show those with imported movements, and those manufactured by Elgin, Hamilton, and Waltham, from 1936 to 1947 (excluding watches of one jewel or none):

	Imports	Elgin, Hamilton, Waltham
1936	2,131,000	1,396,000
1937	2,947,000	1,504,000
1938	2,135,000	965,000
1939	2,700,000	1,290,000
1940	3,267,000	1,484,000
1941	4,169,000	1,886,000
1942	5,107,000	885,000
1943	7,609,000	271,000
1944	6,754,000	174,000
1945	8,709,000	618,000
1946	9,039,000	1,124,000
1947	7,357,000	1,582,000

From 1942 up to the last months of 1945, Elgin, Hamilton, and Waltham manufactured no watches for the civilian market, their full production being donated to war work.

NEED YEARS OF TRAINING

One of the great dangers to national defense is to ignore the shutting down of the Waltham Watch Co. Its personnel cannot be replaced on short notice. The ability to work to such fine tolerances with minute parts, as are present in this highly specialized industry, can be acquired only after many years of training, and careful initial selection on the basis of psychological and physical fitness.

There are only 10,000 such personnel in all America—one-third of them being attached to Waltham. This personnel attended special schools designed to make them specialists, and were participants for many years in extensive training courses conducted within the plant.

Selection of such personnel involves careful psychological testing and requires even an analysis of the chemical characteristics of the applicants' body. (For example: A person whose perspiration is excessively acid can spoil hundreds of precision implements while still uncased by merely being in close proximity of them for a period of time.)

Every one of the Waltham employees is an essentiality in our national defense.

With all democratic countries throughout the world now being alerted to a third world war, and America spending billions in defense measures, it would be penny-wise, pound-foolish, to assume that the shut-down of the Waltham Watch Co. is just another financial failure.

There is much more than meets the human eye in the knocking over of this tremendously essential, highly specialized, industry. Let's not wait until it is too late to make this discovery.

Our Greatest Danger: Financial Rocks Ahead

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Greatest Danger: Financial Rocks Ahead," published in the Detroit Free Press of February 23, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE AMERICAN DISGRACE—OUR GREATEST DANGER: FINANCIAL ROCKS AHEAD

This country is faced with the gravest danger in its history.

It is a disaster worse than war.

For we have always been able before to rebuild after war and to grow mightier.

That time has gone.

The imminent danger with which we are confronted transcends all political differences.

It is not a question of Republicans against Democrats or New Dealers against Old Dealers. It is not a conflict between unions and management. It has nothing to do with the progress of social security, national health or any other controversial question.

The cold stark ugly fact is that the United States is rapidly drifting into national bankruptcy.

Unless something is done to stem the tide we will be, within a very few years, no better off than the nations of Europe.

It is this condition for which the Moscow Communists are patiently and hopefully waiting.

They know what is coming unless we wake up. They can well afford to wait.

Who will be responsible for this national collapse?

Let's be honest about it. We have all been guilty.

No party, no class, no group has brought these conditions about.

We have drifted into it from generation to generation.

The insidious enemy which is serving Moscow as the deadliest of fifth columnists is mismanagement.

It is bitterly ironic—but a great laugh for Stalin—that America upon whose altars we have placed the god of efficiency is dying of dryrot because of gross and stupid inefficiency.

The most powerful business corporation in the United States would go into bankruptcy within a year if it were so wretchedly managed as is the business of our Federal Government today.

There is this difference, however: The private corporation, mismanaged and criminally extravagant, would pay for its own sins and go broke; but the Government does not go out of business. It simply borrows more money which has to be paid through taxation until all business ceases, the factories remain idle and the people starve.

That is the history of all mismanaged nations since civilization began.

We are now rapidly coming to that period.

Only courage and vision can save us.

Again, this newspaper states as emphatically as possible: This is not a party issue.

We are the victims of our own follies and the follies of past generations.

The guilt rests with both parties and all classes. We thought our wealth would never end.

Today the President of the United States, a Democrat, is working shoulder to shoulder with the only living ex-President, a Republican, to save America.

Never in all our history has there been a more completely nonpolitical approach to the prevention of so great a tragedy. Here, in brief, is the picture:

Eighteen years ago it cost $4,600,000,000 to run the Federal Government.

Today it costs $41,858,000,000.

Under President Hoover there were 300 agencies.

Today there are 1,800.

The reason for this?

Lack of organization and the fight of the bureaucrats of both parties to block reform.

In 1931 Hoover begged Congress to give him authority to get the Government on a working basis. Both Republicans and Democrats rejected the proposal for just one reason:

It might affect the soft jobs of political parasites of both parties.

Ten times Hoover pleaded and 10 times was he refused.

Red tape was killing the Nation.

When Roosevelt came in he was granted powers to meet the depression emergency, but when he asked for power to reorganize he was met with the same stone wall of personal selfish opposition.

With the second war over in 1945 it was obvious to everybody regardless of party affiliations that something had to be done.

President Truman and the Congress agreed.

To eliminate politics it was also agreed that there should be six Democrats and six Republicans on a Commission to draw up a plan of reform.

It was unanimously agreed that Herbert Hoover was the one man in all the United States best qualified to head the group.

Mr. Hoover is 73 years of age. He has no political ambitions of any kind. Regardless of party lines he has served the Nation under President Truman faithfully and brilliantly both in war and peace.

The Commission has drawn the best brains from all walks of life in the United States.

Never before, not even in time of war, has there been such a galaxy of experts on management.

For 2 years these experts have studied our Government. Now they have ready 15 separate reports. All of these mesh into one magnificent presentation of what is needed to save us from national bankruptcy, and to meet Moscow.

No American of intelligence can read these reports without gasping in horror at our dangers.

Yet there is a grave possibility that the greatest task of its kind ever accomplished in the history of America will go for naught.

The mean and petty politicians of both parties are seeking to destroy it for their own selfish ends.

As Hoover stated to the Senate committee, the danger is as it was in all other such efforts, "They died of grasshopper bites."

Here, then, is the call to the American people of every honest shade of political belief.

Here is the challenge to save us from the fate for which Moscow is waiting.

Shall we continue to drift?

Or shall we be aroused in time by a mighty outburst of public sentiment?

The people of America have crusaded for war bonds, for Red Cross, for Community Chests, for every worthy effort devised by the mind of man.

Twice in one generation they have gone to war to fight for human liberty. They have poured forth the lifeblood of their youth and their treasure. They have willingly and without protest taken upon their backs the most staggering burden of debt history has ever recorded.

Has all this been in vain?

The Bible has said that where there is no vision the people perish.

Will the leaders of the Republican and Democratic Parties, the National Association of Manufacturers, and the AFL and the CIO, the church leaders of all denominations, every civic-minded group, every noonday club, every individual citizen, unite as we have always done in war, to campaign against the evil which is destroying us?

Will there come a clarion call for battle?

Only public opinion can save the United States from the bureaucrats who stifle us.

The politicians of neither party will move unless they hear the mighty roar of an aroused populace. That is what they dread, the only thing they fear.

"Public sentiment is everything," said Lincoln. "With public sentiment nothing can fail. Without it nothing can succeed."

Our one hope is the people themselves.

Facing the Communist horde, surrounded as we are by darkness and chaos across the world, this must be a holy crusade, a fight for God, for country, and for humanity.

Trouble Ahead

EXTENSION OF REMARKS

OF

HON. FORREST C. DONNELL

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Post of March 14, 1949, entitled "Trouble Ahead," relating to John L. Lewis' order to suspend mining of coal east of the Mississippi for a 2-week memorial period.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TROUBLE AHEAD

The Lewis order to suspend mining east of the Mississippi for a 2-week memorial period will distress miners who will be deprived of their pay and result in loss of revenue and lay-offs by coal-carrying railroads. But with coal stock piles at the highest level reached since 1942, demands for coal slackening and prices slipping, many coal operators will welcome the shut-down, while industrial activity in general will not be seriously affected. Nevertheless, this strike, which Mr. Lewis, by a distorted interpretation of the UMW wage contract, insists is an authorized stoppage, constitutes a threat to the national welfare. For it is a demonstration aimed at coercion of the Senate of the United States—the latest move in the long fight waged by the mine leader to block confirmation of the appointment of Dr. James Boyd as director of the Federal Bureau of Mines.

We hope Senator O'MAHONEY is right in his belief that this arrogant attempt to dictate to the Senate will insure favorable action on the nomination by the Committee on Interior and Insular Affairs, of which he is chairman. But, regardless of the fate of Dr. Boyd, this latest move of Mr. Lewis is a reminder of the dangerous consequences of depriving the Government of the right to resort to injunctive relief in case of national emergency strikes. For the strike just called is only a preliminary skirmish serving the dual purpose of a demonstration against Dr. Boyd and a means of strengthening Mr. Lewis' bargaining power when the negotiation of a new contract gets under way this spring. By reducing the size of coal stock piles, and possibly preventing further reductions in coal prices, the UMW would be in a better position to press for another round of wage increases and benefits and to enforce its demands by calling another strike that would really create a national emergency.

At present the injunction weapon makes it possible for the Administration to delay a strike for at least 80 days. But the pending labor bill with its feeble provision for a 30-day cooling-off period while a Presidential fact-finding board is investigating the dispute, would not put any compulsion on unions to refrain from striking during the 30 days, and the recommendations of such boards would be purely advisory. If he were freed from the restraints of the Taft-Hartley emergency strike provisions, Mr. Lewis could close the mines until transportation tie-ups and industrial shutdowns either forced the mine operators to sign a new contract on his terms or else compelled the Government to intervene as a last resort to protect the public interest.

Rice W. Means

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rice W. Means," published in a recent issue of the Veterans of Foreign Wars magazine. The editorial relates to Rice W. Means, one of the founders of the Veterans of Foreign Wars, and a distinguished Member of this body for a number of years.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RICE W. MEANS

Rice W. Means, past commander in chief of the Veterans of Foreign Wars, and a member of the founders' group which organized

the Army of the Philippines in Denver, Colo., in 1899, died at his home in Denver January 30, after a prolonged illness. He was the first commander in chief to be elected when the three veteran societies were consolidated in 1913 to form the VFW.

The distinguished soldier, statesman, and civic official was buried with full military honors in Denver on February 2. Commander in Chief Lyall T. Beggs was unable to attend the funeral services, but was represented officially by Past Commanders in Chief Ray H. Brannaman and Gus E. Hartung, and a member of the national council of administration, Joseph J. Jacques, all of Denver.

Upon hearing of his distinguished predecessor's death, Commander in Chief Beggs issued the statement:

"In the passing of this beloved comrade, the Veterans of Foreign Wars has suffered a very real loss. Rice Means, with an outstanding record in two wars, was always true to the ideals of the organization which he helped to found. His heart was always with the veteran. Though he served his city, his State, and his country in many important civilian capacities, he never forgot his obligation to his comrades in arms. Comrade Means gave unselfishly of his time and energy to causes which concerned those who, like himself, had given much for their country.

"We pause in the observance of our fiftieth anniversary to salute the memory of a comrade whose name will be perpetuated down through the years because of the contribution he made to the establishment of our fraternity as a permanent, Nation-wide association of overseas veterans."

Rice Means was one of the small group of veterans of the fighting in the Philippines who met in Denver in 1899 and founded the Colorado Society, Army of the Philippines, one of the groups which later merged into the Nation-wide organization known as the Veterans of Foreign Wars.

Means was born at St. Joseph, Mo., November 16, 1877, moving to Colorado with his family 10 years later. He attended school in Denver, and later entered the University of Michigan, where he received his law degree in 1901.

At the outbreak of the Spanish-American War, while still in school, Means enlisted in the First Colorado Infantry and was commissioned a second lieutenant. He served in the Philippines campaign with this regiment and won a promotion. He was twice recommended for the Congressional Medal of Honor and was cited three times in official orders. He was awarded the Distinguished Service Cross for gallantry in action during the attack on Manila.

Means enlisted in the Colorado National Guard in 1905 and was twice the winner of the Hogle trophy for being the best-drilled soldier in that organization.

In World War I, Means held the rank of lieutenant colonel. He commanded the Fortieth Division School Arms, then went overseas, where he was in command of the Fourth United States Infantry in the Meuse-Argonne campaign. He came home in command of the One Hundred and Fifty-seventh Infantry, Colorado's own.

From 1902 to 1904 Means served as judge of Adams County, Colorado. He was the Republican nominee for Congress in 1908, and was an unsuccessful candidate for the United States senatorial nomination in the 1920 primaries. From June 1 to September 1, 1923, he was manager of safety for the city and county of Denver. On November 4, 1924, he was appointed United States Senator from Colorado, a post he held until 1927.

For several years after 1928 Means lived in Washington, where he was owner and publisher of the National Tribune and Stars and Stripes.

The current general order, appearing in this issue of Foreign Service, directs that the charters of all posts be draped for a period of 30 days in tribute to Past Commander in Chief Means.

As a Noted Negro Sees It

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jackson (Miss.) News of March 11, 1949:

AS A NOTED NEGRO SEES IT

Joseph Winthrop Holley, D. D., LL. D., is president emeritus of Albany State College, at Albany, Ga. He founded that institution in 1903 as the Albany Bible and Manual Training Institute. Until 1917 it was operated on private funds. Then the State took it over as a college for Negroes, and it became the Georgia Normal College. In 1942 its name was changed to Albany State College.

Dr. Holley recently published his autobiography entitled "You Can't Build a Chimney From the Top." The book is remarkable in several respects. It is the story of a successful Negro educator following the footsteps of Booker Washington and George W. Carver.

It is the story of a devout Presbyterian who has held high office in the church. It is the story of a leader who has sometimes been out of step with his own people in their struggle for advancement, and who is sure that his way is the right way. It is a revelation of canny Negro psychology in dealing with white men. It is a tale that will infuriate a great many radical Negroes, at whose anger this 74-year-old son of slaves will merely smile compassionately.

For Dr. Holley's motto is: "Push, but don't shove; don't fight—compromise. Love God and your fellow man, work hard, gain respect, and time will bring you victory."

Says Dr. Holley: "We colored people can get what we want, if it is within reason, from a white man if we approach him in the right way. * * * My father taught me as a child never to go to a white man for a favor just before a meal and never go to his front door. Wait until the meal is over and he has had time to get his pipe or cigar, and then go to the kitchen and tell the cook you would like to speak to Mr. John Doe."

He tells of his approach to Judge Putney to ask him to give him a cow for his school. The Negroes gathered to see whether "Fess" Holley, principal of the school, would go to the front door or the back door. He went to neither; he went to the barn, and sent a laborer in to ask the judge for an interview. A white maid came out and ushered him into the parlor.

When the judge had finished his meal he greeted Dr. Holley cordially. The professor immediately raised the ante to two cows, which he offered to buy. The judge said he would be glad to donate them for so worthy a cause. This upshot was that Dr. Holley came away with two cows and two calves. On the way home he thought the gift should be matched by one of his own people, so he showed the cows to a Negro farmer, who immediately offered a pig.

In 1928, Dr. Holley was sent to the Congo to study the missionary program of the Presbyterian Church. There he made several speeches through an interpreter. In one he took as his text, "Though your sins be as scarlet, they shall be as wool." The interpreter told him that was a hard message to get over, as African sheep do not have wool. In another audience he said, "Let the white man sing, Wash me and make me whiter than snow; and let us sing, Wash me and make me blacker than a crow." That stumped the interpreter; he informed Dr. Holley that in Africa crows are white.

"My higher education," says Dr. Holley, "should have been broad enough to have taught me to reason that wool that would keep a sheep in the Klondike from freezing might burn him to death on the Equator; and also that as I had to leave my dark clothes in Belgium and get a white suit, including a helmet, the crow would need white feathers to survive in the Tropics.

In 1932 the Georgia Legislature passed a bill creating a board of regents to conduct the University of Georgia and its 26 branches, including the three Negro colleges.

The board presented plans which in Dr. Holley's opinion would ruin the work of these colleges, which were chiefly engaged in training students in agriculture, trade, and home economics. He therefore appealed to the governor-elect, Eugene Talmadge, to favor a bill to separate the Negro colleges from the university, and set up a State university for Negroes which would offer all the courses taught in the white schools.

Governor Talmadge directed him to draw the bill and tell speaker of the house E. D. Rivers that he wanted it passed, and Rivers promised to put it through. Then Dr. Holley began to get a bit cold around the legs. He told Rivers that the chancelor would fight it. Rivers said he would see the chancelor.

Next day the chancelor summoned Dr. Holley. There was an argument. Finally the chancelor said it wouldn't be necessary to pass a bill; that the board of regents could take the necessary action, and would do so.

In high spirits, Dr. Holley informed the governor that everything had been changed, and Talmadge dropped the measure. And the chancelor and the board of regents did nothing at all. Apparently nothing has been done to this day. By the time Talmadge was again governor in 1942, Negroes themselves were petitioning him not to separate the management of Negro colleges from the white.

Dr. Holley's advice is still to go slow, and pay no attention to CIO organizers who want Negroes to vote as a bloc. The real leaders of the white race in the South are in a mood to give Negroes a better deal than formerly, and in order to bring this about there must be a real spirit of cooperation between the leaders of both races. Only in this way can pressing problems be worked out.

What Constitutes Security?

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able editorial entitled "What Constitutes Security?" from the Ephraim Enterprise of March 4, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT CONSTITUTES SECURITY?

"The most vicious present definition of security is that it resides in political power, or in government."

That is a statement made by Utah's own Wallace F. Bennett, president of the National Association of Manufacturers, in a speech delivered at Des Moines, Iowa, on February 18.

And how true is that statement. Also how untrue and vicious is the belief of so many that governmental agencies can support them and insure them security from want and fear.

We find it locally. Many people have the idea that the city can do most anything—build and maintain a hospital, put in new sidewalks, build a new electric plant and distributing system, oil all the streets, maintain recreational centers, and so forth—but they seldom stop to think where the money for such things is coming from, even in so small a political unit as the city. It seldom occurs to these people that the residents of this city must pay for all improvements made here and that there is a limit to the amount of revenue the city government can collect from its citizens.

And when it comes to State and National matters, few indeed are the people who realize that whatever the State or Federal Government pays out, must first be collected from the people. Governments produce no wealth but at the present time the various governmental units—local, school district, county, State, and National—take about one-third of the income of the citizens. In other words, if you are a worker, you work 1 day for the Government for each 2 you work for yourself. The income from that third day is taken by the Government and distributed among the various governmental bureaus, agencies, and departments, and used to pay the so-called pensions given to old folks and veterans, etc., and to maintain the armed forces, build roads, and pay for the thousand and one other governmental activities.

For years the Government has been collecting social-security taxes from workers and employers, and employment-security taxes from employers. It is supposed to take care of workers in times of old age and of unemployment. It is based on a system that is similar to annuities in life-insurance policies. There is one important difference, however. Life-insurance companies invest their receipts in industry, real estate, buildings, power companies, and other things which produce new wealth and services. Money paid in for social security, teacher retirement, employment security, etc., is invested in what? Most of it is used to pay current governmental expenses, or invested in Government bonds issued to pay current expenses, including interest on debts for past expenses. In other words, the money the workers and employers have been paying in for social security, is secured by debt, nothing more or less.

So just how secure is security that resides in political power, or in Government? Think back just a few years when school teachers were paid by warrants which could not be cashed; when the county paid its workers and its obligations in warrants which might be cashable at some future date. It was then that everyone realized that governmental agencies could pay out only that which they first collected from the people. Hard times had hit the taxpayers. Only a fraction of them could pay their taxes. County and school-district coffers dried up; States went in debt (if their credit was still good), and the Federal Government started deficit spending, debasing of the currency, etc.

As Mr. Bennett also said in his speech, "Security is not the product of political power," a truth which should be pounded home to every citizen of this Republic.

Mr. Bennett then offered a definition for the word "security":

S for spiritual strength.
E for enterprise.
C for character and courage.
U for understanding and unity.
R for responsibilities.
I for individual integrity.
T for truth.
Y for you—you must win this fight for security and truth.

Yes, the greatest need of security in our time is for spiritual and moral strength and stamina. Material security will be a sure byproduct of these, but never of poltical promises.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Difficult To Get Action," published in the Omaha Daily Journal-Stockman, of March 10, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIFFICULT TO GET ACTION

After 2 months of messing around, Congress has made no headway at all in the matter of shaping up farm legislation. Congress has become an unwieldy body, a fact which has long been obvious. It is difficult to turn off a piece of business and have it done, with the result that many important matters hang over till some action becomes imperative. Usually a hodgepodge of compromise is the result.

There was pressure on two pieces of farm legislation, and it is getting too late for either. One was a provision for Government-acquired grain-storage space, to take care of carry-overs from last year's crops, and create added space for this year's crops. But it is realized that even now, should such legislation be completed pronto—which it won't be—such added storage could not be made available by the time of this year's harvests. The other was a stipulation to exclude 1949 plantings in allotting acreages permitted in 1950 and later years. This would be aimed primarily at cotton, but it is already too late for that to be effective. Thus cotton growers are presumed to be expanding their acreages this year, in order to have handsome acreage allotments to cash in on future price supports.

The larger question of price supports is still a long way from action, though some hearings have been held. This matter of price-support policy is a prime administration worry. Up to January 31, Government loans and purchase agreements were in effect on a total of 613,614,642 bushels of grains, in addition to a considerable volume of beans and peas. Corn may still be sealed or put under purchase agreement up to next June 30, and by that time it is estimated that the total may reach 800,000,000 bushels of all grain, potentially belonging to the Government. Carry-overs are figured at 700,000,000 bushels of corn and 300,000,000 bushels of wheat. Add those totals to this year's crops, that is surpluses, with the added fact that farm storage is pretty well occupied and probably will be all summer, and you pose the problem of price-support administration.

Such considerations work out in favor of an eventual flexible price-support program once Congress gets around to a decision, though the demand for a rigid policy, at 90 percent of parity, is still to be reckoned with, despite the fact that such a program would inevitably lead to complete control over the operations of individual farmers.

The upshot of it all is that there can be no such thing as a permanent farm program, or one that at any one time is satisfactory to all concerned.

Dedication of Mississippi Rural Center

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. STENNIS. Mr. President, the great Methodist Episcopal Church of my State has recently established a Negro community center in Marion County, Miss., which is undoubtedly one of the finest developments of its type of any rural area anywhere in the Nation.

I ask that there be printed in the RECORD an account of the dedication of the center, as reported in the Columbia (Miss.) Sunday Mirror.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSISSIPPI RURAL CENTER FORMALLY DEDICATED

Before high-ranking church officials and a large audience of whites and Negroes, the Mississippi Rural Center—the first of its kind in the United States—was officially dedicated Monday and turned over to the Negroes of the Lampton community.

Built to serve all the Negroes of the southern part of Marion County, the center was dedicated to purpose of developing the personality of the Negro youth of this part of Mississippi by Bishop Marvin A. Franklin, bishop of the southeastern jurisdiction, Mississippi conference of the Methodist Church.

The act of dedication was led by Bishop Robert N. Brooks, of New Orleans, bishop of the central jurisdiction (the Negro conference of the Methodist Church, including both Mississippi conferences, Louisiana, Texas, and west Texas).

The $100,000 plant was built with funds from the Women's Society for Christian Service, the women's organization of the Methodist Church.

DEDICATORY ADDRESS

In the dedicatory address, Bishop Franklin endorsed the statement made by the president of the Negro WSCS for Mississippi in which she said, "Negro children want everything the children of other races want, and Negro children need everything children of other races need," he said that he would like to see every child of every race have what his child would have.

Bishop Franklin reviewed the stand toward the Negro race that had been taken by

those who had filled his office before him. He told how Bishops Galloway and Decell had striven to afford the Negro race more opportunity.

Going back to the original theme of the message, the bishop told how the great need in this Nation today was integrated personalities. "We need minds that will do creative thinking," he said; he also pointed up the need for better social and religious life.

"Every child should have a chance to play," the bishop said, "and a place far removed from the honkey-tonks."

He brought out that in the center the Negro youth would have an opportunity to breathe pure air and demonstrate that the Negro and white could live together as Christians."

"We must be bridge builders," the bishop continued, "and turn friction into friendship."

In closing, the bishop stated that he hoped that the center would "give to every child and youth the best possible chance to satisfy his deep heart hunger and to become a complete personality."

MANY SPEAKERS

There were many speakers on the platform representing many types of religious work, educational work, and social work of both races. Miss Marjorie Minkler of New York represented the bureau of town and country work of the Methodist church; Mrs. Paul Arrington of Jackson, vice president of the women's division; Mrs. R. T. Rollings, Hattiesburg, secretary of supply work of the Mississippi Conference of the WSCS, Mrs. W. H. Ratcliff, president of the southeast jurisdiction WSCS, Mrs. E. V. Perry, president of the Mississippi conference of the WSCS and leaders of the Negro church, including district superintendents, social workers, editors of Negro church papers, and others.

Music for the program was furnished by the school chorus of Lampton consolidated vocational high school and the Marion County training-school chorus.

At the conclusion of the program, T. R. Hearon, architect for the building presented the keys to the center to Prof. Isaac Pittman, the director and H. H. Wolf, contractor, presented the keys to the cottage.

THE CENTER

The Rural Center Building is 128 by 88 feet over-all and built of concrete blocks, it has hardwood floors throughout. It consists of a gymnasium, two dressing rooms and showers, clinic, nurse's room, secretary's office, general office, a stage, library, two clubrooms, kitchen, balcony, and men and women's toilets.

When the equipping is complete, the main auditorium and gym will seat 1,300 people.

Located next to the center, the five-room cottage for the directors of the work is built as a modern rural home. It is an attractive frame building with asbestos shingle siding. It consists of three bedrooms, kitchen, bath, combination living and dining room, hardwood floors, attic fans and floor furnaces. Utilities include butane gas and electricity.

An artesian well has been drilled near the cottage to serve the cottage, the center, and any residents of the Lampton community who wish it.

THE DIRECTORS

Isaac and Athelda Pittman are to be the directors of the project. They started in their present occupation on November 1 of last year.

Isaac Pittman is a native of this section of the county, born in Walthall County near Sandy Hook, he is a graduate of Alcorn A. and M. of 1935 and has been teaching in Negro schools of Mississippi since that time. He has 2 years in schools in the Delta, 5 years in Choctaw County and 4 years at Prentiss. He is 38 years old.

Athelda Pittman was born in Port Gibson and also attended Alcorn A. and M. The couple have three children, Herbert 14, Ruth, 12, and Sarah 11. They have already moved into the new cottage at the Rural Center.

SCOPE OF THE WORK

The proposed activities which the center will sponsor are in the areas of health, education, recreation, group work, social service and religion.

The work will be carried into other areas some distance from the center through the use of a suburban bus that is part of the center's equipment.

In the area of health the center will be the location for clinics, health education, home health improvement, health conferences, training and other activity. It is in the plan for the center to employ a full-time Negro public health nurse, but that position is not filled at this time.

In the field of education, the center boasts of a library, a traveling library, through the use of the bus, kindergarten and adult education. The center will be used for training on-the-farm veterans. Training in how to use the agricultural and social services of the Government and private enterprise is also planned.

The recreation program that has been set up includes a playground program and music training.

The center also plans to aid in the work of the 4-H, the Scouts, adult homemakers groups, New Farmers of America and the Youth Homemakers of America.

The religious program includes a week-day religious program, church Sunday school, Sunday school teacher training, vacation Bible schools, worship and church-school activities, and worship services with the bus in distant sections.

BOARD OF TRUSTEES

The board of trustees for this project includes three white citizens of Marion County and two Negroes. The white members are B. B. Bradley, Dr. S. E. Lawrence and H. L. Rankin. The Negro members are John Otis and Scott Chisholm.

TOURNAMENT SCHEDULED

The first scheduled event to take place in the new Mississippi Rural Center will be a Negro basketball tournament with teams from 16 counties of south Mississippi participating.

The tournament will be played Saturday among New Farmers of America teams. The New Farmers of America is the Negro counterpart of the Future Farmers of America.

A large crowd is expected to attend the tournament.

Minnesota—the Saga of the North Star State

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on the occasion of the ceremonies at the Library of Congress, opening the exhibition celebrating the establishment of the Territory of Minnesota.

There being no objection, the address was ordered printed in the RECORD, as follows:

MINNESOTA—THE SAGA OF THE NORTH STAR STATE

(By the Honorable HUBERT H. HUMPHREY, Senator from Minnesota)

Through its 100 years of history, Minnesota has produced sturdy and self-reliant persons, whose sons and daughters we are. The pioneers and their descendants erected a high civilization, known throughout the Union for its contributions to a liberal, democratic society.

It is a considerable part of our country we are discussing today. Minnesota is eleventh in size among the States, 400 miles from north to south and 240 miles in average breadth, standing at the center of the North American Continent and at the top of the Republic. From its average elevation of 1,200 feet flow three river systems, the Red River toward Hudson Bay, the St. Louis toward the Great Lakes and the Atlantic, and the Mississippi toward the Gulf of Mexico. With this advantage in location, her products and her ideas have circulated freely throughout the world. The two are closely related. Minnesota people developed their attitudes toward life, shown in their social and political institutions, during the process of making a living together.

The story of the State therefore begins with the varied resources which nature has provided. Ancient mountains, worn down by erosion, left knobs of granite; forgotten oceans, late in geologic time, which invaded north central Minnesota, left sediments from which the Mesabi Iron Range was formed; and four great ice sheets came down from the north in turn. These advanced and retreated, scouring ridges of rock, polishing knolls, unloading tons of rich soil, and they finally melted leaving heaped-up debris which dammed 10,000 lakes. These are an aid to a great dairy industry and the joy of skater, swimmer, and fisherman. In the south they are broad and shallow, but in the north they lie in deep and rocky basins in the midst of deep forests. Watching the reflections of the clouds in these waters, the Indians gave the region the name of "Minnay Soter" or "Cloud-Tinted Water."

In the northeast are ridges, almost mountainous, and evergreen forests; to the south along the Mississippi are stands of hardwoods, and west and north the prairie stretches into the Red River Valley. In the center of the State the village of Rockville is said to rest on a granite outcrop 5 miles wide and 30 miles long. At Red Wing on the eastern border, high above the wide Mississippi, pottery and clay pipe are made. At Embarass, the Finns still drop stones into pools to make the steam bath and the women with deft fingers card their wool by hand, spin and knit, and make moccasin boots. Minnesota is remarkably varied in resources and people. Nowhere else in this country have two cities so close together as Minneapolis and St. Paul, born almost at the same time, grown to a size so nearly equal. What is even more remarkable is that each of the twins has kept a distinct flavor and character, perceptible even to the tourist on his first visit.

When the early explorers and fur traders came, they found two very different types of Indian cultures. In the northern and eastern forests were the Chippewa, a forest people who had got firearms from the French and driven out the previous Sioux or Dakotas. These went west and became hunters of the buffalo on the prairie.

Artists and writers went with the traders and explorers on many expeditions. Their pictures and books, from the seventeenth century onward, drew the attention of the

outside world to Minnesota, and gave us a picture of the primitive life. Among the famous artists were George Catlin, Thomas L. McKenny, Peter Rindisbacher, and Frank B. Mayer.

They lingered about the frontier forts and councils where treaties were made, sketching the Indian dressed for play or mourning, for the war path or the council ceremonies.

The Chippewa and the Sioux had themselves been artists for many ages before the white man appeared. The exhibit presented by the Library of Congress for this occasion includes some evidences of their skill in carving wood and stone, of their women's patience in making clothing and household utensils. Several thousand Chippewa live in the State today, but under the impact of modern civilization their old culture has largely disappeared.

The Indian could hunt, fish, carve, and fight, but usually could not even read the treaties in which he signed away his land with a mark.

It is believed that two French traders, Radisson and Groseilliers, penetrated Minnesota as early as 1655 to 1659. Then in 1679 came Du Luth, for whom the lake port is named, who set up the standard of King Louis XIV of France in the wilderness. On his second visit, the following year, Du Luth had an amazing experience. When he reached the Mississippi, he met another party of Frenchmen who had been sent by the great La Salle to explore the upper river—Accault, Auguelle, and the famous missionary, Father Louis Hennepin. The priest and his companions had been captured by a band of Sioux and held near the present town of Mille Lacs. On this expedition Hennepin discovered and named the Falls of St. Anthony, and afterward he wrote a book about Minnesota which became a best-seller.

In 1689 Nicholas Perrot, another French trader, proclaimed the sovereignty of France over the whole region, and 6 years later another Frenchman, Le Sueur, set up a trading post on Prairie Island in the Mississippi River between Hastings and Red Wing. Five years later he went up the Minnesota River as far as the Blue Earth region and built Fort L'Huillier.

For many years thereafter France was involved in wars in Europe. Her occupation of Minnesota was suspended until 1727, when the Sieur De La Perrière built a fort and the Jesuits a mission on the west side of Lake Pepin. During the next 25 years La Vérendrye and his sons explored the northern lake country rather thoroughly; the region from Lake Superior west to Rainy Lake and Lake of the Woods has since become known as the Highway of the Voyageurs. They built Fort St. Pierre on Rainy Lake and Fort St. Charles in the "Northwest Angle" of Minnesota, on Lake of the Woods. From the time of their visits until French rule ceased in 1763, the French fur traders paddled over the water routes now followed by the summer vacationist in his canoe.

In 1762, the French secretly ceded to Spain the territory west of the Mississippi; thus for a short period Minnesota was technically under the Spanish flag. But in 1763, when France lost the French and Indian War, the British took possession, and for half a century the British fur barons controlled the region.

Even as they hoisted the British flag over the forts, the first adventurous Yankee appeared. Jonathan Carver spent the winter of 1766 to 1767 among the Indians of the Minnesota Valley, publishing an account of his adventures which rivaled Hennepin's book in popularity. Another Yankee, Peter Pond, lived in the Minnesota Valley from 1773 to 1775, and a trader for the British Northwest Co., David Thompson, explored northern Minnesota as the century drew to a close.

Already, by the treaty of 1783 which acknowledged the independence of the United States, northeastern Minnesota had become American territory. But the British fur traders were slow to learn, or perhaps to appreciate, the news. They stayed at their posts until 1816.

In 1803 the United States acquired the western part of the State as a part of the vast Louisiana Purchase. President Thomas Jefferson decided to assert the authority of the United States and satisfy his personal curiosity about Minnesota. He sent a young Army lieutenant, Zebulon M. Pike, to investigate and inform the British that they no longer owned it. Pike went up the Mississippi as far as Leach Lake and upper Red Cedar or Cass Lake. Visiting the chief British trading posts, he hoisted the Stars and Stripes. For 60 gallons of whisky and $200 worth of trinkets he bought from the Indians military sites at the mouths of the St. Croix and Minnesota Rivers, including most of the present Twin Cities. Fort Snelling, built in 1819 on the site he purchased, was for many years the northwestern military post of the United States and the center of the fur trade.

Other forts planted at strategic points became little islands of civilization, centers of the fur trade and refuges in time of danger. For the next 30 years after the Pike expedition the Americans penetrated the mysteries of the wilderness. In 1820, Gov. Lewis Cass of Michigan Territory set forth to find the source of the Mississippi River. His expedition did not succeed, but a member of the party, Henry R. Schoolcraft, came back in 1832 and found the source of the Father of Waters at Lake Itasca. A great student of Indian lore, Schoolcraft made studies of the legends of the Chippewa. From Schoolcraft's writings, the poet Henry Wadsworth Longfellow derived the inspiration for his Hiawatha; and within a few years Minnehaha made Minnesota famous throughout the Nation. She was probably the most effective press agent Minnesota ever had, attracting settlers from New England and all parts of the country.

Maj. Stephen H. Long, in 1823, first revealed the fertility of the Red River Valley, destined to be of one of the granaries of the world. With him was an Italian gentleman named Giacomo Beltrami, looking for the source of the Mississippi. He wrote a book about his adventures, giving a copy of his book to President Jefferson, and his name to Beltrami County.

One of the greatest of the explorers under the American regime was a Frenchman, Joseph N. Nicollet, who traveled all over Minnesota in the late 1830's, keeping a record of his canoe trip down the Mississippi from Fort Snelling, illustrated with maps so accurate that we can still trace his course and his camping places from hour to hour. Another pioneer who came to Fort Snelling as a drummer boy, Joseph R. Brown, will be long remembered; many years later, during one of the last of the Indian attacks, his son Samuel Brown rode 120 miles through a night of storm to warn the settlers. The house of this western Paul Revere is still preserved in a State park.

Relations with the Indians were not always strained. For 20 years the influence of Fort Snelling upon the tribes was effective through the quiet work of its humane agent, Maj. Lawrence Taliaferro. He had come up from the South in 1823, on the first steamboat to reach St. Anthony Falls, bringing with him the first group of Negro slaves to reach Minnesota. Later, he freed them all. As agent of the fort, Major Taliaferro supervised the fur trade, issued licenses to traders, and tried to keep the peace between Chippewa and Sioux. Recognizing his impartiality, the Indians called him "Four Hearts."

Fort Snelling and Mendota, across the river, were the centers of the fur trade. The Americans began to make up oxcarts in trains of 50 to 100, to bring the furs in wholesale lots from the Red River country; for many years, the squeaking of the ungreased wheels could be heard for miles through the wilderness.

The fur trader was apt to be a French-Canadian or a Scotchman, and his assistants were often half-breeds, who had already formed a large and interesting settlement in the Red River Valley, where they wore the skins of the animals they hunted. Negroes were also active in the early days of the trade, as interpreters and independent operators.

The pioneer fur trader could handle the half-wild hunters, trappers, and voyagers, spoke the Indian's language, and knew the way through the maze of lakes, rivers, and portages. Many of the traders were remarkable men, equally at home in the woods and in the duties of forming a government and building a civilization. Fur traders helped the missionaries to translate the Bible and other books into the Indian languages. The famous trader Henry H. Sibley became the first territorial delegate to Congress, and afterwards Governor. Martin McLeod, another trader, wrote the first Minneosta law for public education. They gave their family names to cities, towns, and counties: Sibley, McLeod, Faribault, Crookston, Brown, Renville, and many others.

Early Catholic missionaries traveled with the coureurs de bois. Protestant missionaries came to Fort Mendota in 1829 and made plans for work among the natives. Both Catholic and Protestant preached to the primative Indian and the white pioneer, and as far as they could, tried to bridge the gulf between them. There is something attractive and noble in the picture of the French Catholic fur traders, the Renvilles of Lac qui Parle, sitting down with Protestant missionaries like Samuel and Gideon Pond, Dr. Thomas S. Williamson, and Stephen R. Riggs, to translate the Bible into the Indian tongue. The first church for white settlers was organized by the Presbyterians at Fort Snelling in 1835.

Downstream Father Lucian Galtier came in 1840 as a priest to the populace at Mendota, which had originally been called St. Peter's. Across the river he built a little log church which he dedicated to the great missionary apostle, and from this church the settlement round about took the name St. Paul. Father Augustine Ravoux of Mendota, Bishop Crétin, Father Frederic Baraga, Father Pirec, and the Abbé Domenech were famous Catholic pioneers. Bishop Henry B. Whipple of the Episcopal Church was a lifelong friend of the Indians.

But the day of the explorer, the missionary, and the fur trader was passing, for the surge of white settlement was becoming irresistible. In 1837, by treaties with the Chippewa and the Sioux, the United States acquired the land between the Mississippi and the St. Croix Rivers. In 1848 a land office was opened at St. Croix Falls, and the first great wave of settlers came—lumbermen from Maine, farmers from the mid-Atlantic States, tradesmen and craftsmen from the cities. People were gathering around Fort Snelling, and at St. Anthony, now a part of Minneapolis. Soon there were villages at St. Paul and Stillwater. Before they numbered 5,000, the settlers began to ask for an independent government.

Under the American flag, Minnesota so far had been shuffled around from one Territory to another; it had been a part of the old Northwest Territory, and the Territories of Indiana, Illinois, Michigan, Iowa, and Wisconsin. When the State of Wisconsin was created in 1848, the Minnesota part was left practically without an administration. The

people took matters in their own hands. They elected the famous fur trader, Henry Hastings Sibley, as a Territorial Delegate to Congress, claiming that the old Territory of Wisconsin still existed. When Sibley got to Washington, somewhat to his surprise, Congress actually seated him, and he began at once to agitate for a Territorial government. The law creating the Territory of Minnesota was signed on March 3, 1849. Alexander Ramsey was appointed Governor, and the first Territorial legislature met in September 1849.

Getting the Indian's land for the farmer and lumberman was uppermost in the minds of the members. By the treaties signed in 1851, the Sioux ceded practically all their lands, and treaties of 1854 and 1855 secured most of the territory of the Chippewa. The Government offered land at $1.25 an acre, and the great river made a highway for the outgoing products of Minnesota and the incoming people. Steamboats came in with settlers and left with loads of flour. Merchant milling began in 1854 at the Falls of St. Anthony; other mills sprang up along nearly every river and creek. Almost from the first the high quality of Minnesota flour was acknowledged, and as early as 1861 the New York market quoted it at a premium. The rivers were choked with logs, the sawmills were taxed to supply lumber for houses. By 1856 there were 253 Minnesota post offices. The boom was on. Immigrants were coming from Great Britain, Canada, Ireland, Germany, and Scandinavia, led by the booster, William G. Le Duc, who kept the presses busy printing guidebooks about the Territory. Minnesota, the Lily of the West, was a popular song, and the Minnehaha waltz or polka was the rage in dance halls of the East.

Sharpers also flocked in, claiming inside information on future railroad routes. A wild speculation in land began to grow, reaching the point at which eastern capital found takers in the Territory at 3 percent a month. Ambitious Minnesota took its first census in 1857, showing 150,000 people. Statehood was in the air.

In the Nation-wide business panic of 1857, the Minnesota boom collapsed. In some ways the disaster was a blessing in disguise, for the people turned immediately to farming the land in earnest; by the following spring of 1858, the cultivated acres in the Territory had more than doubled. And on May 11, 1858, Minnesota was admitted to the Union. Rival conventions, Democratic and Republican, had met in separate sessions at St. Paul in July 1858, producing two drafts of a State constitution, which turned out to be almost identical in their phrasing. The Protestant missionary Stephen Riggs painstakingly translated the new State constitution into the Sioux language, and printed it for the Hazlewood Republic, a short-lived farming community which the missionaries had established for the Indians.

Already, much of the pattern of future Minnesota life had been set. The New England settlers brought with them singing schools and lecture courses, and planted shade trees in the new towns. The first newspaper, the Minnesota Pioneer, was started in St. Paul in 1849 by James M. Goodhue. The telegraph came in 1860. In that eventful year the farms numbered 22,000, producing more than 5,000,000 bushels of wheat, nearly 4,000,000 bushels of oats, and about 2,000,000 each of corn and potatoes. The invention of farm machinery was making possible farms the like of which the world had never seen; one Minnesota farm of that decade boasted 30,000 acres.

Henry Sibley was elected Governor in 1860, and Minnesota cast her first electoral votes by a heavy majority for Abraham Lincoln, the Republican candidate. On the day after the President's war proclamation, Governor Sibley issued a call for her famous First Regiment, which reached the front in time for Bull Run. Two years later, at Gettysburg, the First Minnesota stopped Pickett's charge, the high-water mark of the Confederacy and the turning of the tide. With a population numbering only about 200,000 the State sent more than 22,000 men to the Union armies. At home the farms poured out wheat to feed the Republic and for export. Meanwhile the ousted Sioux were watching the advancing farms.

Under the Indian treaties, some of the speculators had taken advantage of the red men, and the administration of the treaties was less than just; the missionary Bishop Whipple had warned President Lincoln of the danger. Now, with many of the white men away at war, the Sioux suddenly rose in the autumn of 1862, crossed the Minnesota River, and caught the settlers by surprise. They devastated the Minnesota Valley, killing more than 350 settlers and taking 300 prisoners. A company of soldiers from Fort Ridgely was ambushed and almost wiped out. On the south side of the river the Germans at New Ulm barred the way; 1,500 settlers, refugees, and volunteer fighters withstood an Indian attack. But the town was almost a total loss, and was afterward abandoned.

With stronger forces, the Indians were repelled, and nearly 2,000 were captured or voluntarily surrendered. Of these more than 300 were condemned to death; but after Bishop Whipple asked Lincoln to show mercy toward his red children, only 38 were executed. Most of the Indians left the State, and there were reforms in the Indian administration. Today some 14,000 Chippewa live in Minnesota, many on the White Earth Reservation, while direct descendants of the Sioux of that uprising still live at Pipestone and along the Minnesota River between Granite Falls and Redwood Falls.

A more important event for the future than the Indian uprising was the appearance in 1862 of a wood-burning locomotive, the William Crooks by name, pulling a train on a 10-mile track between St. Anthony and St. Paul. By 1870, there were nearly 1,000 miles of railroad in the State, and the population had leaped to nearly half a million.

About the greatest of the Minnesota railroad-builders, James J. Hill, there are many stories; according to one, Hill first left Canada as an adventurous boy of 18, with the intention of sailing to China or India by way of Minnesota. He had planned to continue westward from St. Paul in a Red River car-train, but finding that he came too late for the last trip of the year he was forced to stay over. In St. Paul he found work as a shipping clerk on the wharves, and made the city his home for the rest of his life while he built a mighty transportation system.

The railroad and the State board of immigration sent agents to Europe and issued pamphlets in every language. By 1870, Europe had sent 50,000 Germans and nearly 60,000 Scandinavians. This was the true Norse settlement. Whether or not the Kensington Rune Stone, as many believe, tells of an actual visit by 30 Norsemen to Minnesota in the year 1362, the descendants of the Norsemen who came after the Civil War very largely made the State what it is today. They worked in the woods and mines and on the farms, bringing their songs and legends, and a strong tradition of personal independence and social cooperation. The Scandinavians introduced the farmers cooperatives in which Minnesota leads the Nation.

At one time, the people of Minnesota were 71 percent foreign-born. Today, the proportion is less than 15 percent, of which almost half are still Scandinavian. The Scandinavians gave the State Governors Johnson, Nelson, and Olson, and Congressman Charles A. Lindbergh, Sr., as well known in Minnesota in his own right as his son who flew the Atlantic in 1927.

The railroads brought in the people and brought out the crops, and in so doing aroused among the farmers one of the first great popular movements for which the State is famous. Many farmers in the older settlements complained that bumper wheat crops were of little value with markets far from home; they charged the railroads with discrimination and unfair practices, and began to organize to protect themselves. In 1867 a Minnesota man, Oliver Kelley, founded the Patrons of Husbandry in Washington, D. C. Popularly called the Grange, the movement swept Minnesota rapidly. By 1869, out of 49 Granges in the United States, 40 were in Minnesota. In 1874, Grangers were in control of the State legislature and pushed through State legislation, and Federal action followed soon after to regulate transportation in the public interest.

Minnesota remembers the blizzard of 1873, which took the lives of 70 persons on the prairie, and the business panic of that year. Duluth, which had been enjoying a speculative railroad boom, became almost totally bankrupt within a few days, and suffered a drop in population from 5,000 to 1,300. And then came the grasshoppers. By 1876 they not only devoured every leaf and spear of wheat, in the western and southwestern counties, but ate clothing and wood as well. Private charity and public appropriations kept thousands of old settlers on the prairie, and newcomers in their sod huts, from starvation. The Governor appointed a day of State-wide prayer in the spring; and afterwards, although the hoppers hatched as usual, they took flight when fully grown and left Minnesota.

Railroad building resumed after the panic. The early lines were formed into great competing systems which served the State well, and new waves of immigrants came in. By 1885, after the Twin Cities were connected with the Pacific coast by rail, the population passed the 1,000,000 mark. Many of the newcomers were from Ireland, for whom Archbishop Ireland provided shelter in immigrant houses. The railroads found shelter for others. Sometimes the railroads provided whole towns. By 1900 the meat-packing houses also needed European labor, recruited in the Balkans, Poland, Lithuania, and elsewhere, until the whole map of Europe was represented in Minnesota.

More than once the State has enjoyed get-rich-quick hopes, only to find that real prosperity lay in another direction. So it was with the mineral resources. In 1865 the presence of iron ore was known, but a report started in that year that gold could be found, and the gold excitement—although it collapsed the following year—delayed the development of iron. It was not until 1884 that the first load of 100 tons of ore was shipped in five cars from the Vermilion mines to Two Harbors. The first ore found on the Mesabi Range was not thought good enough to warrant mining; but Leonidas Merritt and his six brothers, all timber cruisers, believed otherwise. In 1890 Leonidas took out 141 leases, and by 1895 20 mines were producing nearly 3,000,000 tons. By the 1920's, Minnesota supplied three-fifths of the Nation's iron ore and at last year Minnesota took nearly 70,000,000 tons of iron from its earth—over two-thirds of the national production. The great ore docks of Duluth and Two Harbors, the spectacular pits of the Iron Range, support mining towns which are like few others on earth—equipped with municipal electric plants and other utilities, and splendid community houses, parks, libraries, and schools.

The Finns were recruited originally from the Old World to work in the iron mines. But they took to farming rather than mining. By this time much of the north woods had

been cut over, and many Finns settled on low-cost homesteads. The going was hard. The ground was difficult to clear, a language barrier separated them from their neighbors. It was by force of circumstances, because every penny counted, that the Finns developed the consumer cooperatives in which Minnesota is a leader.

The economic and social development of Minnesota moved forward on every front, only temporarily checked by Indian uprisings, grasshoppers, business panics, and wars. The growth of one industry aided another, Thomas B. Walker, who came to Minnesota in 1862 as a surveyor for the St. Paul & Duluth Railroad, bought great tracts of pine in Cass County and became a leader in the lumber industry. The genius of a French immigrant enabled the flour mills to overcome an obstacle which temporarily threatened the prosperity of the prairie-farmers.

As the spring wheat of Minnesota came into competition with the winter wheat grown elsewhere, the flour made from the spring wheat was found to be darker and inclined to be speckled. Edmund La Croix, a member of a French family which had come in the 1860's, developed a secret process which eliminated the difficulty. Farmers came for hundreds of miles to Dundas, to marvel at the rows of vibrating sifters. La Croix took his process to the Washburns in Minneapolis. Through the use of the middlings purifier, vast stretches of the Northwest were opened for the growing of wheat which could be milled into the whitest of flour. And today the State mills 11 percent of the Nation's wheat, more than 3,000,000,000 pounds.

The opening of the Panama Canal was a severe, if temporary, set-back to Minnesota, as traffic from the Orient no longer flowed from the Pacific coast to the Atlantic through Duluth. In later years the development of barge traffic on the Mississippi has checked high freight rates by rail, and St. Paul, Minneapolis, and Duluth have grown steadily as distribution centers. When and if the St. Lawrence seaway is completed, Minnesota once more will ship the products of the Northwest region direct to European ports.

In 1862 the Rev. Lars J. Hauge, a Baptist minister, had led a group of Danes to Freeborn County. He was a dairying enthusiast, and almost 30 years later, in 1890, he took a hand in the organization of the first cooperative creamery in the State, at Clark's Grove. The cooperative movement spread gradually; after the legislature in 1919 drew up a code of laws to protect farmers' cooperatives they expanded more rapidly. To their research work in production and marketing, in cooperation with the State university, is due much of the prosperity of Minnesota. As lumbering and wheat began to decline somewhat in importance, a golden flow of butter helped to take their place. In butter production, Minnesota today leads the country with 18.4 percent of the United States butter churned, and stands second in the production of milk—8,000,000,000 pounds in 1948. Although it is still a great milling State, the acreage of corn is now five times that of wheat and the record corn crop of 1948 produced 272,055,000 bushels. At the same time, the State harvested 14 percent of the Nation's oats. Two-thirds of the farmers in Minnesota own their land; and the Minnesota State Fair, largest in the United States, is famous everywhere.

Minnesota has some 1,800 farmers' marketing and purchasing associations, including creameries, grain elevators, livestock and produce-shipping cooperatives; the number of cooperative members is more than half a million, the largest in the Nation. In consumer cooperation, the small independent Finnish storekeepers in the Iron Range and Duluth area met in 1917 to form their first wholesale pool. Since that time, the oil-distributing societies have become well known, and with varying degrees of failure or success, consumer cooperatives have undertaken to operate telephones, electric lines, credit unions, bookstores, dry cleaning, insurance, trucking, and even newspapers.

The cooperative spirit, however, is not limited to those who engage in this particular form of business organization. While Minnesotans were fighting in Europe and the Pacific during the Second World War, a small city, Albert Lea, won honors at home, for its voluntary, cooperative, postwar planning to make jobs for the veterans, the businessmen and other citizens of Albert Lea were nationally publicized as an example.

In the census of 1940 the population reached 2,800,000 and the town population of Minnesota for the first time equaled the rural population, as a result of a remarkable rise in variegated industry, but perhaps more important, as a result of mechanization of farms. The mechanical skills of the early immigrants who worked in the shops and mills has been passed on to their descendants. The State today is known for manufactured dairy products, malt liquors, pulp and paper, canning, linseed oil, cake and meal, foundry and machine-shop products, and electrical goods. There has been a rapid development in electric light and power.

In State politics, Minnesota has generally remained with the Republican Party. From 1860 until 1932 she elected only four non-Republican governors: John Lind, 1899–1901; John A. Johnson, 1905–1909; W. S. Hammond in 1915, and Floyd Olson in 1930.

Governor Olson was elected on the Farmer-Labor ticket. Ever since the time of the Granger movement, the State had been hospitable to independent, radical, third-party movements, of American inspiration. The Farmers Alliance movement began to show potential strength in the State in 1881. In 1886, as industry grew in the cities, the Knights of Labor joined forces with the Alliance and drew up a strong railroad and labor platform which it pressed the Republicans to accept in full. By successfully backing candidates pledged to support agricultural and labor interests, the coalition virtually controlled the legislature. In 1890 it strode out upon the field as a third party, and 2 years later the Nation-wide Populist Party was born, largely through the efforts of Ignatius Donnelly, Minnesota's "prophet of experiment."

Governor Lind, first to break the long string of Republican governors, was elected with the support of Democrats, Populists and "Silver Republicans." In 1912, Minnesota voted for the Progressive Republican, Theodore Roosevelt. From 1920 to 1938 the progressive movement expressed itself through the Non-Partisan League and the Farmer-Labor Party, and from 1932 by support of Franklin D. Roosevelt and his New Deal and Harry S. Truman and his Fair Deal. Minnesota was represented in another early progressive move, by Secretary of State Frank B. Kellogg, who sought world peace through a treaty of all nations, the Kellogg-Briand Pact—a plan of world disarmament.

But no party or coalition of parties has a copyright on the progressive spirit in Minnesota life, which has shown itself in the non-political cooperative movement, in arts and letters and the sciences, and in State and local legislation. The territorial government established public schools and the first normal school west of the Mississippi, and took steps toward establishing a university. In 1872 the State board of health was established, the first child labor law was passed in 1909, and a minimum wage act for women and minors in 1913. In 1917 the legislature enacted 37 laws for the protection of children. The State government was completely reorganized in 1939, when Minnesota established a department of social security, with divisions devoted to social welfare, employment, and public institutions.

The State has 57 State parks, recreational reserves, waysides and monuments, and a larger area in game refuges than any other State—more than 3,300,000 acres, an area greater than Connecticut. Minneapolis and St. Paul are outstanding among large American cities for their park systems. Minnesota's most recent wave of national publicity is making known the cold bright days of winter sport, and the summer life of lakes and parks within easy reach of nearly all citizens.

Minnesota writers have had strong local roots, and for the most part a serious turn of mind. Ignatius Donnelly was not only a political experimenter, but a scholar who surprised his colleagues on the Senate floor by quoting Epictetus in Greek. He was a leading exponent of the Baconian theory of the authorship of Shakespeare's plays. One of his novels, Caesar's Column, is reported to have sold 700,000 copies at home and abroad. It contained a prophecy that industrialized America in the twentieth century would become a dictatorship, which happily has not come true.

Thorstein Veblen, brought by his Norwegian immigrant parents to a Minnesota farm when he was 8 years old, studied at Carleton College, Northfield, Minn., and began to read the social philosophers from Hume and Kant to Spencer. Here he found his direction as a critical analyst of modern industrial civilization. He was a clear-cut radical of the authentic, home-grown kind. It is said that after returning from Yale with his degree of doctor of philosophy, he spent 7 years at home, apparently doing nothing, and was stamped by his neighbors as a failure. Then he became famous as the author of the Theory of the Leisure Class and other economic classics, and for his translation of an Icelandic saga.

In belles lettres, F. Scott Fitzgerald, Charles Flandrau, Martha Ostenso, and Margaret Culkin Banning are well-known to America at large. Ole Edvart Rölvaag, a Norwegian fisherman, came to Minnesota almost penniless. He won a professorship at St. Olaf's College, where he taught until his death in 1931. In Giants in the Earth he wrote a perceptive account of pioneer life which seems assured of permanence in American literature.

Local pride was hurt in 1920 when Sinclair Lewis, a native son, published Main Street, a criticism of the narrowness and materialism which the writer believed were typical of the American small town. Main Street at once became one of the most influential books in our history, both among writers and the general public. If "Carol Kennicott" today would find life in "Gopher Prairie" more interesting than she did in 1920, part of the credit belongs to Lewis—who was known as "Doodle" in his Sauk Center days.

The lumberjacks created the most famous literary character in the history of the State, the fabulous hero Paul Bunyan and Babe, the Blue Ox. As part of national folklore, they are rivaled today only by Uncle Remus and his friends from Georgia. In Minnesota the activities of Paul are still marked on the map, as in the case of Onion River, which derives its name from a difficulty Paul faced in checking the tears of his loggers as they cut timber in a region of wild onions. Close by, incidentally, is Temperance River, named in the logging days because it was the only north-shore stream with no bar at its mouth.

The Germans brought music. Long before the Minneapolis Symphony Orchestra was organized in the 1890's the first string quartet was formed by four Germans in St. Paul, and the Germans in Winona and the Czechs in New Prague each had an orchestra. The Lutheran pastors everywhere saw to it that

their people had trained choirs. The a capella choir at St. Olof's College, the only one of its type in America, owes much to the genius of its conductor, F. Melius Christiansen.

In music, Minnesota has an unbroken tradition—or many traditions—extending back to its early days. Today, Minneapolis is a center of music, with weekly concerts of its famous symphony, with two artists series, one master piano series, chamber concerts, and annual visits of the ballet and the Metropolitan Opera Co. In the arts, there has been more of a deliberate effort at a revival. The people retained for a long time much of the domestic folk art that preceded the machine age in the countries from which they came; in this respect, they were closer than they thought to the Indians whose culture they displaced. The farmer had to make his own tools, his wife made her own bedspreads, the Red River hunter made his own dogsleds, the Yankee farmer and Swedish housewife all had to be craftsmen. As factory-made goods prevailed, the home arts vanished, and were in danger of being forgotten until artists made illustrations of them in recent years for the Index of American Design.

As the machine age began in Minnesota, the women, long before Carol Kennicott complained of the flatness of life in Gopher Prairie, took an interest in the encouragement of art. In 1903, largely through their efforts, the legislature passed an appropriation for a State Society of Art. Among artists of our time, the work of Homer Dodge Martin, Cadwallader Washburn, and Nicholas Brewer among others is well known. Carl Bohnen is noted for portraits, Carl Rawson for his paintings of woods and waters, Jack and Paul Fjelde, father and son, are noted in the field of sculpture.

In science, Minnesota's outstanding contribution had its beginnings in 1883, when a cyclone struck the town of Rochester. The Sisters of St. Francis offered their convent to a local health official, Dr. William Worrall Mayo, to care for 100 injured. Six years later, the order opened St. Mary's Hospital which they placed under the care of Dr. Mayo and his two famous sons, William J. and Charles. Here they first did the work which has since brought them national recognition, and to many thousands of Americans has made Rochester the most famous place in Minnesota. The Mayo Clinic works in close association with the State University.

The arts and sciences, agriculture and industry in Minnesota have all had close ties with the State university, which has gathered a brilliant society of poets, novelists, teachers, scientists, critics, and historians. It is not the oldest college in continuous service in Minnesota, for church colleges established before the Civil War are still teaching American youth. While the university was chartered in 1851, it did not begin its real development until 1867–68 under William Watts Folwell. The university has grown steadily as a focal point for the life of the State. Pioneer leaders like the miller, John S. Pillsbury, have served it loyally and contributed generously. Today it is second in size of enrollment only to California.

The public school system dates from the first year of the Territory, 1849. Today it is one of the best in the United States, serving more than half a million children. The early immigrants of Minnesota were for the most part literate people, many had read about the State in the guidebooks scattered over Europe, and all were eager for more education for themselves and their children. It is largely in the schools that Minnesota has made what many consider its chief contribution to the country as a whole, progress in the art of learning to live together.

The churches of the State stem from the work of the early missionaries, who had comparatively small success in converting the Indians in large numbers, but who built a firm foundation for the work of the denominations today. The Roman Catholic Church, with some 600,000 adherents, is the largest, the Lutherans second. All the leading Protestant churches and the Jewish faith are represented. In the cities are fine, large houses of worship; in the countryside, the modest white steeples of the early days still serve the needs of farming people. Religion is a living element in Minnesota's past and present, a source of inspiration for her social progress, and for her faith in the democratic future.

Even before it was a State, Minnesota had a historical society. It was the first institution incorporated by the State legislature. In the year when statehood was attained a history was published, bearing the seal of the Territory. That seal shows a pioneer with his hand on the plow, gazing toward the setting sun. Above him is a motto, Quo Sursum Volo Videre, "I wish to look forward."

We have the duty not only to honor the founders, but to pass on their faith and fire, to look forward as they did.

American Administration in Germany

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Shame on America," published in a recent issue of the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SHAME ON AMERICA

There is one thing that General Clay should do in Germany before he has any thought whatever of coming home. That is to clean up the shocking background of the Malmedy convictions obtained by American prosecutors at Dachau. The record reads like the brutalities which the Nazis themselves practiced.

To make a very bad situation even worse, an Army review board at Frankfurt now attempts to justify the beatings, kickings, and other physical and mental torturings of German suspects. The board of review says that there was general use of ruses, stratagems, stoolpigeons, and similar practices, but that these were proper because of the difficulty of cracking the case.

While the Army board claims that physical violence was not systematically applied in order to obtain statements, it does conclude that undoubtedly in the heat of the moment on occasions interrogators did use some physical force on a recalcitrant suspect.

The board admitted without qualification of any kind that some suspects were told that if they did not talk their relatives would be deprived of ration cards. In other instances mock trials were held in which the accused were confronted with fake judges dressed in black, seated behind burning candles and a crucifix.

It is no defense at all of such third-degree handling of prisoners to say that the case was difficult to crack. Nor is it any justification that the massacre of 150 unarmed Americans by a German tank force at Malmedy in the Battle of the Bulge was a revolting brutality. The brutalities of the American military prosecutors were practiced after the United States had become a peacetime occupying power in Germany, dedicated to teaching the precepts of democracy, justice, and respect for the individual.

Not all Americans who were associated with these convictions have shut their eyes to their cruelties and deceit. Col. Willis N. Everett, Jr., appointed to defend the 74 Germans, contended that the accused had not had a fair trial and appealed for them to the United States Supreme Court. As a result of his powerful protest, the Department of the Army sent Justice Gordon Simpson, of the Texas Supreme Court, and Judge Edward Van Roden, of Delaware County, Pa., to investigate the facts.

As long ago as last October that commission recommended commuting the death sentences of 29 of the prisoners. Its report, in addition to the brutalities noted above, said some defendants were kept in solitary confinement for months and that some were beaten in hoods bloody from beatings given other prisoners.

On this record here is an entry in the American performance in Germany which is of a piece with Hitlerism. It has been allowed to be part of our record far too long. What if General Clay does have to reverse the death sentences he has approved? What if he does rebuke the wearers of the Army uniform who forgot the basic principles of justice?

If our commander in Germany does not remove this shame from America in short order, he should be expressly directed to do so by Washington. Better that no one be specifically punished for the Malmedy brutality than that the United States condone brutality by our prosecutors overseas.

Lower Excise Taxes Mean More Jobs

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. CASE of South Dakota. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address of Hon. JOSEPH W. MARTIN, JR., of Massachusetts, Republican leader of the House of Representatives, broadcast over the Mutual network Tuesday evening, March 15, 1949:

This was the final day for filing your 1948 Federal income-tax return. You know now how much will be your contribution to the cost of running your National Government, so far as direct taxation is concerned. Of course, you pay much more in the form of hidden taxes—taxes concealed in the cost of things you buy. But so far as your direct tax is concerned, you have observed how much less is your tax bill this year than in the previous year.

Over 7,000,000 people in this country, the men and women with the smallest incomes, will not be obliged to pay anything this year.

May I remind you this is the gift of the Republican Eightieth Congress, the Congress you have heard assailed in the last campaign.

These tax cuts this year are a gift to the people by the Republicans and a number of patriotic Democrats in the Eightieth Congress.

It was passed by a two-thirds vote after the bill had been vetoed three times by President Truman.

The hard facts of taxation reach into every home in the land. Many of our people are still sweating over their final returns for

1948. Millions are wondering where the money is to come from to pay the balance due on their Federal taxes. Millions more are asking themselves:

"Where does all this money go in Washington?"

President Truman's budget for the fiscal year 1950, as now before Congress, calls for approximately $282 a year from every man, woman and child in the United States. This is for Federal taxes alone. If we add the State and local taxes, we find that the average American family today must lay aside from its income at least $100 a month for taxes before it has a nickel to spend on itself, for food, clothing, rent, amusements, and medical care.

In the United States today, the average workingman toils every third day for the Government. The other 2 days he works for himself and his family.

Taxes are a burden on production and can be paid only by production. That is why the problems of taxes and Government spending stand today as the first problem of government.

Taxes are too high. They must be reduced to give an incentive to expand and to earn.

The budget for 1950 is the biggest peacetime budget ever submitted to a representative legislative assembly, anywhere, at any time, in all history.

It marks an historic departure from the oft-repeated pledge through all the trying war years, that when the war was won, taxes would be cut back drastically to normal peacetime levels.

The President's revised budget for 1950 is almost $8,000,000,000 greater than the budget for 1948. This bigger government income would not go toward retirement of the national debt. All the increases shown in the 1950 budget are for more spending—not for paying off any part of the tremendous national debt, which now stands at 252 billions.

As Speaker of the House in the Eightieth Congress, it was my high privilege to assist in the enactment of a Federal tax reduction bill—a bill which eased the burden of Federal taxes by about $4,800,000,000 dollars a year. This tax reduction went mostly to families with incomes of less than $5,000 a year. Most of its benefits went to those who are least able to pay taxes.

During the last campaign administration orators condemned this tax reduction bill. But the people are now getting the benefit of lower taxes granted by the Republican Eightieth Congress.

I make a prediction tonight. If the Truman spenders have their way in the present Congress, that tax reduction bill will stand as the last Federal income-tax cut given the American people in our time.

But I do not believe the American people have yet seen their last tax reduction in this generation. On February 2, this year, I introduced another tax reduction bill—one to cut back the misnamed "luxury" taxes to their prewar rates. Many of these excise or sales taxes range from 15 to 25 percent on the retail purchase price of goods or services. Such high tax rates place many commonplace items beyond the reach of buyers. They restrict trade and contribute to spreading unemployment.

No nation can continue to pay wartime tax rates indefinitely in peacetime and maintain a high level of prosperity for its people.

New spending proposals submitted by President Truman to the present Congress would add another sixteen billions a year to the Federal budget during the next 5 years.

Then our Federal budget would be not forty-two billions a year, as at present—but fifty-eight billions a year.

That's the trail embarked upon in this, the fourth year after the end of hostilities. It is the trail which leads at last to complete national socialism—eventually to the police state, where liberty withers and freedom dies. Darkest Russia and her helpless victims behind the iron curtain are the classic example today of what happens to the people when the dictatorship of the spenders comes upon a land.

And let me sound this solemn warning to our people tonight—a bankrupt America is the hope and the desire of the Communists. That would give them their chance to take over the United States.

We have about 3,000,000 unemployed in the United States today—and this at a time when there are tremendous unfilled demands for housing, roads, public works of every sort, for automobiles, for basic tools and machinery of every kind. The fact that we now have increasing unemployment in the face of all these unfilled needs means that excessive taxes and reckless Government spending are discouraging enterprise and investment.

An unfortunate aspect of these excise taxes is that they fall most heavily upon women—for cosmetics and toilet preparations, for handbags, for infant needs, for low-cost jewelry and adornments of apparel, for travel, amusements, and recreation. They are in fact a harsh discrimination against millions of women. There are some 16,000,000 working women in the United States—stenographers, secretaries, saleswomen, and factory workers. Our wartime excise taxes clip these women for 20 percent more than the purchase price of many routine items.

Why hide longer behind the Government's dishonest phrase, "luxury taxes"? The tax today is 20 percent on a bottle of baby oil or infant powder. Do our spending bureaucrats call a baby a luxury in the American home? Many families today are spending $25 to $30 every month on these hidden taxes—enough to buy a week's groceries or more.

I do not believe the lady who buys a $5 handbag thinks she is buying a luxury, but she has to pay an extra dollar in the form of tax. In our state of civilization, most women believe that a few items of jewelry are an essential part of their wardrobe, and not a luxury at all. The bill which I have introduced would lower the tax on these items from 20 to 10 percent and would exempt entirely items classified as jewelry selling for less than $25 at retail.

Federal revenues are now feeling the results of these excessive taxes. Any retailer will tell you of a growing resistance to the high prices of which a 20-percent tax is too large a part. Reduce these taxes and we shall see a repetition of the historic principle that lower tax rates will actually increase revenues.

Since when in this country have electric light bulbs been luxuries? Yet you pay a 20-percent tax on them.

Some sections of our country experience severe winters. For the woman who must travel through a blizzard to a job, a fur coat is not a luxury. It is quite as essential as a pair of overshoes. The record shows that 80 percent of all fur coats sold in the United States retail at $300 or less. Now these are not the coats of the rich. For the most part, they are the coats of women who must work for a living. Yet these women must pay a 20-percent tax on an item which to them is an essential piece of apparel. At the same time, a woman of wealth may purchase a $500 evening gown or even a $1,000 cloth coat trimmed with ermine, tax free.

There is a 25 percent tax on telephone tolls and telegrams, even 15 percent on local telephone service, essential services of our daily lives.

You are still paying wartime excise taxes when you go to a movie or take a vacation trip on any form of public transportation.

Time does not permit me to go into greater detail, as I would like to do. But suffice it to say that these excessive excise taxes are a gross discrimination against a few selected industries, against their thousands of employees and particularly against the American consumers. They are a deterrent to a high level of national prosperity.

The Republican policy committee in the House of Representatives recently pledged itself by unanimous vote to make excise tax reduction one of its pledges for the Eighty-first Congress.

There was not a dissenting vote. We agreed unanimously that these wartime tax rates on everyday items should be cut back this year—at least to their prewar rates.

Through the recent reports of the Hoover Commission, every citizen now recognizes that the Federal establishment is a shocking hodgepodge of waste, extravagance, inefficiency, duplication, and overlap.

These surveys indicate clearly that the present functions of Government are costing about $3,000,000,000 a year more than they should. And if we were to eliminate those activities of Government which are not urgently needed in peacetime, we could realize further savings of several billions more. We can no longer afford many Federal activities launched during the flush days of wartime prosperity.

Excessive Government spending already has given us the 60-cent dollar. Excessive Government spending is one of the reasons why building costs are out of reach today for a vast majority of our people who work for wages.

To remedy this sorry situation, our national planners tell us we should spend more billions in Federal subsidies, another step along the road to national socialism. No, the true path to economic stability and sustained prosperity for the American people is through economy and efficiency in Government.

If we cut this gigantic Federal bureaucracy down to size, there will be adequate funds for the necessary functions of Government. Then we could not only pass the pending excise tax reduction bill, but eliminate these taxes altogether.

We must challenge at every step of the way that philosophy of government which says there is but one solution to our national problems—more spending, more taxes, or ever larger deficits.

California Needs Additional Veterans' Hospital Facilities

REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. McDONOUGH. Mr. Speaker, the Senate Subcommittee on Labor and Public Welfare are starting hearings on the inadequate hospital facilities for veterans, especially in California. I have just testified before the committee. There is a very deplorable situation in the State of California due to inadequate facilities, and particularly due to the executive order curtailing funds for adding to the already inadequate hospital facilities in that State.

I wish to include in my remarks, Mr. Speaker, a letter from the Department of Veterans' Affairs of California and other correspondence to show that the Veterans' Administration here in Washington has inaccurate figures as to the correct population of veterans of World Wars I and II in California. We not only have the men who were inducted from

our State, but we also have the additional load due to the great number of veterans from all over the United States who have come to California since the war.

The veterans now residing in California are faced with a serious problem when they are in need of hospitalization due to the inadequate facilities available for their care under the Veterans' Administration in that State.

In spite of constant protests, the Veterans' Administration, in estimating the need for additional hospital facilities to care for veterans in California, has continued to base their estimate on obsolete and inaccurate population figures. In fact, a comparison of Selective Service and Veterans' Administration statistics shows that central office credits California with fewer World War II veterans than the number enlisted and inducted from the State.

The records of the Veterans' Administration show on examination a progressively increasing number of case files transferred to California regional offices as compared with those transferred out, and the records also show that more loan guaranties to veterans have been issued in California than in any other single State.

During the last fiscal year the number of veterans receiving out-patient treatment in California through the Veterans' Administration for service-connected disabilities total 206,499, or 10.65 percent of the Nation's total.

According to the latest figures compiled by the California State Department of Veterans' Affairs, there are a total of 1,700,000 veterans now residing in the State. Of this total, 1,300,000 are veterans of World War II, and 350,000 of these World War II veterans entered the State since their discharge.

The need for adequate hospital facilities for our veterans in California is urgent, and consideration must be given to enlarging present veterans' hospitals and constructing new ones rather than discontinuing any of the existing facilities, or curtailing any plan for hospital construction already scheduled.

The State of California is doing what it can to help veterans in need of medical care, but this is a problem which should be solved through the Veterans' Administration. At the present time over 2,000 veterans are in California State mental institutions, and 32 percent of all male admissions at this time are veterans.

Because of the serious need for adequate hospitals for veterans in California, I urge the restoration of the full hospital construction program for that State. The Nation owes this much to the veterans who served in the armed forces, in many cases losing their health due to incidents of service, for the preservation and protection of this country.

STATE OF CALIFORNIA,
DEPARTMENT OF VETERANS' AFFAIRS,
Sacramento, February 16, 1949.

Hon. GORDON L. MCDONOUGH,
House Office Building,
Washington, D. C.

DEAR MR. MCDONOUGH: In a news release from Washington dated February 12, 1949, there is a statement that California Members of Congress have been told by the Administrator of Veterans' Affairs that expansion of veteran hospitals in this State is impossible at this time. The item further quotes Administrator Gray as informing a California delegation subcommittee "that the number of beds available in California veterans' hospitals is greater per unit of veterans population than in other sections of the Nation."

That General Gray makes such a statement is not surprising to the Department of Veterans' Affairs or to any of the veteran organizations in California, since the Washington office of the Veterans' Administration underestimates California's veteran population by 375,000. A comparison of selective service and Veterans' Administration statistics discloses that central office even now credits California with fewer World War II veterans than the number enlisted and inducted from this State.

The Veterans' Administration has consistently refused to consider as factors in establishing its estimate of California's veteran population the progressively increasing number of its case files transferred into California regional offices as compared with those transferred out. It ignores the fact that it has issued far more loan guaranties to veterans in California than in any other single State, and that there are 143 percent more veteran home owners in California than there were in 1945. Even though an analysis of its own December report reveals that the number of California veterans receiving outpatient treatment through the Veterans' Administration for service-connected disabilities during the last fiscal year came to 206,499, or 10.65 percent of the total for the Nation, the Veterans' Administration refuses to recognize this as a factor.

The statement that continued expansion of veterans' hospitals in California is out of the question at this time is a matter of great concern to the veterans of this State. Two additional 1,000-bed neuropsychiatric hospitals have been long authorized for construction in the San Francisco and Los Angeles areas. Over 2,000 veterans are currently in our State mental institutions, and 32 percent of all male admissions at the present time are veterans. Veterans' Administration facilities to care for tubercular patients are woefully inadequate. As for the general hospital situation, a high percentage of the beds are occupied by veterans from other States.

I hope that you will continue to work for restoration of the hospital-construction program planned for California, and if I can be of any assistance to you, please count on my utmost cooperation.

Sincerely,
LAWRENCE C. STEVENS, *Director.*

FEBRUARY 25, 1949.

LAWRENCE C. STEVENS,
Director, Department of Veterans' Affairs,
State of California,
Sacramento, Calif.

DEAR MR. STEVENS: This will acknowledge receipt of your recent letter concerning the statement of Veterans' Administrator Gray that no expansion of veteran hospitals in California is possible due to the number of beds now available per unit of veterans population.

I agree with you that Mr. Gray is not using accurate up-to-date figures on veterans population in California when he makes this statement, and have written to him urging that he reconsider the number of veterans in California and obtain an up-to-date estimate based on figures from all available sources so that adequate veteran hospital facilities can be provided in California. A copy of my letter is enclosed herewith.

Very truly yours,
GORDON L. MCDONOUGH,
Member of Congress,
Fifteenth District, California.

FEBRUARY 25, 1949.

CARL R. GRAY, Jr.,
Administrator, Veterans' Administration,
Washington, D. C.

MY DEAR MR. GRAY: I understand that you recently stated that no expansion of veterans' hospitals was possible in the State of California since, according to statistics now being accepted by the Veterans' Administration, the number of beds available in California veterans' hospitals is greater per unit of veteran population than in other sections of the Nation.

In my studies of the problems of the veterans in California, I have found that a comparison of Selective Service and Veterans' Administration statistics show that central office credits California with fewer World War II veterans than the number enlisted and inducted from the State. The records of the Veterans' Administration show on examination a progressively increasing number of case files transferred to California regional offices as compare with those transferred out, and the records also show that more loan guaranties to veterans have been issued in California than in any other single State. During the last fiscal year the number of veterans receiving out-patient treatment in California through the Veterans' Administration statistics shows that central abilities totaled 206,499, or 10.65 percent of the Nation's total.

At the present time, California does not have Veterans' Administration hospital facilities adequate to care for the number of veterans in the State. I, therefore, urge that you reconsider the number of veterans in California and obtain an up-to-date estimate based on figures from all available sources so that adequate facilities can be provided in California for the veterans who are now in the State.

Very truly yours,
GORDON L. MCDONOUGH,
Member of Congress, Fifteenth District, California.

STATE OF CALIFORNIA,
DEPARTMENT OF VETERANS' AFFAIRS,
Sacramento, March 4, 1949.

Hon. GORDON L. MCDONOUGH,
House Office Building,
Washington, D. C.

DEAR MR. MCDONOUGH: This department has received inquiries from several Members of Congress relative to the number of veterans now in California. For your information an analysis of the veteran population in this State as of January 1, 1949, is as follows:

World War II

California veterans (notice of, enlisted, or inducted from California	950,000
Other veterans (entered State since discharge)	350,000
Total	1,300,000

World War I and other wars

California veterans	130,000
Other veterans	270,000
Total	400,000
Total veterans in California	1,700,000

The Office of Selective Service reports that a total of 1,050,000 veterans were inducted or enlisted in California during the World War II period. This figure has been adjusted to account for casualties and out-migration. Accepted sources indicate 165,000 entered service from California during World War I as well as an unknown number who served during the Spanish-American and other wars. This figure has been adjusted to account for deaths and out-migration.

The sources of information pertaining to in-migration of veterans include: United States Veterans' Administration, the Bureau of the Census, the United States Department of Commerce, the Office of War Mobilization and Reconversion (report of March 16, 1946), the United States Employment Service, the California Department of Employment, the California Reconstruction and Reemployment Commission, the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, and independent surveys of county service offices, and community service centers.

If I can be of assistance in providing additional information on this or any other matter concerning veterans in California, I shall be pleased to comply with your request.

Very truly yours,

LAWRENCE E. STEVENS, *Director.*

Irregularities Charged in Malmedy Case

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, in support of my resolution—House Resolution 143—asking that a full and complete investigation be made of reports that United States investigators in the Malmedy case have practiced third-degree methods against those charged with the crime, I am including as part of my remarks two news articles which appeared in the New York Times on March 2 and March 5, 1949:

[From the New York Times of March 2, 1949]

PROTESTS INCREASE ON MALMEDY TRIAL—CHARGES OF BRUTALITY BY WAR-CRIMES INVESTIGATORS CAUSE DEMANDS FOR INQUIRY

(By William R. Conklin)

Charges that American war-crimes investigators used physical brutality and other third-degree methods on 74 Nazi defendants in the Malmedy war-crimes trial mounted yesterday as Gen. Lucius D. Clay prepared his final recommendations on 12 men condemned to death in that trial.

Following five separate reviews of the Malmedy verdicts in the last 18 months, General Clay is expected to reach his final decision this week. The American Military Governor in Germany has reviewed the trial record as well as many individual protests and group petitions against death sentences for the 12. Pending his final review, execution of the death sentences has been deferred until March 15.

In Washington, Senator WILLIAM LANGER, of North Dakota, has introduced a resolution for a Senate investigation of American military justice in Germany, particularly the Malmedy trial. The Senator joined other critics of the trial in denouncing physical brutality and other illegal methods, which he said had been used against the Malmedy defendants. His resolution is now pending in the Senate Judiciary Committee.

When Senator LANGER introduced his resolution on January 27 last he quoted reviewing agencies as saying that confessions had been obtained through beatings and brutal kickings, knocking out teeth and breaking jaws, mock trials, solitary confinement, torture with burning splinters, posturing as priests, very limited rations, spiritual deprivations and false promises of acquittal.

In remarks printed in the CONGRESSIONAL RECORD he said:

"We cannot have a double standard of justice, one brand for use at home and another for export. We must get to the bottom of this shocking deviation from American principle in American-occupied areas and we must correct the situation."

Informed of these and other charges, Kenneth C. Royall, Secretary of the Army, said he could not comment on them in detail until he had seen General Clay's final report. Meanwhile, Mr. Royall declared that he could not say whether the charges were right or wrong. He pointed out that the allegations dealt with alleged illegal practices before sentences were passed in the Malmedy trials in July, 1946. The 74 defendants, members of Combat Group Peiper, were accused of murdering 83 American prisoners at Malmedy, Belgium, on December 17, 1944, in the Battle of the Bulge.

While allegations have been made that 137 Nazi defendants in the Malmedy and other war crimes trials had been kicked in the groin and that this was standard operating procedure with our investigators, Army officers in Washington denied that any such charges were part of the trial records. In one review, Col. Howard F. Bresee, chief of the War Crimes Branch, reported on August 12, 1948, that at no time was the mistreatment of war crimes suspects permitted or condoned.

Army spokesmen also pointed out that the 200,000 Germans suspected of war crimes at the end of the war had been narrowed down to the 1,672 who went to trial. They cited General Clay's first review of the cases on March 23, 1948, in which he reduced 43 original death sentences in the Malmedy case to 12. Of 17 others condemned to death in other cases, five have been hanged, eleven received commutation of sentences and one is still under consideration, they added.

The Federal Council of Churches of Christ in America, the American Civil Liberties Union and The Christian Century magazine have protested the conduct of the Malmedy case. Two American attorneys who defended those accused of the Malmedy murders joined in condemning American prosecution methods. A third, Judge Edward Leroy Van Roden of Media, Pa., said his review of the trial showed that illegal procedures had been used.

In Atlanta, Willis M. Everett Jr., chief defense counsel in the Malmedy trial, was reported drafting a last-minute petition to the International Court of Justice to save the lives of the condemned 12. Since the international body will not entertain cases brought by individuals, Mr. Everett's move seemed to have scant chance for success. He, like Judge Van Roden, holds a colonel's commission in the Judge Advocate General Reserve.

SAYS CONFESSIONS WERE EXTORTED

In New York, Herbert J. Strong, German-born attorney who served as associate defense counsel, said the prosecution had employed strong-arm tactics to coerce the defendants into making false confessions.

Mr. Strong said he had a statement written and signed by Gen. Josef (Sepp) Dietrich, former commander of the sixth SS panzer division, saying that American investigators had kicked him in the groin and had beaten him before the trial. General Dietrich's statement also says that other defendants were subjected to the same treatment, Mr. Strong added. The former Nazi commander is now serving a life sentence in Landsberg Prison, Germany. His statement was not made part of the trial record because of prosecution objections, the defense counsel said.

"In fairness to the United States Army, it should be stated that the Malmedy war crimes trial was an exception to the general pattern of American military justice in Germany," Mr. Strong declared. "I served at the Malthausen and Buchenwald trials, where the rights of defendants were scrupulously protected. Since I was on both the prosecution and defense sides at various times, I had full opportunity to observe the operation of American military justice.

"I was present at the Malmedy trials at Dachau from beginning to end as associate defense counsel. We had less than 3 weeks to prepare a defense for 74 accused Nazis, and we could not get the record of the prosecution's case. As the only German-speaking attorney on the defense team, I interviewed all defendants and took statements from them. In almost every case they complained that physical violence had been used on them. They told me they had been subjected to mock trials to force confessions from them; that they had been kept in solitary confinement in violation of the Geneva convention; that false promises of acquittal had been made to them; and that their rations had been cut down to two meals a day."

KILLING OF PRISONERS DENIED

"Both before and after their conviction," the defense attorney said, "these defendants swore to me that they had not killed any American prisoners. They did admit shooting Belgian civilians in the Battle of the Bulge, because they were afraid of sabotage on their advancing army. But with the exception of two or three privates, all the defendants denied that they had shot American prisoners at Malmedy or elsewhere. SS Trooper George Fletz was identified at the trial by former Lt. Virgil P. Lary, of Lexington, Ky., as the man whose pistol shots touched off the Malmedy massacre. Most of the defendants were former members of the first SS panzer regiment, which broke through Malmedy in the German drive for Liege and Antwerp.

"There is no question that the American prisoners were shot down and that the shooting was done by German troops," Mr. Strong added. "But I am not satisfied that the trial showed that these particular defendants committed that particular war crime. The prosecution's case was largely circumstantial; hearsay evidence down to the second and third person was permitted; and the case rested chiefly on alleged confessions extorted by methods unauthorized by American judicial practice."

Born in Wiesbaden, Germany, of Jewish parents, Mr. Strong was baptized into the Protestant faith and later practiced law in Wiesbaden. He came here as a refugee in 1937 and practiced law here, returning to Germany for 8 months as a civilian attorney for the war crimes trials. He is with the law firm of Scribner & Miller and lives at 118 East Ninety-first Street, Manhattan.

THREE-MAN BOARD STUDIED CASE

Judge Van Roden was one member of a three-man Army commission appointed on July 29 last to review the record of the Malmedy trials and other war-crimes trials. With the Pennsylvania jurist, Secretary Royall named Justice Gordon Simpson, of the Texas Supreme Court, as chairman, and Lt. Col. Charles Lawrence, Jr., of the Judge Advocate General's office.

On January 6 last Secretary Royall disclosed a portion of the Simpson commission report recommending reduction of the death sentences imposed on the Malmedy defendants. The report said that the trial record warranted a guilty verdict, but that sufficient doubt had been cast on the entire proceedings to make unwise the carrying out of the death penalty.

In addition to recommending life imprisonment or less for the 12 Malmedy defendants, the Simpson commission urged similar commutations for 17 others sentenced to death in war-crimes trials.

Interviewed in Chester, Pa., Judge Van Roden said he agreed with the criticisms of

the third-degree methods used by the prosecution and termed them "atrocities." He disclosed that Colonel Everett had tried for 2 years to obtain reduction of the death sentences. After the Atlanta attorney had tried in vain to get the United States Supreme Court to take jurisdiction in a habeas corpus proceeding, the Simpson commission went to Munich and took testimony in its review.

ASSERTS TRIAL WAS NOT FAIR

"In his petition to the United States Supreme Court, Colonel Everett made serious charges that the Germans had not received a fair trial," Judge Van Roden said: "Everett did not claim that all the German defendants were innocent, but since they did not have a fair trial, there was no way of telling which were innocent and which were guilty.

"Everett's petition contains 150 paragraphs, and if his charges against our American investigators are true, they would be a blot on the American conscience for eternity. Our specific assignment was not only to examine Colonel Everett's charges but also to examine the 139 death sentences which at that time remained unexecuted. One hundred and fifty-two had already been executed. While we did not go into the rest of the 1,672 cases tried by the Dachau American Military Government courts, I noted that of the 1,672 on trial 1,416 had been convicted. That is an unusually high percentage, which might indicate a presupposition of guilt.

"Let me say that the crimes for which these Germans were tried actually took place, and that Germans were guilty of them. The Malmedy massacres, in which a group of American prisoners of war were mown after being captured during the Battle of the Bulge, actually happened. But can we not distinguish between the assertion that these atrocities did happen and the assertion that they were committed by these 74 Germans who had been in or near Malmedy at that time? Because some wicked Germans did it, are we right to say that all Germans we lay our hands on are wicked and should be destroyed? That is not the way of thinking that I learned in my church.

"In the Malmedy case the American investigators claimed: 'We had a tough case to crack and we had to use persuasive methods.' The persuasive methods included some violence and mock trials. The court was told that the cases rested on statements obtained by such methods. There was no jury. The court of 10 officers sat as judge and jury, and the law-member, the only person with legal training, made the final rulings on the admissibility of evidence."

REVIEW RESULTS SUMMARIZED

Summarizing the results of the Simpson Commission's review, Judge Van Roden expressed its findings as follows:

"Statements admitted as evidence were obtained from men who had first been kept in solitary confinement for 3, 4, and 5 months. Confined, between four walls, without windows, they had two meals a day shoved in to them through a slot in the door. They were not allowed to talk to anyone. They had no communication with their families, nor with any minister or priest. Solitary confinement proved sufficient in some cases to persuade the Germans to sign prepared statements."

The Simpson commission's report was classified as secret by its members before transmission to Secretary Royall. Mr. Royall has released excerpts disclosing the recommendations for commutation of death sentences. The commission found that investigators customarily put black hoods over the heads of defendants, punched them in the face with brass knuckles, kicked them, and beat them with rubber hoses.

Judge Van Roden recounted the mock-trial procedure, in which defendants faced investigators dressed in American uniforms seated around a black table with a crucifix in the center and only two candles providing light. After the sham court had imposed a sham death sentence he said the investigators again attempted to wring confessions from the accused.

"We were shocked by the crucifix being used so mockingly," the judge said. "In another case a bogus Catholic priest, actually an investigator, entered the cell of one of the defendants, heard his confession, gave him absolution, and then gave him a little friendly tip: "Sign whatever the investigators ask you to sign. It will get you your freedom. Even though it's false, I can give you absolution now in advance for the lie you would tell."

NO GENERAL CONSPIRACY FOUND

Judge Van Roden said his reviewing agency had found no general conspiracy to obtain evidence improperly. However, he insisted that the 29 condemned men certainly did not have a fair trial by American standards and should, in justice, have their sentences commuted to life imprisonment in 27 cases, to 10 years in one case, and to 2½ years in the last case.

A veteran of both world wars, the Pennsylvania jurist had two sons in the last war. One son, James, flew 35 missions over Germany, and another son, Richard, was shot down over Italy after 32 missions and spent a year in a German prison camp. Judge Van Roden presides over the Orphans Court in Media, county seat of Delaware County, Pa., and makes his home in Media.

Colonel Everett refused to discuss the Malmedy case for publication, though he has been notified that execution of the 12 death sentences had been postponed to March 15.

Following the imposition of sentences in July 1945, the Administration of Justice Review Board of the European Command reviewed the Malmedy case. In an interim report filed on August 18, 1948, the Board incorporated available testimony on the use of physical violence against Nazi defendants. Its final report, recently completed, was submitted to General Clay for his guidance in reviewing the case.

[From the New York Times of March 5, 1949]

UNITED STATES BOARD CRITICAL OF MALMEDY CASE—FINDS SOME ACCUSED WERE TOLD THEY MUST CONFESS TO SAVE RATIONS FOR FAMILIES

BERLIN, March 4.—Irregularities in the treatment of the accused, including physical force and threats that if they did not talk their relatives would lose their ration cards, are charged in the report of the Administration of Justice Review Board in the Malmedy case.

The case arose out of the massacre of United States prisoners in a field near Malmedy during the Battle of the Bulge.

[Two United States investigators denied in New York Friday that the prisoners had been mistreated or that violence had been used.]

Gen. Lucius D. Clay, United States military governor, will reconsider each of the 12 death sentences passed on German soldiers for their parts in the slaying as a result of the report.

Recommendations for commutation of sentences, made by the Simpson commission, whose report was released January 6, also will be considered in General Clay's review.

The review board was appointed to investigate allegations contained in a petition to the United States Supreme Court for a writ of habeas corpus filed by Willis Meade Everett, Jr., chief counsel at the trial.

These allegations charged improper methods in procuring testimony and impropriety in the conduct of the trial and raised legal questions concerning the guilt of the accused and the sufficiency of proof to support their convictions.

MAIN FINDINGS OF BOARD

The board confined its findings to the first two points and concluded that—

1. There was a limited use of mock trials in procuring testimony.

2. There was general use of the practice of persuading underlings to talk by telling them the prosecution wanted to get their superiors and was not so much interested in them.

3. Physical force was not systematically applied to obtain statements, but undoubtedly in the heat of the moment on occasions the interrogators did use some physical force on a recalcitrant suspect.

4. In certain instances the interrogators made threats to the accused that if they did not talk their relatives would be deprived of their ration cards.

5. The afore-mentioned practices in certain instances exceeded the bounds of propriety, but the board has been unable to identify such cases.

6. There was general use of ruses, stratagems, stool pigeons, and similar practices, justified by the difficulty of cracking the case.

7. Conditions at the prison and the methods employed in the interrogations had a definite psychological effect on the defendants and resulted in their being more amenable to giving statements.

8. The defense had difficulties in the preparation of its case, but such difficulties were ironed out and the defense, considering all circumstances of the case, had a reasonable time in which to prepare its case.

9. The remaining allegations of the petition relate to matters that are not deemed to have been substantial abuse under the circumstances.

USE OF MOCK TRIALS ASSAILED

Misconduct was alleged in two categories in the petition. The first was the use of mock trials, threats, inducements, and stratagems to procure sworn statements against the other accused and to obtain confessions. The second was the use of physical violence for similar ends.

The board found that in 8 or 10 instances a mock trial had been used to soften up the witnesses.

In these bizarre proceedings the defendant would be brought from his cell wearing a black hood.

The practice of employing these hoods whenever the defendant left his cell was used at Schwabische Hall Prison in Wuerttemburg-Baden to prevent communication with other prisoners and to prevent the individual prisoner from learning his destination, the report said.

Confronting the defendant when he reached the trial would be a table covered with a black cloth on which stood a crucifix and burning candles and behind which sat one or more persons impersonating judges.

At the end of the mock trial the defendant was made to understand it was his last chance to talk and undoubtedly in some cases understood he had been convicted, the report declared.

Another device was to have the man who posed as the defendant's advocate at the mock trial advise the defendant afterward to tell what he knew.

Undoubtedly some defendants would confess at least part of their crimes under the influence of such procedure, the report stated.

USE OF FLOODLIGHTS DENIED

The board dismissed allegations that floodlights had been directed on the eyes of the defendants during the interrogations or that they had been deprived of clothing while being questioned, as had been charged.

Nor could the board find the reason for the suicide of the prisoner who hanged himself in his cell. He had been under interrogation but the board said it was not convinced that

the prisoner had received the treatment alleged in the petition.

Considering the question of inducements the board found the prosecution's strategy had been to get statements first from enlisted men, and get them to involve their immediate superiors, then to confront those superiors with those statements and get them to involve people still higher up.

The board also found stool pigeons had been placed in cells with the accused in attempts to get statements.

The allegation that physical violence had been used to obtain statements was taken up at great length. Virtually all of the accused in their affidavits considered by the board declared violence had been used and all of interrogators and those in charge of them said no violence had been used.

Corroborating the claims of the various accused as to physical violence there is an affidavit from a dentist at the prison that says he treated 15 or 20 of the suspects for injuries to the mouth and jaw, apparently inflicted by blows, the report, asserted.

GERMAN CHIEF DISCOUNTED ABUSE

The German camp commander, on the other hand, said he had seen no ill treatment personally although he repeated in his affidavits rumors of mistreatment.

At the trial only 9 of the 73 defendants took the stand in their own defense and only 3 of them claimed any physical mistreatment. But in affidavits written a year and one-half after the trial nearly all of the defendants described physical mistreatment.

One prisoner testifying at the trial made no claim whatsoever to mistreatment. Yet in an affidavit written February 11, 1948, the prisoner said that he had been kicked and beaten in the face * * * and abdomen February 12, 1946. Another prisoner mentioned beatings administered by a lieutenant and a civilian at the trial but gave no details. But his affidavit stated, "I was beaten * * * in the face, in the abdomen, and in the genitals."

The board noted that if such actions had taken place the defendants had known of it at the time of the trial and presumably so had their counsel.

No reason appears to explain the fact that the matter was not brought out at that time or if brought out was not developed to the fullest extent, it added.

The report mentioned as additional considerations the fact that the accused were hostile witnesses and although young they were tough SS men who had been trained to hate Americans.

The entire case had to be developed from statements from them and because of the brutality of the Malmedy massacre and wide publicity it received the interrogating team was under pressure to crack the case * * * the report declared.

The board was composed of Col. John M. Raymond, Col. J. I. Harbaugh, Jr., and Dr. Carl J. Friedrich.

Ireland's Attitude on Participation in the Atlantic Pact

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting statement that was issued by Sean Nunan, Minister of Ireland, on the Atlantic Pact:

IRELAND'S ATTITUDE ON PARTICIPATION IN THE ATLANTIC PACT

1. Ireland is essentially a democratic and freedom-loving country. No country in Europe is so deeply attached to the ideals of Christian civilization and the democratic way of life, and, for that reason, no country in Europe is so free from communism. For the Irish people, these ideals mean not merely faith in fundamental human rights, but respect for the principles of national self-determination and of political, civil, and religious liberty and tolerance. More, perhaps, than any country in western Europe, Ireland wishes to be able to play its full part in protecting and preserving Christian and democratic principles and ideals.

2. In the matter of military measures, however, Ireland is faced with an insuperable difficulty from the strategic and political point of view by reason of the occupation of six of her northeastern counties by British forces against the will of the overwhelming majority of the Irish people. It is unnecessary here to set out the full case against the partition of Ireland. It is sufficient to recall that, although no country in the world can claim to have more clearly defined boundaries, a more homogeneous population, or a more distinct national history, Ireland was partitioned by an act of the British Parliament in 1920 for which not a single one of the Irish representatives in the British Parliament at the time voted. The continuance of this partition of Ireland is naturally and bitterly resented by the Irish people as a violation of Ireland's territorial integrity and as a denial in her case of the elementary democratic right of national self-determination.

3. It is obvious that, in these circumstances, any military alliance, or commitment involving joint military action, with the state which was responsible for the partition of Ireland, which continues to occupy a portion of the country with its armed forces, and which supports the undemocratic practices of the Stormont regime, must be quite out of the question so far as Ireland is concerned. Any Irish Government which entered into such alliance or commitment would inevitably run the risk of having to face, in the event of a crisis, the prospect of civil conflict within its own jurisdiction.

4. From the strategic point of view, any such alliance or commitment is equally out of the question. It is quite apparent that the defense of a small island such as Ireland could only be undertaken effectively by a single authority having at its back the firm support of a decisive majority of the population of the whole country. The difficulties of sharing the defense of the country with the state that is wrongly occupying a portion of it are too obvious to require elaboration. Furthermore, the six northeastern counties constitute essentially the industrial area of the country. It would obviously be necessary, from the strategic point of view, that the productive capacity of the country as a whole should be integrated under a democratically elected central authority. This is impossible as long as partition lasts.

5. The political difficulties of the present situation are aggravated by the undemocratic practices of the Northern Ireland Government. It is well known that, in an area approximating four of the six northeastern counties, there is an over-all majority against partition. The people in this area naturally consider themselves to be the victims of undemocratic coercion in that they are prevented from uniting with the rest of Ireland.

6. Taking all the foregoing considerations together, it is only too clear that no Irish Government could possibly expect to find the necessary support for a policy involving a military alliance with a power that continues to lend its sanction, tacit or active, to evils of the very kind which it is the object of the proposed North Atlantic Pact to oppose and prevent.

7. This does not mean that the Irish Government is actuated by feelings of hostility toward Britain. On the contrary, a closer and a better relationship with its great neighbor, Britain, is a major aim of the Irish Government's foreign policy. Since the enactment of the Republic of Ireland Act, there is only one outstanding cause of friction and misunderstanding between Ireland and Britain, namely, partition. Ireland is keenly anxious to develop good and normal relations with Britain. This being in the interest, not merely of Ireland, but of Britain as well, every consideration of constructive statesmanship points to the necessity of ending, once and for all, the centuries-old conflict between the two islands. There are so many factors and so many interests making for good neighbourly relations between Ireland and Britain that it is inconceivable that once British interference in Ireland is removed, and the ordinary geographical, ideological and other forces given full play, Ireland should ever constitute a source of danger or embarrassment to Britain in time of war. Any detached or impartial survey of the strategic and political position must lead to the conclusion that a friendly and united Ireland on Britain's western approaches, is not merely in the interest of Britain, but in the interesta of all countries concerned with the security of the Atlantic area.

8. The wisest and most realistic approach to the question of North Atlantic security lies, therefore, so far as Ireland is concerned, in ending a situation which threatens the peace of these islands and which may, at any moment, prove a source of grave embarrassment to both Britain and Ireland. It is better to face this question as a matter of urgency now, rather than to allow a situation to develop, wherein a solution might become more difficult. Sooner or later, this question will have to be solved. It should be faced now, in a realistic fashion, rather than in other and possibly more difficult circumstances. Far from rendering disservice to Britain, the ending of partition would add considerably to the strength of Britain and to the good relations between the states of the Atlantic community. By offering their assistance and mediation, and by creating a situation wherein the problem could be discussed, the participating nations would not merely assist to end an undemocratic and dangerous situation, but would also render an invaluable service toward the strengthening of the internal harmony and cohesion of the community of states in the North Atlantic.

Report of Consultants to United States Civil Service Commission

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. WALTER. Mr. Speaker, for many reasons, the report which follows is an enduring administrative-law document. It is one of the more fundamental early fruits of the Administrative Procedure Act of 1946. Among the least significant of its features is the announcement that

some Federal administrative trial examiners should be removed for inexperience or incapacity. Much more important is the fact that it describes the beginning of a system of great promise for the selection of what amounts to administrative judges in Federal agencies. It is not only a notable example of service—uncompensated—by members of the legal profession but also a welcome instance in which an agency of the United States has thus utilized the great resources of the bench and bar in peacetime. It is a long step forward in the creation of a corps of judicial officers worthy of the executive branch of the Government of the United States. It is another hopeful chapter in the reform of administrative law initiated by lawyers a decade or so ago. It is living proof of the determination of the Nation to preserve in the flesh its tradition of government under law.

The report follows:

HEARING EXAMINER PERSONNEL UNDER THE ADMINISTRATIVE PROCEDURE ACT—FIRST REPORT OF THE CONSULTANTS TO THE UNITED STATES CIVIL SERVICE COMMISSION

I. HISTORY, OBJECTIVES, AND PROBLEM

As necessary background it will be desirable to mention first (1) the origin of the project, (2) the appointment of consultants, (3) the standards and limitations applied, and (4) the several different classes of persons examined.

1. Origin of the project. No attempt will be made here to discuss the long history of studies, reports, and legislative proposals which led to the present undertaking. They are summarized in the report of the Committee on the Judiciary of the House of Representatives with respect to the Administrative Procedure Act (Rept. No. 1980, 79th Cong., pp. 7–16; also S. Doc. 248, 79th Cong., pp. 241–250).

The group of consultants was established and appointed by the United States Civil Service Commission pursuant to the responsibility conferred by section 11 of the Administrative Procedure Act of June 11, 1946.

The whole of the Administrative Procedure Act is important in understanding the policy adopted by Congress and the executive with respect to examiners in formal administrative cases. Section 7 (a) provides that only the heads of agencies or examiners may serve as presiding officers, which in general and with few exceptions means that only examiners may perform functions otherwise committed to officers appointed by the President and confirmed by the Senate. Such examiners, under the same section, must be able to perform those functions in an impartial manner and are subject to disqualification in particular cases. Sections 7 (b) and 7 (c) demonstrate that they are to exercise their hearing functions judicially. Section 8 provides that, with some exceptions, they are not only to hear cases but to take an important part in the decision of cases. Sections 9 and 10 emphasize that their actions must conform to law.

Section 11 of the Administrative Procedure Act provides that examiners shall be qualified and competent, perform no duties of a nature which would be inconsistent with their functions as examiners, and enjoy independence and security of tenure. It also provides that, consistent with the act, these objectives are to be carried out within the framework of the civil-service system, and for that purpose the Civil Service Commission is given special powers. Section 11 thus reads in full as follows:

"Subject to the civil-service and other laws to the extent not inconsistent with this act, there shall be appointed by and for each agency as many qualified and competent examiners as may be necessary for proceedings pursuant to sections 7 and 8 who shall be assigned to cases in rotation so far as practicable and shall perform no duties inconsistent with their duties and responsibilities as examiners. Examiners shall be removable by the agency in which they are employed only for good cause established and determined by the Civil Service Commission (hereinafter called the Commission) after opportunity for hearing and upon the record thereof. Examiners shall receive compensation prescribed by the Commission independently of agency recommendations or ratings and in accordance with the Classification Act of 1923, as amended, except that the provisions of paragraphs (2) and (3) of subsection (b) of section 7 of said act, as amended, and the provisions of section 9 of said act, as amended, shall not be applicable. Agencies occasionally or temporarily insufficiently staffed may utilize examiners selected by the Commission from and with the consent of other agencies. For the purposes of this section, the Commission is authorized to make investigations, require reports by agencies, issue reports, including an annual report to the Congress, promulgate rules, appoint such advisory committees as may be deemed necessary, recommend legislation, subpena witnesses or records, and pay witness fees as established for the United States courts."

Pursuant to section 11 of the Administrative Procedure Act, the Civil Service Commission first appointed an advisory committee to recommend requirements and procedures. It assisted the Commission in classifying examiner positions, proposed regulations, and suggested minimum qualifications for examiners. The Commission then held a public hearing at Washington, D. C., where Members of Congress and representatives of agencies, the public, and interested professional organizations stated their views. Thereafter the Commission issued regulations (12 F. R. 6321, Sept. 23, 1947).

Section 34.3 (a) of those regulations provides that incumbent examiners with full or competitive civil-service status "may be given absolute appointments as hearing examiners * * * if they are found by the Commission to be qualified and competent to perform the duties of hearing examiners." Such examiners must have been serving in positions which became hearing-examiner positions on June 11, 1947, and must have been conditionally appointed to such positions under the Administrative Procedure Act on such date. The Commission's simultaneous release of September 22–23, 1947, states that for this purpose the Commission would establish the present group of consultants, that the latter would develop standards, that in accordance with such standards the Commission would make a complete qualifications investigation of each incumbent, that such incumbents would be required to appear before the consultants for oral interviews, and that only those incumbents whom the consultants found eminently qualified to be hearing examiners would receive regular appointments under the provisions of the Administrative Procedure Act.

It is to be noted that the foregoing applied only to persons who (1) had full civil-service standing and (2) were actually performing examiner work. But thereafter, in May 1948, the function of the consultants was extended to the determination of the qualifications and eligibility of (1) so-called "war service" or "temporary" incumbent examiners and (2) applicants for examiner positions who were either nonexaminer Government employees or outsiders engaged in private professional work or State or local government service. The consultants were thus asked to function with respect to all present or prospective examiners who are subject to the Administrative Procedure Act.

2. Consultants and associates designated: There are, in fact, two groups of consultants. The first, appointed at the close of 1947, consists of Douglas L. Edmonds, associate justice, Supreme Court of California; Joseph W. Henderson of Philadelphia, former president of the American Bar Association; Laurance M. Hyde, associate justice, Supreme Court of Missouri; Wilson M. Matthews, examiner, United States Civil Service Commission; Carl McFarland, chairman, practicing attorney of Washington, D. C., and former assistant attorney general; and Willis Smith of Raleigh, N. C., former president of the American Bar Association. These have remained the principal group to date.

When the consultants' function was extended to war-service and temporary incumbents and outside applicants in May 1948, on the recommendation of the original group of consultants the Commission appointed the following advisory consultants or associates to function in the several regions of the country: Albert Ewing of Nashville, Tenn., delegate of his State to the governing body of the American Bar Association, for part of the South; Chester T. Lane of New York City, former general counsel of the Securities and Exchange Commission, for New York and New Jersey; Clarence A. Miller of Washington, D. C., vice president and general counsel of the American Short Line Railroad Association, for the District of Columbia, Maryland, Virginia, and West Virginia; Morris Mitchell, practicing attorney of Minneapolis, for Wisconsin, Minnesota, North Dakota, and South Dakota; Charles B. Stephens of Springfield, Illinois, executive secretary of the Illinois State Bar Association, for Illinois and Indiana; Robert G. Storey of Dallas Texas, dean of the law school at Southern Methodist University and president of the Texas State Bar Association, for Louisiana, Oklahoma, and Texas; and Glenn R. Winters of Ann Arbor, Mich., secretary-treasurer of the American Judicature Society, for Michigan. In addition, Chief Justice Carl V. Weygandt of the Supreme Court of Ohio and Associate Justice John V. Spaulding of the supreme judicial court of Massachusetts agreed to cooperate in the same work on an entirely informal basis with respect to applicants from their respective States. The original group of six consultants have aided in the regional work at their places of residence.

3. Standards and limitations to be applied: The Commission required the consultants to operate within two concepts. Examiners, or applicants for certification to eligibility for examiner positions, must (a) have had stated general and special experience and (b) demonstrate specified aptitudes or abilities. These requirements are established by the Commission's Examining Circular EC–17 issued October 21, 1947. They may be briefly described as follows:

(a) Prerequisite general or special experience: As a prerequisite to consideration, any incumbent or applicant must first demonstrate that he or she has had at least (i) 6 years' experience of a professional nature, of which the simplest and most common example is 6 years' practice or Government service as a lawyer, including (ii) 3 to 6 years of specialized experience. The latter means experience in the special fields of governmental or private endeavor loosely known as administrative law or public regulation. Examiner positions are of several different professional grades under the Federal Employee Classification Act and, under the Commission's regulations for examiners under the Administrative Procedure Act, the higher the grade (and the salary) the greater the number of years of specialized experience required.

Pursuant to the Commission's instruction that the consultants develop standards, there is attached as exhibit A a statement of the premises formulated and followed by them, together with examples, in applying the rule of the Commission requiring as a prerequisite that incumbents or applicants shall

have had general or special experience of specified duration for the several grades of examiner positions.

It is also to be noted that, as required by the Commission, general or special experience must have been progressively responsible. Thus experience so long past as to invite doubt of present ability may not qualify an applicant.

Finally, the Commission requires that previous experience in each case must be such as to demonstrate conclusively possession of the required aptitudes and abilities discussed next.

(b) Individual aptitudes, abilities, and temperament: In addition to the demonstrated possession of the required general or special experience as set forth above, the Commission has provided that incumbents and applicants must have "demonstrated conclusively" their possession of certain aptitudes and abilities. These may be fairly summarized as the general ability to act independently, objectively, efficiently, and fairly as an administrative judge—which in this case means, more specifically, the ability to preside at hearings with dignity and command, to assure that necessary factual information is developed for the record at a hearing, to analyze evidence and interpret and apply law or policy correctly, and to write decisions or recommendations of high quality. Of course the case of an incumbent or applicant will be aided to the extent that he can further show either diversity of experience or broad knowledge of the technical and other special factors involved in his field of special competence. It should be emphasized, however, that the consultants have sought generally apt, able, and tempermentally fitted examiners—not specialists in particular subjects such as radio, railroads, or rates. "The applicants must also show conclusively that they are persons of judicial temperament and poise."

The application of these directions has largely required the judgment of the consultants in individual cases involving an infinite variety of personal qualities, attributes, and combinations thereof.

4. Classes of incumbents and applicants: Before coming to matters of method and results, it will be helpful to differentiate between several groups of persons who have been subject to the scrutiny of the consultants.

(a) Status incumbents. First are those presently doing examiner work with full or competitive civil-service status, who were serving in positions which became hearing-examiner positions on June 11, 1947, and were conditionally appointed to hearing-examiner positions under the Administrative Procedure Act on that date. This means that they are Government employees of substantial periods of service. The rules and procedure of the Commission contemplate that they be examined first and specially.

The Commission has directed that only eminently qualified status incumbents be approved by the consultants. It is also to be noted that, under the regulations, incumbents or applicants may show the nature and extent of their prior experience in writing or orally up to the time the consultants act on a given case.

(b) Nonstatus incumbents. Next are persons in examiner positions who were either appointed during the war, and hence could not acquire full or competitive civil-service status, or who have been appointed, transferred, or promoted to such positions after June 11, 1947, when section 11 of the Administrative Procedure Act became effective. These people compete with other Government-employee applicants and complete outsiders.

(c) Nonexaminer Government employees. A third class which should be mentioned are Federal employees who are not examiners but have applied for certification of eligibility for such positions. These people have in many cases been in a position to obtain valuable experience in public regulation and so-called administrative law. Similarly, many employees of State or local governments have made application for certification, and here too their positions have in many cases afforded them opportunity to acquire valuable qualifying experience.

(d) Private practitioners or specialists: The last group are the private practitioners or specialists. Very often they have had some public-service experience. In the towns and smaller cities their experience is apt to be widely diversified. But the number of applications of persons of high examiner quality from metropolitan areas has been disappointing. Indeed, apart from the special and temporary case of the incumbents, it must be admitted that the number of well-qualified applicants from the ranks of nonexaminer government personnel and from private practice or specialization is disappointingly low. The ratio of high quality privately occupied applicants definitely increases in those areas where an active representative of the group of consultants is available to publicize the opportunities or to consult with those interested—a situation which suggests that consultants may have recruiting ability of appreciable value.

(e) Chief examiners: An unexpected development has been the emergence of a serious problem when agencies ask that consideration be given the case of fairly numerous administrative officers who are called chief, or assistant or associate chief, examiners. Very few agencies do not indulge in the practice of having such officers as a part of their examiner set-up. Whether they do or not is of no concern to the consultants. But it does concern them to be asked to certify that such persons are incumbent examiners when they are in fact either not performing examiner functions are are doing so to a necessarily limited extent. This does not mean that the consultants would see objection to a chief examiner who had no substantial administrative duties and who, like the chief justice of a court, is merely the spokesman or first among equals.

On the other hand, and without seeking to have them certified also for permanent appointment as working examiners under the Administrative Procedure Act, so far as the consultants are concerned any agency may, if it desires, have chief examiners or assistant or associate chief examiners for the assignment of cases, keeping of records, and other office management functions. If so, no reason appears, even apart from the Administrative Procedure Act, why agencies should desire to confer security of tenure and compensation upon such administrative officers.

Some agency heads have requested the consultants to express views as to the proper organization of an examiner corps for an agency. Although that problem undoubtedly differs more or less from agency to agency and advice upon it is not a function of the consultants, the latter can say that in the course of their work they have become convinced that one of two serious defects too often results from a chief examiner form of organization. Either the chief examiner becomes immersed in "housekeeping" routines which do not require an examiner's services, or he becomes a directing executive destructive of the initiative and independence of his flock who under the Administrative Procedure Act are supposed to be freed of such influence.

In any event the consultants have declined to consider administrative officers as examiners, even if they hear an occasional case. In some instances agencies have certified that chief examiners (or associate or assistant chief examiners) were assigned to the duties of a bona fide hearing-examiner position when in fact the individuals concerned did not perform true examiner duties. Hearing examiners, it is true, may properly have some duties other than those of conducting hearings or making or participating in decisions, and for that reason the consultants have considered the actual work of these individuals over a reasonable period of time. If that scrutiny did not disclose real examiner work as of June 10, 1947, the individuals have been rated as any other nonstatus or nonincumbent applicant and, if found eligible, placed on the register for appointment to examiner positions in competition with other nonstatus or nonincumbent applicants.

II. METHOD OF OPERATION

The week of February 9–14, 1948, was devoted to meetings with representatives of agencies, with representatives of the Federal examiner corps, and with the Commission. Thereafter the consultants operated singly or in panels of two or more for the purpose of individual cases. But the whole group met repeatedly for the transaction of general business or the discussion of policy and procedure. Associates, of course, operated singly in their regions except when invited to sit in at meetings of the main group or its panels. Oral interviews or examinations were conducted with all incumbents and with such nonincumbent applicants as seemed qualified on the paper record they had submitted.

Generally, if a case reached the rating stage, the incumbent or applicant was graded on the customary college scale—A, B, C, D, E, and F, with pluses or minuses and C the passing grade. Thereafter the individual or panel who had conducted the oral interview-examination and made the initial rating has discussed the case at a meeting of the consultants or submitted ordinary detailed findings by mail. In November–December 1948 all incumbent cases had been completed, and, for the purposes of this first report, the list of nonincumbent applicants was closed. Results were reconsidered, particularly with a view to making the determinations in individual cases further uniform and equitable. (A postaudit of the results indicates that panels of two or three members tended to more uniform, and slightly more conservative, ratings.) Findings have been made in each case, and ratings and grade levels have been assigned. Consultants disqualified themselves in cases in which they felt they might be prejudicial or partial. They have authorized their chairman to authenticate action in individual cases except that, when he has disqualified himself in a case or is otherwise unavailable, any other consultant may do so.

In other respects the method is best described by classes of personnel, as follows:

1. Status and nonstatus incumbents: In the case of all status incumbents of examiner positions, and of nonstatus incumbents who had been in examiner positions for some time, there was first a careful investigation conducted by picked, legally trained, and well-qualified investigators of the Commission operating under the direction of the consultants. This investigation included interviews, with associates of, and practitioners before, the incumbent as well as a review of his personnel record and the quality of his work. Thereafter each incumbent was interviewed by a panel of two or more consultants, who at that time or theretofore also examined specimen records and reports in cases conducted by the person so examined. When all consultants present at the interview-examination were satisfied that nothing would be gained by further time—well over an hour was the usual interview period per case—the incumbent was excused and each member of the panel recorded his vote and judgment secretly. Immediately thereupon each read what he had so written, the chairman if present and participating announcing his last. Then the next case was imme-

diately called or the session was adjourned. In only a few cases, no matter how many consultants participated, did the several votes and judgments vary in range more than, for example, between C and B. Ordinarily there might be a difference of at most a C, a C plus, and a B minus; or an A, an A minus, and a B. In the usual case two or three panel members would reach the identically same conclusion so that, for example, there would be a C and two C pluses.

2. Nonexaminer Government employee applicants: The application papers of all applicants other than incumbents were examined by the Commission member of the consultant group who, if he found a lack of prerequisite experience qualifications as set forth hereinbefore, marked the application "ineligible" and thus finally disposed of it for the present purposes. Applicants from the Federal service, who were not in examiner positions, were then usually assigned to the two consultants and one associate resident in the Washington, D. C., metropolitan area for examination and rating. They first divided the cases. Two of them chose to operate as a panel of two on all their cases. The other chose to operate alone as authorized by the group. Each reported orally on his findings and judgment in each case, and discussed any doubtful or general problems encountered, with the full group at its November-December 1948 meeting.

3. Outside or private practitioner applicants. If found eligible in the preliminary screening of papers submitted, all other applicants were ordinarily investigated, interviewed, and examined by a single consultant or one of the associates located in the region in which the applicant resided. They reported their judgment and findings in each case either by mail or orally at the November-December 1948 meeting. All such cases were either discussed with, or carefully reconsidered on the paper record by, regular consultant members of the group.

4. Future cases. Presumably the future method of operation will remain essentially the same until changed by the consultants or Commission. Investigation and examination of incumbent examiners will, of course, not recur. The consultants, later in this report, recommend certain changes in method. Naturally, there will be fewer cases to consider and fewer vacancies to be filled in agencies or on the register.

III. RESULTS IN SPECIFIC CASES TO DATE

The consultants understand that they will not publish their results in individual cases of incumbents or others, nor would the Commission normally do so. The consultants have not attempted to determine loyalty questions; pursuant to the Commission's instructions those are left to the Commission's loyalty review program, to which the action of the consultants is subject in each individual case. Presumably the Commission will notify agencies respecting action on their incumbents, and an individual letter will also be addressed to the incumbent himself. Nonincumbents will receive the usual form-letter notification. It may, however, be useful to give here the statistics of the results reached by the consultants:

1. Status incumbents: The consultants have not found it possible to apply literally the "conclusively demonstrated" and "eminently qualified" standard adopted by the Commission. But, despite more liberal approach, the number of disqualifications is substantial. Almost all of them are grounded upon (1) lack of the prerequisite experience or (2) abilities indubitably very mediocre at best. Only a handful of the disqualifications are based upon a judgment and finding of bias, prejudice, or lack of objectively judicial temperament. Statistics are given in table I. By agencies, the same results are shown in table IV.

2. All other applicants: Nonstatus incumbents must compete with applicants from nonexaminer positions and private life. Thus, while a status incumbent may retain his position though rated only C by the consultants, a nonstatus incumbent may not so long as there are people with higher ratings on the register.

Since, as explained above, the consultants adopted a liberal rule for the grading of status incumbents, they have met with difficulty in the grading of nonstatus incumbents and nonincumbents because, presumably, the standard should be uniform as between the several classes of persons rated. On such a basis, nonstatus incumbents and nonincumbents become eligible for the register if they achieve a rating of C minus. But it would more nearly meet the quality of person sought by the Commission—that is, persons whose prior experience and performance demonstrate conclusively that they are eminently qualified—if a grade of B minus or better could be established as a passing mark. Since it appears that such cannot be done under present policy and practice, it is the hope of the consultants that the same result will be achieved by the maintenance of a register which, by a sufficiency of highly rated and graded eligibles, will make it unnecessary and impossible for agencies to select persons who are on the register but are rated below B minus. To this end continued recruiting is required and should be a primary concern of the Commission and other interested parties as well as of the group of consultants.

On this basis the results of the work of the consultants respecting nonstatus incumbent examiners are shown in statistical form in table II. The same results, by agencies, are shown in table IV.

The results with respect to all other applicants are shown in statistical form in table III. The figures are self-explanatory. There, unlike the other classes of applicants, some have been disqualified because, for lack of prerequisite experience, they were not eligible for the high grade of position they stated as the minimum post they would accept. These figures indicate that recruiting may become a chief difficulty if the Commission's high standards are to be maintained. However, with increased knowledge of the system and opportunities as well as fewer vacancies to fill, that problem does not appear insurmountable.

3. By agencies: No purpose would appear to be gained by publicizing the incumbent statistics by agencies. The several agencies which have applied for permanent appointment of incumbents are the Agriculture Department, Civil Aeronautics Board, Civil Service Commission, Federal Communications Commission, Federal Power Commission, Federal Security Agency (Bureau of Old Age and Survivors Insurance, and Food and Drug Administration), Federal Trade Commission, Interior Department (Office of Indian Affairs and Bureau of Land Management), Interstate Commerce Commission, Labor Department, Maritime Commission, National Labor Relations Board, Securities and Exchange Commission, and Treasury Department (Alcohol Tax Unit, and Coast Guard). In terms of results reached by the consultants and without identifying the agencies, statistics respecting incumbent applicants by agencies are shown in table IV. There it appears that there is a wide disparity in the present standards and practices of the several agencies so far as their examiners are concerned.

IV. FURTHER IMMEDIATE PROCEDURE

Pursuant to the Commission's standing instructions to the consultants to make such recommendations as they may deem appropriate, it is suggested that the Commission make due provision for (1) the prompt effective date of the adverse determinations respecting individual incumbents, (2) orderly access by agencies to the register of eligibles, and (3) the establishment of a system of full consultant reconsideration and Commission review upon the request or appeal by any agency or applicant adversely affected. These suggestions may be explained as follows:

1. Effective date of determinations in individual cases: After such consideration and action as the Commission itself may desire to take in individual cases or respecting the whole problem, it is suggested that the adverse results as to incumbent examiners be made operative promptly except that (1) any such examiner should be permitted to complete any case upon which he is presently engaged, but (2) in no event should this period be permitted to extend in any case beyond 3 months save with the written consent of the Commission for cause. The purpose of the recommendation is obvious—to make it unnecessary for any agency to redo any part of any case already in process, and at the same time to permit the Commission to prevent evasions for any undue period.

2. Access to new register of eligible examiners: Not only because of the substantial number of disqualifications found by the consultants but also because many agencies have for some time not been filling examiner vacancies, it is necessary that some means be found to regulate the access of agencies to the comparatively small register so far made feasible. Since it is uncertain what agencies will move first or when, formulation of any hard and fast rule may be impossible at least for awhile. However, it is the recommendation of the group of consultants that the Commission authorize its employee member, who is now also the group's executive officer, to regulate the traffic, so to speak, as best he can with such assistance from other Commission personnel as may appear proper and with a view to achieving the maximum purpose of the whole operation.

3. Reconsiderations by consultants and appeals to Commission: Every action of the consultant group is, of course, necessarily subject to review and revision by the Commission. It has been understood all along that such would not be the case, however, to the extent that matters of judgment in individual cases may be involved. The position of the consultants is that (1) they will remain available to reconsider promptly any case upon any relevant ground and (2), because among other things no court would seem to have authority to review these cases, the consultants desire that no impediment be placed against full and painstaking review of any case by the Commission. For these reasons the consultants suggest that there be two phases to the reconsideration-review process within the Commission, as follows:

(a) Reconsideration: It is suggested that the consultants be permitted, upon due application by any agency, incumbent examiner, or other applicant, to reconsider the grounds of their decision with or without, in the discretion of their chairman, further oral interview-examination by an individual member or a panel of the consultant group. In any case in which new evidence is offered, as for example with respect to prior experience for lack of which an incumbent has been found not qualified, it is suggested that it be mandatory that the case be resubmitted to the consultants for reconsideration.

(b) Commission review: After such reconsideration by the consultants as the Commission may see fit to require, it is suggested that next recourse of an appellant be to the Commission. With a reconsidered judgment of the consultants, the Commission should be in a position to pass upon appeals

expeditiously after any necessary intermediate preparatory procedures and such oral argument as it may desire to accord the appellants.

V. FUTURE OPERATION AND SYSTEM

The consultants do not assume to foresee, much less now to recommend the solutions for, the many problems which are bound to appear. It does not seem to them, however, that these are likely to be serious; they are more likely to be in the nature of adjustments necessary or desirable as the system begins to settle down.

There will indeed be two classes of adjustments. First will be those which do not involve the qualification of examiners. For example, it will be necessary from time to time to review the classification of examiner positions and assure that incumbents are adequately compensated as contemplated by the Administrative Procedure Act. Second will be those problems which involve the qualification of examiners. In this respect the consultants feel that they may presently offer the following several suggestions:

1. Continuation of the consultant system. Although at least for awhile it seems plain that the group of consultants should be held together and continue to operate, some routine adjustants should be made to ease the burden. These need not be discussed here. Their present quarters and staff should be maintained.

2. An official examiner organization. The consultants strongly recommend that the Commission immediately establish by regulation an official examiner assembly, composed of all examiners unconditionally appointed under the Administrative Procedure Act, to act as an advisory body to the Commission and to collaborate with the consultants. Such an organization should be permitted to organize, elect officers, appoint committees, hold meetings, and engage in any activities not incompatible with its general purposes. The executive officer of the consultants might be assigned to act as such for the examiner assembly as well.

3. In-service training, productivity, and promotions: The consultants find that most present incumbents make insufficient effort to keep abreast of legal or other relevant developments. Their horizons apparently narrow to the routines and confines of their quarters, with an occasional contact through the press (particularly a relevant and active trade press) or in conversation respecting the course of administrative law or the national setting of the work of only the agency they serve. Very few have read official studies, such as the report of the Attorney General's Committee on Administrative Procedure, or even reports of legislative committees bearing directly on the examiners of their own agency.

This regrettable situation should be corrected. The work of the Commission and the consultants over the past year will certainly be futile if high standards of selection are permitted to deteriorate in the individual case after appointment. It occurs to the consultant that the Commission, through its control of the classification and promotion of examiners, may require of them continued and regular reading, study, or even experience beyond the indispensable minimum necessities of their daily work. The problem, incidentally, affords a splendid opportunity for the proposed examiner assembly to make recommendations to the Commission for necessary future action.

Related to the need for greater expertness and broader up-to-dateness of the individual examiner is the matter of individual efficiency and productivity. Under present conditions, the consultants have noted in some agencies an appallingly low-production record for the average examiner. Increase of real expertness as well as alertness to developments in the relevant related subjects should, of course, carry with them an increased and better case output on the part of the individual examiner. In any event, security of tenure and compensation must not be permitted to be turned into license for poor individual performance. It occurs to the consultants that the Commission will need to take account of this factor in setting up its promotion registers in each agency. In addition, the Commission should undertake some form of periodic check of examiner performance to prevent abuse of the security conferred upon examiners by the Administrative Procedure Act.

TABLE I.—*Status incumbent statistics*

Total number of status incumbent examiners	148
Number lacking required experience	14
Number lacking required ability or aptitude	28
Total found not qualified under Commission rules and standards	42
Total found qualified for permanent and unconditional appointment	106

TABLE II.—*Nonstatus incumbent statistics*

Total number of nonstatus incumbent examiners	69
Number lacking required experience	8
Number lacking required ability or aptitude	4
Number found not qualified under Commission regulations	12
Total graded C minus or better	52
Total graded less than B minus	20
Total at B minus or better	32

NOTE.—These figures include 44 persons appointed to examiner positions since June 11, 1947. Such appointments required preliminary approval of the Civil Service Commission. The incumbents so appointed were required to be selected from applicants for consultant approval after conditional approval by the Commission in the specific case. This system permitted agencies to maintain their examiner staffs during the period covered by this report if they desired to do so. The total of 69 includes 5 recent cases not completed at the date of this report.

TABLE III—*Nonincumbent examiner applicant statistics*

	Public employees	Private practitioners	Total
I. Number of applicants to Jan. 19, 1949			1,499
Number found ineligible on original review of applications	512	237	749
Number found eligible for examination			625
II. Number of applicants disqualified after examination	279	134	413
For lack of experience	163	77	240
For lack of ability, etc.	98	53	151
For grade demanded	18	4	22
III. Total number of applicants qualified after examination	132	80	212
Under B−	27	20	47
At B− or better	105	60	165

NOTE.—Since the examination is a continuing one and additional applications are constantly being filed or processed to final conclusion, the foregoing figures will rapidly change by the addition of new applicants and new consultant actions in specific cases. 90 recent cases are as yet unassigned and 35 cases, though assigned, have not yet been reported ready for final action.

TABLE IV.—*Incumbent statistics by agencies*

Agencies	Total incumbents			Disqualified			Qualified		
	Total	Status	Nonstatus	Total	Status	Nonstatus	Total	Status	Nonstatus
A	48	43	5	12	12	----	36	31	5
B	41	20	21	14	8	6	26	12	14

Total	217	148	[1]69	54	42	[1]12	158	106	[1]52

[1] For the significance of the figures respecting nonstatus incumbents, see the note to table II.

Will the Marshall Plan Destroy American Shipping?

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. SADOWSKI. Mr. Speaker, just recently I received a very interesting report from the National Federation of American Shipping. According to this report, the merchant fleets of Marshall plan nations have recovered from their war losses amazingly well. When their present building programs are completed, they will surpass by more than 5,000,000 deadweight tons their aggregate size in 1939, National Federation of American Shipping reported today.

In a survey of the 10-year status of the merchant fleets of the Marshall plan nations, the Federation stated that not only will their aggregate size be greater, but their ships in operation, on order, or being built, will be more modern, speedier and have larger lifting capacities than prewar vessels.

According to the survey, the Marshall plan nations had, in September 1939, 46,503,300 dead-weight tons of shipping; in June 1948, 43,537,100 tons; and on order or being built, an additional 8,160,000 tons, or a total of 51,697,100 dead-weight tons. This exceeds their aggregate size in September 1939 by 5,193,800 dead-weight tons.

The survey showed nearly six of the nations with sizable building programs as of June 1948, with the largest underway in the United Kingdom of 3,216,000 tons. Next in order of importance of new construction were Norway, 2,799,000 tons; France, 762,000 tons; Sweden, 683,000 tons; Netherlands, 279,000 tons; and Denmark, 254,000 tons.

The federation survey showed three of the nations, Switzerland, Ireland, and Iceland, which had no merchant fleets in 1939, with presently possessing 70,200, 40,900, and 26,700 dead-weight tons, respectively.

Twelve of the number of nations showed greater postwar than prewar fleets when considering ships on order or under construction. Five of the nations, even without including their building programs, have larger postwar fleets than before the war. These are Sweden, Turkey, Portugal, Belgium-Luxemburg, and France.

In summarizing the survey, the federation stated:

From time to time efforts are put forth to gain support in the United States for a program to rebuild the merchant fleets of a Marshall plan nation. The factual situation justifies no such effort. Any proposal to rebuild such foreign fleets is a misnomer and any effort to do so at the expense of the American taxpayer should be opposed.

I think it is about time that this Congress should wake up to the full meaning of the Marshall plan. According to the report that has just come out this morning, our national income is down 8 percent. It is now generally recognized that we will have a budget deficit of at least $4,000,000,000. This means that we will have to place an additional tax burden upon our citizens at a time when their incomes are being depleted, yet these international do-gooders insist on spending over $7,000,000,000 more for the Marshall plan, and other foreign-aid programs, and additional $2,000,000,000 or more to implement the Atlantic pact.

Out of the estimated expenditures of $41,900,000,000, $32,000,000,000 goes for foreign aid, war preparation, and expenditures arising out of past wars. This is 76 percent of the entire budget for 1950. Less than $10,000,000,000, or only about 24 percent of our appropriations will be used for constructive purposes, or for the rehabilitation of our own Nation, our own people, and our own economy. We are appropriating only $2,400,000,000 for social welfare, health, and security; $1,800,000,000 for national resources; $1,700,000,000 for agriculture; $1,600,000,000 for transportation and communications; $1,200,000,000 for general Government; only $400,000,000 for education and general research; only $400,000,000 for housing and community facilities; only $200,000,000 for labor, and the ridiculous sum of only $100,000,000 for finance, commerce, and industry.

It is indeed humorous to read the reports of the task force of the Hoover Commission, making recommendations for the saving of a few nickels here and there, and then to find no agency or group of citizens who would stand out boldly and protest against this terrible shelling out of billions of our taxpayers' dollars to foreign nations.

The cry will soon be raised that we have no money for old-age pensions, Federal aid to education, or for the hospitalization and health program, because of the already overbulging budget. These same people should be reminded that less than $10,000,000,000 is being spent for peaceful pursuits and for our own internal economy. In the present budget we have set up no margin for reduction of the public debt; and also, in the present budget there are no expenditures included for military aid to foreign nations, which will be proposed after the adoption of the Atlantic pact. A report just announced this morning discloses that the national income is 8 percent below that of a year ago at this time. In order to provide for the reduction of the public debt, and for this new additional foreign-aid program, it will be necessary to increase taxes by at least four or five billion dollars. This action will have to be taken in spite of the falling incomes of all of our citizens, business and labor alike. I say that we cannot cut the budget and make savings at the expense of our domestic economy. A cut can be made and should be made in the $21,000,000,000 that we have appropriated for war preparation and for the foreign-aid program. The United States will not be destroyed by any foreign power, but the United States can be destroyed by taxing our citizens and our economy into bankruptcy.

All the greedy and selfish interests have swooped down upon us like a flock of vultures, and by shouting "communism" are picking the very flesh off our bones. In the 1930's, when under the Roosevelt New Deal we were engaged in a liberal spending program and created a great number of alphabetical agencies to rebuild the economy of the Nation, we were severely criticized. But just think what a ridiculous position we are in at this time. We are spending between five and six times as much as we did under the Roosevelt New Deal, and how much benefit are our own people receiving from all of this expenditure?

It will not be long; yes, I will say that within 2 years from now, the taxpayers of the Nation will arise in angry protest against this present program of bankruptcy that has been fostered upon the Nation by greedy and war-minded people. The words of George Washington and his warnings will be recited throughout the land. I wish that it were possible to mail a copy of George Washington's Farewell Address to every man, woman, and child in the Nation, so as to forestall those international leaders who are leading our Nation into bankruptcy and ruin.

Roosevelt before he died came before the Congress and stated that our Nation's economy would stand no more strain, such as lend-lease, or a free foreign-aid program. The International Bank was created to substitute for any further raiding of the United States Treasury; the nations of the world had all agreed to participate. That was the way that the nations of Europe and Asia were to be rebuilt. There was also to be formed the International Trade Organization, whereby trade and business would flow smoothly between all the nations of the world. But, evidently, these two logical ways of rebuilding the world were not acceptable to the greedy bankers and international cartellists. They saw that they could best rebuild their power and international cartels and monopolies by raiding the United States Treasury under the cry of communism. For my part, I serve notice now that I shall continue to vote against all of these free foreign-aid programs. And on the other hand, I shall support a decent national old-age-pension program for our own citizens, hospitalization, health, and education for our people; also aid and assistance to develop the St. Lawrence waterway, flood control, and to protect our natural resources. This program will enrich our own citizens and our own Nation. It is a program of construction. I shall not support a program of so-called foreign aid, which is nothing more than plain thievery of the wealth and income of the American worker and the American businessman.

My Vote To Cut Expenses

EXTENSION OF REMARKS

OF

HON. LEONARD IRVING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. IRVING. Mr. Speaker, the other day when I cast my vote in favor of the bill to authorize reorganization of the executive branch of the Federal Government, I was well aware that in doing so I was obligating myself to support other legislation to complete the long overdue job of reorganization.

My action in voting as I did then was prompted by two reasons. First, reorganization of the executive branch is urgently necessary to make it more efficient. Second, the streamlining of the executive branch, destroying the multiplicity of agencies and overlapping functions, will save millions of dollars in taxpayers' money.

In committing myself to support the remainder of the program, I felt confident that I would not be asked later to support anything unsound. I have profound faith in the leadership and judgment of both President Truman and former President Hoover. I am certain they will submit only those reorganization plans which will accomplish the two objectives which prompted my first vote.

Substantiating my position in favor of economy in governmental operations was a statement issued by the Missouri Public Expenditure Survey on February 2, 1949, showing how the people in my own home county would benefit individually by money savings if reorganization of the executive branch is achieved as now planned.

That statement reads as follows:

Every citizen of Jackson County can put almost $20, which now goes for Federal taxes, back into his pocket, purse, or piggy-bank if the recommendations of the bipartisan Commission on the Reorganization of the Federal Government are carried out, Missouri Public Expenditure Survey disclosed today.

Missouri Survey, which is cooperating with the taxpayer associations in 35 other States

in supplying information on the work of the Commission, declared that preliminary Commission estimates indicate that over $3,000,000,000 now being spent by the Federal Government can be saved by putting Commission recommendations into effect. The Commission is headed by former President Herbert Hoover, who was appointed by President Truman, and is popularly known as the Hoover Commission.

On a per capita basis, this $3,000,000,000 saving means that every man, woman, and child in this county would have the Federal tax bill now charged against him cut by $19.93 if Congress puts into effect the changes recommended by the Commission. The complete Commission report is to be submitted to Congress within 60 days.

The Federal tax saving for this county with an estimated population of 477,828 would total $9,556,560 on the per capita basis.

Missouri's total saving would amount to $76,800,000, figured on the basis that total Federal tax payments made in Missouri amount to 2.57 percent of total Federal tax revenue.

This $76,800,000 is equal to over half of the entire yearly State tax collections. It is more than the operational costs of public schools in Missouri for 1947, and it is more than the combined yearly cost to both State and Federal Governments of Missouri's huge old-age assistance program.

The saving of $9,556,560 on the per capita basis in this county as a result of Hoover Commission work, looms large in comparison to the combined expenses of the county and municipal governments in Jackson County.

Glaring examples of Federal Government waste as exposed in preliminary reports of the Hoover Commission and reported by Missouri survey show that the Federal Government, spending over $40,000,000,000 of taxpayers' money, does not even keep a complete set of accounting books. Over half of all Federal Government purchase orders are made out for less than $10, and the average single purchasing order processing cost is over $10.

Majority of Democratic State Legislators in Montana Support CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement supporting a Columbia Valley Authority, signed by 49 of the 79 Democratic members of the Montana State Legislature. This statement was forwarded to me by Mr. Jerome G. Locke, a director of the League for CVA and chief engineer of the regional committee for an MVA. Mr. Locke advises me that, at the time this petition was circulated by several legislative members, two or three of their colleagues were absent on account of illness and 8 or 10 more were completely taken up with conference committee work and other procedure during the closing days of the legislative session.

Mr. Speaker, these signatures of a majority of Democratic legislators in Montana are a good indication of popular interest and Democratic support for CVA legislation. Earlier, I called to the attention of the Members the fact that the house of representatives in my State of Washington went on record in favor of CVA by an overwhelming majority of 71 to 26.

HELENA, MONT.,
February 25, 1949.

Hon. HUGH B. MITCHELL,
President, League for CVA.,
Seattle, Wash.:

We, the undersigned, members of Montana State Legislature, now in session, have been and are active supporters of programs for development of Columbia River and Missouri River, both of which have headwaters in Montana, through the agency of Valley Authority legislation.

We sincerely favor the same type of legislation as was embodied in the bill to set up Tennessee Valley Authority, namely, a public corporation that shall be responsible for the general plan of development and have a free choice in the selection of other agencies (Federal, State, and local) through which the work of development shall be accomplished. We do not believe the service any of these agencies can perform should be specifically denied, but do believe that the most satisfactory result will be obtained by leaving final choice in the hands of the public corporation, to be known as CVA, as was done in the TVA. We earnestly urge that this viewpoint be considered in drafting necessary legislation.

Senator Paul R. Rice, Bynum, Mont.; Senator Ralph P. Blair, Sidney, Mont.; Senator J. M. Hofland, Vida, Mont.; Senator Chas. W. Brown, Terry, Mont.; Senator George W. Wilson, Shelby, Mont.; Senator David F. James, Joplin, Mont.; Senator Edward A. Wenger, Anaconda, Mont.; Senator H. H. K. Wilson, Red Lodge, Mont.; Senator M. J. Mulholland, Butte, Mont.; Senator Le Roy H. Anderson, Conrad, Mont.; Senator Ray Kelly, Polson, Mont.; Senator Herbert H. Haight, Suffolk, Mont.; Representative Lloyd Barnard, Saco, Mont.; Senator Andrew Dahl, Dagmar, Mont.; Representative Earl E. Clark, Roundup, Mont.; Senator Mrs. B. M. Phillips, Landusky, Mont.; Senator J. B. Bourassa, Flaxville, Mont.; Representative H. H. Hess, Havre, Mont.; Representative Paul K. Harlow, Thompson Falls, Mont.; Representative John J. Cunningham, Bridger, Mont.; Representative John M. Jarussi, Joliet, Mont.; Representative Leo C. Graybill, Great Falls, Mont.; Representative Walter Laas, Chester, Mont.; Representative Martin J. Beck, Wolf Point, Mont.; Representative Ole S. Gunderson, Power, Mont.; Representative Richard Nixon, Hogeland, Mont.; Representative Earl E. Clark, Roundup, Mont.; Representative Edward C. Williams, Cut Bank, Mont.; Representative John F. Dusak, Great Falls, Mont.; Representative Oscar Helding, Missoula, Mont.; Representative J. Harry Wilson, Stanford, Mont.; Representative Allen Goodgame, Troy, Mont.; Representative I. A. Robertson, Ronan, Mont.; Representative Henry F. Mernin, Butte, Mont.; Representative Harry Culbertson, Fort Benton, Mont.; Representative Carle F. O'Neil, Kalispell, Mont.; Representative Ernest Burns, Whitefish, Mont.; Representative N. A. Peterson, Valier, Mont.; Representative Ronald W. Holtz, Portage, Mont.; Representative June McCarthy, Butte, Mont.; Representative Dr. Myron Tripp, Polytechnic, Mont.; Representative John Emmons, Anaconda, Mont.; Representative Arthur N. Jensen, Sr., Superior, Mont.; Representative Thomas P. Koch, Mailton, Mont.; Representative Keith W. Trout, Miles City, Mont.; Representative Volney Anderson, Sidney, Mont.; Representative W. C. Howard, Wibaux, Mont.; Representative Robert S. Cotton, Glasgow, Mont.

Extension of Benefits of Servicemen's Readjustment Act of 1944

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include an endorsement of the executive committee, Department of Connecticut, American Legion, concerning H. R. 1556. Action on this endorsement was initiated by the Robert E. Collins Post, No. 131, of Hartford, Conn., and was given subsequent approval by the State executive committee.

Several such endorsements have been received by me and I commend this legislation to the attention of the Veterans' Affairs Committee, before which it is for consideration.

THE AMERICAN LEGION,
DEPARTMENT OF CONNECTICUT,
Hartford, Conn., March 10, 1949.

Hon. JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PATTERSON: At a regular meeting of the executive committee, Department of Connecticut, the American Legion, held in Meriden on March 2, 1949, it was regularly voted that we endorse the action taken by the Aetna Post, No. 131, of Hartford, Conn., on the attached resolution.

We are forwarding this action to you for your guidance on a matter in which we know you are interested.

Sincerely,

PIERCE U. CLARK,
Department Adjutant.

AMERICAN LEGION,
ROBERT E. COLLINS POST, NO. 131, INC.,
Hartford, Conn.

Whereas there are many veterans of World War II who for such reasons as being over age for further schooling, and being well established in business prior to induction, or who for other reasons beyond their control were unable to take advantage of the educational benefits provided in the G. I. bill of rights: Be it

Resolved, That Robert E. Collins Post, No. 131, of Hartford, Conn., at its meeting regularly convened on February 7, 1949, voted to fully endorse and to petition the national body of the American Legion to support bill H. R. 1556 presented to the House of Representatives by Congressman JAMES T. PATTERSON, of the Fifth District, Connecticut, to the Eighty-first Congress, as per copy of bill attached, or similar legislation. This bill provides for the extension of the educational benefits of the Servicemen's Readjustment Act of 1944 to the eldest children of veterans of World War II where the veterans have received no educational benefits under such act.

H. E. BIERKAN, *Commander.*
WM. H. NICHOLSON, *Adjutant.*

Don't Upset the Boat

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. WHITE of Idaho. Mr. Speaker, if there is any policy of our Federal Government that should be given thoughtful consideration it is the support program of farm prices. We know what happened to credit and business in the livestock-producing districts of the country when the banks withdrew credit from the livestock industry back in the twenties. Financial distress overtook these communities when the livestock growers and feeders were forced to market both finished and unfinished livestock on a glutted market by the banks calling loans and retiring bank currency all over the country, which amounted to over $2,000,000,000. This financial policy brought ruin to the cattle feeders and their creditors and undermined the agricultural price structure which deprived the farmers and cattlemen of purchasing power and destroyed a large part of our domestic market and thereby upset our national economy.

The question of cattle-support prices has been raised in a letter received from the editorial director of the Western Livestock Journal, which is inserted herewith with my reply thereto:

WESTERN LIVESTOCK JOURNAL,
Los Angeles, Calif., March 14, 1949.
Representative C. I. WHITE,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE WHITE: Each month Western Livestock Journal invites a selected list of its readers to forward a reply to the question of the month.

For the month of April the question is: Are you in favor of Government price supports on meat animals? If so, how do you think such a program could be handled?

We will certainly appreciate it if you will forward an answer to this question not later than March 31.

Question of the month has become one of the most widely read features in the Journal. Livestock industry leaders, State and national legislators, and western stockmen have learned to look for the question page to find a representative selection of opinion on one of the important problems of the day.

We are grateful for your interest, and we'll be looking forward to your response.

Cordially,

E. F. NEWTON,
Editorial Director.

MARCH 16, 1949.

Mr. E. F. NEWTON,
Editorial Director, Western Livestock Journal, Los Angeles, Calif.

DEAR MR. NEWTON: The best answer to the question submitted in your letter of March 14, "Are you in favor of Government price supports on meat animals? If so, how do you think such a program could be handled?" is to be found in the hearings of the Subcommittee on Banking and Currency considering H. R. 8780, beginning on January 30 and ending on March 8, 1934, which I have before me.

On page 249 you will find statement by Congressman Busby, of Mississippi.

"What happened by and large was that the rediscount banks were called on to make payment to the Federal Reserve of loans they never expected to be called, and that was the condition all through the South. They were notified by the Federal Reserve, 'if you make this loan again you will carry it in your own portfolio, because we will not rediscount that type of paper.'

"The result was that the lumber concerns, the automobile loans, and everything else were put on the black list for rediscount, and consequently in this country, you will find that a billion, eight hundred and fifty million cash was squeezed out of circulation in the course of 15 months, and I believe about 10,000,000,000 of credit. I have checked up on that."

To my mind, that's an example of what happens with the withdrawal of cash and credit support of the products of the farm industry and related business, and was the major cause of the depression of the late twenties and early thirties. Today, with the exorbitant prices charged the farms for all the things necessary to be used in the farming industry, if we don't support the price of farm products, our national economy will be upset as a result, just as it was in the period during the years after 1920.

You do not need to go further for an illustration of the present price situation than taking the past and the present price of the farm necessity—barbed wire—quoted to me in Lewiston, Idaho, at $11.50 a roll, when I used to buy a roll of the identical wire in my home town of Clark Fork, prior to the First World War, at $1.40 a roll—and we know that John W. Gates got to be a millionaire by marketing barbed wire at a dollar a roll.

Surely, farm-support prices are a necessity if our economy is not to be upset and a depression to result.

Trusting that this answers your question satisfactorily, I am,

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Excise Taxes on Transportation

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Public Utilities Commission of the State of California:

Whereas heavy wartime Federal excise taxes on transportation, when first imposed, were reportedly designed for emergency revenue purposes and to lessen public use to a minimum during wartime of transportation and communications facilities; and

Whereas these taxes are still being levied despite the fact the emergencies created by the war have ended; and

Whereas a report by our rate engineers shows that California traffic paid $32,970,000 during 1948 in transportation taxes, both passenger and freight, and $49,634,000 in communications taxes in the same period, or a total of $82,604,000; and

Whereas the 3-percent freight tax inevitably falls heavier upon all shipments originating long distances from the major consuming markets, thus discriminating against all long-haul traffic; and

Whereas, because of the State's geographical location, California products are severely penalized through this discrimination in competition with products from other areas; and

Whereas the 15-percent passenger-fare transportation tax similarly penalizes and discriminates against those who must travel long distances either in their business pursuits or for personal or recreational purposes; and

Whereas in connection with the communications taxes which are assessed at rates running from 8 percent up to 25 percent on telephone, telegraph, cable, radio, and wire-equipment services, it has been found that these levies tend to restrict usage and thus are injurious to both users of communications and utilities providing communications: Now, therefore, be it

Resolved, That the California Public Utilities Commission does hereby go on record as informing the National Association of Railroad and Utilities Commissioners that this commission supports the principles expressed in 20 or more bills pending in Congress to repeal or modify these excise taxes; and be it further

Resolved, That the commission does hereby urge California's Members in Congress to support all efforts to repeal such taxes, and that a copy of this resolution be sent to each of California's Members in Congress; and be it further

Resolved, That the statements contained in this resolution be given to the press and public of California so that everyone's attention may be called to the fact that this commission deems the time is past due when these unjust and discriminatory Federal excise taxes on transportation and communications services should be repealed.

The Taft-Hartley Law Should Be Immediately Repealed

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. HELLER. Mr. Speaker, the encouragement and promotion of genuine and free collective bargaining should be the primary objective in the formulation of a national labor policy. Mutually satisfactory bargaining arrangements are indispensable to the attainment and maintenance of an era of industrial peace. With these objectives in mind, it is my considered opinion, after carefully considering the subject of employer-employee relations, that the Taft-Hartley Act of 1947 should be repealed for the following reasons:

First. The Taft-Hartley Act's ban on the closed shop has resulted in the outlawing of collective-bargaining agreements which had been mutually beneficial to both labor and management and had assisted in the maintenance of industrial peace for a period of over 100 years. We are all aware of the bitter controversy involving the International Typographical Union, which had a long history of peaceful labor relations prior to the enactment of the Taft-Hartley Act. The act has also disrupted the hiring halls which had been established by collective bargaining and had stabilized industrial relations in the maritime industry. At the time the act was passed

more than 11,000,000 workers were covered by union security agreements. Not only was the closed shop outlawed, but restrictions were put upon union-shop agreements. The procedure under the Taft-Hartley law requiring the National Labor Relations Board to hold elections among employees before authorizing the consummation of union-shop agreements has proved very costly to the Government, and useless. The elections have merely demonstrated the overwhelming preference of workers for this form of security. In about 97 percent of such elections the workers chose a union shop. Proponents of this section, who devised it as a method of harassing unions, have found to their chagrin that it actually resulted in a large favorable vote for the union shop. By providing for numerous elections—representation, union shop, employer's last offer—the Taft-Hartley Act keeps the relation between employers and unions in an unsettled condition, instead of on the basis of stability and confidence so necessary in assuring free collective bargaining.

Second. The Taft-Hartley Act completely outlaws peaceful picketing in many situations, even such types as have enjoyed protection of our courts for several decades. Thus employees who picket an employer because he persists in making them work on partially finished goods produced in another plant at sweatshop wages may be found guilty of the unfair labor practice of engaging in an unlawful secondary boycott.

Third. The Taft-Hartley Act places unreasonable restraints on many aspects of collective bargaining agreements. The check-off—a legitimate labor-management practice—has been surrounded with many unnecessary procedural requirements, violation of which carries a criminal penalty, to the detriment of harmonious relations between labor and management. The law removes from the area of free collective bargaining a subject which is a proper objective of workers—welfare funds established for the humanitarian purpose of protecting the health and security of employees. It is made a crime for employers and employees to establish such funds except under rigid rules limiting their purposes and methods of administration. Furthermore, violations may be enjoined without regard to the Clayton Act and the Norris-LaGuardia Act safeguards.

Fourth. Under the Taft-Hartley Act, State labor laws which contain more restrictive provisions governing union-security contracts supersede the National Labor Act. A recent line of Supreme Court cases upholding restrictive State labor laws clearly indicates that no national labor policy can be effectively administered under such circumstances. Even union shops are banned in some industries engaged in interstate commerce.

Fifth. The Taft-Hartley Act places special emphasis on the use of injunctions to settle labor disputes. The Board, for example, is under a mandatory duty to seek injunctions against unions in all cases involving secondary boycotts, including those for perfectly legitimate objectives, such as the protection of labor standards. In no case is it mandatory that the Board seek injunctions against employers. The increasing use of the injunction as a method of handling labor relations has aroused only hatred, suspicion, and resentment on the part of the workers and has not furthered either the interests of management or labor. The evils of the labor injunction are well known and were recognized by the Congress in the Norris-LaGuardia Act.

Sixth. The Taft-Hartley Act provides elaborate and inflexible procedures including boards of inquiry, an 80-day waiting period, enforced by injunction, and secret ballots which must be followed in emergency disputes. Nevertheless, as the President said in his veto message, he and his officers are deprived of their power to take effective action in securing peaceful settlement of such disputes. For example, even the boards of inquiry are deprived of authority to make recommendations for settling the dispute. In the atomic energy and longshore cases these procedures were unavailing and agreements between the parties were reached with the assistance of Government conciliation, only after the machinery provided by the law had ineffectively run its course.

Seventh. The Taft-Hartley Act's broad ban upon political contributions and expenditures by labor organizations is unfair and undemocratic. It is discriminatory legislation because it selects labor organizations as the only type of voluntary associations which are to be denied effective political participation.

Eighth. Under the Taft-Hartley Act, the employer can, by petitioning for a choice of collective-bargaining representative, determine the time most advantageous for himself to call for an election, even when not faced with conflicting claims for recognition. An employer can thereby stifle and thwart organization efforts and assure a year's freedom from union organization.

Ninth. One of the most serious consequences of the law is the denial, not only of the right of reinstatement, as under the Wagner Act, but also of the right to vote in representation elections while granting a vote to strikebreaker replacements. The law thus permits an employer who is faced with a strike for better wages and hours in his plant, to hire sufficient nonunion replacements to outvote the members of the union and thereupon to demand an election, the result of which can well be to oust the union from the plant.

Tenth. The Taft-Hartley Act abandoned the uniform procedures of the Administrative Procedure Act of 1946 and singled out the National Labor Relations Board as the one administrative agency in our Government which should receive different treatment. The law set up a general counsel who has broad discretionary powers and who is independent of the Board. He has final and absolute authority to determine what complaints should come before the Board. Thus, a tremendous amount of power is placed in the hands of one man since he can pick and choose among the cases to be prosecuted.

The Taft-Hartley Act was passed during a period of great emotional stress, arising from abnormal disturbance and readjustments, which was an inevitable accompaniment of the return to a peacetime economy. It is true that the strikes which occurred between August 1945 and June 1947 played a large part in creating the emotional atmosphere in which a law like the Taft-Hartley Act could be passed. As stated by Secretary of Labor Maurice J. Tobin before the Senate Committee on Labor and Public Welfare on January 31 last, we should remember, however, that at the time the act was passed economic controls had been off for all practical purposes for almost a full year.

In the period between June 1946 and June 1947 the Bureau of Labor Statistics consumers' price index rose from 133.3 to 157.1, or 17.8 percent. During the same period average hourly earnings, exclusive of overtime, increased from $1.05 to $1.17, or 11.4 percent. Throughout the period the widening spread between wages and the cost of living caused dislocations which inevitably produced exasperation and conflict. Had the Congress been faced in the spring and summer of 1947 with writing a Federal labor law under different economic and psychological conditions the result would have been very different from that act. Today the balance between prices and wages is beginning to adjust itself, and economic conditions are on a more settled basis—of course, on a level of production, employment and income substantially higher than that which prevailed in the years 1935–1939. There is an opportunity now again to return to the basic principles of free collective bargaining which the National Labor Relations Act of 1935 established as the fundamental basis of our national labor policy.

Strong unions with effective power to bolster the wages of their members in terms of real buying power, through the process of collective bargaining, represent the most democratic means of preventing the boom and bust cycles which have plagued our economy over the past 100 years when business has fixed wage in all but a few industries without regard to the needs of their workers or to their ability as consumers to buy back the products which a constantly expanding economy was producing.

In the Wagner Act labor received its Magna Carta, its right to bargain collectively was granted. This guaranty must be preserved and protected.

The 1948 election and the special election on February 15, 1949—when I was elected to Congress—were clear and convincing mandates from the people demanding the repeal of the Taft-Hartley law. Zealous public servants should therefore carry out the will and wish of the people. Immediate repeal of this unjust, unfair, and vicious legislation is the way to do it.

A New Day for the Indians

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK
OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. BURDICK. Mr. Speaker, the Indian problem has agitated this country for 150 years. This continually unsolved problem must end sometime and I think to North Dakota should go the credit for pointing a way to a complete settlement of that problem, and within a reasonable length of time.

Extreme conditions of hardship among the North Dakota Indians brought this about, but the plan suggested, if supported by the Congress, will take the American Indian out of the bondage of government wardship and make him a responsible and valuable citizen of the country.

For immediate use, and to prevent further suffering, the legislature of the State of North Dakota has in the session just closed appropriated $175,000 for the relief of Indians, who should have been relieved by the Federal Government. In addition to that, the State of North Dakota passed an act at the same session creating an Indian commission in the State of North Dakota. This legislation is so new and so far-reaching in the final adjustment of Indian affairs in the Nation that I submit herewith the full text of that act:

An act creating the North Dakota Indian Affairs Commission, prescribing duties, making an appropriation, and declaring an emergency

Be it enacted by the Legislative Assembly of the State of North Dakota:

SECTION 1. There is hereby created a North Dakota Indian Affairs Commission which shall consist of the governor, commissioner of agriculture and labor, superintendent of public instruction, executive director of the public welfare board of North Dakota, State health officer, and the chairmen of the boards of county commissioners of Sioux, Mercer, McLean, McKenzie, Dunn, Rolette, Benson, and Eddy Counties. The Governor shall act as chairman of the commission and the commission shall select one of its members as secretary. The chairmen of the board of county commissioners who are members of the commission shall receive the mileage and expenses allowed State officers which shall be paid from the appropriation made to such commission.

SEC. 2. The commission may employ an executive director who shall not be a member of the commission and such other clerical, professional, and technical personnel, as it deems necessary, and shall prescribe their duties and fix their compensation.

SEC. 3. In order that the State may be prepared and have the factual information needed to deal effectively with Indian affairs, provide aid and protection for Indians as needed, prevent undue hardships, assist in the integration of Indian citizens into modern economy, and coordinate State, local, and Federal programs relating to Indian affairs, the commission shall have the power and it shall be its duty,

1. To study, consider, accumulate, compile, and assemble information on any phase of Indian affairs;

2. To formulate and develop proposals for the benefit of Indians who may be in need of assistance in securing employment in agriculture, business, or other usual occupations, on a self-supporting basis;

3. To cooperate with and secure the assistance of the Federal Government or any agencies thereof, in formulating any such program, and coordinate such program, as nearly as may be possible, with any program regarding Indian affairs adopted or planned by the Federal Government to the end that the State may secure the full benefit of such Federal program;

4. To investigate relief needs of Indians in North Dakota and to prepare plans for the alleviation of such needs;

5. To confer with officials and agencies of other governmental units and congressional committees with regard to Indian needs and the coordination of State, local, and Federal programs in regard thereto.

SEC. 4. All public officers, both State and local, shall, upon request furnish the commission such available information as it may require for its purposes.

SEC. 5. The commission or any subcommittee it may appoint may meet at such times and places as it may deem advisable. Meeting may be called by the chairman or by a call signed by a majority of the members of the commission. At any meeting of the commission a majority of the members shall constitute a quorum and a majority of such quorum shall have authority to act in any matter falling within the jurisdiction of the commission.

SEC. 6. The commission, as soon as practicable, and not later than the first day of December 1950, shall prepare and make public a report to the thirty-second legislative assembly setting forth the results of its study and its findings, conclusions, and recommendations. It may submit recommendations in the form of proposed legislation or resolutions and may publish such additional reports from time to time as it may deem necessary.

SEC. 7. There is hereby appropriated out of any money in the State treasury not otherwise appropriated the sum of $20,000, or so much thereof as may be necessary for the purpose of carrying out the provisions of this act. Expenditures shall be made upon voucher signed by the secretary of the commission.

SEC. 8. Emergency. This act is hereby declared to be an emergency measure and shall be in full force and effect from and after its passage and approval.

Along with this legislative action, the superintendent of an Indian reservation, H. N. Clark, Fort Yates, Standing Rock Reservation, himself an Indian, has come forward with a program of rehabilitation of Indians that would fill the requirements of almost any Indian reservation in this country.

Mr. Clark, always insisting that the Indians themselves carry on the work, made a survey of his reservation to learn what each Indian wanted to do to make himself self-supporting, and in addition sent a general questionnaire to every Indian there.

The questions have been answered and there is now a complete file on every Indian as to what land he has, what stock he owns, how many more he could take care of, the number of Indians who want to learn special trades, and other material matters affecting the future welfare of the Indians.

Mr. Clark learned that a great majority of the Indians on that reservation want to engage in the cattle business with supplementary farming that would tie in with the cattle trade. The superintendent then worked out a cattle and land-acquiring program which has gained approval of nearly 75 percent of all the Indians on the reservation. Some, of course, have been dubious; from past experience they have learned to look with disfavor on any plan that comes from the Indian Bureau.

The cattle-raising plan has already been tried, and of 260 who entered the cattle business in 1948, with funds chargeable to the tribal fund, only 16 failed to make good. There on that reservation the Indians have the land base for cattle and farm production and no money is required for land except enough to convey estate land back to the tribal holdings. Individual allotments through the years and through deaths have so divided these estates that in some cases there are 50 heirs owning an interest in 160 or 80 acres of land. The interest of each heir is so small that in some cases it amounts to just a few cents.

With an appropriation of $250,000 these multiple divisions of interest can be repurchased and put back into the tribal lands, where death will not ultimately eliminate the property.

On the cattle and farming program, no new ventures are to be tried this coming year, but a $250,000 appropriation will enable those Indians now having herds to increase them to a holding of 50 head. The cattle purchased will be turned over to those Indians who have made good in the past, giving them units of business sufficiently large to make management worth while. It should be emphasized that this money will by no means be given these Indians, but will be payable back to the tribal fund, and through that to the Federal Government.

The outcome of the Indian Commission work in North Dakota promises to show the Nation just how the Indian problem can be eliminated and the Indian assimilated into State governments. Here again, the way is pointed to final disposition of the Indian question.

The Clark plan will fit any Indian reservation where there is a land base, but on reservations like the Turtle Mountain agency a more serious problem remains to be solved. There, with the passage of time, the great Chippewa Indian domain that once embraced close to a million and a half square miles has to be reduced to less than two townships. Both townships have very poor agricultural land, but are expected to hold 9,000 Indians. There is not room enough for more than 300 Indian families to support themselves on that land. Here the first duty of the Government will be to acquire more land and settle the Indian upon it, then take up the same program that now promises so much for the Indians of Superintendent Clark's reservation.

Pride of ownership appears to be the keynote of the Clark plan. The superintendent reports that where Indians paid for their cattle in full and owned

their own herds, they became very enthusiastic about their business. Independence, which Bureau control prevents, spells a proud new day for the Indian. Through the process of building and encouraging self-reliance in the Indian himself, the Government will reach the solution to the Indian problem.

Rent Control

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. SCUDDER. Mr. Speaker, rent control is a wartime measure and was enacted to control rentals because of the dislocation of people moved into areas engaged in critical war industries and where housing was inadequate and where demand might cause rentals to be subject to bid, thereby causing hardship in certain localities.

Rent control was made a Federal issue by law, controlled and administered from Washington, the Federal Government taking over a function of government which by its very nature should be a function of local government, because local government regulates, taxes, and polices real estate in accordance with the wishes of the electorate of the various States, counties, and cities.

Almost 4 years have elapsed since the close of World War II. If we are ever to have returned to local government those functions which are rightly theirs, we must begin now or it will be too late. The bill we are considering does not only extend rent control, it recontrols properties which have been decontrolled, it places greater restrictions than heretofore existed—we have curbed some of these restrictions by amendment—but the law will still be dictated and controlled from Washington. I believe the governing bodies of our respective State, county, and city governments are better informed as to housing conditions and local affairs and can do a better job than some appointed bureaucrat sitting behind a desk in Washington.

In 1940, when rent control was enacted, we had in this country 16,000,000 rental units; in 1948 we had 15,000,000 rental units and during 1946–48 there were constructed in this country 2,500,000 housing units. This to me is conclusive that we are discouraging construction of rental property and are forcing owners of rental properties to sell, thereby making the rental situation more acute.

I have received numerous letters from constituents protesting Federal rent control. Many of them have rentals and with increased taxes and maintenance costs they cannot afford to hold their properties much longer. Others desire to invest their money by building rental properties, but are holding back on account of the uncertainty as to whether Congress will by law impose conditions which might jeopardize their investment.

It is my belief that the control and regulation of property is a State responsibility and I feel that the sooner we sever this control from the Federal Government, the sooner the housing problem will be solved.

I am a firm believer in the grass roots of government and the closer we can keep our Government to the people, the better we will be governed. I am opposed to the big centralized Government which we have developed and I strongly favor its return to the people.

Housing Shortage Extension

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of March 15, 1949:

HOUSING SHORTAGE EXTENSION

The fact that the House of Representatives has cut from 27 to 15 months the period for the proposed extension of rent controls is an indication that even the Democratic Congress is beginning to doubt that the housing shortage can ever be solved as long as rent controls are in effect.

The amendment adopted on the floor of the House directing the rent authority to allow property owners a reasonable return on their investments as far as practicable is a further indication that Congress does not have confidence in the manner in which rent controls have been administered in the past.

Actually, the phrase "a reasonable return as far as practicable" would not compel the rent authority to allow legitimate claims for rent increases. Since nobody likes to pay more rent, and since renters are also voters, the present administration would never find it practicable to permit rents to be increased in the same ratio that other expenses have gone up, including the cost of keeping rental property in repair.

The emergence of the rent-control bill on the floor of the House last week was accompanied by an announcement that the Housing Expediter would decontrol 170 rent areas throughout the country, mostly in rural sections, if he were given the right in the new bill to decontrol them.

This was seen by some Congressmen as a plain case of attempted bribery—offering freedom from rent control in return for votes in support of rent-control legislation. If there is no need for these 170 areas to be under control, why weren't they decontrolled long ago, without regard to the pending legislation?

The fact is, the measure to extend rent controls for 15 months is a measure to prolong the housing shortage for another 15 months.

It is a measure to continue the confiscation of private property under the fiction, upheld by the Supreme Court, that we are still at war and that the emergency war powers are still in effect.

It is a measure to continue the discrimination against war veterans who have been compelled to build or buy housing at high prices in order to find shelter to the benefit of those who, because they stayed at home during the war, acquired the protection of low rent by Government fiat.

Recent surveys, including one made in Cleveland, have shown that the housing shortage is largely artificial and that it is being maintained artificially by rent controls.

According to the Cleveland survey, renters today occupy more space per person than they did in 1940. If the same rate of occupancy which was in effect in 1940 prevailed today, there would be a surplus of housing instead of a shortage, the survey showed.

But why should anyone who is occupying more space than he really needs bother to look for smaller quarters as long as he is paying cheap rent? As long as rent controls are in force, a tenant who benefits from them will have no incentive to look for better housing, which he might be able to afford, or for smaller quarters, which might be more convenient.

Thus, it should be clear to any reasonable person that rent controls have prolonged the housing shortage and are tending to perpetuate it.

It is time that Congress took a long look at the problem and decided whether its objective is to end the housing shortage as speedily as possible or to give one class of citizens something for nothing.

If the objective is to end the housing shortage, Congress should be moving at this time to terminate rent controls instead of preparing to extend them. Several methods of gradual termination have been proposed, such as decontrolling housing in the high-price brackets first and working gradually downward, or permitting a small percentage increase in rents monthly until the supply of rental property is equal to or in excess of demand.

But if the objective of the Government is to give certain classes of citizens something for nothing, why not extend the principle to other items in the cost of living, such as groceries? Why not provide that everyone who stayed home during the war and made big wages should be allowed a 40-, 50-, or even 60-percent discount on his food purchases—at the expense of the grocer, of course?

Obviously such a proposal would be ridiculous. But it is no more ridiculous than a Government decree giving one favored class of citizens a discount on their rent at somebody else's expense, especially when such a rent gratuity contributes to the housing shortage, discourages new construction, and increases the housing difficulties of those who do not happen to belong in the favored category.

Best Informed Labor Is for Dairy Products

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the segment of labor that realizes that millions of people are dependent upon the dairy industry for a livelihood most assuredly are for protecting the dairy industry from the unfair competition of synthetic or imitation dairy products. They realize that thousands upon thousands of jobs are involved, and they do not wish to join the ranks of the millions already unemployed.

Real labor does not support the $58 to $67 per month wage standard in the oil-producing areas but does support the $140 to $150 monthly wage rate prevailing on farms in the dairy section of our country.

The press release by Mr. August Burnier, president of the Dairy Employees Union of Chicago, follows:

DAIRY UNION OFFICIAL FAVORS REPEAL OF OLEOMARGARINE TAXES BUT WOULD BAN SALE OF YELLOW-COLORED PRODUCT LIKE BUTTER

Urging that taxes be removed from the sale of oleomargarine and that Congress enact legislation to prevent its being colored yellow to be sold like butter, August Burnier, president of the Dairy Employees Union of Chicago, whose 4,400 members work in more than a hundred dairies in Illinois, Wisconsin, and Indiana, testified at the House Agricultural Committee hearings today that dairy workers are concerned about loss of jobs if unrestricted sale of yellow oleomargarine is legalized.

Burnier told the House committee he believed dairy workers would welcome, with other consumers, the repeal of oleomargarine taxes. But he maintained that if yellow oleomargarine is sold in imitation of butter the more economical uncolored oleomargarine may tend to disappear from the market, since the price of colored oleomargarine is likely to follow the price of butter rather than the cost of the inexpensive oils that go into its manufacture, thereby increasing the cost of living.

"The disruption of the butter market will most certainly lead to a decline in dairy-cow numbers, and a consequent decrease in production of milk, veal, and beef, with consequent higher prices for these commodities," stated Burnier, who is a disabled war veteran and employed for years in dairy plants. "Widespread unemployment in local dairy communities, and higher prices for meat and milk would be too high a price to pay for so-called cheaper oleomargarine."

"The only reason the oleomargarine manufacturers wish to color their products yellow," declared Burnier, "is because the color of butter is yellow. If butter were brown, red or blue, you would find them equally as insistent that they be permitted to color their product red, brown or blue. They don't want to sell oleomargarine in the place of butter, but 'just like butter.' The natural color of oleomargarine is white. Why not let it be sold with that color?"

"There are thousands of creameries and dairy plants spread throughout the nation," Burnier pointed out, "whose employees' welfare is involved in producing, processing and delivering butter and other dairy products, and in which unemployment may come about if unrestricted sale of colored oleomargarine is permitted by Congress. The manufacture of butter, by the nature of its production in small plants in widely scattered areas, is greatly decentralized. In contrast, the nonperishable oils used in making oleomargarine makes possible the concentration of that industry in a few large plants, by a handful of manufacturers."

RESOLUTION ADOPTED AT CHICAGO, ILL., ON FEBRUARY 28, 1949, BY THE EXECUTIVE BOARD OF DAIRY EMPLOYEES UNION, LOCAL 754, INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, WAREHOUSEMEN AND HELPERS, AFFILIATED WITH THE AMERICAN FEDERATION OF LABOR

Whereas the Congress of the United States is considering measures to repeal the so-called oleomargarine tax; and

Whereas this action will meet with the approval of workers in the low income brackets since it will reduce the cost of this commodity; and

Whereas if colored oleomargarine is sold in imitation of butter the more economical uncolored oleomargarine may tend to disappear from the market since the price of colored oleomargarine is likely to follow the price of butter rather than the cost of the inexpensive oils that go into its manufacture, thereby increasing the cost of living; and

Whereas the disruption of the butter market will most certainly lead to a decline in dairy cow numbers and a consequent decrease in production of milk, veal, and beef, with consequent higher prices for these commodities, thereby increasing the cost of living: and

Whereas there are thousands of creameries and many thousands of dairy plants spread throughout this Nation whose employees' welfare is involved in protecting butter against unfair competition; and

Whereas widespread unemployment and scarcities and higher prices for meat and milk would be too high a price to pay for so-called cheaper oleomargarine: Now, therefore, be it

Resolved, That the executive board of the Dairy Employees Union, Local 754, in executive session assembled on the 28th day of February 1949, respectfully requests the Congress that it repeal existing oleomargarine taxes and at the same time enact legislation prohibiting the sale of oleomargarine colored as butter, so that the public may at all times distinguish between these products; and be it further

Resolved, That copies of this resolution be submitted to the President of the United States, the Secretary of Agriculture, the Representatives and Senators in Congress; and be it further

Resolved, That the dairy employees' union send a representative to appear before the House and Senate Agricultural Committees to emphasize the very great importance of this legislation to the members of the dairy employees' union and the dairy industry.

Capitol Watchtower

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Tom L. Munger:

Judging by the vote in last November's presidential election, American farmers are looking to the Democratic Administration for a continuance of the policies which over the past decade have made them the most favored and prosperous economic group in the country. They are doomed to a bitter disillusionment.

This is not to say that Congress made a mistake in passing the almost unnoticed administration bill to prohibit the use of 1949 plantings of basic crops in determining future acreage allotments. Not so long as farm-price support programs are continued. The measure was designed to benefit farmers by stabilizing farm prices at comparatively high levels. But it will not look like a benefit at first.

What it will do immediately, of course, is to discourage excessive plantings this year (under 90 percent of parity price protection) for the purpose of establishing claims to large acreage allotments when, if and as controls are reimposed on all basic crops under the Agricultural Adjustment Act of 1938. This act still is on the books, and AAA marketing quotas and acreage controls currently govern tobacco and peanut production.

Both Administration and Congress manifestly are looking toward reimposition of acreage controls on wheat, corn, rice and cotton, the other basic crops. They know there is a prospect of early food surpluses, and the possibility of a farm depression, if curbs are not imposed on such major items of food crop production.

All this in spite of continuing high farm prices, resulting mostly from large-scale food exports by the Economic Cooperation Administration. These exports are decreasing rapidly as food production increases abroad. The food-gift program probably will end in 1952. Thereafter foreign countries are likely to lack dollars for extensive buying on their own account. The food boom cannot last forever.

As matters now stand, there would be no change in the present Agricultural Adjustment Act until next year. Then the Hope-Aiken Act, passed by the Republican Eightieth Congress and signed by the President, would go into effect. This measure was so written as to provide a flexible farm price support scale, ranging from 60 to 90 percent of parity. The greater the total crop, the less in proportion to parity the price support payment—in effect an automatic curb on overproduction.

But the Democratic administration stands committed by President Truman's campaign promises to repeal the Hope-Aiken Act and return to the flat 90 percent of parity. The present Democratic Congress is pretty sure to do this. One reason for thinking so is the passage of the bill to discourage excessive plantings this year, thus scaling down acreage allotments in future years. Now the majority in Congress is in a position to make a grand gesture in hopes of retaining the farm vote next year.

Presently, though, it may dawn upon the farm voters that the Democratic administration is not continuing the policies so dear to the farmer's heart and pocketbook. With one hand the administration will give, but with the other it will take away. Farmers will not be permitted to overproduce extensively in the face of falling demand for farm products. Not with urban industrial populations paying taxes to foot the bill to maintain high farm prices, a major factor in the cost of living. The administration owes too much politically to the labor unions.

It is true that the roundabout method being employed by the administration will force farmers to cut the coat of agricultural production to fit the cloth of demand for the fruits of the soil. But how much easier and simpler, how much more in accordance with American principles, to accomplish the same result by letting the Hope-Aiken Act stay on the statute books. Intrinsically the difference between the Democratic and Republican approaches to the problem is this.

The Hope-Aiken Act, a Republican measure, automatically and by law would regulate farm production and safeguard farm prosperity by keeping supply in balance with demand. "Equal justice under law," as it says in words of marble above the portico that leads to the chamber of the United States Supreme Court.

Evidently the Democrats plan to regulate farm production at the whim of bureaucrats here in Washington. These men will say, on the basis of some earlier small production year, what the acreage allotments shall be. Government power will be even further centralized. The rule will be by men and not automatically by law.

Should it happen the bureaucratic controls are fairly and ably administered, the net result might approximate that of the

Hope-Aiken Act. But it is reasonable to assume, in the light of past Democratic performance, that bureaucratic administration will be strictly in accordance with partisan political necessities. Farmers will have to vote right to get the gravy.

Either way, in spite of President Truman's promises of high prices for things farmers sell and low prices for things farmers buy, it looks as if the lush days of exceptionally high farm income at public expense are due soon to depart. Urban industrial populations will benefit by reason of lower food prices. But farmers won't like it, even though a reasonable degree of farm prosperity should be maintained over a long period.

All of this adds up to one of two things: Either the President's frenzied campaign promises to the farmers were insincere, or he had to learn some of the economic facts of life from Agriculture Department experts subsequent to the election. Neither reflects much credit upon the wisdom or the good intentions of the Administration.

Certainly the course with regard to farm production and prices now being pursued by the Administration and the Democratic majority in Congress is not the course of political honesty. And certainly it reveals the true nature of the bill of goods the farmers of the United States bought for themselves last November.

Information, Please!

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. MANSFIELD. Mr. Speaker, I have before me two form letters which puzzle me somewhat.

One has the heading "Small Business Economic Foundation, Inc." and is signed DeWitt Emery, president, "Eternal Vigilance Is the Price of Liberty."

The other letter has the heading "National Small Business Men's Association, Inc.," and is also signed, DeWitt Emery, president, "Eternal Vigilance Is the Price of Liberty."

What puzzles me is: What is this Small Business Economic Foundation, Inc.? And what is this National Small Business Men's Association, Inc.? Last but not least: Who is this "Eternal Vigilance Is the Price of Liberty" DeWitt Emery?

Now I look again at the letter from the Small Business Economic Foundation, Inc., and it lists, as officers and directors, DeWitt Emery, E. N. Calhoun, A. F. Mathews, W. J. Boos, J. Raymond Tiffany, L. M. Evans, and Dr. Alfred P. Haake.

I then turn my head and look at the letter from the National Small Business Men's Association, Inc., and I find the very same names listed, this time designated as trustees, and also supplemented by two or three additional names. Accordingly, I am more puzzled than ever about Eternal Vigilance Is the Price of Liberty, DeWitt Emery, who signs both letters.

The letter No. 1, from the Small Business Economic Foundation, Inc., is a solicitation for contributors. It reads, in part:

Of course, all of us like to know the company we are keeping, so I thought it would be helpful in your case to attach a cross-section list of the better-known companies who have currently subscribed up to the acceptable $2,500 maximum.

I then take a look at the list of friends of small business and I find such names as Socony-Vacuum Oil Co., Standard Oil Co. of Indiana, Standard Oil Co. of New Jersey, and the United States Steel Corp. I then look at the second paragraph of the letter:

All of the many leaders in industry who have been asked their opinion as to the effectiveness of our grass-roots approach to the problem of explaining to workers the advantages of our free competitive system of business, quickly concede that this program, originating with the representative small business group, is most likely to accomplish the desired result—i. e., public understanding.

I want to emphasize the phrase used in the letter "the representative small business group": The word "the" is underlined right in the letter.

Apparently these big business corporations are a substantial force behind this so-called representative small-business group engaged in explaining to workers the facts of American life.

I now turn again to letter No. 2, from the National Small Business Men's Association, Inc. This also is a letter of solicitation, this time for a check of $18 in payment of "your first year's dues" in the association. It encloses a reprint of a full page advertisement run by the association in various newspapers in support of the Taft-Hartley Act. This advertisement is also signed DeWitt Emery, president, but this time without the surname "Eternal Vigilance Is the Price of Liberty."

By this time I have found out something about the Small Business Economic Foundation and about the National Small Business Men's Association, Inc., but have not quite placed Mr. DeWitt Emery. I look at the printed stationery again, and finally I find it: DeWitt Emery, Monroe Letterhead Corp., Akron, Ohio.

To complete my research into these two small business letterheads, I will simply add at this time a complete list of the corporation contributors referred to in letter No. 1: American Rolling Mill Co., American Screw Co., Auto Engine Works, Barber-Colman Co., Bear Mill Manufacturing Co., Inc., Bibb Manufacturing Co., Libbey-Owens-Ford Glass Co., the Lindsay Wire Weaving Co., Lone Star Cement Corporation, Marshall-Wells Co., Mathieson Alkali Works, Inc., the Miller Shoe Co.

Blue Bell, Inc., Borg-Warner Corp., Botany Worsted Mills, Brown & Sharpe Manufacturing Co., the Buckeye Steel Castings Co., Campbell-Ewald Co., Inc., Celanese Corp. of America, the Cleveland Graphite Bronze Co., Chrysler Corp., DeSoto Motor Corp., Dexter Folder Co., Dodge Bros. Corp., Donaldson Baking Co., the Duff-Norton Mfg. Co., Electric Boat Co., Federal Malleable Co., Federal-Mogul Corp., Marshall Field & Co., Firestone Tire & Rubber Co., First National Stores, Inc., Fort Pitt Brewing Co., Furnas Electric Co., the B. F. Goodrich Co., the Goodyear Tire & Rubber Co., Greenlee Bros. & Co., Gunite Foundries Corp., the M. A. Hanna Co., Harnischfeger Corp., E. F. Houghton & Co., Inland Steel Co., the Interstate Co., Spencer Kellog & Sons, Inc., Mine Safety Appliances Co., Mississippi River Fuel Corp., National Brass Co., National Machinery Co., National Oil Products Co., the Okonite Co., Peter Paul, Inc., Pittsburgh Reflector Co., Plymouth Motor Corp., Proctor & Schwartz, Inc., the Pure Oil Co., Republic Steel Corp., Sawyer Stores, Inc., Sears, Roebuck & Co., Shapleigh Hardware Co., W. A. Sheaffer Pen Co., Socony-Vacuum Oil Co., Standard Oil Co. of Indiana, Standard Oil Co. of New Jersey, Stanley Woolen Co., the Symington-Gould Corp., the Texas Co., United States Steel Corp., Vick Chemical Co., Hiram Walker-Gooderham & Worts, Ltd., Western Insulated Wire Co., Wheeling Steel Corp., Edwin L. Wiegand Co., Williamson Candy Co., Wyandotte Worsted Co., Wm. H. Ziegler Co., Inc., and many others.

The Truth About Free Medicine

EXTENSION OF REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer of March 9, 1949:

THE TRUTH ABOUT FREE MEDICINE

The longer Congress delays in taking action on President Truman's health program, the greater is the probability that nothing much will be done. This is true because the average citizen is begining to think about the cost.

As originally proposed by Mr. Truman, the scheme for free medical and hospital care doubtless looked attractive to a good many individuals who have found their medical and hospital bills a heavy burden. They did not realize what such care would cost them, if financed through pay-roll taxes. Neither did they know anything about Britain's experience with socialized medical and hospital care. Now they are beginning to learn the truth.

Americans currently spend about 4 percent of their income for medical care and hospital service. In return they get the best health service to be had anywhere in the world. It isn't perfect. It isn't as well distributed among income groups as would be desirable. It isn't on a budget basis for most people as yet. But it is better medical and hospital care than any other country has or ever had.

If we may judge by the estimates of Oscar Ewing and Arthur J. Altmeyer, who naturally would see the bright side, the health program would bring pay-roll taxes up to 10 percent or higher. Some Members of Congress, after examining the problem, think the social-security burden generally will go far above that and approximately 20 percent.

Whatever the correct figure may be, the sort of medical care the average citizen would get under socialization would not be worth the cost. There wouldn't be any more doctors or hospitals, at least very soon.

They would have greatly increased demands on their time and facilities, once their services were made free. The average person undoubtedly would find himself getting a lower grade of medical care and paying more for it. The same would be true of hospital care. Certainly there would not be as good care for those seriously ill, because of the diversion of physicians' time and hospital service to nonessential cases.

We already have, in the Blue Cross and Blue Shield plans, a practical method of supplying both hospital and medical care on a budget basis. Millions of American families are covered by these self-supporting, efficient organizations. Many more millions can be. And those unable to pay anything for medical and hospital care can be taken care of more efficiently through Government aid to these voluntary agencies than by a costly bureaucratic scheme of socialized medicine.

Health Insurance Program

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. DINGELL. Mr. Speaker, doctors all over the country are rebelling at the stand-pat attitude of the American Medical Association on proposals for extending medical care to people who cannot now afford it. Several big medical societies and a group of the Nation's top doctors have refused to pay the assessment levied by the AMA for fighting the President's health-insurance program.

Now the Michigan State Medical Society has run up against the same obstinacy of the AMA hierarchy. An editorial in the Detroit Free Press, of February 28, tells the story. Representatives of the Michigan society attended a meeting called by the AMA to consider its recently published 12-point program. They were dissatisfied with the AMA's plan, which has been denounced from one end of the country to the other as inadequate, and made some suggestions of their own.

According to the Free Press editorial the AMA refused to allow the Michigan delegation to explain its proposals although a majority of the delegates to the conference signified their desire to discuss it. The Michigan representatives then arranged a "rump" meeting, which the AMA tried to block, but which was attended by 46 delegates from 22 States. That shows clearly how widespread the resentment is today among doctors to the AMA's insistence upon status quo.

It is interesting to note that among the proposals the Michigan society wanted the AMA to consider were several ideas for getting doctors and hospitals into the rural areas, which is one of the most important features of President Truman's health-insurance program, which I have the honor to sponsor in the House.

Under unanimous consent, I include in the CONGRESSIONAL RECORD this editorial from the Detroit Free Press, with the comment that some of the references regarding the national-health-insurance program are inaccurate and based on misinformation:

AMA HIERARCHY REBUFFS THE PROGRESSIVE DOCTORS

Is the United States to be saddled with a system of Government-controlled, bureaucracy-operated socialized medicine?

Is this country, by adopting the scheme being offered by the Truman administration, to go one step further along the road to economic and political serfdom which has been blazed by totalitarian countries, and followed by Great Britain?

Our future course in this respect depends upon the answer to one big question which the man in the street is asking. The question is:

How can I obtain for myself and family adequate medical care at a cost which my circumstances permit me to pay?

Up until now, he has listened in vain for a satisfactory reply from the medical profession.

The issue of socialized medicine was projected by Federal Security Administrator Oscar Ewing. As spokesman for the Truman administration, he proposed a 10-year plan, based on compulsory health insurance, to provide not only increased medical facilities, but full medical care and hospitalization to be paid for out of a joint employee-employer tax and Federal subsidy.

Actually, Ewing's health program is a cleverly camouflaged blueprint for State socialism.

But it has a plausible ring to it. The average person, harassed by rising medical care costs, is unable to analyze it carefully. He will see in it only a way to relief from his difficulties. Therein lies its danger.

No reasonable or workable substitute has been offered to counteract the Ewing plan in terms which will appeal to the people, and which they can understand.

Economists of the Brookings Institution have successfully demolished all of Ewing's fallacies. This was done by a coldly analytical study based on scientific observations. But it offers no comprehensive alternative.

The mother, desperate for a physician to attend her sick child in the middle of the night, or the wage earner, watching his lifetime savings vanish under a long siege of illness, will not be impressed by the impersonal statistics which Brookings has compiled.

We face the threat of getting socialized medicine in lieu of something better.

The medical profession, through the American Medical Association, has failed in counterattacking the Ewing plan with a positive program of its own.

All that the AMA has offered is a 12-point, "me too" policy which admits the faults which Ewing purportedly would correct. Reactionary leadership within the AMA says, in effect, "Give us the Federal money and let us, in our own way, do what Ewing says he can do."

That is not an acceptable alternative to the American people. Large numbers of AMA members are spurning the program of their Association's heavy-footed leaders.

On Saturday, February 12, the AMA called a meeting of representatives of State medical societies at its headquarters in Chicago to define its 12-point program.

Officers of the Michigan State Medical Society attended, armed with a list of questions, forthright answers to which would have clarified the AMA's position.

The Michigan society's queries would have done more than that.

Although propounded as questions, they were in reality the outline for a positive program. Translated into action, they would allay the demand for socialized medicine.

It was entirely fitting and proper that such an outline for action should emanate from this State where the leadership provided by the State medical society and the Wayne County Medical Society is nationally recognized by the medical profession.

It has been said that in formulating policies pertaining to scientific and economic aspects of medical practice, the Michigan societies have generally been from 5 to 7 years in advance of the AMA.

It was Michigan which pioneered the Blue Cross and Blue Shield systems of prepaid health and hospital insurance when the AMA frowned upon anything so radical.

It was the profession of this State which first established rheumatic fever control centers to combat one of the most distressing afflictions of childhood. It was Michigan which first took postgraduate facilities to the doctors in their own communities; which pioneered in the care and treatment of epileptic children; which set up the first central blood bank to make plasma available to communities which had no facilities for storing it.

It is no wonder then, that professional ears pricked up at the Chicago meeting when the Michigan delegation offered its list of questions.

Pointing to the lack of a positive program under the AMA, the Michigan State Medical Society called for a statement of policy to settle the following questions:

1. Should voluntary health and hospital insurance premiums be paid by government during periods of unemployment?

2. What is our policy for financial assistance to families during sickness of the wage earner? Should he have insurance? If so, who is to pay for it, and for how long?

3. What is the policy for medical care to areas unable to support a physician? Are we in favor of assigning doctors to these areas?

4. Do we favor building of health centers for treatment in blighted areas?

5. Do we favor State financing for building small health centers and hospital facilities in areas unable to attract a doctor? To what extent do we favor Federal assistance?

6. Do we favor medical benefits for the aged and chronically ill, in addition to old-age benefits?

7. Do we favor home-town care of the medically indigent by physicians of their own choice, using the same technique for care as the Blue Cross and Blue Shield have used with veterans?

8. Do we favor return to an individual of all money spent for medical and hospital care, which exceeded 10 percent of his net income, same to come from the general fund, thus guaranteeing that no man would be forced to spend more than 10 percent of his income for catastrophic illness?

Here was the outline for a humane, liberal, and workable national health program.

How did the hierarchy of the AMA receive it?

It refused to allow the Michigan delegates to explain it, or to permit discussion from the floor, although a majority of those in attendance signified their desire to discuss it.

Asked if the AMA hall could be available the following day for a meeting for that purpose, AMA officials curtly stated that their building was closed on Sundays.

Despite that rebuff, however, the general membership was so eager to talk over the Michigan program that 46 delegates from 22 States canceled their train reservations and stayed over in Chicago to attend a discussion meeting in a crowded hotel room on Sunday.

The autocratic leadership of the AMA has its eyes and ears closed to new ideas to strengthen the strained relationship between doctors and the public.

The practice of medicine in the United States, the advancement of medical science, is without equal in the world.

But the slow-moving, slow-thinking AMA, which has been delegated the sole voice of medicine, has been unable to keep up, either with public opinion or the progressiveness of its own rank-and-file.

It bitterly resents any suggestion of change which does not originate in the hoary councils of its own hierarchy.

That is why the aggressive, pioneering leadership of the medical profession in Michigan finds no favor in its eyes.

It is the reason that the United States is being pushed toward socialized medicine.

The AMA has given the people of the United States no other choice.

If the practice of medicine is to continue a part of the private enterprise system, with the privilege of the patient to choose his own physician, and of the physician to choose his own patients, America must turn to the progressive elements of the profession for guidance.

The big question is still unanswered by the AMA.

Michigan has shown that the doctors themselves can furnish a satisfactory answer.

Will they now be permitted to take the lead which the AMA has so dismally failed to provide?

How Can the South Better Tell Its Story?

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. TEAGUE. Mr. Speaker, my attention has been called to an address made to the Association of Southern Agricultural Workers by Mr. H. H. Williamson, assistant director of extension work, and I was so extremely interested in his thoughts that I believe it very worth while to have it printed in the RECORD so many thousands more can read his remarks.

Mr. Williamson is a Texan who has had a long and distinguished period of service with extension work in the Department of Agriculture. The farmers and ranchers know of the many services offered by the county agents, and this cooperative work of the Federal and State and county authorities has been very beneficial to the individual rural citizens and to the entire Nation.

The South is making rapid progress in its effort to improve its economic status, and in many instances, such as industrialization, it is progressing more rapidly than the rest of the United States. Better agricultural methods are being employed in the South, and the story of the South today is not the same story told so often about the South of yesterday. I commend Mr. Williamson for his expressed ideas of suggesting how we can better tell the South's story.

Under leave to extend my remarks in the RECORD, I include the address of Mr. H. H. Williamson before a meeting in Baton Rouge, La.:

HOW CAN THE SOUTH BETTER TELL ITS STORY?

The theme for this afternoon's session is challenging. The primary justification for my leading the discussion is the fact that I am intensely interested. The subject poses several subquestions. Among them are: (1) Does the South have a worth-while story? (2) Does that story need to be told? You and I will agree that the answers to these questions are in the affirmative. If so, our thinking needs to be directed to such questions as: To whom should the story be told? By whom, and how? There is a keen appreciation of the need for the American people to know in true manner the facts about the South, its people, its agriculture, and its industry. Maybe we haven't given sufficient consideration to the means and procedures for getting such a job done in an organized fashion. The South is a popular subject for writers, orators, and analysts. Too often the South is played up as the economic problem No. 1 of the Nation. Many of the stories relating to the South are garbled with half-truths—slanted for various purposes. I have reference to stories with a Tobacco Road tinge. They are not void of facts, but are often distorted, somewhat like the ridiculous reflections of the curved mirror we used to find at carnivals.

Our homes consist of three primary parts—the house in which we live, a front yard, and a back yard. It is natural that we endeavor to keep our most attractive yard possessions and ornaments in the front yard and the less attractive ones in the rear. We certainly keep the garbage can and the rubbish in the rear. What I am trying to say is that too many of the stories about the South are based on what is found in the back yard and sometimes include the garbage can. A rejoinder with or without irritation, "'ain't so," is not a satisfactory answer. Such a response is not convincing and it provokes more argument. What the public needs is an opportunity to see and know more of what we have in our front yard.

Fundamentally, Americans do not hate or dislike their neighbors. They are inclined to believe and not to doubt. Our attitudes are formed by what we see and hear. What I am intimating is that to whatever degree there is a lack of understanding and appreciation of the finer things in the South, some of the fault may be found near our doorstep. Maybe we need to complain less and work more at the task under discussion. Just telling the story to ourselves is not sufficient. Agricultural workers are in a key position, but the task is too big for any one group. It is as big as the South. Instead of thinking of it as a job to be done, we should think of it as a great opportunity—an opportunity for the leaders in education, social affairs, agriculture, and industry, working cooperatively on a well-planned program to familiarize the American people with the South of today and tomorrow, telling the story without glamour or concealment of unpleasant facts. Perhaps there is little that can be done this afternoon in charting a course of action or making blueprints of operation. This discussion may prove to be a constructive step if we concern ourselves sufficiently. Procedures and techniques for doing a job follow constructive thinking. Maybe an appropriate suggestion from this group to the general assembly will result in the central theme of some future annual meeting of the association being The Story of the New South.

The wealth and future of any area can be pretty well grouped under three headings: (1) Its people, their education and vision; (2) its agriculture, and (3) its industries. The people of the South rank well in pride and vision, but at times we may be inclined to be a little sensitive. Our educational facilities are rapidly expanding and improving. We have witnessed a rapid expansion of industry, particularly during the past few decades, and there is much evidence to justify the belief that the expansion will be much greater in the decades ahead. As is well known to leaders in agriculture, a new pattern of agriculture is being forged in the South. Our new agriculture is being built with soil conservation, mechanization, greener pastures, more and better livestock, and better farm homes, all of which are resulting in a better rural life. May I repeat—the South has a worth-while story, a story that the public would like to hear. The Southern leaders in agriculture should help tell the story, for the achievements in agriculture and the great changes that are taking place in the rural South would make a large and interesting chapter. The land-grant colleges of the South, through their research and extension divisions, and the various agencies of the United States Department of Agriculture, are playing a major role in the making of a new agricultural South. It's a wonderful story. Let's help tell it.

Morning After's Cold Dawn Seen Slowing Truman Program

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by Mark Sullivan appearing in this morning's New York Herald Tribune. I think this article hits the nail quite on the head. Certainly the mandate from the people in my section of New York State was not one asking for the fulfillment of Mr. Truman's campaign promises.

MORNING AFTER'S COLD DAWN SEEN SLOWING TRUMAN PROGRAM—MARK SULLIVAN POINTS OUT NEW DEALERS' ELATION OVER VICTORY IS DULLED BY CONGRESS DELAYS

(By Mark Sullivan)

As Republicans could put it tauntingly, alluding to the lack of legislation accomplished by the new Democratic Congress, President Truman has run into what the late George Ade called "the cold, gray dawn of the morning after." The delay of legislation is much too serious a matter to be passed over with a partisan derision, yet in fact the taunt is a true enough description of what has happened.

Following Mr. Truman's victory last November, New Dealers experienced an elation which led them to overestimate what had happened. Moved more by the surprise of the outcome than by anything that was substantial in it, they assumed confidently that Mr. Truman would have great prestige with the country, great power in the Democratic Congress that was elected with him. This confidence was increased by a corresponding overestimate by the Republicans. They likewise moved more by the surprise than by the substance, overestimated the set-back of themselves as the opposition party.

In the spirit of elation, New Dealers spoke of a mandate from the people, implying a mandate on Congress to enact the promises Mr. Truman had made in his campaign. Another phrase expressing the New Dealers' elation was, "the hundred days." That was a recalling of the early days of the Roosevelt administration in 1933 when measure after measure sent to Congress by Roosevelt was passed willingly and quickly, without much of either opposition or change.

SEVENTY-NINTH CONGRESS RECALLED

This elated anticipation failed to take into account some deep-reaching qualifications. Mr. Truman had had a Democratic Congress

before, the Seventy-ninth, which had been elected on the same ticket with President Roosevelt in 1944 and continued for nearly 2 years after Mr. Truman took over following Roosevelt's death. To that Congress Mr. Truman sent more than a score of proposals for social and economic change, nearly all of which the Democratic Seventy-ninth Congress rejected or ignored. Mr. Truman, aggrieved, publicly appealed to the people to bring pressure on the leaders of his own party in Congress. This appeal the public ignored as much as Congress had ignored the President's proposals. Many of the proposals which the Democratic Seventy-ninth Congress rejected or ignored were repeated by Mr. Truman in his campaign. To assume that the Democratic Eighty-first Congress would do what the Democratic Seventy-ninth Congress had refused was to count too much on the psychological effect of Mr. Truman's surprising victory last November.

In the spirit which assumed that the new Congress would accept Mr. Truman's leadership and enact his program of legislative proposals, special emphasis was put on the Taft-Hartley labor law. That was regarded as a symbol. To repeal it would be justification of Mr. Truman's often-repeated campaign denunciations of the Republican Eightieth Congress which had enacted it. Coupled with the Taft-Hartley law as the symbol of Republican infamy was the Wagner labor law as the symbol of the glory of the New Deal. The Taft-Hartley law had superseded the Wagner one. If the Taft-Hartley law could be repealed utterly, that would be an assurance that the Republican Eightieth Congress had been only a brief and unsubstantial interruption of the New Deal—that the New Deal was back and would be kept and extended—and if this could be done promptly it would be another "hundred days."

COMMITTEE PACKED

In this spirit the administration leaders in the Senate arranged that the Labor Committee of that body should consist of eight Democrats and only five Republicans. This set-up gave the Democrats a strength on the committee out of proportion to the party representation in the Senate as a whole. The committee thus organized held many weeks of hearings, at which witnesses and Republican committee members made many suggestions in favor of keeping most of the Taft-Hartley law. All these the Democratic majority of the committee ignored. The committee reported to the Senate an administration measure which would repeal the Taft-Hartley law.

But the time schedule had been slowed up. By the time the new administration labor law was reported out of the Senate Labor Committee some 50 days of the new Congress had elapsed, and much more than a hundred days will have passed before the Senate will have concluded debate on the new measure, not yet even begun, together with action by the House, not yet begun. Besides, untoward events—including a demonstration of the power of labor leaders by John L. Lewis—are unfavorable to enactment of the new administration bill.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the city of Newark, N. J., memorializing Congress to pass the General Pulaski's Memorial Day resolution now pending in the Congress:

Resolution memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in the United States of America: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Newark, N. J., as follows:

1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

2. That certified copies of this resolution, properly authenticated, be sent forthwith by the city clerk to the President of the United States, the Vice President of the United States, and to each of the United States Senators and Representatives from New Jersey.

VINCENT J. MURPHY,
RALPH A. VILLANI,
M. ELLENSTEIN,
JOHN A. BRADY,
Board of Commissioners of the City of Newark, N. J.
H. S. REICHENSTEIN,
City Clerk.

Rankin's Pension Plan Versus Old-Age Security

EXTENSION OF REMARKS

OF

HON. HUGO S. SIMS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. SIMS. Mr. Speaker, under leave to extend my remarks I include in the Appendix of the RECORD an article by Richard L. Strout which appeared in the Christian Science Monitor on March 12, 1949.

Reading Mr. Strout's article brings this question to mind: In voting for the Rankin pension bill, would a Congressman not be voting against providing old-age security for the nonveterans and the majority of the women of this country?

The article is as follows:

SPECIAL PENSIONS OR BROAD INSURANCE?

(By Richard L. Strout)

WASHINGTON.—The big new Rankin drive for veterans' pensions brings the United States for the first time smack up against a momentous choice.

On one side Mr. RANKIN wants benefits for veterans. On the other, the administration wants insurance for nearly everybody. It seems impossible that both courses can be followed. That would be too expensive. The two are in effect mutually exclusive. The time has come when the Nation has got to decide which path to follow for taking care of citizens over 65—direct Federal grants to veterans, or insurance payments to workers for which they have previously paid contributions.

Except in the amounts involved, there is nothing particularly new in the Rankin proposal. There have been veterans' pensions after nearly every war in American history, though usually they have not appeared quite so suddenly as this one after World War II. But the numbers engaged, even in the Civil War, were trifling compared to those in present global combats. That is where the chief difference lies in the Rankin pension plan—the size. So many people participated in the last war that veterans and their families cover a vast section of the whole Nation. They represent, in effect, a distinct type of old-age benefit of a noncontributory type on a vast scale.

Latest estimates by the Bureau of the Budget set the matter in perspective by showing its scope. The Rankin proposal is $90 a month for veterans at 65, irrespective of need or war-incurred disability, plus benefits to surviving relatives. Here are some official estimates:

By 1950 the cost would be $1,200,000,000 or more annually.

By 1990 the annual rate would be $5,000,000,000.

Total cost for the present century, around $125,000,000,000.

Rate from A. D. 2000 on—$4,000,000,000 a year.

After A. D. 2000 pensions to living veterans would taper off in a decade or two, but thereafter, say A. D. 2020, payments to widows and other survivors of veterans would have reached their peak Says the Government, "They would continue high for several decades thereafter."

The Rankin outlays would be added to already large veterans' compensation to which existing laws already commit the Government. These now run to about $3,000,000,000 annually. The present amounts added to the Rankin amounts would mean, it is estimated, about eight to ten billion dollars for veterans' benefits by 1990.

Let us take a long breath and turn to the alternative system of social security.

The distinction is that the social-security program is an insurance program, whereas the veterans' program is a straight-out treasury grant.

America already has a big social-security system started in 1935, and the administration would like to enlarge it. This may not be approved by Congress. In general, I think it is fair to say that public opinion is setting in toward greater governmental responsibility in organizing social insurance. The Rankin veterans' program would cross this trend sharply.

Let's contrast the new Truman social-security program with the Rankin scheme. The first would apply to nearly everybody,

veterans and nonveterans, the second only to veterans.

The first would make old-age benefits available to all employees and self-employed persons at 65 for men, and 60 for women. The Rankin proposal would be chiefly for men, at 65.

The Truman proposal as an insurance program would be paid primarily by beneficiaries, either as contributors or taxpayers. In contrast, the Rankin program would be borne by all taxpayers, for the benefit only of veterans and their dependents.

Old-age benefits under the social-security scheme, it is estimated, would compare favorably with the Rankin pension in size. In addition there would be temporary and disability insurance, which would cover the great majority of both veterans and nonveterans.

Again, the social-insurance program includes an extensive system of benefits and protection for survivors of insured persons. In most cases such insurance would be more generous than the Rankin proposal.

Sooner or later the Nation must choose between the old traditional system of direct pensions to veterans alone or the new system of earned insurance for veterans and other workers alike. Both systems seem unlikely at the same time.

Keyhole Politics

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Times of Tuesday, March 15:

KEYHOLE POLITICS

The full story of the wire-tapping plot to listen in on the telephone conversations of high New York City officials remains to be told. But the average good citizen knows enough of it already to feel a revulsion against such methods of conducting politics, no matter who uses them. The late Justice Holmes once spoke of wire tapping as dirty business. It is the resort of the snoop, the sneak, and the peeper. The conscience of the public rebels against this eavesdropping as an invasion of civil rights, the forcible entry into privacy without warrant. Its only standing in law or in ethics is when used strictly for official purposes, under the sanction of proper governmental authority or court determination, in pursuit of the lawbreaker or the enemy of the state. The possible abuses of even this purpose are so grave that conscientious people are deeply troubled over the problems raised.

Without prejudging in any way the connection or the guilt of any of the figures appearing in the present investigation, we assume it is a fair deduction, and one that will certainly be made by the public generally, that this eavesdropping on official wires was undertaken with the hope of gathering information to be used politically against the O'Dwyer administration in the coming election. In the present preliminary stage there are several fusion movements, associated only slightly, if at all, with one another. Since the only opposition that has a ghost of a chance to defeat the Democratic candidates for city office is a fusion opposition, the public, whether justly or not, will associate the wire-tapping conspiracy with what it loosely thinks of as the fusion movement. City hall is obviously opening all the stops to amplify this effect.

The regrettable fact about this whole incident, then, is that sincere, decent people who have the legitimate motive of conducting a clean, aggressive fight for public office have innocently received a serious setback even before they have chosen their candidates, adopted a platform, or begun a campaign. It is inconceivable, because of their known high principles, that any considerable number of the leaders interested in various fusion movements had any part in the wire-tapping episode, yet all fusion suffers from it and from other undignified and ill-advised displays of showmanship that can only be described as spring folly of an election year.

It is wholesome to have a strong fusion movement in this city, and we hope that the able citizens who have been working in that direction will see now, more than ever, the necessity for forming their lines early and getting unified control of a situation that seems at the moment to have got out of hand. There is no necessity for looking to Albany for a State investigation, or to the felonious fringe of underhanded private inquiry to dig for scandal in order to conduct an effective and determined campaign. This city administration's own indictments of conditions within itself and the findings of other official and privately financed inquiries offer a satisfactory basis for a campaign addressed to better government here; to providing a rebuilt waterfront, an extended, improved, and more soundly financed transit system, more new schools, new hospitals, a reconstructed civil service, a simplification of the tax system, sewage disposal, garbage disposal, cleaner streets, justice to libraries and museums, more equitable pay to certain classes of employees, and, most of all, a more efficient, economical administration, with less politics in some of its offices.

That such a basis exists for an opposition campaign is not necessarily a criticism of Mayor O'Dwyer, who has himself been a severe critic of conditions he inherited (some war-imposed) or has been delayed in correcting because of lack of funds. Whoever wins the coming election, the city will gain by a thorough debate on issues and policies affecting the city's future. It is a healthy thing to have an alert and intelligent opposition, and regrettable that, except for occasional interludes, we must wait until an election campaign to have it.

An effective opposition movement depends almost wholly upon the discovery of a man of sufficient stature to be the candidate for mayor, so attractive as to unite all wanted elements in a powerful fusion. He must be a man with the administrative capacity to run a huge establishment whose operations cost more than a billion dollars a year, and whose integrity is matched by popular appeal that will make his election a practical possibility. It is not easy to find such a man, but without him fusion cannot win office against a Democratic machine firmly entrenched and a mayor who, despite his ups and downs, remains popular with a great many voters.

War Against the Press

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. STEFAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Omaha World-Herald of March 9, 1949:

WAR AGAINST THE PRESS

In these columns we ordinarily prefer not to discuss the special problems of the publishing business, because we feel that newspapers and magazines ought to be able to handle such matters on their own time.

But in the last few weeks there has arisen an issue so serious that the whole industry is flabbergasted, and we think the general public ought to know about it.

The thing we are talking about is a bill, H. R. 2495, which the Post Office Department has asked Congress to pass. It would increase second-class mail rates (these are the rates paid by newspapers and magazines) by about 250 percent the first year, and another 50 percent the year following.

Even in these times 250 percent is a whale of an increase. What is the Post Office trying to do?

It says it is trying to reduce the postal deficit.

That sounds reasonable enough, until one reads the report of the Hoover Commission on Post Office Department finances. It says that the Department is not in position to recommend rate changes for its various services, because it doesn't know what those services cost. Until the Department finds out, continues the Commission, its "rate recommendations to the Congress cannot carry proper weight."

If the Post Office Department's interest in second-class rates were strictly financial, it would be understandable and laudable. Even the demand for a 250-percent raise might be viewed sympathetically (especially by those who don't have to pay it).

But such, manifestly, is not the case. The nature of the pending bill reveals that the Department is more concerned with sociological and ideological matters than with revenue.

Under present law, publications which enjoy second-class privileges pay one rate of postage for the reading matter they publish, and another, higher rate for their advertising.

Under the proposed law, the entire weight of the publication would be paid for at the same rate—but the rate would go up tremendously in proportion to the advertising contained. Publications which carry more than 75-percent advertising more than half of the time would be denied second-class mailing privileges entirely.

This is an exceedingly complex business, but the purpose of the new plan is plain. The Post Office Department is trying to set itself up as judge and jury to decide how much advertising matter should be carried by American publications. Obviously this is another move by the bright young men of Washington who have been fighting advertising ever since the early days of the first New Deal. If they are allowed to fix the limit of advertising at 75 percent today, what is to keep them from fixing it at 50 percent tomorrow? And 25 percent on the day after?

The power to penalize and limit advertising carries with it the power to destroy the press.

We do not wish to give the impression that metropolitan newspapers are completely at the mercy of the United States mails. They are turning increasingly to other means of distribution.

In 1921 the World-Herald served 99 percent of its out-of-town readers by mail. Today it serves only 45 percent by mail, the other 55 percent getting their papers by direct delivery, via railroad, bus, and truck.

The proposed new rates certainly would hasten the change-over to direct delivery. The Post Office would be pricing itself out of business.

To some extent it might also price itself out of the magazine field. The large national weeklies, for example, no doubte would try to divert as much of their circulation as possible to newsstand sales, and would hold their mail circulation to a minimum.

But some publications would have no defense. The Christian Science Monitor, for example, has a scattered national circulation and is almost totally dependent on the mails. Small-city dailies and weeklies also would be hurt, because under this bill they would lose so-called "free-mailing privileges" in their home counties. Labor, religious, and educational publications also would lose their special rates.

As usual, the "little fellow," that conversational favorite of the bureaucrats, would take it on the chin.

We are not contending that there should be no increase in second-class rates. Frankly, we don't know if there should be, and we don't think the Post Office knows.

But if the Department is resolved to wipe out its deficit—in which case every taxpayer in the land should shout Hallelujah—its first step should be in line with recommendations of the Hoover Commission. By means of up-to-date cost-accounting methods it should find out which types of service are being provided at a loss. Then it should try to stop the losses by making its operation more efficient. Finally, if necessary, it should raise rates.

In this bill the Post Office is ignoring entirely the possibility that a large share of the postal deficit may be due to inefficiency and politicking within the Department. Arbitrarily, it is trying to assess a major part of the deficit against the press.

Newspapers, magazines, and their readers should fight H. R. 2495 to the last ditch.

History of Civil Air Patrol

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. JOHNSON. Mr. Speaker, the Civil Air Patrol, civilian auxiliary of the United States Air Force, today has roughly 165,000 participating members, of whom about 137,000 are senior members, male and female air enthusiasts, and some 30,000 cadets. The present goal of the Civil Air Patrol is to have 150,000 active senior members and 70,000 cadets by 1950. In addition, at this time there are also about 100,000 persons in the inactive reserve of Civil Air Patrol.

Civil Air Patrol has been building apace in the past few years after almost dying of neglect immediately after the end of World War II when the pilots who had been flying coastal patrols returned to their normal civilian pursuits.

One man had much to do with reviving Civil Air Patrol, and he died while flying out of Washington, D. C., on a Civil Air Patrol mission. He was Col. George A. Stone. Colonel Stone first became associated with Civil Air Patrol in April 1942 as the State wing commander of Ohio. In July of the same year, Colonel Stone activated and became the first commander of coastal patrol base 14, located at Panama City, Fla. This base was 1 of 21 such bases established along the Atlantic and Gulf coast to combat submarine warfare and escort shipping in these coastal routes. Colonel Stone was successively promoted from captain to colonel during the war years for his outstanding work for Civil Air Patrol.

Shortly after the death of his lifelong friend and associate, Gen. Earle L. Johnson, national commander of Civil Air Patrol, Colonel Stone became chairman of the Civil Air Patrol Board, presently known as the National Executive Board. From February 1947 until August 1948, Colonel Stone spent the majority of his time on Civil Air Patrol affairs, letting his business and personal life revert to a secondary importance. His efforts were instrumental in the passing of Civil Air Patrol legislation; Public Law 476, Seventy-ninth Congress, which incorporated Civil Air Patrol and set forth its objectives, and Public Law 557, Eightieth Congress, which established Civil Air Patrol as a civilian auxiliary of the United States Air Force. Under his leadership, the national executive board formulated policies designed to establish Civil Air Patrol as a permanent organization devoted to the advancement of aviation. The constitution and bylaws of the organization were written and adopted during his term of office as chief executive officer.

Maj. Gen. Lucas V. Beau, national commander of Civil Air Patrol headquarters and headquarters squadron, located at Bolling Air Force base, District of Columbia, took over his command October 1, 1947, and has achieved excellent progress toward the eventual goal of making available to all interested youths a program of air education and an opportunity in the senior organization to put into practice their knowledge.

In addition to General Beau and his administrative staff, the Civil Air Patrol is advised by a national executive board with Gen. Carl A. Spaatz as chairman and Col. D. Harold Byrd, of Dallas, Tex., as vice chairman. Other members of the board are: Col. Harry K. Coffey, Col. Leverett Davis, Col. Irven A. Myhra, Col. J. Michael Morris, Col. Fay M. Thomas, Col. Stuart C. Welch, and Col. W. C. Whelen.

As commanding general of the Army Air Forces, and later as Chief of Staff of the United States Air Force, General Spaatz early indicated his friendship for the Civil Air Patrol organization. Partly in recognition of the services of Civil Air Patrol to the Air Force in the early days of the war, and partly because he had faith in the youth program of Civil Air Patrol, General Spaatz guided the Air Force to recognize Civil Air Patrol as a civilian auxiliary. Long before the introduction of legislation which resulted in Public Law 557, Seventy-ninth Congress, the Air Force had designated Civil Air Patrol as its civilian auxiliary, and had started a program of assisting Civil Air Patrol through the assignment of Air Force personnel, donation of surplus and obsolete property for use in the cadet program, and so forth.

When Colonel Stone, chairman of the national executive board, died, it was natural that General Spaatz, who was on retired status, should be appointed by the national commander of Civil Air Patrol as chairman of the national executive board. Under his leadership, the board is continuing to build an organization devoted not only to the advancement of aviation generally, but to the civilian defense of the Nation, should an emergency arise which requires such action.

Colonel Byrd, vice chairman of the board, first became a member of Civil Air Patrol shortly after its organization during the early part of the war. He organized the coastal patrol base at Beaumont, Tex.; as wing commander of the Texas wing he pioneered the patrolling by aircraft of forest areas to assist in the control of forest fires through not only patrolling and reporting fires when they are small, but also by mapping the burned areas.

After his appointment to the board, Colonel Byrd resigned his position as commanding officer of the Texas wing in order to devote his time to the work of the board. Together with the late Colonel Stone, he was instrumental in the passage of Civil Air Patrol legislation. He also has been very active in special projects, including the entertaining of foreign students touring the United States under the Marshall plan, and of Canadian cadets of the Air Cadet League of Canada during the exchange of cadets with that organization.

What Now in Israel?

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me before the Jewish National Fund conference, Sherman Hotel, Chicago, Ill., March 15, 1949:

WHAT NOW IN ISRAEL?

As friends of Israel, as friends of the democratic way of life, we must stop to ask ourselves at this point, "what now?" I do not mean that with the note of despair that so often accompanies that phrase. But I do ask it as a serious question. I ask it both as the recognition of responsibility and the acceptance of a challenge.

The waves of fever, with relation to Israel, are subsiding. The high drama of the war drums, the momentum of military victory, the tense pitch that was maintained throughout the whole political struggle for independence are withdrawing. We must acknowledge this, because if we don't, all unseen, and very slowly, the greatest enemy of mankind—lethargy and indifference—will overtake us. It is easy enough to be swept along in the stream of excitement, to understand and to help and to sympathize and to participate. But now the sober moments are upon us.

The Knesseth—Israel's first constituent assembly—has convened. Peace talks are proceeding. The recognition of Israel by most of the leading countries of the world has taken place. The Security Council of the

United Nations has accepted Israel's application to join the family of nations. President Truman, in true statesmanship, has acknowledged the integrity and stability of the newest of all democratic republics, by granting the loan applied for. We need only go back a short eight months to review the miracle of Israel's statehood when Israel, pleading before the bar of the world, found that it had to take the reins in its own hands and shape its own destiny. The impact of Israeli victories on the battlefields was felt all over the world, and Jews everywhere were the beneficiaries thereof.

What we see before us, as contrasted with less than a year ago, is a monument to man's endurance, to the truth of his vision, to the everlasting moralities of justice and liberty.

But I come back again to my first theme. Now the tasks before Israel are without the drums and the banners. They are the daily, solid, undramatic chores. I might make the comparison with marriage. The successful marriage is that which, though lacking the high moments of the wooing and the honeymoon, carries on with sober responsibility the shaping of a pattern of life.

I feel I must stress this point over and over again. Israel needs your help as vitally as she did at any previous time. Now is the period of digging and grubbing and building. Now, all the achievements of Israel must be gathered together and tied in an enduring knot.

As the world has found to its dismay, the problems of peace are tenfold more intricate, more delicate than the problems of war. In peacetime the sense of sacrifice seems to dim. The unity and coordination fall apart; the grumbling and the indifferences set in. We have seen it happen the world over. We stand warned. Let us see that it does not happen to and in Israel.

How can we set aside the role of passive spectators and become active participants in the destiny of a people? One of the most vital answers lies in the participation in the Jewish National Fund.

The Jewish National Fund. I like saying it. Because in it are bound up the realities of Zionist achievement. The Jewish National Fund was founded in 1901 at the Fifth Zionist Congress. Stated like that, it's a neat, bare, and unimaginative statistic. But let's couple it with another statistic: On May 14, 1948, the Jewish state was proclaimed. And there it is—two statistics standing in the center of other recordings, thousands already made and thousands more yet to come out of the turbulent history of the Jewish people. And looking at these two interlocked, unerasable facts, the connection between the two can never be broken.

In 1901, when political zionism was being drowned in an ocean of words, fine phrases, and lofty sentiment, the clear, practical, and realistic approach of the Jewish National Fund was the turning back of the tide.

When I traveled through Israel last September and October, I saw the work of the Jewish National Fund. I saw the development of the water resources by JNF; I saw the people on the JNF land, land redeemed and reawakened; I saw the newly occupied parts of the country, the settlement activities, the antimalarial work and the road construction, the drainage and the hydrological processes, all the work of the JNF. I understood, as I had never understood before, the relationship between the establishment of the Jewish National Fund in 1901 and the proclamation of the Jewish state in 1948.

It must be made clear to the Jews the world over, and particularly to the Jews of the United States, because we have the strength and the numbers beyond any, that the JNF is indispensable. I repeat, indispensable to the political growth and the social maturity of a Jewish state. Can there be a people without a land, a state without a land, a home for the dispossessed without land? I was amazed to learn that many Americans believe that now that the Jewish state exists, the land automatically belongs to Israel. That's a mischievous piece of misinformation. The land, not already acquired, must still be bought, dunam by dunam; that land must be developed dunam by dunam. Its soil must be reawakened to productivity; that means afforestation and the development of water resources. There is the whole area of the Negev which must be turned into a food basket for Israel. Twenty-five thousand to 35,000 immigrants are coming into Israel every month. Their successful integration into Israel requires huge areas of land and the husbanding of all resources. Twenty percent of the people must settle on the land, that is, as keepers of the soil. One family on the land enables four other families to find a livelihood in the cities.

Consider these facts well. The Jewish National Fund spells out security and stability for Israel, security and stability for these thousands of immigrants who are home at long last.

And let me tell you this: The whole history of the development of Israel is the development of the JNF, the land, the people, the holdings, the colonies, the water, the trees. These are all the story of the romance of a people that has written its imperishable history into the soil. What Israel is today is no more and no less than a bold outline of the land holdings acquired by the JNF. What gave reason and logic to the presentation by Israeli statesmen to the United Nations and before that to the presentation before 20 commissions that had investigated and surveyed Palestine? Why could the case be argued realistically and with hard facts that no amount of Arab obstructionist talk could deny? Why? Because the concrete accomplishments of the Jews in Israel could not be denied by the evidences of the five senses. They could be seen, heard, touched, smelt, and tasted. The productivity of the farms, the settlements, the proud, martial bearing of the trees, the afforestation, the cities, the green, rich grass. All these bore convincing testimony that the barrenness of Palestine for thousands of years had given way before the determined and practical idealism of the Jews. The statesmen of Israel did not come before the world with tears, with heartrending, lurid phrases, with sentimental outpourings. No. They came with the fruits of their labor and said, "Look and judge."

And that's what the Jewish National Fund asks of you today. "Look and judge."

I have learned a lesson in my quarter of a century of political life, and I keep it before me always. No argument is more persuasive than the "fait accompli"—that which is already done. The Israeli statesmen knew this; they knew the battle for the Negev, in the political sense, would be a bitter one between the British and the Jews. The leaders of the Jewish National Fund knew this. The JNF established 30 settlements in the Negev and invested millions of dollars in its development, and by so doing made it an integral part of Israeli territory, so integral a part that the United Nations could find no answer to the assertion that only the Jews would and could develop the Negev. Even the obstinacy and the trickery of the British could not overcome that argument. The argument could not be disproved because it had already been done. The JNF, dealing with tangibles and realities throughout the years, tangibles like land, water, trees, had come to know the realities and seized upon them to make them work for Israel.

I say this without fear of contradiction. The 300 settlements that have been developed, the chain of hospitals, the Hebrew language, the culture, the pioneering spirit, the idealism, all this would not have been possible without the JNF. The land is first. The land is foremost. The Jews have a national consciousness which has been kept alive for 2,000 years because once the land had been theirs. It is theirs, at long last, again. The religion, the culture, the memories of a people are all threads of the Jewish people leading back to the land. Whatever term has been used—homeland, commonwealth, state, it related to the ownership, possession, and control of the land—the soil upon which men could walk, build, and plow, as freemen, living in security and dignity.

I remember through these many years the blue and white boxes of the Jewish National Fund. I remember seeing them on the street corners, and in subways, carried and shaken by young boys and girls. I remember how the work-weary hands stopped to drop their nickels and their dimes into the boxes, for the redemption of the land—the promised land. Wherever there were Jews there were the blue and white boxes, keeping the vision alive of a dispersed people who some day would go home again—to the land. To many, it was the one warm dream left in a life that had otherwise been shattered. I remember the stories of the Polish Jews who saved out of their pitiful savings some trifling sum to put into the blue and white boxes—and today, thousands of their children, walk in Israel's sun, on the land which the pennies helped to buy.

I'd like to bring out at this point the brilliant distinction between word and deed which Chaim Weizman sets forth in his autobiography, Trial and Error. In writing of the sense of futility surrounding Fifth Zionist Congress, he states, "I should mention, in connection with the history of our movement that the London Congress was actually of some historic importance; but not as a demonstration. It was there that the Jewish National Fund for the purchase of land in Palestine as the inalienable property of the Jewish people was founded; founded in a small way indeed, and, as it were, incidentally. It was destined to become one of our most important instruments in the building of the homeland, but its birth was obscure, and the attention paid to it was completely overshadowed by big talk of charters and international negotiations."

There it is, the difference between the filibuster and the vote, the difference between excavation onlookers and the drillers, the difference between the gloved and the bared hands, the difference between crowing over the miracle of Israel as parlor conversation and asking, "How was this miracle wrought? And what part did I play in it?"

Today, President Weizmann says, "Interwoven in the record of the Jewish National Fund and of its work and accomplishments is the story of the rebirth of Israel." And Premier Ben-Gurion, emphasizing the unshackling of foreign bonds, states, "The historic task of the Jewish National Fund to root the Jewish masses in the soil of the homeland can now be carried out in full."

Can it? Only if you want it to.

Only a million dunams of land is in JNF possession, land that cannot be alienated or sold for personal gain. One million five hundred thousand Jews cannot be brought into Israel unless JNF acquires 4,000,000 additional dunams. A contribution to JNF is not charity. It is a capital investment, a permanent investment in the future of Israel. It is productive capital out of which the growth and safety of Israel is assured. It is planned investment providing an agricultural base side by side with the industrial development. Israel must provide for her own food. Land provides homes and hope and freedom and a foundation. Land opens up new opportunities for the intensive, though balanced, cultivation of its resources. Land means the mass settlement and the mass movement of Jewish immigration into Israel. In short, land is Israel's future.

Yes; today we look to Israel's future, harking back across a span of centuries to retell the story of Esther and how Haman hanged on the gallows built for Mordecai, remembering the endurance of the Jewish people through every kind of tyranny. For it is written in the Book of Esther, "And that these days should be remembered and kept throughout every generation, every family, every province, and every city; and that these days of Purim should not fall from among the Jews, nor the memorial of them perish from their seed."

That is the injunction: "Nor the memorial of them perish from their seed." Nor the memorial of other days when righteousness triumphed over tyranny.

I want to tell you a bit about what I saw and felt in Israel when I was there in September and October and how much JNF contributed to the genesis of Israel. The excitement of my experiences is still with me. Israel poured new life into my old skin. I welcome this opportunity because of the work of the JNF to break forth in a torrent of Israel. There may be those of you present who have been to Israel, and you will understand my fever. I want to say without reservation that anyone who contributes in small measure or large to Israel's rebirth and development has gained for himself an enrichment and fulfillment that no degree of personal self-serving success can bring.

Mark you, when I stepped into Israel, I did not step into a country of luxury, of factories producing at a furious rate, of mile upon mile of growing grain and wheat, of furs and perfumes, in short, of material abundance. No; I stepped into a country at war, with shortages evident everywhere, food, clothing, shelter, a country with bomb-ripped buildings and stricken farms. But if I stopped there, I would be giving you a picture completely out of focus, for there is a tempo in Israel, as quickening to the blood as the rhythms of the Hora that no honest description of Israel dare omit. There is no self-pity; on the contrary, there is almost an exultant fever about the people that animates their whole being, the way they walk, talk—an eagerness and vitality that defy definition. They were fighting a war unaided, they were building a country, they were teaching their young, they were welcoming and integrating the immigrants, they were forming a government, they were in the midst of a hundred and one activities, and yet, over all, there was no feeling at all, none whatsoever, of a regimented people. You will find it hard to believe when I tell you that with all the burdens, the responsibilities, the privations, the dangers, the animosities and indifferences of the world outside, there is today in Israel a joyous people. They feel they belong, no longer surplus, no longer apologetic for being Jewish, no longer alternating between fear and defiance, for this is "their own, their native land."

I think we can sum it up by saying that each one feels he has a reason for living; he's glad he is alive, and that grip on life seeks and finds a diversity of expression, not only in the work in the everyday pursuits, but in the arts and the sciences. Israeli literature is already in the making in the contemporary sense. They are experimenting with art forms. I saw an exhibit of soldiers' art in Tel Aviv and you can believe me that it was far from primitive, although still in the main imitative of the modern masters. I heard the mature performance of the Israeli Symphony Orchestra conducted by our own Leonard Bernstein. I listened to a performance of the opera Thais in Hebrew translation. There are seven Hebrew newspapers published in Tel Aviv alone. Everywhere there was a sense of doing, of personal participation, in the destiny of a reborn people.

This is the spirit that must be kept intact. This is the spirit which assures the sturdiness, the health, social, political, and economic, of Israel. This is the spirit you uphold with contributions to the JNF, so that Israel will live and grow, in justice, dignity, and equality, so that we, in turn, may point with pride to a new light on the world's horizon, a light that will lead to a world more secure, in the interest of peace for peoples everywhere. In serving Israel well, we serve the cause of all mankind. Let there be none who turns his head or heart away.

The B-36 Story

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of today, March 16, 1949:

THE B-36 STORY

The Air Force is under fire from some quarters because it is suspected of spreading the word that the B-36 intercontinental bomber is capable of attacking Russia with atomic bombs in event of another war.

It happens that the Air Force denies giving out this story, which has been carried by one of the press associations. But whether the Air Force leaked the story or not, it is a piece of information which, if true, ought to be published.

Heretofore there has been a big question mark dangling from the nose of the B-36. It has been generally accepted that it had the range to fly from American bases into Russia and back, carrying an atomic bomb on the ingoing trip. But the critics have insisted it was so slow and lumbering that it would be a sitting duck target for Russia's jet fighters.

This is the big point of the story that has now come out. The Air Force, according to this report, has been conducting experiments with our own jet fighters, and has learned that at 40,000 feet the jets cannot successfully intercept the big bomber. And they reason that if our jets cannot do it, neither can the Russian jets.

There is no way of knowing, of course, whether this estimate is correct. The risks of error and surprise are always present in military calculations. But if the estimate is correct, or if the Air Force, having conducted honest tests, believes it to be correct, then the information is of a kind that ought to be made public to the fullest extent that is compatible with security requirements.

There are several reasons for this. One concerns the sensitive matter of military appropriations. When the Air Force stages a nonstop round-the-world flight, or when a story appears that the B-36 can bomb Russia, the suspicion arises that the objective is a larger slice of the military budget, and perhaps this is the case. But what is wrong with that? If it is true, that 70 strategic targets in Russia have been brought within successful atomic bombing range by the B-36, that is a highly significant development. Why should the Congress which makes the appropriations, or the people who ultimately foot the enormous bill for our Military Establishment, be kept in ignorance of such an important fact?

There is a second, and, it seems to the Star, more important reason.

The prime objective of our policy today, both foreign and domestic, is to prevent another war. Fear has been expressed that publicity on the performance of the B-36 may serve to incite war. The more reasonable view, however, is quite to the contrary. There is small chance of war unless it begins with Russian aggression. So we have been trying by various devices—the Greco-Turkish program, ECA, and the projected North Atlantic Pact—to erect a structure of strength which will discourage aggressive ambitions. The theory is that weakness invites aggression, while strength has the opposite effect. If this is sound, then why not tell the story of the B-36? Is a potential aggressor more or less apt to strike if he knows that retribution will be swift and terrible? We know that Hitler struck because he mistakenly thought he could win a quick and relatively cheap war. If we were to hush up the capabilities of the B-36, might not that help lead the Russians to the false conclusion that they, too, could win a quick and cheap war, at least in Europe? We ought to put ourselves in Russian shoes. If we knew or believed that Russia was capable of devastating 70 American cities with atomic bombs, would that encourage us to launch a war of aggression which would invite such an attack? Or would it make us think long and hard before assuming that risk?

Finally, there is the question of our potential allies. It is said that brandishing a big stick in the form of the B-36 will frighten them off, that fear of Russian reaction will keep them out of any alliance. But why is this so? In the last analysis, they look to us for their security. If we know, and if we let them know, and if the Russians know, that we have the means of carrying ruinous war to Russia, what is apt to be their reaction? Would our prospective allies rather lean on a strong reed, or a frail one?

These are some of the factors that should be considered in weighing the relative advantages of releasing and suppressing information. If the question is considered dispassionately, it will be hard to find any disadvantage that is not greatly outweighed by the advantages of a full and honest disclosure of what we are capable of doing, and what we will do, if forced again into war.

St. Patrick's Bequest to the Irish Race

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article appearing in the Lynn Telegram-News, Lynn, Mass., Sunday, March 13, 1949:

THE BELL RINGER
(By Steve Walsh)

Twenty years ago, March 18, 1929, a remarkable lecture was delivered at the St. Patrick's Day entertainment, under the auspices of the Xavierian Brothers of St. Michael's Diocesan High School, Brooklyn, N. Y. This discourse was called St. Patrick's Bequest to the Irish Race, and it was spoken to an attentive audience by the late Brother Gilbert, C. F. X., a profound scholar, a servant of Christ, and a dear friend to countless Americans whose forebears were of Irish origin. It depicts the reason why the Celt

will set aside next Thursday to honor St. Patrick. Its substance is presented in its entirety to my readers through the courtesy of Brother Samuel, C. F. X., blood brother of a noble Christian whose memory still remains fresh and green.

ST. PATRICK'S DAY

"My dear friends, we are gathered here today to pay tribute to our illustrious ancestors—those brave Irish who have contributed so unselfishly and so magnanimously to the weal of humanity the world over. Their noble impulses in the interests of civilization have not been measured by time or clime; they are as old as civilization itself and as broad as humanity's very foundations.

"For 750 years, Irish genius and Irish energy have woven themselves into the texture of every government wherever government has found a home. Their music and verse have lulled nations in ordeal; their eloquence has given spirit in depression, and fired the irresolute with purpose; their valor has brought succor to oppressed people; their constructive genius has given fiber and fabric to the purpose and the ornament of governments; their faith has brought inspiration, radiance and warmth to the hearts of afflicted people.

"It is only fitting and proper that we should celebrate this day, because there is nothing that can so enkindle and enflame the young to do bravely and to dare nobly in ordeal like the contemplation of the triumphs and tribulations of their own ancestors. A recital then, however, meager, of their fealty in time of war and their devotion in time of peace, together with their unswerving loyalty to that precious heritage, their Christianity, which Patrick bequeathed them from the Hill of Tara, will serve as an inspiration not only to the present generation, but to generations that are not yet born. The intensity of your fidelity in this age is your legacy in devotion to the next.

"From time immemorial, governments have marked the great events in their history, and the birthdays of their distinguished chieftains for celebration, and they have appropriately commemorated those designated anniversaries. They have done so, that by attaching momentous significance to the names and achievements of their early champions, future generations might be inspired to imitate their virtues.

"The function of meditation on joys or sorrows is the enrichment of emotions. Visions of triumphs or tribulations in those who are dear to us refine the soul, encourage to resolution and fire our beings with fresh transports of fidelity and love. And as the heritages, whether spiritual or temporal, which we Irish enjoy today reflect the glories of triumphant past, or the tribulations of a trying one, we mention them in the hope that their vision may cheer timid souls, in the hope of stimulating in all the ardor of gratitude and the ardor of imitation. Indeed, the very purpose of tradition is to promote imitation; and, God knows, the history of Ireland is rich in tradition."

When Irishmen meet

"St. Patrick's Day has unofficially become the memorial day of the Irish. It is the day on which the children of the Gael gather to pay loyal respect and grateful veneration to the memory of their sainted benefactor and his saintly imitators. The Celt finds ample opportunity for expressions of gratitude on St. Patrick's Day. Oh, yes; because beautifully tender, sweetly solemn, and inspiringly impressive are the memories which cluster about the commemoration of this sacred day in Ireland and the world over for Irishmen.

"In harmony with the reawakening of the spirit of love in you, on St. Patrick's Day, there will be a rebirth and resurrection of all nature in Ireland. There the green will spring from the dull dead clods of earth; and bursting assunder the fetters of wintry restraint, it will break forth in floral splendor and vernal verdure over meadow and woodland, and the rivers and streams freed from the icy bands of their mountain fastness will chant their paeans of praise to God as they roll sparklingly to the freedom of the open sea; and the flowers in field and the blossoms upon the bush will burden the air with their nectared fragrance; and the birds upon the trees will distill the fragrance of flowers with miracles of melody informing the world that the voice of Ireland may be stilled but the soul of Ireland lives.

"Today my dear friends, your brothers and sisters in Ireland, their heart and pulse leaping and throbbing with new-born vigor and promise, gathered garlands from the gardens abloom and marched prayerfully down the lengthening aisles of their bivouacs, and wreathed every green mound where a martyr lies with the symbol of their hope and gratitude, and then held up to God the shamrock, that symbol of the rich contribution which Ireland has made to civilization and humanity—her long litany of martyrs and scholars—she pleaded to St. Patrick for mercy upon those souls who loved Ireland dearer than life, and to whose sacrifices she owes, under God, the benedictions with which her children have been blessed throughout the world. Let us, too, be mindful of Ireland's glories as well as Ireland's tribulations on St. Patrick's Day."

Steadfast in faith

"Other nations have selected the birthdays of their statesmen, their wartime heroes, or their national founders as their days of jubilation, but it remained for the Irish race alone to make the faith of their patronal saint the chosen expression of the national ideals. The traits of a race spring from the character of its people, and standing out in bold relief, against all other forces in the character of the Irish race is its wonderful fidelity to the faith and the teachings of the glorious apostle whose festival we celebrate today.

"The strength of that fidelity is best evinced by the fact that notwithstanding centuries of intolerance and persecution, it thrives today as pure and as vigorous as when the first seed was sown in the virgin soil of Ireland. It has taken root, too, and flourished in exotic climes, until today its growth is confined by the limits of no land, and its fruit is found among the products of every progressive nation upon the face of planet earth. The observance of St. Patrick's Day, then, is unique in that it is universal, for in every land wherever conditions and circumstances have carried the Celt, the voice of the race is lifted on this day in memory of Ireland's patron saint.

"It was Shelley who said, 'Our sweetest themes are those that tell of saddest thought.' Lifting the scroll of the ages and peering into their secrets, we behold a nation that stepped from the mellow light of gladness into the dark night of grief. The monuments of her genius have tottered, her universities that pierced the darkness of the sixth, seventh, and eighth centuries with the light of learning have long since paid the terrible toll which barbarism demanded of culture, but that lone monitor, her Catholic faith, which constitutes the connecting link between the fifth and the twentieth centuries still survives in the purity and freshness of its original radiance.

"O Ireland! The harp of your minstrel is suspended among your ruins, the inspiration of your singers has been stultified, the canvas of your artist has been scattered on the wings of the wind, and the cromlech of your aborigines has long since crumbled into dust; but your faith—that faith that came to you in dower from an humble and lowly shepherd, whose cradle another nation rocked—that faith, defying persecution, oppression, and the lapse of ages, comes down to you over time's terrific and gigantic flood, carrying with it the message of 1,500 years of loyalty, fidelity, gratitude, and reverence."

To honor the dead

"Little is known of Patrick's birthplace, nor does it matter much where he was born. Suffice it to say, that Ireland is the land of his adoption and the field of his apostolic labors. Suffice it to again say, that Ireland is the country which he reclaimed from paganism in the gloaming of the year 432, and presented it to the living God as one of the greenest and fairest laurels that ever ornamented the brow of triumphant Christianity. It is certain, too, of Patrick, that in his old age, when about to rest from his arduous labors that he reclined his weary head on the lap of Ireland, that she possesses the deposit of his sacred ashes, and while she keeps vigil by hallowed urn that contains them, her children are content that other nations, if they will, should dispute the glory of having rocked his cradle.

"The story runs that when Patrick was but 16 years of age, his father's house was ravaged by a band of barbarians. Patrick, it seems, and many of his father's vassals were carried by vandals into Ireland. Torn, then, in the tender years of youth from the sacred ties of home and parental influence, he arrived in Ireland a slave. But the children of Ireland for 1,500 years have exhausted eulogy and the art of bending words that they might pay reverential tribute to their patron for the unceremonious reception that was first given to him in their native land. And be it to the eternal glory of that nation, and that nation's children, that the last noble use that Ireland made of her own freedom was to tear away all the manacles of bondage, all semblances of slavery, and proclaim every man, woman, and child in Ireland free.

"With that last act of legislative power, Ireland bowed her head in bondage through the treacherous deception of Henry II, but she made atonement to St. Patrick, and she gave the nations of the world a sterling lesson on their obligations to their fellow men.

"'Some things more perfect are in their decay
Like spark that going out gives clearest light
Such was my fate whose doleful dying day
Began my joy and termed fortunes' spite
Rue not my death, rejoice at my repose
It was not death to me, but to my woe
The bud was opened to let out the rose
The chains unloosed to let the captive go.'

"St. Patrick was by profession a man of peace, and for 60 years, until he died at Saul in Ulster in 493, he labored zealously in promoting the arts of peace. Scarcely had Patrick reclined his head in the lap of mother earth than we find Ireland transformed into a vast center of learning. From the early part of the sixth to the tenth century, when the clouds of war hovered over western Europe, the sons of Patrick alone held the torch the beacon of learning that poured its flood of cultural light on the science, philosophy, and art, when practically the whole world was threatened with the horrible darkness of barbarism."

To gain inspiration

"Historians and essayists have vied with each other in exhausting eulogy on the glories and the illustrious achievements of the sons of St. Patrick. The princes of other countries were their pupils, and Irishmen according to Venerable Bede took no fee from them either for board or for tuition. England and the world are proud of the immortal Alfred the Great, but Ireland points to him with a greater pride—the pride that is born of the privilege of having sponsored his cultural

achievements that lend luster, and dignity, and probity, and honor, and immortality to his name.

"Nor were their growing virtues confined to Ireland alone. Leaving home, clad in no armor other than their virtues and scholarship, they assailed the very centers of ignorance, where pillage, plunder, rapine, and greed were dominating the impulses of mankind. Into the very citadels of ignorance went the apostles of Ireland, carrying the torch of revelation, and everywhere dispelling with rifts of light the darkest intellectual gloom.

"Columbanus she sent to Italy; Gall, to Switzerland, where the abbey and the town still bear his name; to Germany she sent Killiam and Virgilius, and in Germany today no fewer than 200 churches are dedicated to Irish apostles. Indeed, it is to Irishmen that the world is indebted for the universities of Oxford, Pavia, and Paris. Are we amazed then at the words of St. Bernard, 'that from Ireland, as from an overflowing stream, crowds of holy men descended on foreign nations?'

"For every known country the sons of Ireland carried forth for the sickly flame of knowledge until Ireland became known in the secular and ecclesiastical writings of the times as the 'Island of Saints and Scholars.' I could mention that the Irish scarcely felt the riveted manacles of slavery than France and Italy furnished that great galaxy of geniuses in poetry, music, architecture, and art that merited Leo X's pontificate, the title of 'The Golden Age.' "

To cling to memories

"Verily it was the age of faith—that faith that reared all of the vast miracles of architecture under the vast dome of heaven—those stupendous monuments of genius that are at once the wonder and the embarrassment of your modern masters. No. I will say that Irishmen were the creative inspiration of them, but it is oddly coincidental that when the Irish independence was unsuspectingly assassinated because of an immoral act of King Dermott—that these countries that profited by Irish emigration should spring into new, live, industrial, and progressive nations.

"Lord Macaulay hints that the suspicion is not unwarranted when he says, 'Scattered all over Europe were to be found brave Irish counts, Irish barons, Irish knights of St. Lewis, of St. Leopold, of the White Eagle, and the Golden Fleece, who, if they remained in the house of bondage, could not have been more ensigns of a marching regiment of freemen of petty corporations. These men, the natural chiefs of their race, having withdrawn what remained, were hopelessly passive.'

"There is reason—ample reason even now—for the Irish being scattered all over Europe. In the face of a long litany of tyrannies that were enough to destroy a nation of lesser hardihood, the Celt had to choose between infidelity to his nation's ideals or the shelter of a strange land. Here is the horrible chain of hideous enactments: (1) the Kilkenny statutes, (2) the purpose of the settlement of Ulster, (3) Cromwell's massacres and confiscations, (4) the broken treaty of Limerick, (5) the penal code, (6) the white terror of 1898, (7) the infamous union, (8) Pitt's broken pledge to emancipate the Catholics, (9) the Tithe war, (10) the artificial famine, (11) the coercion acts, (12) Lord John Russell's poor laws, (13) the clearances, (14) the land war, (15) the broken pledge of home rule—all this unhappy litany of outrages simply to prove the truth of Lincoln's dictum, 'No man is good enough to rule another without the other man's consent.'

"My grandfather lived through the terrible famine of 1846–49. Often he related to me some of the gruesome episodes that occurred in Ireland during those three awful years of living death for a nation—tales of Irishmen crawling to a meal of putrid carrion with the same eagerness that Englishmen of the same period went to their carnivals of viands and wine; tales that would make your blood ferment; tales of hollow-eyed and cadaverous Irishmen dying down in the ditches while howling for bread. During that awful night of 3 years when 729,000 people died in the horrors and agonies of starvation—during that awful night of 3 years when all Ireland was on a hunger strike for its faith, its priceless heritage from St. Patrick, the world took little cognizance of it."

Of heroic traditions

"Ireland did not then have 32,000,000 children scattered over the earth, the strongest fabric of powerful empires, and the London Times made bold to show its hand. While brave and valiant Irishmen were awaiting living physical decay, with the glazed eye of starvation and the empty cough of death, the Times hatefully and contemptuously remarked, 'The Celt goes to yield to the Saxon. This island of 100 harbors with its prolific rivers, its beautiful lakes, with its fertile mines, its riches of every knd, is being cleared quietly, surely, and effectively for the interests and luxuries of humanity.' Humanity! Good God, were not the Irish human? Get that word 'luxury' in speaking of famine, and a people's extermination.

"Every conceivable device for persecution was invented in order that her faith might be destroyed. Persecution and oppression were rampant, and Irishmen had to seek the consolations of their faith in strange lands. Forth they went over the highway of the ocean, to Spain, France, Italy, Germany, Australia, Canada, and the United States. Driven from home, her children are found in every land, yet their affections, like the old ivy to the temple, still cling tenaciously to the memories of their national land; memories that are rich in culture and fraught with heroism of her valiant sons. Tonight we entwine a garland of glory from the annals of her history, and with tender sensibilities we place it upon the ruins which persecution wrought on the land of our fathers.

"And we select our mementoes from the bosom of the Emerald Isle—from the grandeur of the causeway of the north and the scenic glories of her Killarney in the south; from the meetings of the waters of Avoca's Vale and the Mystic round bowers in the submerged fields of Glendalough; and from the ivy-clad abbey that shall bear testimony to her undying faith from the moss-grown monastery that shall attest her ages of matchless learning, and from the molding cromlech that shall eloquently proclaim the paganism of the past and triumph of St. Patrick. It shall be a memorial to a race that was triumphant in liberty and distinguished in bondage."

When men and women

"Her ruins! O Ireland! What tribulations are yours! The message of them comes to us over the flood of centuries, reverberating on the waves of Time's terrific tide. The ruins were old long before the great Christopher Columbus pointed the way during 70 torrid days across the trackless ocean and centuries before Cardinal Langlon and his brave Norman barons forced King John to sign the Great Charter of liberties on the famous old field of Runnymede. They were old centuries before the great St. Patrick ascended the Hill of Tara, threw a halo around it, and then gilded its outlines with the light of Christianity. Invaders for centuries sought to destroy them, and the children of Ireland fought bravely for centuries to defend them.

"There is no more illustrious spectacle in history than the conflict of the Danes and Irish on the Field of Clontarf. The setting was appropriate. On Good Friday morning, 1014, a wave of barbaric Danes swept down on Clontarf. Gallantly and fiercely, the sons of Erin, led by their venerable leader, Brian the Brave, locked weapons with Brodar and his heavily mailed Danes in one of the bloodiest battles that, until then, had ever appeared on the horizon of human affairs. And when the din and turmoil of fierce strife were stilled, the avaricious Danes had been driven to the sea, never to return.

"The sword of Erin and the Cross of Christ had triumphed over avarice and paganism. But an odd bit of fate, both Brian Boru and Brodar met death after the battle. Nor has there ever been a moment in the 1,500 years of her Catholicity that the Celt has failed to stand gallantly by the ramparts of his faith. The legions of Henry VIII were sent to destroy her; Elizabeth dispatched armies to annihilate her; and the monster Cromwell outraged her. All apparently aimed at her extinction, but in whatever else they succeeded, of this we are sure, they all failed magnificently in their efforts at tearing her faith from the bosom of her soil.

"The blood of her martyrs not only fructified the seed of faith, but their warm blood touched it with vigor and enkindled it with the fire of divine life and love. Today, it flourishes more beautiful than ever, and its fragrance burdens the air in every clime whether the children of Ireland were driven by persecution, oppression and the penal laws. Father Shealy, S. J., has beautifully said:

Lived and died

" 'Ireland may be called the land of failures. Failure, if you will, but glorious failures. For what is national failure? Poverty? Suffering? The broken arch? The desecrated shrine? The dismantled halls of the princely chief? No. These are ruins, but not failures. The one awful failure of a nation is to fall from her ideals—from her heritages; to give up striving; to be less than herself in aim of effort; to sell her soul to powers or avarice; to be aught that serves the sordid sway of pride and passion. That indeed is failure which succeeds at the price of virtue and honor. Ireland might have been rich and favored. She might have merged her identity and her faith in an alien empire, and in an alien worship. But she fought and she died; she starved and she agonized. Yet in defeat she has conquered. The spirit lives on.

" 'Who fears to speak of '98
Who blushes at the name,
When cowards mock a patriot's fate,
Who hangs his head in shame?'

"That is the glorious resurgent spirit of the Celts. When their cup of bitterness was filled up, when the light seemed parted from their eyes, when their heroes and leaders lay dead before them, when no one could work for her whom he loved, when even their bards could not invoke Erin by name, when Eileen Arcon and Dark Rosaleen became consecrated to their song, they hoped magnanimously, they dreamed beautifully, they loved passionately, and they maintained in hearts that were well-nigh broken, the exalted valor and patriotism and fidelity to heritages by virtue of a faith that can never be broken, by a love that cannot die."

For God and Ireland

"They lived for their heritages and the enthusiasm of their lives has been felt in all the earth, and it has given heart and pulse to every struggle for liberty the world over the past 300 years. And of an ideal John Quincy Adams says: 'It must, it will irradiate the darkness of dissolution; will identify the consciousness of the past with hope of futurity; will smooth the passage from this to a better world, and link the lost pangs of expiring nature with the first raptures of never-ending joy.' "

It was the immortal Grattan who said, "To hell with your concessions, we want our country." And Robert Emmett, "When my country shall take its place among the nations of the earth, then, and not till then, let my epitaph be written." And Padriac Pearce, "Life springs from death, and from the graves of our martyred dead spring live nations. England has left us our martyred dead, and while Ireland holds these graves, Ireland, unfree, shall never be at peace."

"The morning breaks. The light ahead is fair to see. It is of good augury that the feast of St. Patrick is celebrated here as well as in Ireland. Noble country! In deep reflection, the spirits of your dead walk its streets today; brood amid thy solitudes; pause beneath thy balconies and belfries to revisit the scenes of their past triumphs; glow with pride in recalling the achievements of her sons; and thrill at the beauties, oh, Ireland, your Ireland of other days; they stand at last upon your monuments, whispering to the stars: 'Grace of dreams, what may betide! God of my fathers, grant our children hearts of grace. God of the universe, shower your benedictions on poor old Ireland.'

"Yes, the mellow light of morning is fair to behold. And as Archbishop Hughes once said, 'We may still hope that the flag of freedom will once more wave on the green hills of that unhappy country, and we may predict that the faith of St. Patrick will continue to be the faith of Ireland, when the religions of those who persecuted the Irish shall be forgotten, or remembered only to convince incredulous posterity that legislatures have dared to invade the prerogatives of God in attempting to dictate what a people should believe.'

"Then here this evening, in consideration of radiant struggles that were and peeping into glorious and brighter days ahead, as we are gathered here in loving communion, freed of faction and purged of selfish purpose, let us pledge anew our fidelity of the precious heritages that St. Patrick bequeathed us, and our veneration and love for the immortal dead of Ireland.

" 'Oh, Ireland! thy sun is but rising while others have set
And though slavery's cloud o'er thy morning hath hung,
The full moon of freedom shall beam around thee yet.
Ireland, oh, Ireland, though long in the shade
Thy star shall shine out when the proudest shall fade.' "

Michigan's State Legislature Opposes Curtailment of Veterans' Hospital-Construction Program

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution that was unanimously adopted by the Michigan State Senate and the Michigan House of Representatives. The resolution follows:

Senate Concurrent Resolution 8

Concurrent resolution requesting immediate review of recent cuts in the veterans' hospital program

Whereas the Veterans' Administration has recently announced the cancellation of plans for the construction of a 200-bed general hospital at Grand Rapids, a 500-bed tuberculosis hospital at Detroit, and a 1,000-bed neuropsychiatric hospital at Toledo, Ohio, from which beds were to be allotted to Michigan mental and nervous cases; and

Whereas it appears that needs of veterans will not be adequately cared for as a result of such action; and

Whereas the citizens of Grand Rapids are now engaged in the conduct of a drive for approximately $4,000,000 to add to the hospital facilities of Kent County and neighboring counties and that such facilities have been shown by survey to be badly needed, regardless of what facilities are provided by the proposed Veterans' Hospital; and

Whereas the action of the Veterans' Administration has caused great confusion and uncertainty and has endangered the welfare of veterans and of all other citizens of the community interested in the development of hospital facilities in the area; and

Whereas the interests of veterans and other citizens generally throughout the State of Michigan are adversely affected by the action of the Veterans' Administration with respect to hospitals at Grand Rapids, Detroit, and Toledo; and

Whereas budget cuts should not be made at the expense of sick and disabled veterans while we are spending much larger sums abroad: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the President, Congress, and the Veterans' Administration be memorialized and requested to reopen and reexamine the decisions previously made with respect to these hospitals, and to determine without delay the need for veterans' hospitals at Grand Rapids, Detroit, and Toledo, Ohio; and be it further

Resolved, That if such need be established as now appears to exist, the Veterans' Administration be requested to reverse its earlier decisions and to continue with its program as originally determined upon; and be it further

Resolved, That a copy of this resolution be transmitted to President Truman, to the President of the Senate, to the Speaker of the House of Representatives, and to the Michigan Members in the Senate and House of Representatives of Congress.

Unanimously adopted by the senate, February 4, 1949.

Unanimously adopted by the house of representatives, March 4, 1949.

National Health Insurance

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. BUCHANAN. Mr. Speaker, I am quite interested in the propaganda against the President's national health-insurance program being distributed by the American Medical Association through its $3,500,000 lobby and propaganda fund.

That fund is being raised by assessing all members of the AMA $25. The Trainman News, the official organ of the Brotherhood of Railroad Trainmen, carried an editorial on that assessment which I am sure the Members of Congress will be interested in reading.

Under unanimous consent, Mr. Speaker, I include in the CONGRESSIONAL RECORD that editorial and a news story from the same issue of the Trainman News on the 12-point program recently issued by the AMA for the alleged purpose of extending medical care:

AMA PUBLICISTS START WINDOW DRESSING—OFFER REHASH OF PLAN THAT ALREADY FAILED—80 PERCENT OF AMERICANS ARE MEDICAL INDIGENTS UNDER ASSOCIATION RULES

The American Medical Association in its time-honored refusal to face the facts, is offering the public snares and delusions in a frantic effort to forestall effective national health legislation.

They have hired a high-powered public-relations outfit—Whitaker and Baxter—to weave the fantasy and present it to the public in ads and articles.

FANCY PRESS RELATIONS

A fancy press-relations job designed to obscure the AMA's stubborn opposition to any program which would bring medical care within the means of the average man is being presented the Nation, says Dr. Channing Frothingham, chairman, committee for the Nation's health.

In answer to critics, AMA has prepared a program for health centered around the old stand-by of voluntary health insurance—a plan already proved inadequate for the 80 percent of Americans making less that $5,000 per year.

Said Dr. Frothingham: "In reading the AMA program, it would be well to remember that the AMA recently hired a new and clever publicity firm for what is reported the biggest public-relations fee in history and which AMA hopes to pay out of the $3,500,000 propaganda it is trying to collect by assessing members $25 each."

The publicity men have come out with a fancy window-dressing job aimed at obscuring AMA opposition to real advance in providing medical care.

Less than a sixth of the population is covered by voluntary plans, and these offer limited protection. Most plans are controlled by AMA doctors or pay only a small part of total medical costs.

AMA ALWAYS LAST

AMA urges that Government funds be applied to voluntary plans to include "indigent and medically indigent" persons. By its own statistics, said Dr. Frothingham, "80 percent of the population are not able to meet medical expenses out of their own resources."

Thus many self-respecting American families would be labeled "medically indigent" after investigation of personal finances, to meet AMA rules, for Government aid.

Most of the items on the AMA lists are either on the statute books, or are incorporated in President Truman's program now before Congress," said Dr. Frothingham. The AMA is merely accepting the inevitable, and belatedly jumping onto the bandwagon as it has in the case of most social advances in the past.

Can you imagine the howls in the Halls of Congress and the hysteria in editorial offices if a labor union ever announced that it was going to tax its members $3,500,000 to oppose a single piece of legislation? That, of course, is exactly what the reactionary American Medical Association is doing in an effort to throttle President Truman's national health program.

In view of its attitude toward the millions of Americans who cannot now afford adequate medical and hospital service, the AMA ought to change the old slogan to "Physician, 'heel' thyself."

Which Kind of an Economy Do You Recommend?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following is taken from an official table of the Bureau of Agricultural Economics:

Monthly farm wage rates (without board), 1948

	Per month
South Carolina	$58
Mississippi	62
Alabama	63
Georgia	63
Louisiana	69
Tennessee	71
Arkansas	80
Kentucky	83
West Virginia	83
North Carolina	84
Florida	93
Virginia	94
Missouri	105
Delaware	110
Maryland	113
Ohio	115
Texas	115
Oklahoma	117
Indiana	117
Pennsylvania	121
Maine	129
Illinois	130
New Mexico	132
Michigan	136
Kansas	136
Minnesota	140
New York	142
Iowa	143
Nebraska	144
Vermont	145
New Hampshire	147
Wisconsin	147
New Jersey	150
South Dakota	154
Connecticut	155
Massachusetts	155
Rhode Island	155
Colorado	159
North Dakota	169
Nevada	169
Wyoming	170
Utah	173
Montana	176
Arizona	178
Idaho	187
Oregon	192
California	202
Washington	204

In which area would you prefer to have a garage, drug store, or any other business?

Note that the monthly farm wage—without board—is rather low in the areas where oil and soil-depleting crops are produced, and note that in the dairy and livestock sections the farm wages of $140 to $150 per month are over twice as much as the first-named area.

Why should we let areas that have already witnessed the ruination of their soil forge a program that will ruin the soils of the remaining areas of the country? We should maintain the fertility of our farms by dairying and livestock farming. The more imitation butter produced, the scarcer and higher the price of meat. The more imitation butter produced, the less fertile the soil. Why talk soil conservation and then ruin the soil at the same time? Which labor return should an informed labor group advocate—the $58-per-month wage scale or the $147-per-month wage scale?

World Round Flight

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. CASE of South Dakota. Mr. Speaker, in connection with my own remarks upon the meaning of the historic nonstop flight of the *Lucky Lady II* around the world, I have thought the CONGRESSIONAL RECORD should preserve to posterity one of the factual, summary stories carried by the newspapers of the day. For this purpose, the following account by the United Press seems well suited and is here given by permission of the House:

FORT WORTH, TEX.—*Lucky Lady II*, a United States Air Force B–50 bomber, today completed the first nonstop around-the-world flight in history.

Ninety-four hours and one minute after she took off from Carswell Air Force Base here last Saturday, the great four-engine bomber came home again out of a haze hanging in the west.

It was estimated that she had flown 23,452 miles, almost the distance of the earth's circumference at the Equator, without any major difficulty aloft and with the benefit of four refuelings in flight.

Her 14 crewmen scrambled out, proclaiming their willingness to do it all over again after a little rest, and received a royal welcome from top Air Force officers and Air Secretary W. Stuart Symington.

Capt. James Gallagher, of Melrose, Minn., the smiling crew commander, said, "We were on instruments only 4 hours; the weather was excellent."

The last leg—the homeward dash from Hawaii, where *Lucky Lady II* took on fuel from a B–29 tanker Tuesday night, "seemed the longest," Gallagher said.

Lucky Lady II took off from Carswell at 10:21 a. m., MST, last Saturday, February 26. She flashed past the Carswell tower, at the end of her epochal flight, at 8:22 a. m. today, made two great circles about the field at altitude of 3,000 feet and then came down, over Lake Worth at the west end of the runway, for a perfect landing.

Some 400 to 500 persons, most of them Air Force personnel, were on the ramp to wave their greetings to the crew, which had their faces pushed against the windows.

The B–29 tanker planes were with *Lucky Lady II* as she broke through the haze. They had "picked her up" and flown escort on the run in from Tucson, Ariz., this morning.

Symington and the top military men—Gen. Hoyt S. Vandenberg, Air Chief of Staff; Gen. Curtis E. Lemay, strategic air commander, and Maj. Gen. Roger A. Ramey, Eighth Air Force commander—pushed forward and encircled the crew as they climbed down.

The Air Force billed this as a training mission but its obvious pride in the flight was reflected by the presence of all the "top brass."

Air Force B–29 tankers went up over the Azores, Dhahran in Saudi Arabia, the Philippines and Hawaii to deliver fuel to the glory-bound bomber, which circled the globe at an average speed figure unofficially at 249.39 miles per hour.

Vandenberg said the flight was additional evidence that "we have an intercontinental Air Force." It was a demonstration to the world that no enemy objective is outside the range of United States bombers.

It was, said the Post, "a part of a continuing program of in-flight refueling training flights which will be flown to all parts of the world."

Lucky Lady II refueled over the Azores 15 hours and 34 minutes after her take-off; over Dhahran some 35 hours and 9 minutes out of Fort Worth; above the Philippines at the 55 hour and 39 minute mark, and over Hawaii, before turning homeward on the last lap, 78 hours and 54 minutes after the flight began.

Lucky Lady II, drawn from the Eighth Air Force's Forty-third Bomber Group, is a regular combat plane. She carried twelve 50-caliber guns but no ammunition or bombs. For additional safety margin, bomb-bay fuel tanks were installed.

The historic flight was performed on a schedule of masterful precision and precaution.

Ramey and his associates said the flight was ordered on February 18. Three days later, on February 21, the B–29 tanker planes were in place at the refueling points.

Air-sea rescue units were put on alert and 100 to 125 auxiliary landing fields were designated for emergency use.

Hourly reports came back from *Lucky Lady II* to the strategic air command at Omaha and Eighth Air Force headquarters here. So well devised were the channels of communication that reports from the plane reached headquarters in an average time of 30 minutes to an hour.

The 14-member crew was given a physical examination just before the take-off. After a brief press conference, the crewmen were hurried away to flight physicians again this morning for more examinations, to study the effects of their long grind.

The B–50, manufactured by Boeing Airplane Co. of Seattle, Wash., is a vastly improved postwar version of the B–29 Superfortress. It has a combat radius of more than 2,300 miles, but on a straight-line shuttle bombing mission can carry 5 tons of bombs 6,000 miles.

Its operational ceiling is above 30,000 feet, and its load capacity is 10 tons.

The Air Force has ordered 390 of the B–50's, but it has not revealed the number thus far delivered.

ANY PLACE WE NEED TO GO

Lt. Gen. Curtis Lemay, head of the Strategic Air Command, declared the feat is merely an indication of things to come in Air Force achievement.

Asked if this means the Air Force can deliver an atomic bomb to any place in the world, he replied:

"Let's say any place that would require an atomic bomb."

He said the only limit on "mass flights" of the same sort "seems to be the number of tanker planes available.

The *Lucky Lady* skirted Russian and satellite territory, flying across north Africa and India, to avoid crossing land behind the iron curtain.

Powered with four Pratt & Whitney 3,500 horsepower engines, the B–50 has a top speed of about 400 miles an hour, a cruising speed around 300, and can climb to 40,000 feet. Its bomb capacity is stated at 10 tons, its maximum range (without in-flight refueling) at 6,000 miles. Its wing span is 141 feet, its fuselage length 99 feet. The weight of the plane, for normal take-off is about 120,000 pounds.

Lucky Lady II took its name from the B–29 *Lucky Lady*, one of three Superforts which began a round-the-world flight last July. Two of the planes finished the flight, and the third crashed in Arabia.

SECRET FLIGHT

While hundreds of persons apparently were in on the secret of the *Lucky Lady II* flight, no word of it leaked out to the public. Last night in Washington, 54 newspaper, radio, and newsreel correspondents were loaded aboard two B–17 Flying Fortresses and a Constellation transport and hustled to Fort Worth to cover the B–50's arrival.

They were not told of their destination until they were in the air en route.

PREVIOUS WORLD FLIGHTS

On April 6, 1924, four Army planes took off from Seattle, headed around the world. Only two of the original planes finished the flight. It took 175 days, of which 14 days and 15 hours were actual flying time.

In 1929, the German dirigible *Graf Zeppelin* made the globe-circling trip in 20 days and 4 hours from Friedrichshafen to Friedrichshafen, the distance 21,700 miles.

The late Wiley Post made two trips. In 1931, with Harold Gatty as navigator, he flew a northern route of 15,474 miles in 8 days, 15 hours, and 51 minutes. In 1933, flying alone, he covered roughly the same route in 7 days, 18 hours, and 49½ minutes.

Howard Hughes, airplane designer and former Hollywood producer, flew around by way of Russia, 14,824 miles, in 3 days, 19 hours, 8 minutes, and 10 seconds in 1938.

In 1947, William Odom, with Milton Reynolds, the owner, flew a converted Air Force medium bomber over a 20,000-mile route in elapsed time of 78 hours, 55 minutes, and 12 seconds.

CONGRATULATIONS POUR IN

In a telegram from Washington to Secretary Symington and Gen. Hoyt S. Vandenberg, Air Force Chief of Staff here, Secretary of National Defense Forrestal said:

"The completion of the first around-the-world nonstop flight is a significant achievement. Through you I send my sincere congratulations to the Air Force, and particularly to Captain Gallagher and his crew."

CREW MEMBERS

Besides Captain Gallagher, members of the crew were: First Lt. Arthur M. Neal, Visalia, Calif., second pilot; Capt. James H. Morris, San Antonio, Tex., third pilot; Capt. Glenn E. Hacker, Eldorado, Kans., first navigator; First Lt. Earl L. Rigor, Corvallis, Oreg., second navigator; First Lt. Roland B. Bonner, Bakersfield, Calif., radar officer; First Lt. William F. Caffrey, Boston, radar officer; Capt. David B. Parmelee, Guilford, Conn., flight engineer; Staff Sgt. Robert G. Davis, Niles, Mich., flight engineer; Tech. Sgt. Virgil L. Young, Cranesville, Pa., flight engineer; Tech. Sgt. Burgess G. Cantrell, Pound, Va., radio operator; Staff Sgt. Robert R. McLeroy, Alvarado, Tex., radio operator; Tech. Sgt. Melvin G. Davis, Long Beach, Calif., gunner; Staff Sgt. Donald G. Traugh, Jr., Danville, Pa., gunner.

Lieutenant Neal, second pilot of the *Lucky Lady II*, was the pilot of the B–29 Superfortress *Lucky Lady*, one of the three Superforts which started on the round-the-world training flight previously.

Peace Through Air Power

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a remarkable article entitled "Peace Through Air Power," written by Maj. Alexander P. de Seversky and published in the Reader's Digest for February 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEACE THROUGH AIR POWER

(Condensed from a chapter of a forthcoming book)

(By Maj. Alexander P. de Seversky)

In a world that has not yet learned to dispense with force, our ardent hope is that our military strength will prevent war. The important question is, What kind of strength?

Mere quantity in armed men and weapons will not serve. If war comes, the enemy will have at his disposal teeming populations, and possibly vast resources of the whole Eurasian Continent. American strategy must therefore gear to quality rather than quantity.

Fortunately, we have within our grasp a strategy that meets this condition. It is uniquely suited to American genius and capacity. It is the strategy of air power.

But what kind of air power? The assumption that a lot of indiscriminate planes—a 70-group air force, a huge naval air arm, a tactical Air Force supporting an Army, Marine aviation, Coast Guard aviation—add up to air power is wrong. A country may possess swarms of aircraft, yet be deficient in air power, as Hitler and Tojo learned too late.

True air power means a strategic striking force that can rise from our own American Continent for direct assault against the industrial solar plexus of the enemy and return to its home bases. It means aviation freed from dependence on overseas bases.

The creation of such an aerial force is fully possible. It calls for no new inventions; the necessary aircraft are already in the skies, but we are not building enough of them. What is more, this air power can be created as soon as, if not sooner than, the mountains of equipment on land, sea, and in the air now proposed.

Instead of continuing to spread our limited man power and resources thin in all three elements, the proposed air strategy would concentrate on the decisive weapon for clean-cut superiority in the decisive element. By reducing sharply the roles of armies and navies, the fearful drain on men and materials can be stopped, the crushing burden of military expenditures can be eased.

With control of the air ocean enveloping the whole globe in our hands—the test and purpose of adequate air power—our position would be analogous to Great Britain's in the last century. A small island off Europe in effect gave mankind a century of peace, the Pax Britannica. It did this without militarizing or regimenting its people. This miracle was possible because Britain did not attempt to be strong on land and sea at the same time. Living in an era when water was the decisive medium for carrying destruction to enemies, Britain channeled practically its entire military potential into sea power, attaining command of the seas through an invincible fleet.

Today the air has become the primary medium of global power. An air force capable of commanding the skies can enforce its will on everything below. If we hold our effort on land and sea to a minimum and channel our resources into long-range air power, we likewise can be incomparably strong without the risk of military regimentation. When we muster the intellectual courage to face the new power equation, we can have a century of peace. Not a Pax Americana but a Pax Democratica, in partnership with all other free nations.

It sounds incredible today, but more than 2 years after the outbreak of World War II, and months after America was in it, bomber aircraft were still at the bottom of the priority lists. The men who were then—and for the most part are still—in charge of our military destinies looked on them as an unwarranted luxury. For these generals and admirals the unfolding struggle was merely a continuation, with modern trimmings, of the surface strategy of World War I.

That grim spectacle of stubborn inertia left airmen like myself no alternative but to speak out vigorously. I believed an enlightened public opinion could serve as a corrective on the natural conservatism of a great Military Establishment rooted in tradition. That faith was amply justified.

Today it is again a deep anxiety for the state of our national security that moves me to write. The moment is crucial because we are now in the first stages of a large-scale rearmament. The plans now being shaped up, if allowed to congeal, cannot easily be undone. They will commit us irrevocably.

It would be against nature to expect the elder services to make a strategy decision amounting to an order for their own demotion to secondary roles. It is the American people who must determine the military course through their Congress and their President. They must choose between the profligate land-sea-air strategy of the recent past and the interhemispheric air strategy opened up by modern aeronautics.

Winning nations tend to glorify the methods and weapons that brought them victory. France at the end of World War I, flushed with triumph in the trenches, proceeded to construct a supercolossal de luxe trench—the Maginot line. It was an engineering marvel, embodying all the latest scientific gadgets. But it was still a trench—a steel-and-concrete monument to the tragic belief that any new war would be as static as the last one.

True, a young officer named Charles de Gaulle foresaw the advent of mobile and motorized warfare that would nullify supertrenches. But would France listen? Its illusions of safety were confirmed by such newly haloed heroes as Foch, Joffre, Pétain, Gamelin. To question their military wisdom at that time seemed close to treason.

The implications of the Maginot line—a symbol of futility—have not been fully grasped. We Americans are at this very moment perpetrating a tragedy of the same order, for the same reasons, with the blessings of our own haloed heroes of recent victory. Having won the last war with triphibious task forces, Army-Navy-Air teams, we are proceeding to build supercolossal task forces which will embody all the latest technological innovations. Little gliders are being displayed by big gliders; tanks by supertanks. Assault barges firing primitive rockets are being replaced by superbarges firing V–2 rockets. Escort carriers are to be replaced by gigantic floating islands at a quarter of a billion dollars a throw. In America today, as in France a generation ago, legislators are overawed by the prestige of the five-star generals and admirals who delivered victory.

We need to be reminded that the triphibious strategy of World War II was an improvisation forced upon us by failure to provide air power with sufficient range to strike at the vitals of Japan from bases already in our possession. Such air power was technically possible but had been arbitrarily brushed aside by surface-minded planners. The land-sea-air team was an emergency device for carrying short-range aviation step by step, island by island, within striking distance of the ultimate target.

Indeed, as the range of available aviation was extended, those steps could be stretched, bypassing intermediary islands where the enemy was entrenched. Every enlargement of range thus paid off in lives saved. In the final stage, our superforts were planted within direct striking reach of Japan proper. At that point their surface teammates became

in effect mere bystanders, as air power undertook the systematic demolition of the enemy sources of power.

Air power finished the job—and this is the key to an understanding of the events—with great Nipponese armies on the home islands and on the Asiatic mainland still intact, but impotent. Air power finished the job with a fantastic mass of American land and sea forces likewise intact and useless.

As late as June 21, 1943, General Marshall explained in a speech that "your adversary may be hammered to his knees by bombing, but he will recover unless the knock-out blow is delivered by the Army." Fortunately, he was wrong. The knock-out blow was delivered by air power, sparing perhaps a million American and Japanese lives. Our actual invasion came after the surrender. A handful of American officers landed and took control of a country still possessing millions of fresh troops.

Most civilians could grasp the obvious lessons of this picture. But professional surface-strategists, innocent of the aeronautical facts of life, were bewildered. With few exceptions, they emerged from the war sold to the hilt on the triphibious team for securing outlying bases. They still remain blind to strategy based on victory without the orthodox showdown by foot soldiers on a battlefield. We are still witnessing the Maginot Line mentality at work. The current program of defense through balanced forces operating from a chain of bases means only one thing: the perpetuation of the methods of the last war.

Our projected 70-group air force is built around 20 groups of medium bombers of the B-29 and B-50 types—which is to say, around a 5000-mile flying range, or 2000-mile striking radius. (Striking radius is about 40 percent of total flying range.) It provides for only five groups of long-range B-36 bombers, which have an effective flying range of 10,000 miles—with current modifications promising 13,000 miles—enough to blast any target in Eurasia from our own continent. Why do we thus continue to put our faith in an old-fashioned and technologically outmoded air force?

The telltale fact about the 2,000-mile radius is that it requires an array of overseas bases. Bases in turn call for large land and sea forces to hold and supply them. The over-all military pattern thus remains unchanged. Whether we have 70 groups or 700, the complex set-up on the surface remains indispensable. The more air power of this limited reach, the larger the land and sea forces required to make it operative.

Before the last war we had built and flown 82-ton aircraft with a flying range of some 8,000 miles. Did we put them into production to fight the war? Not at all. Instead, we produced 20-ton aircraft with a flying range of 2,000 miles. Today we have a few bombers of 150 tons with a flying range of 10,000 miles. But what are we building? Seventy-ton bombers with a flying range of 5,000 miles (combat striking range, 2,000)—just short enough to rule out transoceanic offensives.

True, we are now resorting to air refueling and other tricks to extend the range of action. These will work under conditions of surprise, but I am convinced that sustained offensives cannot be maintained without planes of interhemispheric range. One can understand the present face-lifting improvisations by our Air Force. Its leaders have no alternative. Aircraft of inadequate range have been imposed upon them by military planners hell-bent on fighting from distant bases guaranteed by huge armies and navies.

The arguments advanced today for holding back the extreme planes are the same as those we heard when the 82-ton B–19 seemed extreme. The real explanation for freezing our strategy at the 2,000-mile radius is not technological but psychological. Military minds of the old stamp cannot admit the possibility of war without show-down land and sea battles, spearheaded by marines and supported by complex supply lines all over the world.

I do not hesitate to challenge the 2,000-mile radius restriction. It is destined to join the Maginot line in the limbo of outlived military notions. Even if a war should begin on this basis, it would inevitably be transformed into an all-out contest of interhemispheric dimensions before a decision could be scored. The logic of air power means an Air Force with enough range to strike from its own continent. The nation that is first in preparing for intercontinental aerial warfare will win the next war.

The United States should begin now. Tomorrow may be too late.

The advent of the atomic bomb does not alter this picture. The bomb is not a new military force, in the sense that the Army, Navy, and the Air Force are military forces. It is a new and horribly destructive explosive, as yet of finite scope. Before it can score a decision, it must be delivered, like any other explosive, by one or a combination of military forces to the right target at the right time. Thus it is not the stock pile of atomic bombs that will decide the issue, but superior means of delivery—and that means air power. Far from nullifying the art of war, the atom bomb puts a higher premium on correct strategy.

There are two possible strategies open to us. One, when air power can deliver the atom bomb only when provided with overseas bases. This demands a large Army and a great Navy. The national effort is split three ways so that none of the forces attains its maximum potential.

Two, when air power has sufficient range to deliver the atom bomb directly from this continent, without need of overseas bases. This reduces our Army and Navy to a minimum and allows us to put most of the national effort into the Air Force so that it attains its maximum potential.

There is nothing novel about the first strategic plan. That is how the last war was fought, and it is, unfortunately, the strategy underlying our present plans for national defense. But suppose that Soviet Russia possessed similar air bases in Cuba or Greenland—how long would they remain Russian after the start of hostilities? Obviously, we could kill them off by throwing against them the full weight of our bombing power. We would operate from the source of our strength and supplies, while the enemy could use only one segment of his and would have to depend on thousands of miles of vulnerable supply lines. The idea that Russia could hold Cuba or Greenland is fantastic.

But is it any less fantastic when we propose to hold bases on the periphery of the Eurasian continent? Our projected air outposts in North Africa, Europe, the Near East, and the Far East are within striking range of Soviet air power. Most of these bases could be attacked not only by long-range bombers but also by great masses of short-range tactical planes, a type in which quantity rather than quality is the vital consideration. And we know that Germany and Russian factories are now producing thousands of tactical planes. The Soviet leaders can be expected to use these planes ruthlessly, considering them as expendable as so many shells. Finally, to hold these bases and keep them supplied would also mean challenging the 300 divisions of the Red army.

The use of outer bases for initial surprise action is possible. But their permanent control for sustained strategic offensive is the stuff of dreams. Being within the orbit of the total hostile air potential, these bases will be captured or demolished, paralyzing the strategy dependent upon them. The ultimate decision will be postponed until we are ready to use long-range strategic aviation based on our own continent. Unless the enemy is ready with that kind of air power first.

Everything we have said about fixed bases applies a hundredfold to the floating bases called aircraft carriers. The only advantage they claim is mobility. But maneuverability reckoned in hundreds of miles becomes meaningless against aircraft covering thousands of miles. How a ship sailing 600 miles a day can evade detection by planes flying 600 miles an hour the admirals haven't explained.

In the last war carriers could not operate in the Mediterranean or North Sea within reach of the German Luftwaffe. Enlarging a carrier merely provides the foe with a larger target. The 80,000-ton floating islands on which our Navy has set its hopes are military monstrosities. They will be quarter-of-a-billion-dollar expendables, good at most for one limited sneak assault before they are annihilated. And their planes will be inferior to equivalent planes operating from the ground. I have no doubt that when military history is written these marine mastodons will be cited as a prime example of strategic folly.

If this strategy of carriers, overseas bases, and short-range aviation is allowed to stand, we would be called upon, in the event of war, to produce simultaneously the world's largest Army, Navy, and Air Force, while dividing our aeronautical effort between strategic and tactical planes, both in maximum numbers. Since our resources are not infinite, we could not hope for absolute superiority in any one of these forces. And, according to Government figures, we would be putting $10 into surface elements for every dollar put into the skies. We don't need a calculating machine to realize that we are here dealing with strategy which, if it is to have the magnitude for victory over the world's No. 1 land power, would bankrupt a nation 10 times as rich as the United States.

A recent press summary of the views of our high command stated that "the United States can develop overwhelming superiority in the air and at sea, but will find it hard to compete with Russia's land power." The allusion to sea superiority is frivolous. Soviet Russia, a self-contained and blockade-proof continent, has no navy, needs no navy, fears no navy. But if a contest on land is dangerous, if superiority in the air can be made overwhelming, why do we earmark a third of America's manpower and resources to face an admittedly superior land force and the near-certainty of defeat? Why allocate another third to futile and irrelevant sea power? Why not convert the whole potential to the force recognized as our realm of supremacy—the Air Force?

Let us have the intellectual clarity and daring to break with the past. For a small fraction of the cost of conquering, maintaining, and supplying bases for short-range aviation, we can buy long-range aviation that nullifies the need for those bases and the huge surface forces that go with them.

The Air Force stated recently that the possession of the B–36 will make it possible for us to operate against a possible aggressor anywhere in the world from bases on the North American Continent. Why, then, is the bulk of our money being put into 20 groups of medium bombers, while only five groups of the B–36 type are projected?

The answer is that our defense policy is shaped by men reared on surface concepts. Critics warn that the huge, unwieldy B–36 will be shot down. Of course some will. The medium-range bombers we plan to send from overseas bases will also be shot down. War without combat is a pipe dream.

We face today a crucial choice. Either we continue to divide our national potential three ways for land-sea-air operations tied to distant bases or we channel our strategy

boldly into the skies for direct operations, with command of the whole air ocean as the objective.

That is the only strategy that will serve as a real deterrent to aggressors. It is the natural product of our way of life. No one will be able to challenge that kind of force. In order to create it—and more important, to exercise it properly—the challenger would have to possess talents equivalent to ours, and to acquire those talents he would have to adopt our way of life. But if he adopts our way of life, there will be no need for war.

The change called for is a bold reversal of prevailing concepts. Nothing less than an aroused public opinion can accomplish this. The pressure of the American people on their Representatives in Congress can force revision of obsolete strategic plans.

The decision must be made quickly. Only the Nation as a whole can make it. Our people must choose between outmoded methods and an historic opportunity to win peace through air power.

Civil Defense, the Missing Link—Socialized Medicine a Menace

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered before a joint session of the Legislature of Vermont, in the house chamber, the afternoon of March 15, as follows:

Mr. Speaker, I appreciate the courtesy of the invitation extended to me to address this joint session of the general assembly.

Of necessity I shall be brief—and I can hear some of my friends say, "Let's hope so."

I do wish to direct your attention to three or four matters of general interest which are giving Members of Congress much concern.

As is well understood, I never have undertaken to advise the wisdom and virtue of Vermont, as here constitutionally assembled, as to the way in which they should legislate—and for two reasons. One is found in the fact that I have troubles enough of my own trying to represent you folks in Washington. The other reason is based on my many years' experience as assistant clerk and clerk and speaker of the Vermont House. I learned in those days that while the legislature is always respectful and courteous to visitors who come from Washington to tell the General Assembly of Vermont what to do, those visitors nevertheless leave at least a wrong impression, politically speaking.

I am still so old-fashioned or so conservative as to believe in the declaration of the founders of the State of Vermont, who said, with respect to fundamental principles and inherent virtues, that "frequent recurrence to fundamental principles, and a firm adherence to justice, moderation, temperance, industry, and frugality, are absolutely necessary to preserve the blessings of liberty and keep government free; the people ought, therefore, to pay particular attention to these points in the choice of officers and representatives, and have a right, in a legal way, to exact a due and constant regard to them from their legislators and magistrates in making and executing such laws as are necessary for the good government of the State."

To that provision of our State constitution I have always endeavored religiously to adhere.

So here I come with what you friends of mine naturally expect me first to talk about; namely, reasonable and adequate military preparedness.

As we all know, of course, the National Military Establishment has been created under one head. A National Security Council has been provided for determination of policies. A National Security Resources Board has been set up to coordinate mobilization problems, both of manpower and matériel. A Munitions Board functions to assure production for the National Military Establishment. A Research and Development Board is taking the leadership in scientific research. Selective service has been enacted and other measures taken which may prevent aggression.

But the missing element—the missing link—in the defense structure is civil defense. Without a sound and effective system of civil defense, the people and the productive facilities of the country are unprepared to deal effectively with the results of an enemy attack on our country.

As has been suggested, if attack should come it might be by bomber squadrons dropping atomic bombs, incendiaries or gas bombs, or superexplosives on one or a score of our major centers. It might come via guided missiles from distant points, or from submarines off the American shores. Or it might come from within the borders of the United States, through saboteurs and fifth columnists.

However it might come, it could mean devastation and death at many points on such a scale that the tasks of rescue and restoration would be far beyond the present capabilities of the people and the communities attacked.

Our ownership of the atomic bomb undoubtedly engendered to a wide extent the mistaken sense of security and complacency which pervaded the public mind immediately after the war and which was in some measure responsible for demobilization.

The atomic bomb does not give us automatic immunity from attack, as some people would like to believe, nor does its mere possession guarantee victory if war should come. With or without the atomic bomb there can be no absolute security for the United States or for any other nation in the world until all nations agree to the regulation of armed forces and the substitution therefor of peaceful methods in the settlement of international disputes. It seems to me that such a day is still a long way off.

The American people need fear no military dictatorship so long as they recognize their responsibility to see to it that we are so adequately prepared as to make it suicidal for anybody to attack us. That is the answer in this world of men in which there is no peace. It is practical—harshly so—but, brutally, it is the truth and not to be successfully denied by theorists.

SOCIALIZED MEDICINE

I am opposed to socialism under whatever Mother Hubbard it hides its form. I am opposed, as probably every one of you knows, to socialized medicine.

The truth is, as I have said often before, Federal aid for medical care and socialized medicine are no more alike than a cat and a skunk. They may look alike, yet one is apt to regret it if he takes a skunk to his bosom, thinking it is a cat.

What the women of this country, particularly, and their husbands and brothers and sons, should realize is that the lives of the women under the bills as proposed and now before Congress are put under the control of the Surgeon General of the United States. Whether or not their unborn children shall live is put at a hazard for that they, the pregnant mothers, cannot be assured of any right to choose their doctor, or their hospital.

These matters will be handled from Washington. Regimentation personified.

When Vermont women, pregnant mothers especially, realize what is being attempted to be done to them under the cover of something-for-nothing, there will be a revolution. And what a revolution.

Socialized medicine, as proposed, is the beginning of the end of this republican democracy, and no sane woman should be for it who loves her family and her country and has any respect for her independence.

Of course she should be for a better public health, help from the Federal Government where the State cannot supply necessary aid, more hospitals, and so forth, but she should not yield up the control of her life and that of her unborn child to those who are really trying to take over this government under the subterfuge of humanitarianism.

The whole scheme of socialized medicine, believe me, my fellow Vermonters, is directed toward the furtherance of the socialist state in the United States. To that I am opposed and I, therefore, urge every one of you to consider well whether this is the form of government under which you can wish to live. Centralization of power; bureaucratic control of the daily lives of every citizen; centralization of funds in the Federal Treasury; relinquishment of local autonomy and individual responsibility—these are the steps to state socialism. If this is what the country wants, the voters and the representatives of the people should come out openly and say so. It is time to put a stop to pious declarations that we want a democratic form of government while simultaneously sponsoring legislation designed to Germanize America and deliver our citizenry to a powerful bureaucracy in Washington. It is obvious that socialized medicine is one of the best methods by which to gain control over all the people.

Now I repeat that I am unalterably opposed to each, every, and all attempts, by subterfuge or by any other approach, to perpetuate the socialistic trend in America by a continuation of the New Deal policy of promising everybody something for nothing.

I still believe in America—with liberty and justice for all; with its Government based on sound fundamental principles, yet sufficiently flexible to be readily adaptable to all essential and proper changes to meet the expanding and advanced new era of civilization.

I still take off my hat to those who founded and made it at so great cost; fought for it, bled and died for it; that we and our posterity may continue to live in, enjoy, and love our America. I have no use for those who are glad to live here so long as they can live off America.

SPENDING

My record is my evidence in substantiation of the fact I am opposed to wasteful and extravagant and ruinous spending of the taxpayers' money.

Do you realize that the United States owes over $250,000,000,000? Reduced to Vermont, this means that each family has hanging over it an invisible, though nonetheless real, mortgage on everything it has and owns to the tune of $6,000 per family.

In addition to the Federal debt of more than $250,000,000,000, other political subdivisions—meaning States, cities, counties, school districts, and so on—owe twenty billions. Twenty billions is practically one-twelfth of two hundred and fifty billions. If we owe $6,000 per family by reason of the national debt, add to that one-twelfth of $6,000, or $500, and you find that all each family in Vermont owns or has is mortgaged in the amount of $6,500.

The States, cities, counties, school districts all are under terrific pressure to provide more

services and greater benefits. All are having to boost taxes and borrow money to pour out to a never-satisfied public.

The popular idea is that these funds can be obtained from the rich and the big corporations—so that the majority of the people can have the benefits without paying the cost. But nobody gets anything for nothing. Everybody shares the debt. Everybody pays taxes—direct or indirect.

There aren't enough rich people to enable the Government to finance itself at their expense. If Government took all the wealth of the corporations, it wouldn't put the country on a sound financial keel. But it would put the corporations out of business and workers out of jobs. Meanwhile, all that the big companies pay to Government becomes a part of the cost of the goods they produce—an important factor in the cost of living for everybody.

Only wider realization of these basic facts can stop the tragedy that must eventually happen if the give-everything-to-everybody theory continues unchecked.

FREEDOM

I have been asked by the Daughters of the American Revolution to stress at every opportunity the fact that freedom is not bought for dollars.

So, in conclusion, may I emphasize the fact that it was through no act of our own that you and I were born Americans or have been kept free.

You and I have known nothing with which to contrast liberty.

We have known no thing by which to measure freedom's distance from the depths of tyranny. The dust of honored graves stirs restlessly these fateful hours, as troubled spirits rise to warn us that there is still time, but none to spare. We should dedicate our every strength against the gripping curse of communistic larcenists, guard our liberty, while we make sure we turn back those lustful men who would undertake to persuade us to close our eyes while they rob us of the things for which our fathers fought in order that we might have a chance to keep our children free.

"This is an hour to keep,
This is an hour to guard, letting no past
Or future moment make the present small.
Nothing except eternity can last,
And we must trust today to live at all."

For, as has been said, "Today, tomorrow, will be yesterday."

So let us hope—

"God sends us men with hearts ablaze—
All truth to love, all wrong to hate.
These are the patriots nations need.
These are the bulwarks of the state."

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 17 (legislative day of Monday, February 21), 1949

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio broadcast entitled "A Four-Point Program To Break the Filibuster Against the St. Lawrence Seaway," which I made over Station WMAQ, Chicago, on March 13, 1949.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

A FOUR-POINT PROGRAM TO BREAK THE FILIBUSTER AGAINST THE ST. LAWRENCE SEAWAY

ANNOUNCER. You, Senator WILEY, have gained the title of the unofficial leader of the forces in the United States Congress which have been working for the completion of the Great Lakes waterway project. During the Eightieth Congress, you served as chairman of the subcommittee of the Senate Foreign Relations Committee which spearheaded the drive for the seaway, but which was defeated in a 52-to-30 vote. Now, in the Eighty-first Congress, you are once more leading the fight for the seaway on a bipartisan basis. What is your seaway program now, Senator?

BROAD COSPONSORSHIP OF BILL

Senator WILEY. I think I can summarize our approach to the St. Lawrence seaway during this Congress in the following points: (1) We are shortly going to introduce in the Senate a new Great Lakes waterway bill. Already, many Senators have asked to have their names put on the bill as cosponsors. Of course, these Senators represent both political parties. (2) At the earliest possible moment during this first session, we are going to seek hearings in the Senate Foreign Relations Committee on the seaway bill. That committee is right now busily engaged in reviewing the proposed North Atlantic Pact and other foreign-policy matters. However, at the first opportunity, we are going to request the opening of limited hearings on the seaway.

ONLY LIMITED HEARINGS NECESSARY ON THE SEAWAY

ANNOUNCER. Why do you say limited hearings, Senator?

Senator WILEY. The answer to that is simple. It is because there is absolutely no necessity for exploring all of the old ground, rehashing all of the old arguments, hearing all of the old witnesses on both sides of the fence, and wasting the taxpayers' money. We have got virtually all of the facts that are necessary, and the only subjects that require hearings are a few relatively new phases. I refer, for example, to the phase of the new discovery of tremendous deposits of Labrador ore which will become available through the Great Lakes seaway.

COMBATING ANTISEAWAY LOBBYING

ANNOUNCER. Well, those are points 1 and 2 of your program. How about point 3?

Senator WILEY. Third, we are going to take vigorous steps to combat the vicious lobbying that was done against the seaway during the Eightieth Congress. We weren't licked on the floor of the Senate when the seaway bill came up the last time. Rather, we were defeated by the vicious pressures that were brought to bear outside the Senate Chamber. We were licked by the fears that were stirred up by a horde of well-trained lobbyists who descended in droves upon the Senate. We are going to rip the lid off the antiseaway lobbying by exposing the facts on it.

ANNOUNCER. How are you going to do that, Senator?

Senator WILEY. Well, as my listeners may know, I am a member of the subcommittee of the Senate Judiciary Committee which has a lobby investigation resolution before it right now. One of the things that definitely needs investigation is the antiseaway lobby. Of course, we recognize that there is a proseaway lobby too. It, however, has operated openly and consists principally of rank-and-file people throughout the Nation who happen to believe in the seaway, who brought no secret pressure to bear, but who simply expressed themselves in plain letters and telegrams recommending enactment of the seaway.

MIDWEST DEMANDS RECIPROCITY

ANNOUNCER. That makes three points in the program. What about point 4?

Senator WILEY. Fourth, we of the Middle West are going to make known in no uncertain terms that we are going to fight with all the vigor at our command against projects recommended elsewhere in our country unless those projects are merited and unless the sponsors of those projects are willing to work with us for development of the Midwest's seaway. Now, understand what I mean by that. I don't mean what some folks call logrolling. I don't mean that we are going to simply vote in favor of their projects if they vote in favor of the Midwest's project, whether or not their projects have any merit. As a matter of fact, my colleagues and I detest useless projects which waste the taxpayers' money and simply represent rat holes. There are, however, certain projects throughout the Nation in the far West, the Southwest, and elsewhere, that do merit careful consideration. None of them, however, is as important as the St. Lawrence seaway, which involves the destiny of 50,000,000 people in the valley of the Great Lakes. Why then should we of the Middle West continue the policy of giving blanket approval to these projects elsewhere in our country unless we can get a little reciprocity, a little quid pro quo, as the professors say? We are not asking for anything that the people of our area don't deserve. All we are asking is simple justice.

MIDWEST HAS BEHAVED LIKE A CHUMP

ANNOUNCER. Hasn't the Middle West received its fair share of aid, Senator WILEY?

Senator WILEY. Unfortunately, no. For years now, the Middle West has been a chump—yes, a sucker to use a blunt term—and has paid no attention to its own needs while appropriating billions for the needs elsewhere in the Nation. It is high time that we secured necessary grants for our own needs. And, remember, it is a grant that will be repaid to Uncle Sam—every last dime, because this money we're requesting is only a loan. That, then, is my four-point program for the seaway.

ENDING THE TALK, TALK, TALK

ANNOUNCER. Well, Senator, in designating the subject for our broadcast you mentioned the title, "Breaking the Filibuster Against the St. Lawrence Seaway." Just what do you mean by that?

Senator WILEY. I will be glad to explain that title. You know there are filibusters and filibusters. During the last couple of weeks there has been a talk marathon in the Senate, so to speak, against the President's civil-rights program. That is one type of filibuster. But, to use the term a little more generally, there has for 30 years been a filibuster, a talk marathon, against the most important single unfinished project on the North American Continent—the St. Lawrence seaway.

ANNOUNCER. Just how has the seaway been filibustered, Senator?

Senator WILEY. Well, the opponents of the seaway haven't been talking continuously against it, but the net effect of their stalling actions has been the same. On those few occasions when seaway legislation has come up for a vote, opponents have thrown in enough delaying devices and tricks to force postponement of the completion of the seaway. Last year, for example, they had the bill recommitted to committee, for further study. That's a sample of their devious tactics.

ANNOUNCER. Getting specific, Senator, can you cite another illustration?

Senator WILEY. Well, the opponents of the seaway are perpetually asking for more investigations, more reports on it. But there are enough reports already on the St. Lawrence seaway to fill several warehouses. Moreover, as fast as we try to get the opponents the facts they say they want, just as fast they start inventing new questions, demanding new answers and new reports. It is an endless process. We can't satisfy all of the opponents, because they insist on stalling indefinitely, on talking, talking, and talking.

BAD FAITH OF OPPONENTS

ANNOUNCER. Do you mean that there is bad faith on the part of the opponents of the seaway?

Senator WILEY. I wouldn't want to accuse all of the opponents of the seaway as insincere or as acting in bad faith. On the contrary, many men in the opposition both inside and outside the Congress, sincerely believe that the Great Lakes waterway is not essential and they have arguments which they feel are sound against it. On the other hand, there is a considerable amount of the opposition which, with tongue in cheek, has utilized every shady trick in order to torpedo this project. They have filibustered and fillbustered against it through their delaying devices.

ANNOUNCER. Can you give us an example of just what you feel constitutes a shady device?

Senator WILEY. Well, take the matter of the new provision in the seaway bill which we set up which would provide that the cost of the seaway would be self-liquidating through tolls on shipping. When we worked on that provision 2 years ago, we were assured by many of the opponents of the seaway, by railroad officials, for example, that they wouldn't oppose the seaway any longer if we set tolls which would pay the construction costs to our Government. Well, we acted in good faith and inserted the provision. But, did that lessen the opposition of the railroads to the seaway? The answer is definitely "no." They broke their promises and in a neat doublecross, proceded to oppose the seaway more vigorously than ever before. Now, don't get me wrong. Ordinarily, I have a great respect for American railroads, for their officials and for their hundreds of thousands of faithful, hard-working employees who give us the best rail transportation system in the world. I am only referring to a few top railroad officers principally in the eastern lines who mistakenly feel that the seaway is going to compete with their lines and deprive them of business.

RAILROAD FOLLY

ANNOUNCER. Do you believe that they are wrong in feeling that way, Senator WILEY?

Senator WILEY. I definitely do. The railroads don't know their own self-interests any more than they knew their self-interests when they opposed the Panama Canal 40 years ago. In fact, some railroads have opposed every major waterway improvement that has ever been suggested. Actually, the Great Lakes waterway would help the railroads by building up midwestern industry. It would, moveover, help the East by providing necessary electric power through the St. Lawrence power project. It would help agriculture, industry, transportation, yes; just about everyone. It wouldn't harm a soul, not even the eastern or southern port interests which so blindly oppose us.

VALUE TO MIDWEST

ANNOUNCER. Now, specifically, Senator WILEY, just what will the seaway mean to the average man and woman in Chicago, Milwaukee, Superior, Duluth, Manitowoc, Madison, or anywhere else in the Middle West?

Senator WILEY. The answer to that is that the seaway will mean continued economic health and life in the Middle West, continued prosperity for business. It will mean prosperity to Midwest agriculture, too, because it will permit cheaper transportation of agricultural commodities. In terms of the businessman, it will make sure that the great heavy industries remain in the Midwest and don't have to move to the east coast in order to depend there on imported ores. Through the seaway, we will be able to get ore from Laborador and this will assure continuation of the very basis of the midwestern industrial economy.

ANNOUNCER. Well, what will happen to the Midwest, Senator, in the event the bill isn't passed?

Senator WILEY. The answer to that one is that the Midwest may become an economic wasteland. Already the Midwest has lost population to other areas of our Nation. We have seen how an entire region of the country can become arid, almost like a desert. The same can happen economically, and it can certainly happen to the Middle West unless we provide for continuation of its industrial economy.

ANNOUNCER. Well, Senator, since this project has been pending for over three decades now, and since it has been beaten so many times, do you feel that it is just going to remain one of those perennial projects that is perpetually discussed but never really acted upon favorably?

AMERICA WANTS THE SEAWAY

Senator WILEY. The answer to that is definitely "No." I think it was Napoleon who said, "We have been defeated and it is time to turn our defeat into victory." We don't ignore the fact that we have been set back on countless occasions. But we have every confidence that this time we are going to win. Every American President in the last 30 years has backed us. The people are with us in an overwhelming majority. You know, I recall a little verse which reads:

"Truth proclaims this lesson
In letters of living light,
No question is ever settled
Until it is settled right."

Well, the seaway bill is not going to be settled until it is settled right—meaning it is finally passed.

ANNOUNCER. Do you think, Senator, that the seaway opponents feel that you have got them on the run at last?

Senator WILEY. I definitely do feel that way. I think that they realize that the tide is at last turning against them. Most of the steel industry which used to be in the opposition has now come over to our side. Many other sources in Illinois and elsewhere which hitherto opposed us have now become at least "neutral," so to speak. In addition, President Truman is vigorously supporting us, and, too, the National St. Lawrence Association which has been spearheading the drive for the seaway has succeeded in developing new organizational roots throughout the Nation.

But there is no question that the seaway opponents will be fighting tooth and nail again. Moreover, they will be getting some of their trained seals to repeat the old arguments, rehash the old fears against the seaway. This time, however, I say to the seaway opponent, not only are you endangering your own self-interest by your continued blind opposition, but your selfishness is endangering the interests of all of the people of the United States. You know if anyone tried to blow up the Panama Canal we would consider that treason or sabotage against the United States. Well, those individuals who are trying to blow up the seaway project before it is completed, while they may be sincere and honest in their opinion, are actually saboteurs against the interests of the American people.

ANNOUNCER. Thanks, Senator, for discussing with us today over the WMAQ microphone the case and the prospects for the St. Lawrence seaway bill.

Senate Debate Limit Not Needed for Security

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 17 (legislative day of Monday, February 21), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Senate Debate Limit Not Needed for Security," written by Mr. Gould Lincoln and published in the Washington Evening Star of March 15, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATE DEBATE LIMIT HELD NOT NEEDED FOR SECURITY—OTHER EFFECTIVE MEASURES COULD BE TAKEN TO INSURE UNITED STATES SAFETY

(By Gould Lincoln)

The argument that old-time freedom and unlimited debate in the Senate must be sacrificed on the altar of national security has a persuasive sound. It might occur to those who make the argument, however, that there are other, more effective measures which could be taken to insure national security without disturbing unlimited debate in the Senate.

For example, the establishment of a universal military training system, providing for a huge reserve force which under law might be called into service by the President the moment this country is attacked, would be far more effective than choking off debate in the Senate so that legislation could be quickly enacted to begin to train men for war.

Further, if this country is attacked, the President and the armed forces of the United States do not have to wait for congressional action to fight back. There is no slightest doubt that the armed services have perfected plans for waging effective warfare against Russia, or some other country, which would be put into effect immediately if Russia should attack this country. It would be a bold Senator who rose to filibuster against a measure for national defense after an attack has been made by an enemy on the United States. Indeed, the supposition that a Senator would follow such a course can be relegated to the category of suppositions contrary to fact.

POLITICAL MOTIVES

As has been pointed out in recent debate in the Senate over a proposal to make an ironclad rule to limit debate—and some have urged a majority cloture—the rule of unlimited debate has neither prevented attack on this country nor has it prevented immediate counterattack by American armed forces. A declaration of war by Congress has followed actual hostilities in two great wars of the last half century. And there has been no sign of a filibuster in the Senate after hostilities were under way.

The battle to break down the rule of free and unlimited debate springs, in the present instance, from political motives. Although opponents of unlimited debate and the filibuster argue that efficiency of government and national security are involved, there is no reason to believe the battle over the Senate rules would have been started at this time, or in this Congress, had it not been for President Truman's campaign pledge to put

through his civil rights program, including antilynching, anti-poll-tax, and pro-fair-employment-practices legislation, buttressed by similar promises made by the Republicans in that campaign.

The one time that national defense was in particular jeopardy on Capitol Hill was in the House of Representatives, where there are the strictest rules to bring an end to debate. That was in the summer before the Japanese attack on Pearl Harbor, when the House by only the barest kind of majority was able to pass a bill continuing the Selective Service Act, then about to expire. That was the law which made it possible for this country to respond much more quickly to that attack.

NOT HELD UP BY FILIBUSTER

No filibuster in the Senate held it up. The national security argument against unlimited debate in the Senate seems a bit idle in view of the record. It is true that in piping times of peace—if they ever come again—a group of pacifists in the Senate might undertake a filibuster against a national preparedness measure. But if a majority of the Senate favored the legislation in peacetime, it would have the time as well as the inclination to break such a filibuster.

To give up freedom of debate, admittedly a weapon which may be used effectively by a minority to stall off legislation which they deem harmful to their State and constituencies, or to the country as a whole, in search of so-called efficiency of government does not add up to much. Nor does it seem more undemocratic for a third of the Senate plus one, or even for a smaller group of Senators, to veto the demand of the majority—especially for class legislation—than it is undemocratic for a single man, the President, to thwart the will of the majority as expressed by Congress when he vetoes a bill passed by both Houses.

A dictatorship may be more efficient than a democracy; but is that a good reason for urging measures which at least lead the way toward dictatorship?

Keep the Red Cross Flag Flying

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, March 17 (legislative day of Monday, February 21), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Keep the Red Cross Flag Flying!" written by Harry H. Schlacht and published in the New York Journal-American of March 8, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEEP THE RED CROSS FLAG FLYING!

(By Harry H. Schlacht)

The fairest chaplet Victory wears is that which Mercy weaves.

All honor and glory to the American Red Cross, the glorious delight of the Republic. All honor and glory to the Red Cross nurses, the noble women who weave heavenly roses in our earthly life.

They are angels of mercy whose deeds of love are as lighted candles for vestal virgins to keep burning on the altar in the temple of fame.

In deepest reverence we stand together and salute the American Red Cross.

It is the light of civilization. It is the lighthouse in a darkened world. It is the embodiment of human tenderness. It is the flag of humanity.

The true story of the Red Cross is too vast, too sad, too full of human sorrow ever to be written in words.

The Red Cross was baptized in suffering. It was conceived by Clara Barton—God's angel of mercy on earth.

A million thanks to one, who hath a million plaudits won for deeds of love so many millions done.

The ARC is a typical American institution. It is a demonstration of the highest patriotism. It is a soul-stirring story of sincere service. It is a sunbeam in a dark corner.

It offers its friendship to all. It raises no barrier of wealth. It hears no political beliefs. It recognizes no creed save that of service.

Amidst the destruction, desolation, and despair, amidst the suffering, carnage, and death floats the banner of humanity—the banner of the American Red Cross.

Against this standard no arm is raised, and no gun is fired.

The ARC is founded on the noblest of principles, in the deepest needs of human nature, and in the enduring instincts of mankind.

The Red Cross is the greatest mother in the universe.

She is the representative of all mothers in our land. She is there with our occupation forces across the sea. She is there at the side of your son. She is there when the dream of mother floats upon the river of his thoughts.

Her smile is like a glowing sunshine. Her smile is sorrow's only balm. Her smile is a thankful hymn.

When the first rays of the sun kiss the waking world, it touches not the dew of the morning, but the tears in her angelic eyes.

When the drapes of twilight close part of the earth in slumber, and when the moon is moving in majestic effulgence across the skies she is ever at prayer by his side.

Her post is the open field between the bullet and the hospital.

Not all the heroes are in the Army, Navy, and Marines. They are also in the American Red Cross.

Not in the written records are their deeds engraved, but in the hearts of suffering humanity.

There on the tablets of memory their heroism is inscribed. There on the tablets of our hearts they will ever abide.

They will ever live heroic in the deathless songs of peace and of war.

Many times a year the people turn to the Red Cross. Once a year the Red Cross turns to the people.

The Red Cross is asking for a large sum, but the Red Cross is doing a gigantic job.

From neighbor to neighbor, from cottage to mansion, all must support the Red Cross.

Every hand must be outstretched to do its share.

None is too rich to give. None is too poor to give.

Let us remember those who stood as sentinels between the warring forces of humanity and inhumanity; who silently and swiftly fly to all scenes of disaster; who recognize no foe, no race, no color or creed, but extend the same red-chevroned arm to all.

Let us give as we are able. Let us give even of our poverty.

Let us demonstrate to all the greatness of the American heart.

Forgetfulness is injustice. Remembrance is a sacred duty.

Let us give gladly. Let us give generously.

Let us uphold the flag of loving sacrifice. Its color is red with the life of loving service. Its emblem is the cross.

Keep the Red Cross flag flying.

Eisenhower to Youth

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. CASE of South Dakota. Mr. Speaker, within the past few weeks, several Members of the House have quoted or referred to a recent address by Gen. Dwight D. Eisenhower, president of Columbia University, to a group of students attending the first Columbia College Forum on Democracy. Reports of the address appearing in the newspapers have been fragmentary but the excerpts which have appeared appealed to me as they have to other Members.

It occurred to me that the message of this great man of our generation to a group of representative young Americans might well be presented in the CONGRESSIONAL RECORD, not only to preserve it for posterity, but also to make its full content available to young Americans generally. Accordingly, I wrote General Eisenhower and asked for a copy of the address and his permission to place it in the RECORD.

In his gracious reply, General Eisenhower says:

My little talk at Columbia University on February 12 was not made from notes, but I am sending you, herewith, a rough transcript. I have no objection to your using it as you may see fit.

The address is offered for the RECORD, accordingly, and I earnestly commend its complete reading by all who cherish opportunity and freedom.

Dean Carman, gentlemen, I think that the temptation to reminisce is very great when an oldster such as myself stands up in front of a younger generation. I shall take advantage of that habit to go back to my boyhood for just a moment, but I assure you I am not going to bore you with long tales of the Kansas prairies.

The feature of that boyhood I'd like to mention is this: I was of a big family of boys, six of us. And we were very poor, but the point is we didn't know we were poor. That's the point I want to make with you. The mere fact that we didn't do all the things that others in cities may have done made no impression upon us whatsoever because there was constantly held out in front of us, by everyone around us, until it was deeply embedded in our consciousness, that opportunity was on every side.

OPPORTUNITY, NOT SECURITY

In those days we didn't hear so much about the word security, personal security through life from the cradle to the grave, some kind of assurance that we were never going to have to go out with a tin cup or to sell apples on the streets. But there was constantly around us the right and the opportunity to go out and do better for ourselves than merely to follow the plow down through the field, or to work on the section gang, or anything else that we might do to make the extra few dollars in the summer that we always needed.

I believe that our confidence in opportunity came about because of the character of the country in which we were raised, and in which you are raised. I do not mean character in terms of cities or of vast resources, agriculturally and in every other

way. I mean character as determined by the system under which we live. It is a free system that gives to each of us, of any religion or of any location in that country, the right to do something for himself. He has the right, and the opportunity is always there.

I think that this morning it is important, rather than talking about any living man, to think a bit about the life of the man whose birthday falls today, Abraham Lincoln.

LINCOLN'S ATTITUDE ON POWER

I think that each of you has a very special reason for venerating his memory. We think of him always as the great American. One thing I like to believe about him is this: That he had the proper attitude toward power.

Lincoln finally came to be the President of the United States at a very special time—in war—when the power devolving upon the President of the United States is so great that if used evilly or to the disadvantage of his fellow citizens it can become a dictatorship. And that was especially true in the War Between the States, because the very life of the Nation was at stake day by day.

Yet there is nothing in Lincoln's life or in Lincoln's writings that could lead any of us to believe that he felt or believed that he himself was a source of power.

He was a director of power, a man who might give it a trend in a particular direction, but he had no ambition to associate the source of power with himself and, thereby, to rule others. He served others. That, to me, gave us an example of the true essence of liberty and of freedom.

A man placed in a position where he could have been arbitrary, unjust, unfair, could have done many things for his self-glorification, and he refused to do any of them.

He seems to have said: "I have been given a job to do for the United States. And I will serve in that job to the best of my ability. More I cannot do."

And more he could not do and still be true to the principles on which this country was founded and which he described so eloquently at Gettysburg.

Very naturally, when we talk about a man so great, of such overwhelming stature, the thought comes to us: "Well, what relationship has that got to us; we are not Lincolns?" But the principles by which he lived, the faith he had in freedom and liberty was exemplified, for example, in his very great act, in the emancipation of the slaves.

His passion for individual liberty of thought, of worship, for freedom to act, freedom of opportunity, is the virtue that each of us can emulate and, more than that, I believe, it is the virtue that each of us must emulate if we are to preserve to ourselves the opportunities which we in Kansas recognized in my boyhood and which I am certain that you young men see around you on every side.

TO PRESERVE OPPORTUNITY

The kind of dictatorship under which we may fall today is not necessarily brought off by means of a coup d'etat and a suddenly seized power, using the Army or the Navy and its guns to put us all in strait-jackets.

There is a kind of dictatorship that can come about through a creeping paralysis of thought—readiness to accept paternalistic measures from the Government, an acceptance that is accompanied by a surrender of our own responsibilities and, therefore, a surrender of our own thought over our own lives and our own right to exercise our vote in dictating the policies of this country.

If we allow this constant drift toward centralized bureaucratic government to continue, finally the governmental function will be expressed in terms far exceeding the necessary one of laying down the rules and laws for governing each of us in his daily actions to insure that we do not take unfair advantage of our comrades and other citizens. Government will be in the actual field of operation. There will be a swarming of bureaucrats over the land. Ownership of property will gradually drift into that central government and finally you would have to have dictatorship as the only means of operating such a huge and great organization.

I believe it is things such as that which we must watch today if we are going to be true to the standards that Lincoln gave to all of us.

THE OPPORTUNITY TO SERVE

To come down specifically to today and to youth, I believe that opportunity is greater today—and I mean individual opportunity—than it has ever been at any time in our history, because opportunity, regarded in the sense that Lincoln regarded it, is this: opportunity to serve the society to which you belong.

And, frankly, when our democracy, with its system of free enterprise, is operating properly, then individual reward comes to you in the measure that you render service to others.

All about us is a changing economic scene, with concentrations of great labor groups in cities, with acute dependence of the farm and city each upon the other, and we are still unable to find ways in which they can get along together. There are problems of distribution, surpluses in one area and starvation in another, there are thousands of things to which you gentlemen can apply your talents with constant opportunity to do good for your great country and, by doing so, to receive greater rewards for yourself than has ever been the case in the past. And that, I honestly feel, gentlemen, includes even the days of the Revolution and of the War Between the States.

I cannot tell you how honored Columbia feels that this forum has been held here on our campus grounds. The purpose of keeping a brilliant faculty, teachers and facilities, here is merely to make sure that the Columbia of the future, pushing ahead, keeping abreast of our American culture, will be of as great service to a future free America as it is possible to be. And that we conceive to be also the ambition of every right-thinking American.

Thank you all very much for coming today and for giving me the chance to see you. This takes me back, I must tell you, at least 40 years.

National Health Insurance and Public Health Act

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following facts about the National Health Insurance and Public Health Act:

FIVE IMPORTANT FACTS ABOUT THE NATIONAL HEALTH INSURANCE AND PUBLIC HEALTH ACT (H. R. 783)

This health insurance bill is not socialized medicine. Socialized medicine means that doctors are employed by government. This measure is a pay-as-you-go insurance program in the American way. It provides specifically that:

I. Patients have free choice of doctors.

II. Doctors have free choice of patients.

III. Doctors may choose whether or not to serve under the national health insurance plan.

IV. Administration would be on the local level. The bill provides that each State be subdivided into local self-governing areas to insure home control. The majority of doctors in each area may determine for themselves the method of payment. It may be on the basis of a fee for each service, a salary, or a per capita fee (so much for each patient under a doctor's care), or a combination of these methods. This definitely refutes the misstatement that "a Washington bureau (would) pay all the doctors in the United States to give free medical service to all the people in the United States."

V. Medical care would be based on the insurance principle. This measure provides insured persons with needed medical care as their right. It is not tax-supported charity limited to those willing to admit they are medically indigent.

TWENTY QUESTIONS ON THE HEALTH OF THE UNITED STATES AND THE NEED FOR NATIONAL HEALTH INSURANCE

I. How often are people ill?

1. Among 1,000 average people during a normal year 1 out of 3 will be sick once, 1 out of 7 will be sick twice, 1 out of 20 will be sick 3 times. In addition, there is unrecognized illness among many persons who consider themselves healthy.

2. At least 7,000,000 people—1 out of 20—are incapacitated by sickness or other disability in any 24-hour period. Half of these will remain disabled for 6 months or more.

II. How often does premature death strike?

In terms of people: 1,401,719 American civilians died in 1945; 1 out of every 2 was under 65; 5,668 mothers died in childbirth in 1945; 104,684 infants died before reaching their first birthday in 1945.

III. How much do maternity and infant death rates vary among the States?

1. Widely. The death rate among women at childbirth is three times as high in the five worst States as compared with the five best. In Connecticut, Minnesota, Oregon, Rhode Island, and Utah, 12 to 14 mothers died per 10,000 live births (1945). Compare this rate with 32 to 38 mothers dying in Alabama, Georgia, Mississippi, New Mexico, and South Carolina for the same year.

2. Infant mortality rates tell the same story. In the four best States (Connecticut, Nebraska, North Dakota, Rhode Island) 28 to 30 babies died per 1,000 live births (1945). In the four worst States (Arizona, Colorado, New Mexico, and West Virginia) 50 to 100 infants died in their first year.

IV. What do sickness and disability cost annually?

1. In terms of people: 25,000,000 people suffer from chronic disease or physical impairment. About 3,000,000 workers were incapacitated in this way during 1947. Over 40 percent of the Nation's selectees were unfit for military service. Many had remediable or preventable diseases or defects.

2. In terms of production: More than one and one-half billion man-days are lost annually. The average industrial worker is off his job about 6 days annually due to short-term illness, which includes all absences because of sickness or injury that last from 1 day to 6 months.

3. In terms of money $27,000,000,000 annually is the total cost of sickness and disability, including direct wage losses, direct business costs, plus hidden costs of loss of future earnings because of premature death and disability.

V. How many doctors do we have?

1. There were 198,246 registered physicians in the United States as of February 15, 1948.

2. The number of active private physicians was estimated to be nearly 145,000, including 45,000 who limit their practice to a specialty. This was about 1 active physician for every 1,000 potential patients. If we leave out specialists, there was only 1 active physician for every 1,500 people in the United States.

VI. How are doctors distributed among the States?

1. Doctors are not distributed evenly. In the three best States and the District of Columbia in 1940 (California, Massachusetts, and New York), there was 1 active doctor per 411 to 747 persons.

2. But there was only 1 active doctor per 1,565 to 1,784 persons in the 4 worst States (Alabama, South Carolina, South Dakota, and Mississippi).

VII. How are doctors distributed within the States?

There exist also differences in the distribution of active physicians within the States. The cities have more than their share, the rural areas less. In 1946, for example, 330 counties (10 percent of the total of 3,070 counties) had less than 1 active physician per 3,000 population. Seventy-five counties had no active doctor.

VIII. How much do doctors earn?

1. The average net income of doctors in 1941 was $5,047. In 1943 (latest year for which data are available) the average income of physicians rose to $8,688.

2. However, one doctor in four had a net income of less than $2,000. One doctor in eight had a net income of $10,000 or more. This was in 1941. There are no corresponding figures for 1943.

IX. Do we have enough hospitals?

1. There were 6,280 hospitals in the United States in 1946. Their capacity was 1,468,714 beds. Four beds per 1,000 population is a minimum standard. Judged by this standard:

a. Almost one in two counties fall below standard.

b. Only 1 in 10 meets it.

c. Four counties out of every 10 have no approved general hospital. Fifteen million Americans live in these counties with no approved general hospital.

X. What hospitalization do people get?

An average of one in nine persons in the United States was admitted to a registered hospital in 1946 (including maternity, industrial, eye-ear-nose-and-throat, children's orthopedic, isolation hospitals, convalescent and rest homes, etc.). Of these 15,153,452 patients, 14,782,502, or 97.5 percent, went to general and special hospitals; 271,209, or 1.8 percent, went to nervous and mental hospitals; 99,741, or 0.7 percent, went to tuberculosis hospitals.

XI. How many nurses are there?

There were 173,055 active registered professional nurses in 1941—an average of 1 per 760 people. The best State (Connecticut) had 1 nurse per 336 people. The worst State (Mississippi) had 1 nurse per 2,143 people.

XII. Is there a shortage of nurses?

Yes. The National Nursing Council's Committee on Statistical Research says we were short 41,000 nurses as of August 1946. Further, there were only 30,899 student nurses that year, compared with 56,567 in 1945.

XIII. Do we have enough full-time public health services?

1. No. Forty million Americans live in communities without a public health department. More than half of our counties have no full-time public health department.

2. There is a shortage of 45,000 public health nurses, based on United States Public Health Service standard of 1 per 2,000 persons. Our 1946 national average was only 1 public health nurse per 6,500 persons. There were only 21,171 public health nurses in 1946.

XIV. What do we spend on health compared with other things?

Item	Amount	Percent of national income, 1946
Medical care (including insurance and supplies)	$5,600,000,000	3.4
Alcoholic drinks	8,800,000,000	5.2
Tobacco	3,400,000,000	2.0
Jewelry	1,400,000,000	.8

It must be remembered that medical care is not a pleasure like tobacco, liquor, or jewelry. It is an undesired necessity.

XV. How much do we spend on medical research?

1. The Federal Government spends about $28,000,000 a year for research and development in medical and allied sciences.

2. By contrast, the expenditure for research in plant and animal diseases was almost $30,000,000 for one Federal agency alone (1947).

3. Business spends about $450,000,000 a year on industrial research.

XVI. Why do Americans need health insurance?

1. Every American may be hit any year by sickness costs ranging from a few dollars to hundreds or thousands of dollars. No one can predict in advance whether his sickness bills next year will be unimportant or crushing. Therefore, everybody (except the few wealthy) needs health insurance.

2. The people who have no incomes and must be supported by public or private charity must, of course, have their sickness bills paid for them. But Americans do not want to have to turn to charity as a way of meeting their sickness bills.

XVII. How many Americans cannot meet serious sickness costs without assistance?

1. Four out of every five persons—about 117,824,000. In 1939, the American Medical Association estimated that families with incomes under $3,000 need help to meet the cost of serious illness. The present equivalent in purchasing power is about $5,000—nearly 80 percent of our families earn less than $5,000.

2. At the National Health Assembly held in Washington at the beginning of May 1948, the representatives of 17 national organizations agreed that: "The principle of contributory health insurance should be the basic method of financing medical care for the large majority of the American people, in order to remove the burden of unpredictable sickness costs, abolish the economic barrier to adequate medical services, and avoid the indignities of a 'means test'."

XVIII. How many people are covered by voluntary health or hospital insurance plans?

1. According to figures presented at the National Health Assembly, voluntary health or hospital insurance plans showed an apparent total of about 45,000,000 members at the beginning of 1948. This figure, however, includes an unknown number of persons who belong to more than one plan, and may be several millions too high.

2. Not more than about 4,000,000 of these persons were covered by comprehensive medical care plans, providing home and office care from physicians, as well as care in hospitalized illness.

3. Of the remaining persons, the majority—25,000,000 or less—have insurance for hospitalization only. The remainder have insurance for hospitalization and also have some of their doctor's fees covered, usually only surgical and obstetrical fees for care while the patient is in the hospital.

XIX. How would national health insurance compare with our present system of paying for medical care?

1. In 1946, over $5,600,000,000 were spent by the people of the United States for medical care, including medical and hospital services, medicines and supplies, and health and accident insurance. In 1941 the total amount spent on medical care was over $3,400,000,000.

2. The amount spent for medical care by families varies with the various income levels. For example, in 1941, the average family with a yearly income of $1,250 spent $43 for medical care. For an income of $2,500 the average expenditure was $74; for an income of $3,600, $143. These figures exclude expenditures for dentistry and home nursing.

3. The annual contribution proposed under the National Health Insurance Act would be 3 percent of earnings, but in the case of employed persons half of this would be paid by the employer.

Thus:

An employee earning $1,250 yearly would contribute $18.75.

An employee earning $2,500 yearly would contribute $37.50.

An employee earning $3,600 yearly would contribute $54.

4. Comparison with the above figures shows that the payments required of employed persons under national health insurance would be much less than these people spend at present for medical care.

XX. Do Americans want national health insurance?

1. A Nation-wide poll by the National Opinion Research Center in 1944 showed: 82 percent thought something should be done to help people pay for medical care; 85 percent thought social security should include doctor and hospital care; 58 percent were willing to pay a 2½-percent deduction for this care.

2. Public opinion polls in several States show 84 percent of New York State residents want health insurance (poll by New York State Commission on Medical Care, 1946); 70 percent of Washington, D. C., residents endorse national health insurance (poll by Washington Post, 1946); 50 percent of California residents favored some Government medical plan (poll by the California Medical Association, 1946).

Too Many Babies Die

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call attention to an article entitled "Too Many Babies Die," published in the Woman's Home Companion, March 1949 issue.

Here is another indication that we, with our tremendous resources, are neither in every respect the healthiest country among nations nor are we doing all that might be done with our unexcelled corps of health and medical personnel. I am convinced that we can learn something from other nations and still decide right here in the Congress on a plan to meet our health needs that is strictly American in principle and detail.

The article follows:

TOO MANY BABIES DIE

(By Jack Harrison Pollack)

Within the next 5 minutes a baby will die somewhere in the United States.

Within the next 8 minutes another baby will be born—dead.

Why?

American medical care—the best of it—is unexcelled throughout the world. But in saving babies' lives three countries are ahead of us—New Zealand, Australia, and Sweden.

The reason is that in those three countries the best obstetric and pediatric care is available to practically everybody. Here it is still limited to far too few.

One hundred and eleven thousand American babies die each year during their first 12 months of life, according to the latest statistics. This does not include 65,000 stillbirths. During the war years more American babies died than soldiers.

Thousands of these infants succumbed because they took their first gulp of air in a rural rather than an urban area. Or in a backward rather than a progressive State.

True, we have made strides we can be proud of. American infant mortality is today the lowest in our history. We have cut the death rate in half during the last 25 years.

But should we be satisfied? No, according to Katharine F. Lenroot, head of the Federal Children's Bureau, who confessed to the international assembly of doctors at the recent World Pediatrics Congress, "We have far to go to measure up to what some of you have already achieved."

The international yardstick for measuring infant mortality is the number of babies out of each thousand born alive who die during their first year. According to the latest reliable figures for comparison (1946), our rate was 33.8, Australia's 29, Sweden's and New Zealand's—the latter long the world's pace setter—both only 26. Granted that smaller populations and geographical areas simplify the problem, the fact remains that a baby born in Stockholm, Sydney, or Wellington, New Zealand, has a better chance for survival than your child or mine.

Infant care in many parts of the United States is the finest in the world and services are constantly being extended to new areas. The maternity center for mountain women in Oneida, Ky., and for Negro mothers and babies, recently started in Tuskegee, Ala., are examples. Both projects were undertaken and are being maintained with Children's Bureau aid under the social-security program. Of our many hundred rural counties, Anne Arundel County in Maryland—where Annapolis is located—comes closest to furnishing the range of health services that mothers and children need, according to the Children's Bureau.

But in many other American communities facilities are limited and mothers are left largely to their own devices and finances. A visiting Dutch pediatrician recently observed: "In infant services your country has many peaks and valleys while we in Holland are like a plateau." Hazel Corbin, director of the Maternity Association of New York City, adds: "Our best is the best in the world. It's our average that needs to be improved."

The leading causes of infant mortality in the United States today are premature birth, pneumonia and influenza, congenital malformations, injury at birth and diarrhea. They acount for nearly three-fourths of all our baby deaths. Thanks to immunization, the new miracle drugs and purer water and milk supplies, the acute infectious diseases such as measles, whooping cough, diphtheria are less often fatal today. That is also true of the more chronic infections and of dysentery, tuberculosis, and syphilis.

Numerous doctors and public health officials freely admit that many of our babies who die—perhaps half—could be saved. "If all our States did as well as our best ones," a cautious Government official points out, "we could save almost 30,000 babies a year." Certainly we can do a whole lot better. Ideally, every American community should have all the facilities needed for safe obstetric and pediatric care. Not all the techniques of successful foreign countries would be suitable to our system of government, but whenever possible and practical we shouldn't be too proud to learn from others.

Here is what many of our own experts recommend as a good start toward cutting our infant mortality rate. Check them against the facilities your community now has for fighting infant deaths. If your community is failing its babies, organize a citizens' committee for safe infant care in cooperation with doctors, nurses, hospital and health officials to carry out as many of these recommendations as is humanly possible.

START MORE FREE PRENATAL SERVICES

Studies all over the world show that a woman with good prenatal care has the best chance of bearing a healthy full-term baby. Besides the routine checks such as urinalysis, blood pressure, weight, et cetera, when needed a chest X-ray early in pregnancy can detect tuberculosis; a maternal blood test can uncover syphilis; an Rh factor test can prepare doctors for the possibility of having to give a transfusion; an X-ray of the pelvis has proved valuable in predicting possible difficulties in delivery.

Yet thousands of American women have no prenatal care at all. They live in communities without free clinical facilities and cannot afford private obstetrical fees. In this land of abundance and medical enlightenment, three out of four of our rural counties still lack a regular monthly prenatal—or any kind of maternity—clinic. And many city health departments are as bad.

But any Swedish mother-to-be, whether she lives in the city or the country, can attend a government-sponsored prenatal clinic free of charge. There she is carefully examined during pregnancy, treated for any disorders not requiring hospital care, and, if necessary, hospitalized. The clinic is directed by an obstetrician or general practitioner who is assisted by a nurse or trained midwife. Attendance is voluntary but most prospective mothers—rich and poor—take advantage of this government service.

New Zealand also offers its women extraordinary prenatal and other maternal services. Much of the credit belongs to a private organization: the Royal New Zealand Society for the Health of Women and Children, commonly known as the Plunket Society.

The Plunket Society supervises the health of four out of five of New Zealand's mothers-to-be—free of charge. Its motto is "Help the mothers and save the babies." * * * Under New Zealand's national health insurance program the average woman has her baby at little or no cost.

Similarly most of Australia's expectant mothers attend free prenatal clinics or are visited at their homes by infant welfare nurses. Though as in New Zealand nearly all pregnant women have their own doctors, clinic nurses give them good advice on personal hygiene plus helpful suggestions about baby care.

Some of our prenatal services, of course, are as good, if not better, than any in the world, especially those attached to grade A medical schools or good teaching hospitals. But we simply do not have enough.

ASSURE EVERY MOTHER ATTENDANCE AT BIRTH, PREFERABLY IN A HOSPITAL

Much of a prenatal clinic's value is lost unless a woman has continuous care throughout the entire maternity cycle. That is why the Maternity Center Association has long crusaded for every mother to have medical care from the start of pregnancy until she can take care of her baby herself.

Even though a baby's first day on earth is his most critical, more than 175,000 babies are born in America every year with no medical attendant present. Occasional epidemics in some hospitals have unfortunately prejudiced some people against all hospitals. But a good hospital is unquestionably the best possible place for an infant to start life because emergencies and complications can be instantly met. Birth injuries, one of the chief causes of infant deaths, can be reduced by competent care at delivery. * * *

The proportion of our babies born in hospitals now varies sharply between city and rural areas, white and Negro population, and among the 48 States. In Connecticut, which had one of our best infant mortality records in 1945 (only 3 babies out of 100 died), more than 99 in 100 births took place in hospitals. In Mississippi, where only 33 out of 100 births took place in hospitals, the infant death rate is tragically higher.

By contrast, almost all babies in New Zealand and a large proportion in Sweden, Australia, and Switzerland are born in hospitals. National health insurance pays the bills.

Where hospitals and doctors are not available nurse-midwives can be of great help, as the Companion has pointed out (Babies—Special Delivery, May 1946). Many European countries have long used trained and medically supervised midwives. Though Sweden's city women almost always give birth in hospitals those in rural areas are often attended at home free of charge by the midwives. * * *

America too has nurse-midwives, graduating from three schools in New York City, in the Kentucky mountains, and in Santa Fe, N. Mex. The Maternity Center Association, which runs the school in New York, reports a record of 10 years with no maternal deaths among the women cared for and delivered by the nurse-midwives. If anything unusual arises obstetricians are available for supervision and consultation.

START MORE FREE BABY HEALTH CLINICS

These are also called child health centers, well-baby clinics (or conferences), baby health centers (in Australia), Plunket rooms (in New Zealand). At these clinics medical attendants examine and immunize babies and advise mothers on how to keep their infants well.

In Australia every community maintains a baby health center and all but 5 percent of mothers use them. Their cost is shared dollar for dollar by the Australian Government and the states with the municipalities where the centers are located. Trained sisters—as Australia's nurses are called—staff them. Sick infants are not treated but referred to doctors. Six years ago Australia also established a highly successful traveling baby center to reach rural infants. * * *

New Zealand has similarly effective baby health clinics, including traveling ones converted from wartime medical units. When notified of a birth, the Plunket Society immediately writes to the infant's parents—as is done in some parts of this country—offering free services and enclosing a stamped addressed card for the mother to use in requesting them. Four out of five mothers accept the offer. Until the child is several months old he is given weekly and then semimonthly check-ups at home by a Plunket nurse. After that, the mother brings the child to a Plunket room for examination. But if she is unable to do so because of poor health, bad transportation facilities, or too many small children to look after, the Plunket nurse will continue the home visits.

Sweden has an all-embracing network of baby clinics also—provided by the Government free of charge. Though attendance is voluntary, four out of five babies born each year are regularly examined at these clinics. Dr. Adolf Lichtenstein, pediatrics professor at the University of Stockholm, reports that this Government service has increased public interest in child welfare and private pediatricians are busier than ever.

In the United States only one in three of our rural counties maintains a baby health clinic with public funds. Some of these are doing outstanding work such as the one operated by the Olmstead County Health Department in Rochester, Minn., which is staffed with personnel from the nearby Mayo Clinic. But again—we haven't enough.

GIVE MORE AND BETTER INSTRUCTION TO MOTHERS

Classes for expectant mothers are now being held in many alert American communities, but they are not so widespread as they should be. Too many of our mothers still have no instruction before their babies arrive. Our 36-year old Children's Bureau, although continually pressed for funds, has rendered an outstanding public service with its trail-blazing booklets. Scoffed at in the beginning as the work of agitators and busybodies, it has since justified its stand that if

the Government can tell farmers how to feed their hogs, the Government can also tell mothers how to care for their children. Its pamphlet, Infant Care, is a best seller—nearly 22,000,000 copies have been issued.

* * * * *

Wherever there is a well-conducted baby clinic, mothers receive thorough instruction. New Zealand, for example, does an excellent job of mother teaching. Trained Plunket nurses instruct mothers both individually and in groups.

Australia has saved many rural babies' lives through its correspondence course for mothers. Raising-your-baby-by-mail was started by the Mothers and Babies Health Association of South Australia, but now the association sends its lectures to mothers in all of Australia's isolated areas. One "mail baby" has been successfully reared in a lighthouse off the coast where mail is received only once every 6 weeks—and then only if the weather allows a boat to land.

In the United States the Visiting Nurse Association, Red Cross, and many other organizations conduct excellent mothers' classes. The Clara Elizabeth Fund in Flint, Mich., has classes for mothers, fathers, and young people about to be married—a program that could well be adopted by other communities.

DO MORE FOR PREMATURES

The greatest single cause of infant deaths—more than 30,000 a year in this country—is premature birth. One in every twenty babies in the United States is born prematurely and about half of all who die during the first month are prematures. Any baby weighing less than 5½ pounds at birth is considered premature. Some under 2 pounds have survived. There are fewer prematures among women who are healthy, have good prenatal care, and who get the right diet during pregnancy.

Ironically, we have both the skills and the knowledge to save thousands of these tiny newborns. But the expense has discouraged many communities. Special equipment plus expert and continuous care is needed. Thirty-nine States now have public programs providing some services for prematures and eight are actually operating hospital centers. Illinois plans a network to blanket the State. Chicago's premature program, foreign pediatricians say, is the finest in the world. There, premature births must be immediately reported by telephone; ambulances, with special nurses, are on 24-hour duty to rush infants to centers. Denver, Baltimore, and Massachusetts also have good programs. While every community may not need a premature center, every baby should be within ambulance reach of one. * * *

New Zealand's facilities for prematures are as thorough and far reaching as its other baby-saving projects. France, whose celebrated prematures included Voltaire, Napoleon, Rousseau, and Hugo, pioneered in saving prematures. England, whose famous prematures included Newton, Darwin, and Churchill, has recently worked out a model scheme for the city of Birmingham.

EVERY STATE SHOULD REQUIRE PRENATAL AND PREMARITAL BLOOD TESTS

At this moment a million potential American mothers probably have syphilis. If their infection isn't discovered in time, at least five out of six will bear children with syphilis. Those are the facts according to the American Social Hygiene Association.

Though 38 States now require doctors to test pregnant women for syphilis, 10 States and Washington, D. C., still have no such law. Expectant mothers in these States—Alabama, Maryland, Minnesota, Mississippi, New Mexico, North Dakota, Tennessee, Texas, Virginia, Wisconsin—should visit a doctor or a clinic early in pregnancy and demand a blood test.

Connecticut, which, as pointed out, has one of the best baby-saving records, passed the first premarital examination law in 1935. If you live in a State lacking such a sensible law you should voluntarily seek a blood test before marriage.

Most States have laws aimed at protecting babies from being blinded at birth by gonorrheal infection. These laws require silver nitrate to be dropped into their eyes. * * * Everybody agrees something should be done to protect every infant from the possibility of lifelong blindness. Yet where births are unattended in this country the newborns don't get any such protection. In countries with fewer unattended births—New Zealand, Australia, Sweden—gonorrheal blindness is virtually unknown.

BETTER DIETS FOR PREGNANT WOMEN

Enlightened people have long understood the close connection between a pregnant woman's diet and her infant's health at birth. A recent study by the Boston Lying-In Hospital and the Harvard School of Public Health reveals that four-fifths of babies born in ill health are the offspring of mothers whose diet during pregnancy was poor. These women also tended to have more difficult labor with more major complications during delivery despite their infants generally being smaller. A Pennsylvania hospital survey of 2,000 expectant mothers indicates that if the poor diets of pregnant women could be corrected, thousands of babies who are stillborn or die in infancy could be saved. Nutrition Foundation studies point to the same conclusion. Experiments in Toronto and Birmingham, England, also show that what a mother eats helps determine how healthy her baby will be.

RECORD ALL BIRTHS

Getting births recorded in this country has been a long, slow process. Back in 1915 members of the General Federation of Women's Clubs, working with the newly founded Children's Bureau and with the Census Bureau, rang doorbells as a beginning step toward establishing Nation-wide birth registration. At first records were available for only 10 States. By 1933 birth registrations were required throughout the continental United States. But not all counties comply. The National Office of Vital Statistics today estimates that 200,000 births remain unregistered each year in the United States.

Yet if the Federal Government, States, and communities are to plan the most effective public health programs, all births should be registered. However, births should be registered in a way that will not stigmatize children born out of wedlock. Registration is also extremely important for the child. For example, his proof of citizenship, right to enter school, work, inherit property, marry, hold office, and receive social security benefits may depend upon his having a birth certificate. Registration often gives a public health nurse the opportunity to tell parents about public facilities and services to which they are entitled, as for example, under the Federal-State crippled children's program.

Our New England States, closely followed by the Middle Atlantic, Great Lakes, and Pacific States, have been the most conscientious in recording births. Minnesota has the best record—it registers 99.7 percent of all births.

Of course, the outstanding countries I have cited are smaller and more homogeneous than the United States. But the important point is that the small countries are taking big steps on a national scale to save their babies' lives while we, under our States' rights heritage, leave the matter largely to local initiative.

* * * * *

The fact that the death rate for nonwhite babies is 63 percent higher than for whites—more proportionately in congested northern cities than in the south—is inexcusable. Negro mothers and infants—along with low-income whites—desperately need Government-subsidized medical care.

The largest Nation-wide maternal-infant public-health program we have ever undertaken was the unusually successful wartime emergency maternity and infant care program. Under EMIC, though women chose their own doctors, Uncle Sam paid the medical, nursing, and hospital bill for about a million and a quarter wives and new-born infants of servicemen in the four lowest pay grades. In addition this emergency "stork bill" furnished free medical care to over 200,000 babies who became ill during their first year of life. At the height of the program one out of every seven babies in this country was born under EMIC; in 1945, 92 out of 100 of these EMIC births took place in hospitals, compared to only 79 for the general population. Conservative doctors estimated that EMIC saved the lives of countless babies and mothers.

During EMIC an old granny midwife led a shy 17-year-old girl before a Texas county health officer, belligerently proclaiming: "She's a soldier's wife an' has a right to have her baby in a hospital and I'm here to see she does." A New England private whose wife and twin babies required prolonged hospital care costing $1,744 sighed, "I felt like living again when I heard I didn't have to pay that bill." A southern sergeant confessed, "I thought it might be like charity or being on relief but it wasn't. They took care of my wife and baby swell." EMIC taught many women to demand good medical care.

But EMIC has been discontinued. Children's Bureau officials warn we must not move backward. Aware that something must be done, the American Academy of Pediatrics is now completing a monumental 2-year million-dollar survey in cooperation with the United States Public Health Service and the Children's Bureau to discover what medical services children receive throughout the United States. Harvard's Dr. John P. Hubbard, director of the pioneer study, says that the findings will spotlight areas where children's medical services are now inadequate. An academy committee is already developing a program for action on these findings.

Some authorities say that if all our babies are to have a better chance we need compulsory health insurance—now in effect in all countries with better infant-mortality records than ours. Some cynics even argue: "Let's wait until we get national health insurance before doing anything more." To this Dr. M. Edward Davis, University of Chicago professor of obstetrics and gynecology replies: "That's like withholding bread from the starving people of Europe because we can't send butter and jam with it."

When the Children's Bureau was created in 1912 the great question asked it was, "Why do babies die?" Today the answer to that question would be: Babies usually die because neither they nor their mothers get the care they deserve.

No American mother should stand over a coffin that could have been a cradle. "I do not say the lives of all infants can be saved," says wise Dr. Martha Eliot, Children's Bureau associate chief. "But I do say it is wrong for a hundred babies to die when 50 could be saved. We know what is needed in health services for mothers and babies. We have the knowledge and skills. But we need to apply them far more widely. It's up to the people through Congress to decide when and how the job can be started."

Guamanians and Samoans Eligible to Naturalization Under H. R. 199

EXTENSION OF REMARKS
OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. FARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letters:

MARCH 2, 1949.

MR. L. PAUL WININGS,
Immigration and Naturalization Service, Department of Justice, Washington, D. C.

DEAR MR. WININGS: I should like to have your opinion as to whether H. R. 199 would permit Guamanians and American Samoans to become naturalized citizens of the United States. If so, can residence in Guam and American Samoa be considered as residence within the United States for naturalization purposes?

Sincerely yours,
J. R. FARRINGTON,
Delegate from Hawaii.

UNITED STATES DEPARTMENT OF JUSTICE,
IMMIGRATION AND NATURALIZATION SERVICE,
Washington, D. C., March 8, 1949.

HON. JOSEPH R. FARRINGTON,
Delegate from Hawaii,
House of Representatives,
Washington, D. C.

MY DEAR MR. FARRINGTON: This will refer to your letter of March 2, 1949, addressed to Mr. L. Paul Winings, general counsel of this service, in which you made inquiry concerning the status of certain Guamanians and American Samoans should the bill H. R. 199, which passed the House of Representatives on March 1, 1949, become law. The general counsel's views concerning your questions, with which I concur, are hereinafter set forth.

You inquire whether the bill would permit Guamanians and American Samoans to become naturalized citizens of the United States. H. R. 199 will remove all racial restrictions upon the naturalization of any person as a citizen of the United States. This will be true whether such persons are aliens or nationals of this country.

I presume your main interest is in those Guamanians and American Samoans who are nationals of the United States but have previously been barred because of their race from being naturalized as citizens. No such bar will remain against them if H. R. 199 is passed. Furthermore, if they become residents of the continental United States, the Territories of Alaska, or Hawaii, or Puerto Rico, or the Virgin Islands, they may, if otherwise qualified for naturalization, include their previous residence in Guam or American Samoa in meeting the residence requirements of the naturalization laws. This provision in their favor is contained in section 321 of the Nationality Act of 1940 (54 Stat. 1178; 8 U. S. C. 721).

If any of the individuals in whom you are interested are aliens who have previously been barred from admission to the United States or from naturalization because of race, that previous restriction will be removed by H. R. 199. However, in those cases there is no provision by which previous residence in Guam or American Samoa may be included within the residential requirements for naturalization.

At the present time there is no way by which persons residing in Guam or American Samoa may become naturalized citizens of the United States. That is because there are no courts exercising naturalization jurisdiction in Guam or American Samoa. H. R. 199 would not change that situation.

Sincerely,
WATSON B. MILLER,
Commissioner.

Eightieth Congress and Public Power-Transmission Lines

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. CASE of South Dakota. Mr. Speaker, there seems to be some confusion on the record of the Eightieth Congress, a Republican Congress, in appropriating funds for transmission lines for Government power projects. In order that the record may be clear and unmistakable, I asked W. G. Dewall, the clerk of the Appropriations Subcommittee for the Interior bill, to give me a list of such appropriations.

The list is impressive and speaks for itself. I submit it for the RECORD at this point:

Bureau of Reclamation—Estimate of congressional appropriations for transmission lines and facilities

Project and feature	80th Cong. 1st sess.	80th Cong. 2d sess.
Boise-Anderson Ranch: Transmission line and switchyards	$91,000	$287,000
Boise-Payette: C line power supply	60,000	
Rio Grande:		
Las Cruces-Alamogordo Air Base transmission line	7,000	
Switching station, Las Cruces	5,000	
Substation, White Sands ordnance	3,000	
Substation, Alamogordo Air Base	15,000	
Substation, Alamogordo	37,000	
Alamogordo-Hollywood transmission line	73,000	
Substation, Hollywood	25,000	
Switching facilities, Elephant Butte	20,000	
Substation, Socorro	39,000	
Elephant Butte-Socorro transmission line	476,000	10,000
Socorro-Albuquerque transmission line	20,000	
Substation, Albuquerque	20,000	
Sierra cooperative substation	13,000	
Distance relays for Las Cruces-Alamogordo Air Base transmission lines	2,000	
Permanent improvements, employee residences		16,000
Substation and feeder lines		32,000
Total	755,000	58,000
Yakima-Roza:		
Transmission lines (FPC 340-1, 344-9)		248,000
Switchyards and substations (FPC 342-3)		94,000
Total		342,000
Shoshone: Transmission plant	194,000	204,000

Bureau of Reclamation—Estimate of congressional appropriations for transmission lines and facilities—Continued

Project and feature	80th Cong. 1st sess.	80th Cong. 2d sess.
Davis Dam:		
Davis-Kingman-Needles 69-kilovolt extensions	$65,000	
230-kilovolt Parker interconnection	902,000	$1,284,000
Second Parker-Phoenix line	9,000	17,000
Third synchronous condenser, Phoenix	5,000	90,000
Bank No. 2, Phoenix	6,000	218,000
Bank No. 4, Phoenix	61,000	30,000
Tucson-Deming interconnection	30,000	92,000
Second Phoenix-Tucson line	331,000	630,000
Phoenix substation additions	3,000	26,000
Wickenburg extension (Davis-Mesa line)	129,000	1,808,000
Second Parker 230-kilovolt transformer bank	7,000	281,000
Second Parker-Gila line	196,000	991,000
Improvements and extensions to Yuma 34.5-kilovolt system	28,000	192,000
Substations along second Phoenix-Tucson line	135,000	475,000
Davis-Hoover 230-kilovolts interconnection	60,000	1,600,000
Power supply to Wellton-Mohawk division of Gila project		4,000
Operation and maintenance basic magnesium facilities		72,000
Transmission plant:		
Structures and improvements	30,000	250,000
Station equipment	308,000	340,000
Total	2,305,000	8,400,000
Parker Dam power:		
Substations:		
Phoenix terminal: Air coding equipment, transformers operation and maintenance		22,000
Gila substation: Fire protection		23,000
Total		45,000
Central Valley:		
Transmission lines:		
Shasta-Tracy via Oroville and Sacramento	257,000	500,000
Keswick tap line	160,000	
Shasta-Tracy Nos. 2 and 3,230-kilovolt (west side)	1,500,000	250,000
Tracy-Contra Costa-Clayton-Ygnacio 69-kilovolt	118,000	
Tracy switchyard		1,400,000
Substations: Contra Costa-Clayton-Ygnacio	48,000	12,000
Total	2,083,000	2,162,000
Colorado-Big Thompson:		
Completed lines on substations as of June 1946, and addition of overhead ground wires on existing 115-kilovolt lines	40,000	35,000
Estes-Flatiron-Greeley-Sterling 115-kilovolt (2 lines)	210,000	86,000
Sterling-Holyoke-Wray-Brush, 69-kilovolt line	188,000	60,000
Estes-Marys, Estes-Granby, 115-kilovolt line	26,000	37,000
Brighton-Longmont-Loveland-Fort Collins-Greeley, 69-kilovolt line	6,000	
Carrier current communication, relaying load and frequency control		10,000
Supplies and equipment on hand	150,000	
Estes Park-Foothills power system	200,000	
Columbia Basin: Pasco pumping plant power line	110,000	
Total	820,000	228,000
Fort Peck:		
Yellowstone River district:		
Glendive-Miles City transmission line	138,000	

Bureau of Reclamation—Estimate of congressional appropriations for transmission lines and facilities—Continued

Project and feature	80th Cong. 1st sess.	80th Cong. 2d sess.
Fort Peck—Continued		
Yellowstone River district—Continued		
Miles City substation	$36,000

Address by Dr. Norman Vincent Peale on the Occasion of the Observance of the Birthday Anniversary of Thomas A. Edison

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, March 10 (legislative day of Monday, February 21), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address entitled "God's Man Edison," delivered by Dr. Norman Vincent Peale on the occasion of the observance of the birthday anniversary of Thomas A. Edison.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOD'S MAN EDISON

(By Dr. Norman Vincent Peale)

Text: "I sought for a man among them." Ezekiel 22: 30.

The title of this sermon implies a superlative estimate of a man. In a deep sense every man is God's man for every person has a work to do in the world—God's work. Perhaps the real difference between success and failure in life is the degree to which we do the work for which God has ordained us.

In a special sense, however, it is the testimony of history that God selects from time to time certain colossal figures to do special projects for Him. When some great new development is ready to flower, Almighty God calls upon some outstanding man to bring this new phase into being.

Ezekiel stated it well in the prophetic word, "I sought for a man among them." (Ezekiel 22: 30.)

There is no special or mystical significance to the month of February but by some curious turn of events February is the birth month of three extraordinary human beings whom God called from among the masses of humanity. To bring to birth the great ideal of human freedom which at long last was ready to become dominant among men, God summoned a colossal figure in the form of the immortal Washington. Elevated, serene, and alone he stands. Forever enshrined in the annals of freedom is the form and figure of the Father of His Country.

When a new ideal of humanitarianism was ready to come into being, forged out of the terrible conflict between brothers, when the very foundations of the state were being rent asunder, God brought forth a rugged, indomitable, magnificent figure from the backwoods of this young Nation in the person of Abraham Lincoln. No American who ever lived so gripped the hearts of his countrymen, and indeed of men everywhere, as the mystic, lovable, towering personality of the rail splitter, emancipator. He is as American as the scent of burning leaves in autumn, as the odor of lilacs in spring. He is the living personification of American democracy.

When the time had come to tap the secrets of the universe and relieve man from the back-breaking drudgery under which he had toiled for centuries, when in the course of human events secrets long held by nature were ready to be revealed, when mankind was at last prepared for the greatest and most awe-inspiring revelation of the wonders of God, the Creator summoned a man and poured into him the same genius of creation which He, himself, possessed. He put into his hand a magic wand and said to him, "Even as I gave Moses the ability to tap the rock in the wilderness and bring forth water, so do I give you the divine ability to tap the universe and bring forth light and music and skills to astonish the imagination of mankind." So in February came God's third great man, the inventive, creative genius of all time, Thomas Alva Edison.

Washington, a deeply religious man, told us that often in the historic days when this Nation was being built he saw evidence of a great hand. He solemnly asserted on one occasion, "The event is in the hands of God." In the twentieth century, no less than in the valorous epochs of the past, God is still in the stream of history and Ezekiel's words are prophetically true, "I sought for a man among them." God needed a man and he sought and found one—God's man Edison.

What is the strange genius by which a few such men as Washington, Lincoln, and Edison become the immortal benefactors of the human race? Is it a particular ability? Obviously, yes, for in order to accomplish the great deeds which God requires, men must be big brained, big souled, big in spirit. He creates such men as giants in intellect, insight, and soul. Yet even they, with all their vast potential could be relatively ordinary men did they not in a very natural way become usable, yielded, and dedicated instruments of the divine will. This does not mean necessarily that they articulate their dedication in traditional pious phrase. But it does mean that in their hearts they had a sense of attunement with God and the unexplainable feeling of being God's chosen ones.

In the case of Thomas A. Edison, there is abundant evidence that this simple and yet profound attunement with God existed. It was my privilege to know the late Mrs. Thomas Alva Edison, a charming and gracious lady and a sincere Christian woman. Being interested in the phenomena of human

beings I constantly asked her for information and impressions of her great husband. On one occasion she told me that it always impressed her that Mr. Edison was "nature's man." She explained by saying that he would come to the house from the laboratory after long hours of labor and lie down upon an old couch which was his favorite resting place. He would go to sleep as easily and naturally as a child. He lay in perfect relaxation. When, after a sound sleep he awakened, it was without any of those contortions with which tense people emerge from their troubled sleep, but he would be wide awake, fully refreshed and rested. There was something about this simple process of refreshment and renewal which impressed her with the fact that he was really resting in God, a natural, unaffected, normal child of nature. The phrase intrigues the imagination, "He was nature's man."

One day after he had emerged from such a nap, Mrs. Edison asked him, "Where do you find all those wonderful ideas of yours?" She relates that the wonderful, old smile passed over his face and without a word he raised his finger and pointed upward. "I think I saw it all at that moment," she said. He was completely yielded in mind and spirit and soul as well as in body to the creative genius of God. The Lord used the marvelous mechanism of his mind as a medium through which to pour at the feet of men the wonders which he had created for His children. Such astonishing work could only be done through nature's man or as I prefer to state it, God's man.

Edison, himself, shared this view, not of himself, for he was too modest for that, but that there is a personal God operating through human minds and souls he had no doubt. The direct question on one occasion was put to him, "Do you believe in a personal God?" His answer was firm and confident, "Most assuredly I do. Nature and science both affirm His existence. Where the layman believes, the man of science knows." On another occasion he declared, "I can no more doubt the existence of an intelligence that is running things than I do the existence of myself."

Among the many important lessons taught by the life of Thomas A. Edison is the immense enthusiasm which one should have about life. Mr. Edison believed enthusiastically in the enormous benefits which nature can contribute to human welfare. To his dying day he was characterized by an infectious enthusiasm, insatiable curiosity, and profound interest. Life never palled on him. It was too romantic for that. He was in old age, as in young manhood, enthusiastically eager to find new things and develop them for the well-being of all men.

A series of three experiences left an unforgettable impression upon my mind. I spoke to an industrial convention in Boston and at the head table sat beside one of the greatest American research scientists. He described with burning enthusiasm the astonishing way in which American industry orders impossible machines. With a rather unscientific fervor he told me how science delivers to industry these selfsame impossible machines. He waxed eloquent as he described the possibilities of machinery, concluding with the assertion, "There is no limit to what you can do with a machine."

Shortly thereafter I spoke to the annual dinner of a chamber of commerce in Ohio. I sat beside one of the greatest American farmers, Louis Bromfield, an enthusiast about soils. He became very enthusiastic as he pointed out that basically there need be no such thing as unproductive land. He says that if we believe in the possibilities in the soil and bring to bear upon it modern scientific knowledge, there is no limit to what you can do with the soil.

The climatic experience was that of being invited on the one hundredth anniversary of the birth of Thomas A. Edison to witness the opening of his old roll-top desk at his West Orange laboratory. This desk, closed on the night Mr. Edison died, was kept sealed out of sentiment by his son, Gov. Charles Edison, until the one hundredth anniversary of the birth of the great inventor.

I happened to be standing by the desk with Mrs. Edison and I asked her how Mr. Edison felt about the possibilities of future scientific discovery; whether he had ever indicated the thought that perhaps the greatest discoveries had been made and what was to come might merely be a refinement of that which had already been invented. Her answer was, I believe, indicative of the creative, aspiring mind of Mr. Edison for she said, "Oh, no; my husband believed there is no limit to the possibilities of development in the natural sciences." Had Mr. Edison been permitted another 50 years of life, there is no doubt in my mind that his insatiable curiosity and indomitable energy would have produced wonders of which we can only dimly dream. But he had done his work. He had cracked open the secrets of the universe and had pointed the way for those who were to follow after him. He was without question the greatest pioneer of them all in finding and solving God's secrets. The only explanation of this man's genius is that God must have whispered in his ear. This is why I call him "God's man Edison."

However, one must come back at once to an emphasis upon hard work as an outstanding factor in the success of Mr. Edison. In this day and age when practically nobody emphasizes the value and discipline of hard work, when we have adopted the foolish idea that the less work we do the more humanitarian we become, it still remains that the only way anybody ever got anywhere is by diligent, unremitting, never-ending toil. When someone was ascribing genius to Edison, he vigorously denied it. He said, "Genius is 1 percent inspiration and 99 percent perspiration." Often he would work around the clock in order to solve some difficult problem and his perseverance is attested by the fact that in his search for a nickel-iron-alkaline battery he spent 10 years and performed 50,000 experiments before he was successful.

He never inquired as to how many hours he should spend. He never demanded overtime pay. In fact he never seemed much interested in pay. He had a job to do and he loved his work and he worked at it as the passion of his life. He is both a challenge and a rebuke to the modern, indolent philosophy that it is humanitarian to reduce the hours of labor so that man may have more hours of leisure in which to destroy his character and make him a weak and often neurotic being.

Mr. Edison is an example of the truth that this Nation was built up by men who worked and worked hard and as a result they not only succeeded materially but they also succeeded emotionally and psychologically. It was not until hard work became a social crime that men developed the widespread neurotic maladies which plague our time. It is said that all work and no play makes Jack a dull boy, but it is also true that too much play and soft work made Jack a neurotic. The scriptures say, "My Father worketh hitherto, and I work." That is to say, God works unceasingly in the constant creation of the universe and for the sustenance of mankind God works and God's men work also. Edison certainly could have said, "My Father worketh in creation. I work in bringing His creations to the use of mankind." Therefore one of the outstanding factors in the greatness of this man was the enormous ability to work and to love it.

The story is told of Mr. Edison's invention of a new type of storage battery. When he had conducted more than 8,000 experiments without any apparent measure of success, an associate asked, "Are you not discouraged?" "Certainly not," responded the inventor. "I have learned 8,000 ways the job cannot be done and I am, therefore 8,000 ways nearer my goal." Think of it, 8,000 failures but the result was not to cause him to throw up the effort in hopelessness and futility. He figured that despite all these failures he was making progress for he had written off 8,000 ways in which he knew it could not be done; therefore, his attainment was that much nearer.

Why did he not believe in failure? The answer is—he was God's man. God had sought for such a man and so the man knew down deep in his heart that through faith nothing shall be impossible.

Mr. Edison served God in his day and generation through his great belief in America and the American way of life as the greatest method of helping humanity. There is a doctrine widely preached today that humanitarianism consists of relieving men of the necessity for toil, assuring them of security, giving them material things, and making their government a source of material benefits for them. In other words, to be humanitarian, according to this philosophy, means to take care of people, to give them equally something for which they have not toiled nor ventured, nor struggled. Mr. Edison believed that such a method does not produce great people but on the contrary weakens and softens their characters and so is not Christian humanitarianism. Humanitarianism means the creation of great souls and great souls are developed only through labor, toil, struggle, suffering, pain, the conquest of insecurity, the realization of hopes. Real humanitarianism is to give a man opportunities and say "Here are the tools, here are the resources, here is a free land, where every man is held in esteem and respect. Go to work and make something of yourself."

This does not mean that evils in our society should not be corrected. This does not mean that the poor and the unfortunate and those who are defeated in life should not have the sympathetic concern and care of those who have been more fortunate. This is not to eliminate compassion for never was there a more compassionate people than those who have been developed under the system of free enterprise. The great men of America are almost without exception men who have come up from lowly beginnings. America has done more in the humanitarian development of great people than any modern nation and certainly more than those nations which have sought to depress all people as the servants of the state.

Mr. Edison believed thoroughly in our competitive system and he believed that due and honest profit is a good thing. He would never have subscribed to the innocuous and unsubstantiated idea that profit is unchristian. He said, "It is the competitive system, as much as any other thing, that has made us a great nation. We must depend on competition for the development of more and better products, and for better services at lower costs and thus increase our living standards. I need competition to keep me on my toes. So does my management. Competition is good for business." "Competition," he continued, "develops resourcefulness in our citizens. Competition is good for the individual."

In his life and work Mr. Edison showed the way to develop great humanitarian results. He did not whine and complain that there were no opportunities, that the frontiers had all been discovered, that opportunity had been exhausted. He was not one of those who complained that while in the past a young man could get ahead, could do something, that now all opportunity is gone. The frontiers, the prairies had been conquered and taken up, when he went to work but that did not deter him from achievement for he opened up limitless new frontiers. He developed the great electrical system of America. He brought into being the giant of elec-

tricity and as electrical America grew, new industries were born and with these new industries came jobs for millions of people. He did more to develop humanitarian values in this country by creating jobs than all of the agitators who have ever spoken on all the soap boxes in this country making speeches and nothing but speeches about the welfare of the people. They would have us adopt what they call the "welfare state." Edison produced a state of welfare by bringing millions of jobs out of his fertile mind to stimulate the American free-enterprise system.

He invented and devised the dynamos, conduits, insulators, fuses, sockets, and meters and the multiple-arc system of current distribution which made efficient, economical distribution of electricity possible. He brought light to the world. He developed the telegraph; the phonograph, too, which today brings music into thousands of homes. He developed the motion-picture camera which started a vast industry which gave jobs to more thousands and thousands of people as well as entertainment to the multitudes. It is said that the total of his inventions which created jobs for millions of men and women in hundreds of new industries produced capital assets in excess of $20,000,000,000. This is a conservative estimate of the direct results of Edison inventions. When you broaden these estimates to include industries which did not spring directly from Edison inventions but which would have been impossible without his contributions to industrial and scientific progress, the figures of his total work would represent an impressively large part of our national wealth.

The way to produce wealth for our people is not in the redistribution of wealth until we wear it out, until it is exhausted, but it is the constant creation of new wealth. The multiplication of jobs, the maintenance of the ideal of hard work and faith; this it is that will have the best humanitarian results for all the people. Had not Mr. Edison labored and dreamed and worked, the American free-enterprise system would not have attained its present high standard, the world today would be completely in ruins. It is the American system of free enterprise that today stabilizes the economy of the entire world. Were it not for our goods and our service the world would go down in chaos. Probably the one man who more than all others stands out as the benefactor of mankind in this connection is Thomas A. Edison. In fact, Edison did probably more than any other man to bring the people of the earth together. In a remarkable address reprinted in the CONGRESSIONAL RECORD entitled "Edison, the Great Liberator" the following quotation from an unknown source is made: "They are truly great who, as the centuries slowly pass, are found by each succeeding race nearer to the heart of human love."

He believed in the greatness of human nature and in the evolution of a better society. He once said, "We are groping on the verge of another great epoch in the world's history. The invitation to constructive thought is becoming irresistible to every branch of human effort. Creative thought," he continued, "will raise the human race to higher and higher standards."

He had an unshakable optimism about the future. God's men are always optimistic about the future because they walk with God and they know that God lives and that events are in God's hands. It is men who lose sight of God who are enveloped in darkness and are afraid. Men who walk with His word as a lamp unto their feet and a light unto their path do not stumble nor are they unable to see ahead. They know down in their hearts that if we keep on working and keep on believing and are brave in our hearts that we will come out of the shadows by and by into the light of a new day.

At his last public appearance before his death on October 18, 1931, Mr. Edison gave this prophetic word to his people, "Be courageous. I have lived a long time. I have seen history repeat itself again and again. I have seen many depressions in business. Always America has come out stronger and more prosperous. Be as brave as your fathers before you. Have faith. Go forward."

In this sermon I have spoken of Mr. Edison's quality of mystic insight. It was true to him at the last. On the morning he died it was noticed that he was attempting to give a message. His physician bending low heard Mr. Edison say faintly but distinctly, "It is very beautiful over there." These were his last words. What did he see? One can only dimly imagine. He reported that what he saw was very beautiful. One thing is sure, Mr. Edison was always a scientist. He would never have reported anything he did not see. He was always very exact in his description. He had brought beauty to the earth in the form of light and music and human happiness. He was now sighting that place which is prepared for all those who have been faithful. He was being called home and what he saw as he voyaged across the river entranced him with its beauty.

So passed from this earth, but not from the memory of the human race, God's man Edison.

Appointment of Louis Johnson as Secretary of National Defense

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Thursday, March 17 (legislative day of Monday, February 21), 1949

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Johnson's Fight for Preparedness Is Found 'Startling' in Retrospect," written by Doris Fleeson and published in the Washington Evening Star of March 10, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOUGH AND VISIONARY—JOHNSON'S FIGHT FOR PREPAREDNESS IS FOUND STARTLING IN RETROSPECT

(By Doris Fleeson)

As Secretary of National Defense, Louis Johnson has one main job: To find the weapons of the next war and build them without bankrupting the taxpayer. Its corollary is that he must make the brass cooperate.

For the first, Mr. Johnson will need vision; for the second, toughness. No one who has seen him in action doubts that he is tough. Because his appointment is an obvious repayment by President Truman of a political debt, there is less confidence that the President also looked for the vision necessary in what many feel is the second most important job in Washington.

A backward look at the Johnson record under President Roosevelt is startling even to those who recall vaguely that Mr. Johnson fought to prepare the Army until Mr. Roosevelt sacrificed him to political considerations. The new secretary's prophetic attitudes are the more remarkable since they came in the murky post-Munich period when few politicians showed vision and those who did, like Roosevelt, usually trimmed it to fit their political interests.

PLANNED RAIL EXPANSION

Mr. Johnson became Assistant Secretary of War in 1937. In September 1938, President Roosevelt made him chairman of a national defense power committee. Mr. Roosevelt heard its report, and then announced that the administration and utilities would make peace because in case of war power shortages might develop in industrial areas and, for lack of munitions, our forces might be defeated.

The New Dealers yelled murder, the pacifists ditto, but Jesse Jones refused to lend RFC money to the utilities to expand their facilities; so that was that.

Mr. Johnson surveyed the railroads and laid plans to improve and enlarge their facilities. He drew up an industrial mobilization plan. He urged upon President Roosevelt an expanded Air Force and passed him word that Goering had more men working in a single airplane factory in Germany than America had in its whole airplane industry. Mr. Roosevelt was impressed; he said the National Youth Administration would train 20,000 airplane mechanics and pilots. Mr. Johnson said he ought to make it 200,000. Mr. Johnson went on the Hill and admonished Congress to buy and store strategic materials like tin.

Meanwhile, he had routed Army officers from their comfortable chairs and dispatched them to 20,000 factories for a look-see. He then designated 10,000 of these factories for future war purposes and had them taught how to adapt their facilities to make shells, powder, and rifles.

SOUGHT MASS PLANE OUTPUT

He revived the Army's list of wants and came up with the famous 55-55 items that peacetime industry did not make and would not have the tools or experience to make in wartime. He demanded educational orders for these materials.

He began to press for a mass-production airplane industry and mass production of munitions generally. Crediting him with sincerity, a liberal weekly moaned: "He is honest; he only wants to build as many planes as Colonel General Goering. He is envisaging a war equal to World War I; he does not even exclude the sending of a great citizen army to fight in Europe or Asia."

By this time Secretary of War Woodring was writhing; the isolationists were furious. President Roosevelt, knowing the score, had determined to get rid of Secretary Woodring, and Mr. Johnson was to inherit. But trapped by time—1940, a Presidential year—Mr. Roosevelt sacrificed him. On the eve of the Republican convention he shrewdly appointed Republicans Stimson and Knox to War and Navy.

Mr. Johnson resigned. But he left his monument. The Congress he had educated fixed by statute the procurement powers of the Assistant Secretary of War. It was under this legislation that Robert Patterson so successfully operated throughout the war.

Discrimination in the District of Columbia Is a National Disgrace

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. KLEIN. Mr. Speaker, under the Constitution of the United States there is no room for discrimination toward any citizen because of external qualifications. Citizenship is absolute, and the

rights and privileges of citizenship cannot be taken away from any person except by due process of law as punishment for his own misdeeds.

Yet in actual practice in the United States, by one means and another, we deprive a tenth of our citizens of full rights.

The victims of legal and economic discrimination are invariably those of minority groups, and the victims of discrimination who suffer most are American Negroes.

It is an indictment of our understanding of democracy that discrimination exists anywhere in the United States; but it is an indictment of Congress itself that discrimination should flourish in the shadow of the Capitol, where, by constitutional provision, the Congress has exclusive legislative power.

I am introducing today a new bill aimed at the elimination of all legal discrimination in the District of Columbia—a bill which takes a new approach to the issue and proposes to make use of the basic police power of the Government in eliminating economic discrimination.

The text of the bill given below indicates the scope; and I am confident that, sooner or later, the Congress must see that this is an equitable approach to our national disgrace.

An act to declare the public policy of the District of Columbia to be opposed to the segregation of persons of different race, color, creed, national origin, or ancestry, to provide for the operation of the public schools of the District of Columbia on a nonsegregated basis, and to provide for the denial of business licenses to persons who fail to conform to the aforesaid policy

Be it enacted, etc.

FINDINGS AND DECLARATION OF POLICY

SECTION 1. This act may be cited as the "District of Columbia Antisegregation Act of 1949."

SEC. 2. (a) In the Capital of the United States members of certain races and peoples of certain color are denied access to many of the institutions of higher education. Segregation, based on color and race, is practiced in the grammar and high schools. Hospital and housing facilities, with minor exceptions, are provided on a segregated basis, and the quality and quantity available to members of different races and colors is vastly unequal. Hotels, restaurants, theaters, stores, and other places of public accommodation are not available to all persons on equal terms.

(b) By these practices of segregation and exclusion the opportunity of full participation in American life is denied to many of our people. While the Nation loses the benefits of their potential contributions to the national welfare, the social and economic conditions resulting from these limitations tend to increase crime, disease, and social disorders.

(c) The failure to close this gap between the principles of democracy and the prevailing racial practices in Washington, D. C., in particular, materially impairs the leadership of the United States in the cause of a democratic world.

(d) Experience indicates that when people of different races, colors, creeds, national origins, or ancestry have had the opportunity of using places of public accommodation without segregation, they have done so with a minimum of friction. These experiences themselves have been an important factor in destroying the barriers of ignorance and prejudice.

(e) Therefore, it is declared to be the public policy of the District of Columbia to oppose restrictions, qualifications, or distinctions based directly or indirectly on race, color, creed, national origin, or ancestry in the admission of any person to, or the accommodation or service of any person in, any place of public accommodation, whether licensed or not.

(f) Places of public accommodation shall be deemed to include schools, hospitals, hotels, restaurants, stores, offices, office buildings, theaters, motion-picture houses, lecture and concert halls, parks, streets, and public transport facilities, but shall not include bona fide private social clubs operated on a nonprofit basis.

PUBLIC SCHOOLS

SEC. 3. (a) On or before September 1, 1951, the Board of Education of the District of Columbia, acting through its Superintendent of Schools, is hereby directed to administer the public schools of the District of Columbia in a manner consistent with the public policy declared above.

(b) All provisions in the District of Columbia Code relating, directly or indirectly, to the establishment and maintenance of a segregated school system are repealed or modified to the extent necessary to comply with 3 (a) above, effective September 1, 1951.

BUSINESS LICENSES

Sec. 4. (a) On and after November 1, 1950, licensees under the following sections of the District of Columbia Code will be required to conform to the public policy declared in this statute: 47-2308; 47-2309; 47-2310; 47-2311; 47-2312; 47-2314; 47-2320; 47-2321; 47-2322; 47-2323; 47-2324; 47-2325; 47-2326; 47-2327; 47-2328; 47-2331; 47-2332; 47-2333; 47-2334; 47-2335; 47-2336; 47-2338; 47-2339; 47-2340; 47-2341; 47-2342.

Any license issued pursuant to the above enumerated sections is hereinafter referred to as a "4 (a) license."

(b) In addition to any other statutory or administrative requirement for the issuance of a 4 (a) license for use on or after November 1, 1950, the Commissioners of the District of Columbia and their designated agents are hereby directed to require that the applicant, a sole proprietorship by the proprietor, a partnership by a partner, a corporation by its managing agent, execute the following certificate as a prerequisite to the issuance of the license:

"CERTIFICATE OF COMPLIANCE WITH THE DISTRICT OF COLUMBIA ANTISEGREGATION POLICY

"——— of ———, Washington, D. C., applicant for a 4 (a) license to engage in ——— pursuant to section ——— of the District of Columbia Code, after being duly sworn—in person—by the oath of a partner—by the oath of its managing agent (strike out the two not applicable) hereby asserts and certifies with respect to the public policy of the District of Columbia opposing restrictions, qualifications, or distinctions based directly or indirectly on race, color, creed, national origin, or ancestry in the admission of any person to, or the accommodation or service of any person in, any place of public accommodation as defined in section 2 (f) of the District of Columbia Antisegregation Act of 1949 as follows:

"1. That applicant has conducted the above business throughout the preceding license period so as to maintain the said policy.

"2. That if said license shall be issued, it is the intention of the applicant to comply fully with said policy in the conduct of the above described business so long as the license shall remain valid.

"Signed ——— ———,
"Applicant.

"(If applicable) "By ——— ———,
"Partner or Managing Agent of Applicant.

"Date ———."

The above certificate shall be subscribed and sworn to before any person in the District of Columbia authorized by law to administer oaths: *Provided,* That subscription to the paragraph numbered 1 shall not be required for a license which will expire on or before October 31, 1951: *And provided,* That subscription to the paragraph numbered 1 shall not be required for a license if the applicant has not had a license for said business at any time during the 12 months preceding the effective date of the license applied for.

(c) On and after November 1, 1950, applications under this section shall be filed with the Commissioners of the District of Columbia or their designated agents at least 20 days prior to the effective date of the license applied for.

(d) Upon receipt of an application for a 4 (a) license to be effective on or after November 1, 1951; the Commissioners of the District of Columbia or their designated agents shall cause a notice to be posted in an appropriate public place in the offices of the Commissioners of the District of Columbia. Said notice shall be plainly titled "Notice of License Application" and shall include the name and address of the applicant, a true copy of its certificate of compliance with the District of Columbia antisegregation policy, and the building and room number where and the last day when protests may be filed as hereinafter set forth.

(e) Within 10 calendar days after the date of posting under 4 (d) above, any person may file a protest against the issuance of the license. Said protest shall be filed in duplicate and shall consist of:

(1) A verified statement by the protesting party which shall set forth the name and street address of the applicant, the allegation that contrary to its certificate said applicant has failed to maintain the public policy declared in the District of Columbia Anti-Segregation Act of 1949, a summary of each affidavit required by subsection 2 below, and a prayer that the present application be denied.

(2) Affidavits of two or more persons setting forth the personal knowledge of affiants of incidents separate and distinct as to time and as to the person or persons involved in which affiants state that the hereinbefore described public policy against segregation has not been complied with. Each affidavit shall set forth the full particulars of each such incident, including the approximate hour and day of the alleged departure from the said policy, a full description of the incident or incidents constituting a departure from the said policy and, insofar as practicable, the names and titles of the applicant's officers, agents, or servants involved.

(f) If no protest shall be filed within 10 calendar days after posting of notice as provided in section 4 (d) hereof, the license shall issue subject to other applicable statutory and administrative requirements.

(g) If a protest shall be filed within 10 calendar days after posting of notice as provided in section 4 (d) hereof, the Commissioners of the District of Columbia or their designated agents shall cause to be served upon the applicant a copy of the protest and shall furnish the applicant and the protesting party with a notice of public hearing at a place within the District of Columbia not less than 5 nor more than 20 days after service of notice.

(h) The hearing shall be conducted by the Commissioners of the District of Columbia or their designated agents in such manner and according to such rules as will insure each side a fair and impartial hearing.

(i) At the conclusion thereof or within 5 days thereafter, the person or persons who have conducted the hearing shall file their written findings of fact. If they find that the applicant has maintained the public policy declared above in accordance with its certificate of compliance, the license shall issue

subject to other applicable statutory and administrative requirements. If they find that the applicant, contrary to its certificate of compliance, has not maintained the public policy declared above, the license shall be denied.

(j) Where in the first instance the hearing is conducted by agents of the Commissioners of the District of Columbia, either the applicant or the protesting party may appeal to the said Commissioners for a review of the facts within five calendar days after filing of the findings. Where said Commissioners grant a review, it shall be conducted in a public hearing according to such rules and in such manner as will insure each side a fair and impartial hearing. At the conclusion of the hearing, or within 5 days thereafter, said Commissioners shall file their opinion affirming or reversing the findings below. The decision of said Commissioners on all questions of fact shall be final and conclusive.

(k) Where desirable to facilitate the operation of this section or to avoid hardship on an applicant while proceedings under this section are pending, the Commissioners of the District of Columbia are hereby authorized to grant temporary extensions of existing licenses not to exceed 90 days from the usual expiration date upon payment of the pro rata fee.

SEC. 5. Neither the provisions of sections 47–2344 or 47–2345 of the District of Columbia Code nor of any regulation issued thereunder nor any other existing statute or regulation shall be construed to exempt, directly or indirectly, any person or persons from operation of this statute.

SEC. 6. Section 47–2345 of the District of Columbia Code is hereby amended by adding the words "for failure to comply with the policy against segregation" immediately before "or for any other reason they may deem sufficient."

SEC. 7. If any provision of this act, or the application of such provision to any person or circumstance shall be held invalid, the remainder of this act, or the application of such provision to persons or circumstances other than those to which it is held invalid, shall not be affected thereby.

Addresses on the Occasion of the Christening of the "Clipper America"

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Thursday, March 17 (legislative day of Monday, February 21), 1949

Mr. JOHNSON of Colorado. Mr. President, on March 5, at 3:30 p. m., a new and greatly improved type of passenger airplane, the *Clipper America*, was christened at the National Airport in Washington, D. C., by the President's lovely daughter, Miss Margaret Truman. I ask unanimous consent to insert in the Appendix of the RECORD the addresses which were delivered on that occasion.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY PRESIDENT JUAN T. TRIPPE

Mrs. Truman, Miss Truman, Mr. Vice President, and distinguished guests, in a few minutes Miss Margaret Truman will christen the *Clipper America*—the new queen of America's merchant air fleet.

Here in Washington 20 years ago Mrs. Calvin Coolidge christened the *Clipper Columbus*, which inaugurated international air service for the United States over the first overseas route between Key West and Habana. Fifteen years ago Mrs. Herbert Hoover christened the original *Clipper America*, now retired from service, which extended air operations under our flag to the countries of South America.

Here also 10 years ago Mrs. Franklin D. Roosevelt christened the *Yankee Clipper*. The *Yankee Clipper* and the *China Clipper*, both historic in the annals of American aviation, were the pioneers of over-ocean flying—the first to provide scheduled air services across the Pacific to the Orient and the first across the Atlantic to France and England.

Five years ago, however, the Clippers were still at war. There was no ceremony to mark the entry into war service of the Constellation-class Clippers which after the war inaugurated the first scheduled air service "around the world."

We Americans are proud, I am sure, that our flag moved from last to first place on the airways of the world during the 20 years since the christening of the *Clipper Columbus*. We Americans are thrilled that aircraft built in the United States, owned by American free enterprise, flown by American crews under command of American captains, and flying the Stars and Stripes, were first to provide scheduled air service for passengers, mails, and freight over both major oceans and around the world.

But all through these pioneering days our eyes were focused on a more important objective. The goal was not just to fly airplanes on schedule across oceans to all six continents and around the world. The goal was to carry people, cargo, and letters in great numbers—mass air transportation for the average man at fares he can afford to pay. That we felt was the opportunity—and the obligation—presented to international air transportation.

Some progress has been made already. The world's first low-cost tourist-class fare was authorized between New York and Puerto Rico on September 24, 1948. Tourist-class accommodations are less spacious. No hot aloft meals are served, but safety standards are not compromised. First-class service, of course, continues for those who can afford the luxury of first-class service.

In five short months, the number of scheduled air passengers betwen Puerto Rico and New York has more than tripled. Tourist-class air service is here to stay. The people want it. It is good business for the air lines. In fact, only last Tuesday, daily tourist-class air service was extended from New York all the way to Rio and Buenos Aires.

Late this summer, when the 19 new sister ships of the clipper *America* have been delivered, the capacity of our overseas air fleet will be increased by 40 percent. For the first time, sufficient equipment will be available to provide low-cost tourist-class service to Europe and to the Orient as well as South America.

Tourist class fares to Europe can be at least one-third below first-class rates. There is no reason, therefore, why a tourist-class air trip to Europe this fall should cost more than $225. That is our objective. That we will seek to do if foreign governments concerned permit, and we are very hopeful that they will.

American travelers already are spending a billion dollars a year abroad. Low cost tourist fares will add a great new flood of tourist dollars to the dollars American taxpayers are generously giving western Europe under the Marshall plan. Tourist dollars are not tax dollars. We Americans enjoy spending them for education and for pleasure. Other nations not behind the iron curtain seek and welcome tourist dollars. Most important, tourist dollars will not terminate with the Marshall plan.

In an era of mass air transport overseas our people and citizens of all peace-loving countries will benefit. With low tourist-class fares even the workman can leave his lathe and visit any part of the world in the course of his 2-week vacation. Air travel abroad will no longer be limited to a privileged few.

History will record for future generations that the *Clipper America* and her sister ships ushered in the era of mass travel abroad for the common man. This great aircraft was built at Seattle by many thousands of skilled Americans. We are happy indeed that William M. Allen, president of the Boeing Airplane Co., is here to speak on behalf of the men and women who built the *Clipper America*. Mr. Allen.

ADDRESS BY WILLIAM M. ALLEN, PRESIDENT, BOEING AIRPLANE CO.

Mr. Trippe, ladies and gentlemen, Miss Truman will soon name this plane the *Clipper America*. I think that name is highly appropriate. Today's event is a great deal more than a milestone of an air line and a manufacturing company. It is a symbol of the kind of progress that has become synonymous with America. It is a milestone that makes us all sharply conscious of the tremendous strides that have been made in transportation, and their ever-increasing significance in the affairs of this shrinking world.

This new civil air liner has the same type of engine and the same type of wing that carried the B–50 nonstop around the world. Our military services have thus made a great contribution in developments which are adapted to commercial use.

We have designed this airplane to meet the expanding requirements of air transportation, which include greater speed, greater range, and the ability to carry nearly twice the number of passengers across the ocean as existing equipment. We have also met the air lines' desire for substantially increased passenger comfort by providing sufficient space to permit moving about the ship during flight, and by including air conditioning and pressurization for comfortable flight at extreme altitudes. Our engineers and workmen have devoted many years of effort to making these and other improvements possible.

We believe the *Clipper America* and others that will follow will further remove the barriers of distance that have kept the people of the world provincial. They will help to make us all world-conscious.

We congratulate Pan American Airways for the kind of leadership that made this program possible. Mr. Trippe, best wishes to you and your organization for taking another great step forward in the development of air transportation.

ADDRESS BY JOSEPH J. O'CONNELL, CHAIRMAN OF THE CIVIL AERONAUTICS BOARD

We are meeting here today to participate in the christening of the largest and fastest air liner yet to be flown in commercial service on the airways of the world. It is an event that is significant in the history of transportation and in the development of aviation.

Each increase in transportation speed has resulted in opening up greater areas of the world to trade and travel. On such occasions, in all nations, transportation progress has been celebrated with appropriate ceremonies of christening. It was so with the camel caravans of the East that brought trade goods down to the sea from the deserts. It was true when Caesar's galleys developed the foreign commerce and national defense of the Roman Empire. It was true with the

golden ships of Spain and the huge merchant fleets of England.

It was true also, 100 years ago, when the United States launched the fastest sailing ships ever known. For a short period in our history these great clipper ships of the sea gave us our first and only leadership in international transportation.

But it was more important a century ago, to a new nation opening a great continent westward, to concentrate on national development. During the period that we developed the Overland Trail, and built and christened our first transcontinental railroad, our leadership in international transportation was lost. In the years that followed, American goods and American passengers, more often than not, have been transported internationally in the ships of foreign nations.

But today, as we stand here under the wings of the new *Clipper America*, we are participating in a ceremony similar to those attended by our forebears in the launching of our clipper ship fleets a century ago. We are again celebrating our active participation in international commerce. But this time we are stating boldly that we intend to continue participating in international commerce by maintaining our leadership in world air transportation.

It was only 10 years ago that the Congress of the United States gave American aviation its charter of operating authority known as the Civil Aeronautics Act. To carry out the mandates of that act Congress formed the Civil Aeronautics Board and directed the Board to consider the encouragement and development of an air-transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the postal service, and of the national defense.

Since that time the foreign air-transportation system of the United States has developed, with assistance provided by the Federal Government, until today it serves all the continents of the world and is certificated to serve more than 178,000 route miles. It is significant of the growth of international air transportation to note that some 195,000 passengers were carried across the north Atlantic in 1947.

But it is even more important to note that 73 percent of these passengers were transported by American-flag carriers.

Today with the introduction of the new Boeing Stratocruiser-type transport international air commerce can be said to have entered a new era. The increased speed of this new air liner will make possible an increase in the frequency of schedules; the increased size of the aircraft will begin to open up markets of mass transportation by air. The Boeing Airplane Co. and Pan American Airways are to be congratulated for contributing to such development by producing and operating the *Clipper America*. And it must never be forgotten that a vigorous and dependable system of air transportation is at all times a major bulwark of our national defense.

I know all of you join with me in wishing Godspeed and happy landings to the beautiful *Clipper America* as it flies the airways of peace throughout the world.

ADDRESS BY SENATOR EDWIN C. JOHNSON OF COLORADO

Thank you, Mr. Trippe. On behalf of my colleagues in Congress who with abiding faith and excellent judgment have grubstaked and backed financially the aeronautical engineering genius of America, I thank you.

It has been and it is the policy of the Congress to foster and encourage the development of a sound civil aviation transport system capable of serving the air traveling peoples of all the world. Today we are privileged to witness the latest and best fruit of that progressive and constructive national policy.

Today, with the gentle assistance of Miss Truman, we christen another span in the bridge of world-wide friendship. This magnificent ship is not an agency of death and destruction. This ship was not built to spread fear and hate but to bless mankind. It carries no guns or bombs. It transports quickly loved ones to their friends and relatives and it carries messages of cheer in its mail pouches to lonesome and eager mankind in faraway places.

Beautiful in design, luxurious in its appointments, it soars through the skies, a breath-taking tribute to American venture and creative genius. I am very happy to know, Mr. Trippe, that you have 19 other ships like this on order and that three other American-flag air lines have placed orders which will give the United States a fleet of 45 such aircraft in the near future.

This ship will spread the spirit of good will toward all men throughout the world. When they see it glittering and gleaming in distant skies men will not tremble in fear; they will glow with pride and admiration.

This is the first of the great passenger ships to be designed since the war. Emphasis as it should be has been placed on safety, speed, and comfort. May it fly far and serve many.

ADDRESS BY HON. ALBEN W. BARKLEY, VICE PRESIDENT OF THE UNITED STATES

During the last war people everywhere were stunned by the power of the airplane to create havoc on the earth. Today the airplane can and must become the most powerful messenger of peace. Peace is the true mission of civil aviation.

It is true that perhaps no other civil activity of our people bears any more direct and intimate relationship to our country's security than does our civil aviation. Providing an indispensable reservoir of men and machines at the same time as it helps maintain an industry that can be instantly converted to defense in the event of an emergency, it is an arm of our national air power.

It is part of our capacity to preserve the peace. But even more important, civil aviation actually helps to make and create peace.

The plain men and women of the world are their own best ambassadors. When they can stand face to face and talk things over, they can live together as friends, and misunderstandings will disappear. Until now, they have been unable to do this. Not many persons can afford more than 2 or 3 weeks away from the responsibilities of family and work. But with new planes such as this, a vigorous civil aviation with mass air transportation as its goal can enable our people to visit abroad—and people from foreign countries to visit us. Mass air transportation can bind men closer together by shortening the distances between their minds.

There is still another importance to our civil aviation. Directly and indirectly, millions of our people have a personal stake in civil aviation as an industry. It is an important and expanding part of our national economy.

Only in free countries where private enterprise remains unchained can aviation develop to such an extent. Only free minds can dream daringly and chart new courses. Slave labor may build but cannot be creative. Let us hope and pray that soon all the powers of the world will be able to devote their resources and genius to building for their people's comfort and improvement instead of weapons of destruction.

In christening the *Clipper America*, we are launching another wing for peace. We are sending forth into the world another symbol of the limitless scope of man's imagination and ability, of his skill in manufacture, and of his continuously pushing forward of the frontiers of knowledge.

The Menace of Red China

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Francis Budenz from Collier's magazine for March 19, 1949:

THE MENACE OF RED CHINA

(By Louis Francis Budenz)

(The Communist avalanche that's rolling across China will gain momentum, smash across the Pacific islands and cover the United States—all according to the Soviet plan. The American public's apathy to this looming disaster is also a part of the plan—exposed here by one who took part in the plotting.)

The Communist conquest of China, now dangerously near completion, long has been planned as a major milestone in Moscow's road toward creation of a Soviet America. Japan and Korea are next on the schedule, then Indonesia and the Philippines. Once in control of the western Pacific's vast manpower and vital rubber, tin, and oil resources, Russia hopes to be ready for the final showdown with the United States.

That is the blueprint, at least, of Soviet world conquest. It has been known to United States Communists since 1927, the year Earl Browder was sent to China to plant seeds of anti-Americanism there. His mission became a model, cited repeatedly at Communist meetings I attended, for the manner in which a true Bolshevik acts against the bourgeoisie in his own country.

Since 1927, every American Communist has been inculcated with the Soviet tenet that China is the master key to a Red White House.

In my 10 years as a Communist editor and party worker, no other indoctrination program was more important. Numerous United States Red leaders stated their belief that China's 463,000,000 people would be the decisive factor in sovietizing the United States. At a 1940 "educational meeting" of Daily Worker staff members, William Z. Foster, now the party's national chairman, stressed China's role in America's future.

"China's millions," he said, "will be a great aid to the Soviet Union in helping the American proletariat establish a Soviet America." Continuing, he pointed out that China was also "the key to Korea, Japan, and the Philippines."

Japan's scheduled role in the Soviet pattern of conquest was more recently outlined in the September 8, 1948, issue of New Times, weekly supplement of the Moscow newspaper Trud. An editorial in it predicted that "the insensate policy of power-drunk American monopolies" in Japan would "cost blood, the blood of the people." But, it concluded, "the national liberation movement in the Asiatic countries will drive the American imperialists out of all Asia, including Japan."

Significantly, on the very day of Generalissimo Chiang Kai-shek's retirement, a Chinese Communist broadcast promised that "a new China * * * will assist in Japan's democratization and prevent the reemergence of reactionary forces." The same day, in Moscow, Pravda editor Pospelov denounced America's "mad imperialism," cited the great Communist victories in China despite United States aid to Chiang Kai-shek, and predicted "the twentieth century will be the century of the complete triumph of Leninism."

The tremendous potential of China's manpower and materials dominated many discussions at United States Communist Party headquarters while I was editor of the Daily Worker. Conferences with secret conspirators, spy, saboteur agents like J. V. Peters and the late Jacob Golos, always traced the route Asiatic operations would follow. China first, followed by Japan, Korea, the Philippines—and then Alaska and Hawaii.

Golos, one of the espionage chiefs, often outlined the vital urgency of organization on the west coast and Hawaii as vital links in the Asiatic chain, which would mean the ultimate defeat of American imperialism.

Peters, then as now a main cog in the Communist International underground, discussed plans with me for infiltrating Hawaii with our California undercover agents. Recent congressional revelations of a Red spy network extending from California to Alaska indicate that Peters did his west coast job very well.

Discussion leaders at our "educational" meetings were party theoreticians like Foster, Alexander Bittelman, Moscow-sent expert on Leninism and China, or Max Weiss, chief of the Young Communist League, later known as American Youth for Democracy. Always emphasized was the necessity of our joining the China struggle as a preliminary to the overthrow of our own bourgeoisie.

Yet it is a tragic irony that this gravest threat to our national security is a thing of America's own making. Most Americans, during World War II, fell for the Moscow line that the Chinese Communists were not really Communists. They firmly believed that Mao Tse-tung's soldiers were nothing more than agrarian reformers, plus a few democrats and liberals who couldn't stand the Kuomintang corruption and graft. To prove their contention they cited T. A. Bisson in Far Eastern Survey, who wrote that by no stretch of the imagination can this be termed communism; it is, in fact, the essence of bourgeois democracy, applied mainly to agrarian conditions.

And that is just what Moscow wanted Americans to believe. Even many naïve Government officials fell for it. So did several ill-guided newspapers and magazines. This deception of United States officials and public was the result of a planned campaign; I helped to plan it.

MAKING AMERICA A CAT'S-PAW

Its objective was to win American confidence so that the United States' foreign policy in China might be influenced to Moscow's own ends. The number one end was a Chinese coalition government in which Chiang Kai-shek would accept the agrarian reformers—at the insistence of the United States.

Among the unwitting American officials that I influenced in this operation were a United States Senator and a member of the House Rules Committee. The Senator, fancying himself an authority on China, lent a sympathetic ear to my "right slant" on Chiang Kai-shek. My contacts with both officials were on orders of Communist Chief Browder.

The classic example of naïveté, however, was a high Government official with whom I had become acquainted in the depression days. A defense of the WPA, that I had written while I was editor of the Communist Mid-West Record, had caught his eye and won his respect for my judgment. He communicated with me frequently.

He phoned from Washington one night in 1939 to get my opinion. What, his query went, did I think of the rumored aid by Stalin to Hitler? Naturally, I pooh-poohed the idea. He seemed satisfied. So was I, and so was Browder when I reported the conversation the next day. A few weeks later, the alliance of the twentieth century's two most infamous dictators was working at full speed.

The Asiatic assignment's chief contact man in Washington was Frederick Vanderbilt Field, millionaire and dilettante left-winger. His mission was to the State Department, where there were valuable channels through which to pour his propaganda that Mao Tse-tung's followers were merely agrarian reformers. But once the Chinese Reds gained the upper hand, Field changed his tune. In the July 1948 issue of Political Affairs, the Communists' official theoretical publication, he wrote:

"Our Chinese comrades are destroying American imperialism in the Far East. Let us, American antiimperialists, at least accept and make use of the historic contribution which they are making toward our own welfare."

This on-again-off-again policy toward Mao Tse-tung always shifted with the devious, opportunistic course of Moscow strategy. The first twist came in 1937. Earl Browder, then general secretary, called a China conference at party headquarters, 35 East Twelfth Street, New York.

Grouped beneath pictures of Lenin and Stalin in the drab ninth-floor office overlooking the street were 10 United States Communist leaders, among them: Alexander Trachtenberg, publisher of all Marxist-Leninist literature in the United States; J. V. Peters, the Communist International secret agent; Fred Brown, whose real name was Ferrucci Marini and who was a Communist International secret agent; Harry Gannes, foreign editor of the Daily Worker; Sam Carr, national organizer of the Canadian Communists; Carl Bristel, active in the Young Communist League; Frederick Vanderbilt Field, Browder, and myself.

Browder announced that he had received word that the followers of Mao Tse-tung have to be presented in a new dress. With a sarcastic grin and Kansas-imitated twang, he said our new objective was to picture them as a mild variation of plains State agrarian reformers. Up to that point they had been known simply as Chinese Communists.

We agreed that the change could not be effected immediately, since our recent emphasis had been on the revolutionary aspects of the Chinese Soviets. Then Field outlined an alternative. We could work through legitimate Far East organizations and writers that were recognized as oriental authorities. Field emphasized use of the Institute of Pacific Relations. This is not a Communist organization, but Field later succeeded in becoming secretary of its American council. Also chosen were the American League Against War and Fascism, and American Friends of the Chinese People, the latter a Red-front organization. Their publications Fight and China Today were to be used in the deception.

The agrarian reformers idea started from there. It took root in leading Far East cultural groups in the United States, spread to certain policy-making circles in the State Department and broke into prominent position in the American press.

Browder master-minded the new China policy. Having served 2 years in China as a Communist International representative, he was our authority on that country. Ostensibly, back in 1927, he was one of a three-man international workers delegation composed of himself, Tom Mann, of England, and Jacques Doriot, of France (Doriot later renounced communism). Actually, Browder's real job in China had been the undermining of United States prestige. He had shouted about the evils of the "dollar republic" (the United States of America) and how it was the exploiter of all countries. Those denunciations were incorporated in the 1928 Sixth World Congress declaration of war against all bourgeois democratic countries.

Significantly, Browder had arrived in China just after Chiang Kai-shek threw out the Communists who had tried to take over the Kuomintang. A raid on the Soviet Embassy in Peking a short while before had revealed conclusive evidence of a Comintern plot to use the Kuomintang for its own purposes of world revolution. Then, as well as now, China was the focal point for world revolution. And one of Moscow's agents in the Kuomintang central executive committee prior to the 1927 purge was Mao Tse-tung, the peasant leader who had helped organize the Chinese Communist Party in 1921.

But by 1937 Mao Tse-tung was just an agrarian reformer. This whitewash was a plot to get United States pressure on Chiang Kai-shek to agree to a coalition government. When the Japanese invaded China Mao proposed national unity arrangements to Chiang.

Chinese Communist cooperation with Chiang Kai-shek lasted until Stalin's 1939 pact with Hitler. Then, of course, Chinese Reds followed the Moscow lead again, branding the European conflict an imperialist war and breaking off relations with the nationalist government. Soon after Russia signed a nonaggression pact with Japan.

Mao Tse-tung, always a devoted Stalin disciple, didn't let patriotism for his invaded homeland stand in the way of Moscow's long-range strategy. He was too well drilled in the philosophy of Soviet policy. This policy was expressed best by Stalin in 1934: "The strategy of the party is not something permanent, fixed once and for all. It changes to meet historical shifts, historical turns."

Wartime Communist propaganda in the United States made much of the gallant fight Mao Tse-tung's armies were supposedly making against the Japs in China. Yet no party-line apologist has yet explained how 10 Japanese divisions moved from Manchuria to the Central China front in 1944, through Communist-held territory, without meeting any show of resistance. It was that Japanese force which eventually cut through east China and overran Gen. Claire Chennault's fourteenth United States air force bases.

CHOU PLEADS FOR COALITION

In the midst of the Stilwell crisis in October 1944 while Japanese troops from Manchuria were encircling United States air bases in Yünnan, the Chinese Reds issued another call for a coalition government; it was faithfully echoed by naïve Americans. Chou En Lai, political assistant to Mao and chief Red negotiator during the 1946 China mission of General Marshall, said: "In order to save China in this crisis * * * we propose that the government abolish (the present) one-party dictatorship and set up a coalition government." (Everyone remembers the advantages a coalition government gave Czechoslovakia.)

Just 6 months after Chou's statement—in April—the Communist duplicity was revealed, and by Mao himself. At the Seventh National Convention of the Chinese Communist Party, Mao made a special report on coalition government. Coalition, he said, was merely a slogan that would lead to the destruction of Chiang Kai-shek and the defeat of reactionary American imperialism. That revelation reemphasized this party resolution, adopted in 1944: "The cooperation of the Chinese Communist Party with the United States is a temporary strategy."

This policy of deceit began the downfall of Nationalist China in late 1945. Russia, after a phony 6-day war with the Japs in Manchuria, disarmed 625,000 Nipponese soldiers and turned their weapons over to the Chinese Communists. That Russian-donated booty enabled the Chinese Reds to drive Chiang Kai-shek's soldiers out of Manchuria, North China, and to eventual surrender at Nanking. Three months before Russia thus armed Mao Tse-tung's forces, Moscow had pledged friendship and support to Chiang's Nationalist Government in return for China's

forced agreement to Russia's claims in Manchuria.

There were many instances where the Communists were successful in impressing their views on the United States State Department simply by planting articles with the proper slant in such magazines as Far Eastern Survey, Pacific Affairs, and Amerasia. Both Far Eastern Survey and Pacific Affairs are publications of the Institute of Pacific Relations.

However, the institute is, as I said, not a Communist front. Most of the 1,600 members of the American section of its 10-nation Pacific council are patriotic United States citizens. But party members and apologists have infiltrated its most influential committees and publications. Their articles and speeches have been used as reference material by the Far Eastern Division of our State Department. Frederick V. Field, one of the institute's council secretaries, incidentally, attended the San Francisco Conference and at the same time served as correspondent for the Daily Worker.

The success of Amerasia's entree to at least some circles of the State Department is a court-proven fact. Its coeditor, Philip J. Jaffe, was indicted in 1945, charged with conspiracy to remove confidential Government records from secret files of the State Department and other departments. That was the first revelation of Washington's wartime stolen secrets, followed later by the Alger Hiss-Whittaker Chambers exposé.

Jaffe, whose magazine faithfully followed the Moscow line on China, pleaded guilty. After paying his fine, he entertained his codefendants (some whose indictments had been dismissed) and members of the Daily Worker staff at a party. Toasts were drunk that night to "the coming victory of communism in China and the defeat of American imperialism."

Soviet secret police in the United States first told me about Jaffe. They said he was a valuable friend. Later, through reports to the national committee, I learned Amerasia's main objective was establishment of State Department contacts which could prove helpful in stopping United States aid to Chiang Kai-shek.

CHIANG BRANDED AS FASCIST

Less than 24 hours after Japan's surrender, American Communists really turned the heat on their old foe, Chiang Kai-shek. He suddenly was labeled a Fascist. An editorial in the Daily Worker of August 15, 1945, declared that "not a single American gun, soldier, plane, or other war equipment must be placed at the disposal of the Fascist clique at Chungking."

Two days later a paid "message to President Truman" appeared in the Daily Worker. Its verbiage was substantially the same as the Daily Worker editorial of August 15. It was signed by 21 prominent Americans. Among them: Frederick Vanderbilt Field, Lawrence Salisbury, an IPR editor; T. A. Bisson, China expert to whom the Chinese Reds were "the essence of bourgeois democracy."

Later, the Daily Worker editorial was supplemented by a memorandum from the New York State Office of the Communist Party. The subject: Campaign of Struggle Against United States Imperialist Intervention in China. I still have a photostatic copy of it.

The memo ordered picket lines, mass meetings and congressional protest delegations in opposition to the Truman administration and Republican Party policies of imperialist world domination * * * and imperialist intervention in China. As a means to that end, it recommended the sale and maximum distribution of Mao Tse-tung's book, China's New Democracy. It didn't mention, however, that the United States version of Mao's book had been revised by Earl Browder and other Communists back in the late 1930's to edit out embarrassing references to the dictatorship (in the image and likeness of Stalin, of course) that he planned to establish once the Reds came to power in China.

The memo also suggested books by two American authors as reading material: Harrison Forman's Report from Red China and Gunther Stein's Challenge of Red China. That was not surprising. Both had pictured the Reds as agrarian reformers.

MAO'S ATTACK OF THE UNITED STATES

Mr. Forman's book was published in 1945; but the line had changed while the book was on the press. That year Mao Tse-tung openly declared himself with Russia and against the United States, telling the Chinese Communist convention that coalition government was a temporary expedient, one that would lead to the destruction of Chiang Kai-shek and American imperialism. Mao's attack on America was made while United States and Russian troops were still celebrating their linkup at the Elbe River.

At the Daily Worker office, we immediately realized that the honeymoon would soon be over. Mao's tip-off was followed on June 1, 1945, by a Moscow directive in the New Times.

On the surface, it was an innocuous article. Titled Patriotism and written by N. Baltisky, it declared that the highest patriotism consisted of subservience to Soviet Union. Comrade Baltisky added that true patriotism required the peoples of the world to stand with the Soviet Union against all imperialist ventures of their own governments.

To uninitiated, non-Communist eyes, that was no more than a harmless rehash of the propaganda line preached by the Soviets prior to the Comintern's dissolution in 1943. It meant something more to Communists, familiar with Stalin's technique of transmitting orders. It was the Kremlin's code method for rallying the world's Reds for the newly launched cold war—which Moscow still insists was started by the west. The date was 3 weeks after VE-day and 6 weeks before the Potsdam Conference of the victorious Big Three Allies.

The cold-war line, introduced by Mao Tse-tung and seconded by Comrade Baltisky, got its sanction from Stalin in October 1947. Moscow announced the formation of the Fourth International, postwar successor to the Comintern. Its manifesto said that world politics, since World War II, has crystallized into two opposite lines.

"On the one extreme," it read, "the U. S. S. R. and the democratic countries aim at whittling down imperialism and strengthening democracy. On the other side the United States and England aim at the strengthening of imperialism and the strangulation of democracy."

Presumably, imperialism was whittled down with the successful Soviet coup in Czechoslovakia, and democracy was strangled when the French Government defeated Communist efforts to overthrow it.

Now it's China's turn to get strengthened democracy, Soviet style. And American troops in Korea and Japan are exposed to another Bataan, flanked by numerically superior enemy forces on the mainland and open to submarine blockade from Soviet ports in Manchuria and Siberia.

Back in 1923, 5-year-old Soviet Russia saw China as its steppingstone to world domination, realizing well that as China goes, so goes Asia. It took a quarter of a century to reach the goal, which only proves that while the Communist pattern of conquest may deviate, it never dies.

Radio Broadcast of Jack Bell

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of Mr. Jack Bell's broadcast on the Elmer Davis program over Station WMAL on Wednesday, March 16, 1949:

At length, after misgivings, the State Department announces that Soviet delegations will be admitted to this country. They will use America as a platform for anti-American sentiments. The visas of 23 delegates from Russia and satellite countries have been granted to attend a 3-day conference at the Waldorf Astoria. It is thinly disguised under the high-sounding name of the Cultural and Scientific Conference for World Peace. Since there is now no further use in seeking to get the Justice Department and the State Department to bar known Communists from this country—they have adopted a special rule, in this instance—I think, in fairness to the American public, that as much publicity should be given as possible about the antecedents of this outfit and its close connection with the Cominform. This meeting at the Waldorf, to begin on March 25, is a blood cousin of the so-called World Congress of Intellectuals, which was held last summer at Wroclaw, Poland. The American delegation, as I recall, was headed by Dr. Harlow Shapley, who is the head of the National Council of the Arts, Sciences, and Professions which is now sponsoring the Waldorf meeting. Dr. Shapley, a Harvard professor of astronomy, seldom lets a week go by without lending his name to some project which furthers Soviet interests. He belongs to more than 10 Communist-front organizations and is one of the defenders of Gerhardt Eisler. In Boston today, I note that Thomas Forgan, clerk of the Suffolk County court, invited Shapley to resign, because he consorts with Communists. Vice chairman of the National Council of the Arts, Sciences, and Professions is Max Weber, an artist, who has supported Communist Party candidates for office. This National Council has recently condemned President Truman for not having accepted Stalin's invitation to go abroad and meet him. It defended the so-called Hollywood 10 and has raised a fund of $25,000 to back up American teachers who have been discharged for disloyalty. I leave it to you to judge from these citations what its political coloration is.

The same troupe of performers, which will be on view at the Waldorf meeting tomorrow, went through its paces last summer at the Wroclaw congress of intellectuals. It was run by and for the Cominform. The chief speaker was one Faydeyev, who is the Soviet commissar of literary production. He made an incendiary attack on America, for its cultural "filth," which he said was overspread by the dollar sign, and then went into the real meat of the coconut—attack on American foreign policy. He was cheered to the rafters and followed by speaker after speaker, echoing the same line. Faydeyev is one of those coming to the Waldorf-Astoria conference.

At least one American, attending the Wroclaw conference—Bryn J. Hovde, president of the New School in New York—got mad clear through and got up and made reply, saying

that true democracy in government was the hope of the world. He said later he never saw anybody get a colder reception. Only a handful of Americans and British applauded. Mr. Hovde came to the conclusion that the purpose of the Wroclaw meeting was to get ammunition from so-called intellectuals, the world over, which could be used by the Soviet Union in the cold war—to place the blame for war, when it came, on the west.

If we get full reports from the press and radio on this Waldorf conference, I think undoubtedly you will see the same line emerge. Undoubtedly a great many Americans will be taken in by the names and the great air of respectability. The name of Shostakovich, the Russian composer, will attract its share of people who admire his music. They should remember that his best music has been condemned by the ideological censors of the Soviet Union as being too servile to the west. He suffered something of a cultural purge a few months ago and had to bend the knee and admit that "he had not fought hard enough" against this corrupting influence. He is a pawn in this world game of influencing others, on the outside, even while his music was the subject of official attack on the inside of Russia.

The State Department demonstrates that it knows what the score is. George V. Allen, Assistant Secretary of State, who made the announcement that the Communist representatives would be admitted, said, "The American Government entertains no illusions as to the manner in which the Communists will attempt to use and manipulate the present conference." He went on to say that the Soviet Government had frequently failed even to answer visa applications of high American officials who had sought to enter the Soviet Union. The United States had decided, he said, to admit the delegates "because of its unswerving devotion to freedom of information and speech on any issue, however controversial it may be."

I think the matter is now in the hands of American intellectuals—scientists, artists, and professionals—if they can get the floor, to show up this conference for what it is from the floor. Surely there must be some such in the United States who are true liberals and not "totalitarian liberals." We ought to be able to show the world that—even if we are slow about it—we finally catch on.

The American Legion

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1949

Mr. FURCOLO. Mr. Speaker, today we observe the thirtieth anniversary of the founding of the American Legion. This great national organization born in a period of confusion and turmoil at the close of World War I is now completing three decades of outstanding contributions to the American way of life.

Starting in 1919 with the organization of its National Service Bureau which worked with State service bureaus and others to assist veterans in hospital treatments, vocational training, and war-risk insurance problems, the American Legion has established an enviable record of achievement.

During this 30-year period the Legion successfully campaigned for establishment of the United States Veterans Bureau and its subsequent reorganization and fought continuously until the eventual creation of the Veterans Administration.

All the outstanding contributions to the Nation's welfare culminated in the acceptance by the Congress and the president of the Legion-sponsored GI bill of rights—the Serviceman's Readjustment Act of 1944. Drafting of this legislation has been called the greatest single feat of statesmanship in the Legion's career.

The accomplishments of the American Legion that I have mentioned are but a very few of the high lights of this organization's outstanding record. Time does not permit my enumeration of accomplishments in the fields of labor and general social service. Time forbids a discussion of accomplishments in the fields of education and foreign affairs. Let me point out that the Legion has never rested on its laurels but is fighting and will continue to fight the battle for a better Nation and world while always holding aloft the torch of democratic ideals.

Allow me to express my heartfelt personal congratulations to the active membership of the American Legion upon this anniversary of 30 years of outstanding accomplishment.

Manganese

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1949

Mr. MARTIN of Iowa. Mr. Speaker, under leave to exend my remarks in the RECORD, I include the following from an article by Tris Coffin in the Washington Times-Herald of March 13, 1949:

MANGANESE RACE

A toughening-up metal is giving the Munitions Board headaches that aspirins won't cure. It is manganese—14 pounds go into every ton of steel to harden it. This metal is the one thing the Russians have that we need like sixty.

This is the pitch: The United States eats up about 1,500,000 tons of manganese a year, and produces around 130,000 tons annually. It is especially needed for the hard, tempered steel that goes into armaments. There is no publicly known substitute. Our stock pile is little more than a year's normal supply, or less than a fourth of a security supply.

Russia is the big manganese producer. Her low-priced manganese dumped on the world market forced many American producers out of the game 20 years ago. The other producers—and they haven't come within shooting distance of Soviet production yet—are the Union of South Africa (hundreds of shipping miles away), India, the Gold Coast, Brazil, and Mexico. The United States grabbed a million tons of manganese ore from Cuba during the war, but those deposits are now exhausted.

A scary statement on the manganese shortage was made by Elmer Pehrson, the Bureau of Mines chief economist. He was asked what the score would be if our stock piles were exhausted, imports were shut off, and we had no production at home. He answered soberly, "I feel if we ever get to that stage, and if we're in a real war, we might just as well acknowledge that it's over."

The answer, according to WILBUR MILLS, the young Arkansas Congressman, is to subsidize manganese mining. He has it from those in the know that there is enough ore in this country to last two centuries or more. But it is ore that will cost plenty of bucks to get out and process. Mills has a bill to get Uncle Sam to buy domestic ore at a price that will get mining interests at work digging.

Why Ireland Is Not Joining Atlantic Security Pact

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address being delivered by me over radio station WLW, Cleveland, this evening:

Fifteen hundred years ago, a civilization was dying. The great Empire of Rome still wore the insignia of power and glory, but its heart was gone. From the north and east the barbarian tribes were battering at the walls of the Empire, and the walls were crumbling.

In those years a young slave escaped from Ireland to France. Historians dispute about where the young slave, Patrick, was born and where he was captured. But beyond that, Patrick has left historians little to dispute about. He found Ireland pagan and left it Christian. He made it the isle of saints and scholars; so that when the Roman Empire finally went down and Europe was sunk in spiritual darkness, it was from Ireland that the light came to illumine it again. There is no need for me to rehearse here a more than twice-told tale. I would rather stop and ask what Ireland means for us in the world of today. Has she any light to cast on our problems? The shadow from the east is again over Europe and men are talking of the possible end of our civilization. On this St. Patrick's Day of 1949 why do we look to Ireland?

Tomorrow the world will be given the details of the Atlantic security pact. Ireland has been asked to be a party to that pact and has refused. The Irish Government has said that it cannot be a partner to the pact so long as its six northeastern counties are partitioned off by the act of the British Government. Now, the Irish Government does not expect that its actions shall be immune to criticism, but it has a right to expect that if they are criticized, the criticism be intelligent. It has a right to expect that people become acquainted with the facts in the case before they judge.

This refusal of the Irish Government to take part in the Atlantic Pact should not be looked on as just the attitude of a sulky child nursing old grievances. Let us look at the facts. Six of Ireland's 32 counties were partitioned off by the British in 1920

and given a separate government. Shortly after coming into existence in 1921, the northern government declared a state of emergency and suspended all civil liberties. The emergency has now lasted nearly 27 years. I think an emergency like that calls for explanation.

The territory of northern Ireland was carefully chosen so as to be big enough to make it possible to exist under a separate government, but not big enough to enable the most vigorous minority ever to attain a majority. You may get an idea of the way the division was carried out when I mention that Malin Head, in Donegal, the most northerly point in Ireland, was placed in southern Ireland.

Under the Special Powers Act, Irishmen can be taken from their homes in the dead of night and interned indefinitely without charge or trial. To make assurance doubly sure, the northern government has gerrymandered on a grand scale. Indeed, the Irish have a new word for it, "Derrymander," taken from the example of the city of Derry. In that city 27,000 members of one group can elect only 8 city officials, while 18,000 recognized supporters of the other group can elect 12. Cookstown, county of Tyrone, illustrates the unfairness of representation of the minority. Fifteen hundred of the minority group can elect no representative to the Urban District Council, while 2,000 of the majority can elect 12.

Let me give you an evaluation of the Northern Irish Government, made, not by Irishmen but by Englishmen. In 1935 there was a series of riots in Belfast, in which over 500 families were driven by violence from their homes, many of their homes being burned by mobs. A British organization, the National Council for Civil Liberties, sent an observer to Belfast to report on affairs there. One thing he observed was that a large force of police, numbering about 100, backed up by armored cars and machine guns, did not seem able to control a mob bent on wrecking houses. The Council for Civil Liberties had this to say of the Special Powers Act, under which the northern government operates:

"Through the use of the special powers, individual liberty is no longer protected by law, but is at the arbitrary disposition of the executive. The abrogation of the rule of law has been so practiced as to bring the freedom of the subject into contempt.

"The Northern Irish Government has used special powers toward securing the domination of one particular political faction and, at the same time, toward curtailing the lawful activities of its opponents. The driving of legitimate movements under ground into illegality, the intimidating or branding as lawbreakers of their adherents, however innocent of crime, has tended to encourage violence and bigotry on the part of the Government's supporters.

"The Northern Irish Government, despite its assurances that special powers are intended for use only against lawbreakers, has frequently employed them against innocent and law-abiding people, often in humble circumstances, whose injuries, inflicted without cause or justification, have gone unrecompensed and disregarded."

That is the report of the observer sent from London by the British National Council for Civil Liberties. The observer was not reporting on Nazi Germany or Soviet Russia, but upon the six counties of the north of Ireland. The northern government has been operating on the Fascist model for 27 years; and the British Government, which set it up and which supports it, has not lifted a finger to do anything about it. Do you not think that the Irish Government has a case for refusing to join the Atlantic Pact while one of the signatories to the pact maintains such a monstrosity of a government in the north of Ireland?

Why do I bring all this out? Because it is going on right now, because it has gone on for 27 years, and Britain has not once taken action to stop it. The Irish Government is not nursing an old grievance. It is affronted at a continuing grievance. The Irish Government, if it enters the Atlantic Pact, has the right to expect that its partners in the pact shall deal fairly with it. If this is a pact designed to save peoples from dictatorships, Ireland has a right to expect that Britain shall do something about a dictatorship which began before Mussolini marched on Rome, before Stalin came to the Kremlin, before Hitler became Chancelor of the Reich. Ireland sees a part of its people taken from it, and subjected to oppression and persecution; and do we expect that its Government shall sit down with the Government that is the cause of this and say nothing about it?

Perhaps it may be urged that, considering the imminent peril to Christendom from the encroaching menace of Moscow, the Irish Government should take the attitude that it will waive the partition question in the face of a common danger. There are a couple of comments I would make on that. First, it is not just a grievance of the Irish Government, not just a territorial question that can wait for solution. Nearly half a million Irishmen are suffering persecution in the north. Can the Irish Government just brush them off? Is the Atlantic Pact based on respect for human rights or is it not? There is no government in the world that shows more regard for human rights than does the Irish Government. Would it be true to its principles if it let the human rights of its own fellow Irishmen go by default?

My second comment is this: If there is a moral obligation on the Irish Government to take part in the Atlantic Pact, irrespective of the treatment of the minority in the north, there is a double obligation on the British Government to do something about the northern situation. The northern government could not last a month without British support. The British Government must bear its share of the blame for keeping the discriminating government of the north in power. No one therefore can fairly demand that the Irish Government join the pact without at the same time demanding even more strongly that the British Government take steps to end the injustices it is condoning and supporting in the north.

If Ireland is asked to join the pact, it has a right to some proof of the good faith of its associates. What proof can the British Government offer so long as it continues to maintain in power the government that persecutes a minority?

No one who examines the map of the Atlantic can fail to see the commanding position that Ireland holds in any scheme of Atlantic defense. By its geographical location, Ireland holds a key position in guarding the approaches to Europe. It is to our own advantage, here in the United States, to help Ireland to take its part in the defense of the west. I hope that I have made this much clear: we cannot fairly demand Ireland's adherence to the pact without at the same time demanding that Britain do something to remove the continuing injustice which, for nearly 30 years, British-supported partition has inflicted upon Ireland. The member states should come into the pact with clean hands.

It would be strange, indeed, if the Government of Ireland were to be thought of as lacking in international understanding. Its record is, in fact, well above average when it comes to international understanding. Listen to these words of Mr. De Valera before the League of Nations, September 16, 1935, when the League was considering Mussolini's aggression against Abyssinia:

"The final test of the League and all that it stands for has come. Our conduct in this crisis will determine whether the League of Nations is worthy to survive, or whether it is better to let it lapse and disappear and be forgotten. Make no mistake, if on any pretext whatever we were to permit the sovereignty of even the weakest state amongst us to be unjustly taken away, the whole foundation of the League would crumble into dust. If the pledge of security is not universal, if it is not to apply to all impartially, if there is to be picking and choosing and jockeying and favoritism, if one aggressor is to be given a free hand while another is restrained, then it is far better that the old system of alliances should return and that each nation should do what it can for its own defense. Without universality the League can be only a snare. If the Covenant is not observed as a whole for all and by all, then there is no Covenant."

That was in 1935. Rarely has a prophecy in political affairs been so swiftly and so terribly fulfilled. Can we say that Ireland's stand is unreasonable today if it refuses to take part in an Atlantic Pact while one of the chief partners in the pact is engaged in active injustice against Ireland itself? Should we not rather take the Irish Government's stand as a warning against repeating in 1949 the folly of 1935?

Ireland's strength in its centuries-long struggle for freedom was mainly spiritual. Man for man and weapon for weapon, the oppressor was immeasurably stronger. But Ireland had what cannot be measured, the will to survive of a people determined to be free. The Irish never lost their faith in the things of the spirit. And their warning to us today is that we underrate spiritual values. When we sacrifice them to immediate, short-term material gains, we come out losers in the long run. Nothing can help us in our present struggle for men's souls so much as rigid adherence to justice, fair dealing, and the strictest respect for the rights of all men. Unless we hold by those, our victories will be pure illusion, for we shall be giving away the very things we are fighting to preserve.

Standing firm on its spiritual heritage, the Irish nation has in our own times achieved a new birth of freedom. One does not have to be very old to remember when such a birth of freedom for Ireland seemed the most remote and impractical and hopeless of fantastic dreams. Yet it has happened. We have seen it with our own eyes. If we can bring to the solution of our present seemingly hopeless world problems the courage and faith, the understanding of the human spirit and its needs that inspired Ireland's leaders, then we, too, may hope to see a new birth of freedom in this heartsick world.

Shipments of Manganese From Russia

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Tony Smith from the Washington Daily News of March 11, 1949:

HAS RUSSIA ALREADY QUIT SHIPPING US MANGANESE?

(By Tony Smith)

Russia may already have halted its shipments of vital, steel-making manganese to

this country, Representative WILBUR D. MILLS, Democrat, of Arkansas, said today.

Approximately 70 percent of this critical material comes from Russia.

The move has been rumored and reported for several weeks.

It was strongly indicated in the February import figures. They were 70 percent below the peak month of 1948 and considerably below average.

Representative MILLS, who comes from a minerals-producing State is sparking the drive in Congress to find domestic sources of manganese so that the country can be self-sufficient.

The House Public Lands Committee is considering one of his measures for that purpose, and an Armed Services Committee will take up another Mills bill as soon as Public Lands finishes.

CONGRESS WAS WARNED

Moscow's attempt to throttle the tremendous steel-producing machinery of the United States was inevitable after this country reduced its shipments of steel products, machine tools, oil, and other products Russia needs, to the vanishing point, according to Representative HERMAN P. EBERHARTER, Democrat, of Pennsylvania.

That action was taken over the vigorous objections of the State Department. Time and again in 1946 and 1947 representatives of Gen. George Marshall, former Secretary of State, warned Congressmen who wanted to raise the roof because they'd seen a Russian oil tanker loading up at a time of domestic shortages here.

State Department aides argued the oil going to Russia was only a drop compared with our total annual production. They said it was a small but important part of the price we were paying for vital strategic metals such as chrome and manganese.

Opinions differed widely on the effect of Russia's action. Iron Age, a publication put out by the industry, angrily accused the Soviets of trying to blackjack the United States into lifting its embargo on machine tools and steel.

"But the Red threat won't work," Iron Age said. "Government and industry have been aware of this possibility for nearly a year. They are prepared. * * * Supplies may be tight for awhile, but steel making will not suffer one iota."

The national metalworking weekly claimed Government stock piles could supply the industry for as long as 5 years.

OR SERIOUS SHORTAGE?

This view runs contrary to that of two Congressmen studying the situation. Representative MILLS estimated 1,300,000 long tons of manganese is stock-piled in the hands of private industry for the Government. He said this wouldn't be enough for even one full year at the present rate of production, which requires 1,700,000.

Representative CARL T. DURHAM, Democrat, of North Carolina, chairman of the Armed Services Subcommittee on Strategic Materials, agreed with Representative MILLS' estimate.

He said Russia's action has created a shortage of manganese in this country. Pointing out that steel can't be produced without it, Mr. DURHAM said it has placed the Nation in a "precarious condition."

"Not only because the need for steel in defense industry," he added, "but because of its importance to the entire national economy. When you consider how dependent this mechanized society of ours is on steel products, you'll see that any material essential to its production is the cornerstone."

Representative MILLS said the Russian cut in exports to this country came sooner and went deeper than expected. The intent was known here, but most officials thought the slow down would be more gradual.

St. Patrick's Day

EXTENSION OF REMARKS

OF

HON. NEIL J. LINEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. LINEHAN. Mr. Speaker, to our American people of Irish blood and ancestry, March 17 is more than a festive day of genial comradeship, or an occasion to sport a green tie or pocket handkerchief. It is a memorial to the gallant spirit and undaunted religious faith of a people who resisted oppression.

In our world of today, we see about us on every side many forces striking at the very roots of our independent existence. The philosophies are many which are advanced in our times to minimize our cherished spiritual beliefs. We see the religious of all faiths and creeds an ever-increasing target of attack. These men and women whose altruistic motives best exemplify man at his best, are badgered, tortured, and imprisoned for seeking to instill recognition of our dependency on God, rather than the state.

It should be heartening to all that the mind, despite the trials of this life, can triumph over the sword and the lash. We should be comforted in these days of worry over world crises, that we will triumph over the powers threatening our security, just as surely as did the valiant sons of St. Patrick.

Contribution of the Irish to the Development of America

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. FURCOLO. Mr. Speaker, today throughout the world men and women of Irish blood are pausing to pay tribute to the great patron saint of Ireland, St. Patrick.

On this great day it is well to dwell for a moment on the contribution of this great race to our Nation. The true contribution of the Irish can never be measused; the blood of their sons has enriched every battle ground. They fought gallantly in the War of Independence. They fought, too, for the preservation of the Union. They were at the Alamo in Texas and at Custer's last stand. The casualty lists of World War I and II contain the names of thousands of Americans of Irish descent who valiantly gave their all for a better world.

In every field of endeavor the Irish-American has left an indelible imprint on American life: in the arts and sciences, in the field of business, in all the professions, in the Halls of Congress, and every legislative chamber in the land.

It is impossible to enumerate the countless Irish-Americans who have individually contributed so much to the development of our Nation. Their names will be forever enshrined in the heart of America.

The amazing thing about it all is that the small nation known as Ireland should produce so many capable people who could contribute so much to our Nation—so much beyond what could be expected when considering numerical strength.

Gentlemen, I believe that the answer to it all is faith—an abiding faith unparalleled in history. No people have ever exceeded the loyalty and faith of the Irish and their burning love of liberty. This faith was handed down by the great St. Patrick. Fifteen centuries have failed to dim the devotion of the Irish to the heritage of the great apostle.

I believe it would be well for us all on this day to rededicate ourselves to the teachings of St. Patrick as exemplified in the Irish as a race.

Fidelity to God, devotion to liberty, preservation of human rights—the teaching of St. Patrick—the belief of the Irish should be ever in our hearts.

The Clarkson Letter

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article by Prof. Andrew S. Ormsby, of Clarkson College of Technology, Potsdam, N. Y., because it deals directly with Senate bill 249. The approach that Professor Ormsby takes is, I think, a rather unusual one and one which has not been discussed too much in consideration of this legislation. He writes from the point of view of the effect of the revision of the Taft-Hartley Act on the worker himself rather than upon the employer or upon the union organizer.

Professor Ormsby, before joining Clarkson as head of the department of business administration, was director of industrial relations for Worthington Pump & Machinery Corp.'s seven plants. Prior to that he served as general counsel for Bendix-Westinghouse Co., and as staff assistant in charge of industrial relations for Bendix Aviation Corp. During the recent war he served as industry representative on the National War Labor Board. Educated at Pittsburgh, Xavier, and Columbia Universities, he brings a wide background of academic training and professional experience to bear on the consideration of currently proposed labor legislation.

The article appears in the April-May issue of Clarkson College's publication, the Clarkson Letter:

WHAT CONGRESS WOULD DO TO AMERICAN LABOR

(By Andrew S. Ormsby, professor and head, department of business administration, Clarkson College of Technology)

If Congress passes the proposed Senate bill 249, regarded as the administration bill, aided and abetted by officials of union-labor organizations, there will be perpetrated a rank injustice against the American worker. If this bill passes, it will take away from employees freedoms they now legally have. These freedoms are greater than they have enjoyed at any time during this century.

DO FOR YOUR EMPLOYEES

In the very early twenties some executives tried to recapture their individual contacts with employees through welfare schemes, employee-representation plans (company unions) and other paternalistic ideas. There evolved the philosophy of "Do what you must for your employees and fight the labor leaders wherever you find them with every conceivable device or method, whether that method or device be fair or foul."

In this battle some managements went pretty far. This made the union officials pretty angry. The union officials, having governmental support, did a masterful job and succeeded in having the Wagner Labor Act passed.

The Wagner Act outlawed the company union, especially where it was found to be company supported or dominated. The act contained many features which strengthened the union organizers' position. In addition, those selected to administer it definitely favored the union officials. Through the enlarged powers brought about by the act and its administration some union officials became very dictatorial.

Managements, in many cases, realized their impotency in the field of labor-management relations. In taking stock of the situation they yielded to many demands; the purposes of which were to build the hierarchy of the unions, often to the detriment of their own workers and supervisors. Managements in some cases made deals and agreed to the building up of the prestige of union officers through such things as superseniority for union officers and stewards. In such instances, union officials had greater employment-security privileges, in the event of lay-offs, than did employees having much longer records of service. In other cases, union officials and stewards were granted privileges of going anywhere in the plant—under the guise of investigating grievances—and were paid by the company. In still other instances, the companies gave privileges to the union hierarchy far greater than they gave to their own foreman. In one company's contract, the foreman was required to introduce new workers in his department to the union steward for an indoctrination before the man could go to work.

DO FOR THE UNION LEADERS

This tendency to curry the favor of the union officials was leading to the philosophy of "Forget the employees, let's do all we can for the union leaders." The workingman saw this and he didn't like it. He didn't like being herded into a union by the negotiations of his employer and the union leaders. He realized that in order to be able to work he was required to submit to the control of the labor leaders. Frequently his employer had helped to bring this about. He didn't like having his whole economic existence placed in the hands of the union bosses any more than he liked having it subject to the whims and caprices of the management.

He saw that because of the closed shop, union shop, or the maintenance-of-membership shop, his fellow workers who spoke out against some of the situations which appeared to him to be wrong were charged with conduct unbecoming a member, suspended from the union, and dismissed from their jobs. He learned that to secure a job, in some cases, he had to pay money to join a union or obtain a work permit for a fee, before he could even apply for work. He saw instances where the union officials did not pay much attention to the grievances of the workers, and that he couldn't do anything about it. He didn't like these conditions—and as a result, he talked to some of his friends in political positions, very cautiously and fearfully lest he suffer reprisals, but he talked to them nevertheless.

Some political leaders listened, and as early as December 1941 a bill to amend the Wagner Act was passed in the House, but it was pigeonholed when it reached the Senate. Things grew worse. Power begot power. Abuses became greater.

DOWN THE MIDDLE

Finally, in the last session of Congress and in many State legislatures, laws were passed which freed workers from many of the abuses that they had experienced. On the Federal level, the workers gained this freedom through the Labor-Management Relations (Taft-Hartley) Act of 1947. As a result of this law, employers had to review their philosophy in dealing with their employees and there began to emerge a pattern which can be expressed as "Do what you can for your employees and get along with the labor leaders." This law, having curbed the absolute power of the union officials and having restored to the American worker freedom such as he has not had in this century, was appreciated by many of the rank-and-file employees.

Let us make no mistake about it, workers want their union, they want the advantages of such affiliation but they do not like being pushed around by any group, be it the employers, the union leaders, or the politicians.

What are the freedoms which I assert the American worker now has by law that would be lost to him if the proposed S. 249 were passed as written?

WILL WORKERS LOSE THESE FREEDOMS?

1. His right to determine for himself, without threats, intimidation, or coercion from any source, what union, if any, he wants to represent him as the collective-bargaining agent. Those who have seen organizational drives in process can well understand what this means. To free themselves from such threats and coercion many workers joined and had union cards of several unions in their pockets during such campaigns.

2. It would take away from the employee his freedom to look for work without having to join any organization or pay for a working permit, even before he applies for work. It might be well to add that the railroad brotherhoods have grown into a powerful union, without the necessity of a closed-shop provision.

3. It takes away from him the democratic freedom of expression if he doesn't like what is going on in his union. He would again have to be subservient to hold his job.

4. The proposed law takes away the right of the worker to decide how he wishes to pay his union dues. Now he can pay them the same as he pays all other bills, after he receives his check or, if he agrees to it, the employer can deduct his dues from his pay and turn them directly over to the union. Note that it is the worker, and he alone, who decides the method.

If the present bill is passed as written, he no longer will have that right—the employer and the union will decide it for him.

The Railway Labor Act prohibits the check-off, even if an employee wants it.

5. This proposed bill takes away the right an employee now has by law to determine whether he prefers to work under a union shop or a maintenance-of-membership shop. He has a right to vote on the matter.

The theory of the law being that the union is the bargaining agent of the workers, why shouldn't the worker (the legal principal) have a right to say under what conditions he prefers to work.

6. Following this one step further, why shouldn't the worker (the legal principal) continue to have the right of removal of the union (the legal agent) if the union is not doing the kind of job the worker thinks it should? In the proposed bill that right of decertification of the union is taken away from him.

7. Why should the worker's right to process a grievance without the aid of union officials be taken away from him? Is he not the principal? Why should he have to ask his agent to do it, if he doesn't want to? The union, under the present act, is already amply protected.

8. Why should the workman lose the right he now legally has to know how his money is used? Why shouldn't his agents account for its expenditure? He has this right in other organizations, why not in the union which is his?

9. Why not keep his home free from attachment in satisfying a judgment against a union in a damage suit? Workers' homes have been sold in the past to satisfy damage suit judgments. The law as it is now protects the worker—why not continue to give him that protection?

10. Why not retain for craft and professional workers their present right to determine whether they want to be separate or included with a larger group in which there may be little or no community of interest?

11. Why not permit workers to continue to enjoy the rights they now have by law to go to the National Labor Relations Board and file charges against a union or an employer for an unfair labor practice?

S. 249

The American worker now having by law certain rights and freedoms should not have those rights taken away from him as is proposed in S. 249, because in doing so the administration and the Senate, aided and abetted by the union officials, will do the American worker a gross injustice. Certainly there has been no evidence that the American workman does not know how to use these rights, nor that he has in any way abused them.

What Atomic Energy May Mean to Industry

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16 (legislative day of Monday, February 21), 1949

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "What Atomic Energy May Mean to Industry," by Mr. Walker L. Cisler, the executive vice president of the Detroit Edison Co. I made the request on March 16, neglecting to obtain the appropriate estimate. I now have the estimate of $195.25. I resubmit the request with the estimate. I ask unanimous consent that the address be printed notwithstanding the cost.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The full significance of what atomic energy may mean to industry can only be answered by prophets. And I am no prophet. However, I shall try to describe some of my own impressions of the atomic energy enterprise. These impressions may afford clues which will enable you to form your own ideas about future prospects.

During the past 2 years I have had a number of intimate contacts with atomic energy affairs. For a period of many months I have served as a consultant to the Atomic Energy Commission and have been deeply interested in what it is attempting to accomplish in the industrial field. The first work of this kind was to help in devising a control system to regulate traffic in equipment useful in the production of fissionable materials. The regulations for this purpose were authorized by the McMahon Act. They were designed mainly to prevent any unfriendly country from getting apparatus from our manufacturers that would help in a rival atomic project abroad.

I should say here that our experience in the War Production Board was extremely useful in developing these regulations for the Atomic Energy Commission. In WPB days, you remember, our whole economy was regulated by orders of this character, and formal and informal industry advisory groups were used very freely to assist that Federal agency in its work. These groups gave the Government the benefit of industry experience; the Government in turn used the committees to get its point of view across. Finally, in the actual administration of the control orders, these industry representatives helped keep things running smoothly and fairly.

The Atomic Energy Commission is following this tested and proven method of handling its difficult regulatory work. It is very reassuring that the Commission finds it possible to maintain this conventional system of Government-industry relations in spite of the secrecy and other very special conditions affecting atomic energy.

More recently, I have had some part in the work of another kind of advisory group. This one was concerned not with regulatory matters but with the more general question of industry's role in the whole broad field of nuclear development. It was the committee set up by the Commission under the chairmanship of James Parker, president of my company, and it included such distinguished industrialists as Isaac Harter of Babcock & Wilcox, Robert Wilson of Standard Oil of Indiana, and others.

As you may know, this industrial advisory group spent the better part of a year on a study of the Atomic Energy Commission. Its report on the subject of industrial participation in the development of atomic energy was made public last December. Copies of that document can doubtless be obtained from the Commission, and I was pleased to learn the other day that it is also reprinted in full in the March issue of Mechanical Engineering—the publication of one of our great professional organizations, the American Society of Mechanical Engineers.

That organization, by the way, is attempting to do a job in connection with atomic energy which in my opinion other technical professional societies ought to be doing for their members. Through its nuclear energy application committee, the ASME is planning a vigorous program to keep its members in touch with technological developments, to make special studies of interest to them in this field, and to try to develop useful working relationships with the Government agencies. These are not easy tasks as I think will become clear to you as we go along this evening.

Getting back to the question of what atomic energy may mean to industry, probably the best introduction can be obtained by studying the Parker committee report. Along with it you should read the Commissions's excellent fifth semiannual report to the Congress which appeared in January.

At any rate, as a result of the long period of my consulting service with the Commission and the more recent work with its industrial advisory group, I have personally had an unusual opportunity to see the atomic-energy project at first hand. It has been an absorbing experience. When you once get a close-range exposure to the atom, the subject very quickly becomes a preoccupation, and that is the way it has been with me.

While engaged in these two Commission assignments, it was necessary for me to visit and inspect the major installations at Oak Ridge, Hanford, Los Alamos, the Argonne, and elsewhere. It was also necessary for me to talk with leading scientists and technicians who are associated in the Commission's activities. In the course of my work, therefore, I have been privileged to observe the chief activities of the Commission, and to get a personal look at many of its problems.

Without that experience, I am sure that I would have only a very confused and sketchy conception of our atomic-energy enterprise. Because of it, I believe that I have a fairly clear picture of it. The information that I have acquired is, of course, subject to security restrictions which means that I can only discuss that part of it which is not secret.

My experience as an individual, however, is to be contrasted with that of industry. Up to now industry generally has not been able to get a broad, intimate knowledge of atomic energy. In this connection I should like to describe the experience of my own industry—the electric utilities, a term which in my thinking includes both the privately and the publicly owned electric systems.

Shortly after the first atomic bomb was dropped on Japan, members of the electric-utility industry realized that in time this new source of energy might very well revolutionize the production of power. A number of leading utility engineers and executives, therefore, formed a committee—this was back in 1945—to make an intensive investigation of the new field of technology. This group made many attempts to carry on the inquiry. It sought out the scientists and technicians who had worked on the project during the war. It talked to Government officials. But it never got very far.

So, as soon as Mr. Pike and his associates organized and started to work in 1947, that utility group asked to meet and talk with the Atomic Energy Commission. On that occasion, not quite 2 years ago, these members of the industry had a long session with Mr. Lilienthal, Mr. Pike, and their fellow commissioners. They described to these officials the futile efforts of our industry to study atomic energy. The Smyth report—published right after the first bomb—had given just enough information to show that the subject was of vital concern to the electric utilities. Beyond that there was everywhere a wall of secrecy.

It was very difficult for people who had been brought up in the power industry to resign themselves to these conditions. In the past, the electric utilities have always had an important part in the development of the equipment which they use to generate power. Progressive utility systems customarily work closely with such manufacturers as General Electric, Westinghouse, and Allis Chalmers, and the scientists and engineers employed by them. In that way, we who buy and use the equipment collaborate with those who produce it. The complementary skills and experience of manufacturer and user thus combine to promote research and development in new and better types of machines and facilities.

One has only to compare the efficiency of today's electric generating equipment with that of a quarter century ago to observe the benefits of this collaboration. America's phenomenal war production, the atomic energy project itself, and our remarkable postwar output—including support of the Marshall plan—owe much to the efficiency and adequacy of our electric-power supply. It is no exaggeration to say that the cooperation between maker and user of electrical equipment has been a prime factor in giving us this rich resource of power.

Now, of course, I would not press too far the analogy between development of conventional electric-power equipment and atomic energy. Nuclear energy is quite a different thing from ordinary sources of energy, namely, thermal energy from gaseous, liquid, and solid fuels, and hydraulic energy from falling water. It involves a radically new technology. It is surrounded by considerations of national security and necessary secrecy for which we seem to have no precedent in our political or industrial history.

At the same time the two subjects have some things in common. Various official sources have predicted that it is only a matter of years before we will be able to produce electric energy from atomic fuel. Just a few weeks ago, Commissioner Bacher, in the most impressive paper that has thus far appeared on nuclear reactors—these are the plants that burn atomic fuel—suggests that within 8 or 10 years we should have such a reactor. He points out, however, that for nuclear energy to have any significant impact upon the country as a source of electrical energy would take much longer, even granting economic feasibility.

But the point that I wish to emphasize is this. These matters are of the greatest interest not only to the utility industry, but to every industry that uses heat and power.

Indeed, all industry has an interest in such questions as:

When will heat-power reactors in fact be a practical reality?

What will be their relative economy as compared with other sources of thermal or hydraulic energy?

What will be their first commercial application?

What will be their relative safety?

Will they be exclusively in Government hands or under license to private enterprise as well?

The way in which these and a host of other questions are answered may well depend on the degree to which industry is permitted to work with Government during the research and development phase through which we are now passing. For example, whether results are achieved speedily or only slowly may well depend on the extent to which interested segments of industry are permitted to help.

All of this may seem a rather lengthy digresson from that meeting with the Commissioners to which I referred. At that meeting—nearly 2 years ago—between representatives of the utility industry and the Atomic Energy Commission, the industry people presented their problem. They explained that ever since the Smyth report, the industry had been endeavoring to study atomic energy. They said that they were trying to determine what opportunities it held; that the utilities hoped to be able to take a healthy part in furthering the development of nuclear energy just as in previous decades they had had a share in perfecting equipment in the field of steam and water-power generation. But, they explained, they had not been able so far to find out enough about atomic energy to make any significant progress.

Observing that one of the stated purposes of the McMahon Act was strengthening free

competition in private enterprise, the utility representatives asked the Commission whether a way could not be found to open this field to our industry. In response, the Commissioners cited the overriding objectives of the McMahon Act to assure the common defense and security. Obviously, secrecy restrictions would be necessary as long as the world remained in its present troubled state. But the Commission also expressed the hope that a way could be found to reconcile these seemingly conflicting objectives of industry participation and secrecy.

Much valuable time has passed. Since then the utilities have pretty much had to stand still as far as this subject is concerned. This observation is not a criticism of the Atomic Energy Commission. It is merely a statement of fact. The hard fact is that insofar as reactor development is concerned, the power industry, which is so vitally interested, has practically no more first-hand knowledge now than it had 2 years ago. It has been left in a state of wonder.

Again let me emphasize, this is not said in criticism of the Commission. But in attempting to judge what atomic energy may mean to industry, it is very important to bear this in mind. It will be difficult, if not impossible, for atomic energy to mean very much to industry unless industry can know what the developments are when they occur—not afterward, can have some direct part in them, and can employ industrial ingenuity, resources, and organization in contriving ways to promote new developments and to make use of them.

It is, of course, true that in one sense atomic energy already has a considerable immediate importance for business. The Government is spending nearly a billion dollars annually on its atomic program. Much of this sum is spent directly with industry, through the thousands of contracts which the Atomic Energy Commission has with various private concerns.

But most of this contract work does not really let industry in on atomic energy. A good deal of it is straight procurement; that is, contracting for the equipment and supplies which the Atomic Energy Commission needs. Much of it is in construction contracts. Some goes to the industrial concerns which run the Government reservations at Oak Ridge and Hanford and Los Alamos—a kind of company-town arrangement. Another portion goes to the companies which operate the Government's production plants at these locations.

In short, as Fortune magazine said in a recent article on the Commission, a large part of the billion-dollar annual budget is spent under contractual arrangements which make industry a hired hand of government.

Now, it is a very good thing that industry is the hired hand in these undertakings. The Atomic Energy Commission has everywhere been commended for its practice of doing its work through contractors, rather than through the building up of an immense Government force. But when the question is asked, "What part may industry have in atomic energy?" there is obviously the hope that there will be more to the answer than, "Hired hand."

Up to now the prospect that industry might be something more than a hired hand in the important aspects of atomic energy has not been too bright. In a few areas, industry has been given an opportunity to operate more or less on its own. This is true in the manufacture of compounds containing radio isotopes. It is true in the general use by industry of radio isotopes for industrial research and for industrial controls. And a rather thriving little industry has sprung up in the postwar manufacture of radiation-detection instruments.

The Government has also been able to give industry a pretty free hand in the mining, milling, and processing of the essential raw material—uranium. In fact, earlier this month, Mr. Pike spoke to a meeting of the Colorado Mining Association and pointed out some very promising opportunities for enterprising miners. At the conclusion of that address, he expressed the pious hope, as he put it, that 5 years from now some of you will be coming to these meetings in gold-plated limousines to be greeted as the new kings of uranium. Such is the spirit of free opportunity which has helped to make our country so great.

Personally, I know Mr. Pike to be a sound and honest merchant and I am satisfied that he was not overselling the Colorado miners. It's good to reaffirm that spirit.

So there are some places in the atomic-energy picture where private concerns, which are qualified to do the work, can make an effective, competitive attempt to take part. All this is healthy. But it is very important to remember that these are the only areas in which something like free enterprise is functioning in connection with the new activities which atomic energy has stimulated.

It has frequently been suggested that in one of these presently open areas—the use of radio isotopes—there is the most promising opportunity of all for rich new developments. These are as yet largely unidentified and undefined, although they are confidently predicted. For my own part, I think that in this direction industry has much to look forward to. These developments, however, will not be necessarily connected with atomic energy: they will rather be a by-product of the new research tool, radio isotopes. Radio isotopes are expected to father multitudes of new discoveries, just as the microscope did.

In the field of atomic energy itself, the main hope for developments of interest to industry resides, of course, in the application of atomic energy to the production of heat and power. This is what the electric utilities are naturally most interested in. Because of the nature of the technological problems and opportunities, a lot of other important industries are also vitally concerned. Notable among these are the chemical, petroleum, and heat transfer equipment, metallurgical and instrument industries.

One of the large unanswered questions about reactor development is: How much opportunity will industry get to take part? The Commission tells us that next year it will spend more than $100,000,000 on its reactor program. That is a big program, and the application of atomic energy to the production of heat and power on a large scale hinges on the success of that program, which will require a period of years to produce substantial results.

My faith in the American industrial system makes me bold enough to believe that the success of that reactor program in turn depends on how well we bring to it the lessons of our long and brilliant record of technological progress in other fields.

At present a few industrial concerns are importantly engaged in working on reactors. General Electric, a main contractor for the Commission, is scheduled to construct and operate one of the four new reactors which constitute a central part of the Commission's program for the next few years. Another of the new reactors is to be in charge of Westinghouse which will have a Commission contract for this purpose.

But it is not clear whether and to what extent other industrial concerns and other interested industries will be permitted to take part. Even more important, it is not clear whether they will be permitted to keep intimately abreast of developments. As I have already tried to explain, atomic energy cannot come to mean very much to American industry, as we know it, unless American industry is enabled to have an integral part in developments as they occur. Only in that way can industry take benefits from and contribute benefits to atomic energy developments.

This point was made very emphatically in the report of the Parker industrial advisory group. After describing some of the Commission's more important unsolved technological problems—including that of reactor development—the report went on to say:

"Success in finding solutions for comparable problems in other fields of technology has come about through energetic attack by many competing firms and individuals rather than by any select group. The Commission's contract system—though it includes some of the country's ablest industrial organizations—is not by itself a real substitute for this process."

Then the report attempted to explain more concretely just how the right process worked:

"An illustration of the process in miniature can be observed in the experience of our own small group. In the course of our survey we, that is, the industrial advisory group, were consulted informally by the Commission or its contractors on problems with which they were confronted. One or another of our number, drawing upon his particular industrial background, was able more than once to suggest a helpful new approach toward solution. The suggestions reflected no superior talent but merely the fact that occasionally the specific background of certain individuals furnished a different clue from those discerned by the men already at work on the subject."

From these first-hand experiences, the advisory group then drew conclusions in the following terms:

"The need, as Mr. Lilienthal has said, is to bring the resources of industry to bear on atomic energy with maximum effect. This means that all those industries which are potentially interested must somehow become broadly and deeply involved. The suggestions that a few industrialists may make on casual contact are obviously insignificant as compared with the possible contributions that all these industries could make if the opportunity were available to them."

The Parker group makes it perfectly clear, however, that the process is two-sided. Potentially industry has much to give in developing this new field. But it should also have much to gain. And later on in the report there is this account of an experience which illustrates the other side of the coin:

"One of our number is at present in charge of an important specific industrial research and development project. Among the knotty unanswered questions in his project is one relating to the type of coolant to be used. During our survey (of the Commission), he observed, first hand, a unique process that was being worked on in one of the Commission's laboratories to solve a problem which also related to coolants. The Commission's work immediately suggested to him a new avenue of approach to his own special-research problem. He remarked at the time that even had he read about the Commission's investigation in the technical journals the chances are that he would have missed the connection with his own investigations. Direct personal contact with the work in the atomic energy laboratory gave him the concrete experience necessary to see a relationship that he would otherwise have missed."

The lesson in this example should also be clear:

"The experience just described (the report continues) is in itself a rather trivial incident. Yet it is out of a multitude of such trivial incidents, experienced by many people, that the massive forward movement of technology takes place. It is for this reason that we emphasize that the most comprehensive and competent reporting by the Commission will fail of its purpose unless it is complemented by extensive individual, personal contacts between qualified technologists, industry leaders, and Commission personnel and work."

These, I think, are very forceful statements of the need for establishing extensive con-

tacts between our atomic-energy developments and the industrial world. But what about the requirements of secrecy? Reactor development—the field of most vital interest to industry—is also an area where requirements of Government monopoly and secrecy appear to be very strict.

We get back, therefore, to that dilemma which confronted the Commission and the utility people at their meeting 2 years ago: How to reconcile a healthy competitive industrial participation in atomic energy with the admitted necessity for some Government monopoly and much secrecy.

Perhaps the most important feature of the report of Mr. Parker's industrial advisory group is its hopeful exposition of a number of ways by which the objective of wider industrial participation could be fitted in with these requirements.

The industrial advisory group report contained enthusiastic approval of the progress which the Atomic Energy Commission has made along many lines. It did suggest, however, that the Commission should make a still more strenuous effort along several fronts for the purpose of encouraging and promoting industrial participation. And it set forth the preconditions for such participation essentially as follows:

1. Industry must be given more knowledge of the subject;

2. It must have more—much more—direct contact with the developmental work; and

3. It must have much more involvement in that work.

These are the roads that must be opened up to industry if it is to recognize and take advantage of opportunities to participate and to help.

To this end, the report urged the Commission to increase the publication of information about atomic energy in a form useful to industry. It urged the Commission to develop a program by which engineers, technicians, and executives in industries which have a legitimate interest in the field can be brought directly in touch with the atomic-energy enterprise. It urged the Commission to expand its system of industrial advisory committees, thus emulating the practice of the War Production Board. As I observed a while ago, that agency used these committees with great effectiveness, both to educate industry about the war-production program and for the purpose of obtaining advice from industry.

None of these proposals need cause any conflict with the requirements of secrecy or limited Government monopoly.

During the past year the Commission has itself found it possible to step up declassification and publication of nonsecret data. Recently there has been a considerable acceleration in this activity. The fifth semiannual report to Congress is in itself a notable example of publication of material which should be of use to industry in keeping abreast of atomic-energy developments. Dr. Bacher's paper on reactors is another. The announcement that in the near future a comprehensive Commission report on reactor developments will be published is even more important.

All these efforts on the part of the Commission seem to me deserving of highest praise. I think they are calculated as time goes on to promote more and more industrial participation.

It should also be possible—as the Parker group urges—to permit a good many more representatives of interested industries to have personal access to the atomic energy work. These people would be subject to the same security checks and obligations as the AEC contractors and consultants now are. With such safeguards, their intimate contact with the program should not imperil necessary secrecy in any way.

It can be inferred from the Commission's response to the industrial advisory report, that it now has under active consideration a number of additional measures more or less in line with the recommendations of the Parker group. But this welcome initiative on the part of the Government will not alone produce results. Industry will never attain a more significant role in atomic affairs unless industry, too, contributes a considerable amount of initiative and enterprise.

Experienced newspapermen will tell you that despite the barriers of secrecy which surround atomic energy, it is nevertheless possible to do a good job of reporting on atomic energy events. But these journalists will also tell you that in order to do a good job in the face of these barriers, they must be willing to work two or three times as hard. They must be willing to spend two or three times as much time in getting a story as they would in the case of a more conventional subject.

I think the same ratio will hold true for industrial rewards in this field. For example, it will take a great deal of work on the part of industry to make use of the additional material which the Atomic Energy Commission is now publishing. The Commission is obviously endeavoring to put the information out in a form that will be clear and useful to industry. But the subject matter is unfamiliar and difficult. Until industry acquires a background, therefore, it will have to make a special effort to digest and understand what the Commission publishes.

The proposed program to bring more outside industrial technologists and executives into direct personal contact with atomic energy work would also be full of difficulties. The program would not be feasible at all unless our leading industrialists pitch in energetically to cooperate with the Commission in setting it up and in making it work.

The same thing holds true for industrial advisory committees. If and when the Commission begins to use them more widely, they will only be useful if interested industrial concerns make their most competent executives and engineers available for membership.

But in my opinion, it is essential that industry be alert to opportunities for making such a special investment of time, effort, and talent in atomic energy affairs. Industry should not expect that by following this course it will secure quick or spectacular results. Atomic energy is likely to be an increasingly important force for peace as well as war. But results will come not suddenly but gradually. During the present developmental stages industry must be prepared to get into the work without the inducement of immediate rewards. Unless industry does this now—and this is the point that needs to be emphasized most strongly—it is not likely to have an important voice in atomic affairs later on.

The prospects for industry in atomic energy have thus far been somewhat dim. The Atomic Energy Commission, however, is making a special effort to bring industry more actively into the picture. It is apparently prepared to make still greater exertions in this direction. If industry will respond—with initiative, energy, and aggressiveness—then I think the prospects for industry can become very bright.

Domestic Economic Issues

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, March 18, 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Chester, Pa., on March 17, 1949, before the Manufacturers' Association of Delaware County, Pennsylvania.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure to come to beautiful, historic, and industrial Delaware County.

Here the first permanent settlement in Pennsylvania was begun by the Swedes in 1643, 40 years before the arrival of the Quakers.

Here was established the first seat of the government of Pennsylvania, where William Penn presided. Your historic courthouse in Chester is the oldest public building in our State.

Revolutionary battles were fought on the soil of Delaware County. It is the last resting place of Gen. Anthony Wayne, one of America's greatest soldiers. It is the birthplace of Benjamin West, the famous painter; John Bartram, the noted botanist; and of John Morton, one of the signers of the Declaration of Independence.

Delaware County's famous colleges—Swarthmore, Villanova, and many others—and its strongholds of religion have given your people high cultural and spiritual attainments.

Industrially, your county is highly developed for peace and war work. Your annual production in shipbuilding, oil refining, textiles, locomotives, paper, electrical-equipment machinery, steel castings, and many other lines of manufacture, reaches the enormous peacetime total of nearly $800,000,000. These industries give gainful employment to about 100,000 people.

Mineral products and the yield from your 25,000 acres devoted to agriculture add more millions to your balanced economy. The total is considerably greater than the total of many States of the Union.

The splendid material, cultural and spiritual development of Delaware County is a typical example of American progress and achievement. It is the success story of American enterprise, initiative and industry, working, saving, investing and prospering in an atmosphere of freedom. Thus the general welfare has been advanced through the years.

This pattern, repeated thousands of times in large and small communities is responsible for the greatness of America. It has given our country a foremost position among the nations of the world.

Delaware County people are interested in good, clean, economical and forward-looking government.

In America the people are the government but they must take a sincere and active interest in the affairs of government if they are to control it.

The people must fully understand and give unselfish consideration to every proposal if they are to continue to direct their government. Otherwise the Government will direct them.

I think the following will be accepted by all of us as self-evident truths:

1. The American system of government has produced more of the good things of life for more people than any other government ever established.

2. Our greatness as a Nation rests upon the freedom and dignity of the individual. These are God-given rights. Our mightiest secret weapon during war is our freedom. In peacetime freedom gives us the right and the opportunity to pursue our own happiness and security.

3. Americans can preserve individual freedom only by constant vigilance. We cannot be free unless we appreciate the blessings of freedom and accept the obligations it imposes.

4. An America, divided into sections, groups, and races, will be destroyed. We

cannot survive if we are divided by jealousy, hatred, and prejudice. We are weakened if one section, group or class profits at the expense of another.

5. Governments that spend beyond their means can go broke, the same as individuals.

With these truths in mind let us consider briefly some of the things endangering our way of life.

In America today a great war is in progress. The outcome of that conflict will decide whether we are to continue as a Nation of individual freedom and self reliance under free enterprise or whether we are to live under the Socialistic domination of an all-powerful government.

The opposing forces in this struggle represent two widely separated philosophies of government. One proclaims that America can achieve greater progress through centralization of government at the Federal level. Its followers believe in the concentration of power and authority, supported by high taxes and the unlimited expenditure of public funds under the direct control of the central government.

The other army is composed of those who advocate prudent and economical government within the framework of the Constitution. They believe that local government should retain control of those functions which have been traditionally recognized as matters for local determination at the local level.

The opposing camps are not divided along strict political lines. The fight for higher taxes, bigger spending and encroachment upon individual freedom is being waged by some Republicans as well as the Democratic Party now in power.

I am glad to say that there are some Democrats like Senator BYRD, of Virginia, and his supporters, who are battling on the side of economy, lower taxes, and constitutional government.

The Eighty-first Congress is the battleground in this conflict. As you are well aware, those believing in unrestricted spending are in control of the national purse-strings.

Unfortunately, we have witnessed in the last 2 decades a change in the whole thinking of millions of our people. They have been misled by false promises into believing that hard work and thrift are outmoded virtues. They have been taught that government is the source of everything that is needed to make life comfortable and secure.

No more dangerous theory has ever threatened our national existence.

In all history every demagogue who has sought to enlarge and perpetuate selfish power has posed as a friend and benefactor of the people—and has pretended, for selfish motives, to be the protector of every minority group.

Every demagogue has been loud in his promise to give something to the people but has concealed his real purpose to take precious liberty away from the people.

The tragic fact remains that the trend toward a socialistic form of government is interwoven with the false notion that government is better able to do things for the people than they can do for themselves.

Too many of our people have accepted the idea that governments, State and national, have inexhaustible sources of revenue. They seem to think that money spent by the Government does not cost the individual citizen anything.

The result has been a mad scramble for higher taxes all over the country. New ways and means of increasing taxation are being devised in order to provide funds for bigger Government spending. Every level of Government is involved in this move to dig deeper and deeper into the pockets of the wage earner and into the resources of business and productive industry.

Tax and tax, spend and spend, has become the slogan in so many places all over the Nation.

The statistics of the rapid increase in the cost of Government and the heavily increased burden of taxation and debt reveal one of the most shocking stories in American history.

It is not my purpose to bore you with a recital of all the figures, but I would like to point out some of the things that indicate clearly how dangerous the present tendency has become.

In 1930 the cost of operating the Federal Government was less than $4,000,000,000.

Ten years later it had more than doubled to $9,000,000,000. Our current bill for Federal Government is more than $42,000,000,000 a year.

In 1940, only 8 years ago, tax collections for all levels of Government were only $14,000,000,000. That was nearly 19 percent of the national income or $109 for every man, woman, and child in the United States.

In 1948 the total tax collections had skyrocketed to above 55 billion, 26 percent of the national income or $377 for each individual man, woman, and child.

Every time $1,000,000,000 was added to the cost of Government, the tax bill went up $7 for every man, woman, and child in the United States, or $28 for the average family of four.

Spending by the Federal Government alone is now greater than all the money spent for food by all the people of all the 48 States.

Let us now consider the debt which must be paid.

In 1930 the Federal debt was only $16,000,000,000. In 1940 it had climbed to nearly $43,000,000,000, and today we owe approximately $253,000,000,000.

That is about $1,800 per capita, or $7,500 for the average family.

In other words, the Federal Government owes $15 for every dollar it owed 18 years ago.

Let us look at the debt from another angle.

In 1930, the total debt of all levels of government—plus the private debt—was $188,000,000,000.

That was 44 percent of the national wealth, which then amounted to $428,000,000,000.

Today the same public and private debt has shot up to almost $444,000,000,000, or 71 percent of the present national wealth of $620,000,000,000.

Is it not plainly evident that at the rate we are going it will not be long before the debt of our country will be greater than our national wealth?

Yet, in spite of these cold, stark, ugly facts, the President has recommended new spending proposals that would add a minimum of $14,000,000,000 annually to the present tax burden if put into full operation.

With the expansion of big government, the number of civilian employees has increased from about 600,000 in 1930, to approximately 2,200,000 today.

In 1930 there were less than 500 separate units in the Federal Government. Today there are more than 1,800 boards, bureaus, agencies, and commissions.

Is it any wonder that the Comptroller General of the United States, the Honorable Lindsay C. Warren, testifying before a congressional committee on January 24 of this year said:

"The present Government structure is a hodgepodge and crazy quilt of duplications, overlappings, inefficiencies, and inconsistencies. * * *

"It is an ideal system for tax-eaters and for those who wish to keep themselves perpetually attached to the public pay roll—but it is bad for those who have to pay the bill."

We have been told how part of the burden can be lifted from the backs of the taxpayers. The Hoover Commission has estimated that reorganization of the Executive Department alone would result in a saving estimated at $3,000,000,000 a year.

I cannot take your time to discuss the continually increasing spending, taxes, and debt at the other levels of government, but the figures show that the same infection is spreading through State and local government all over the Nation.

What does all this mean?

It means, first of all, that unless we stop this drunken spending spree we will soon find ourselves at the end of the road we have been traveling—the road to bankruptcy.

All the elements of American greatness will be destroyed. A socialistic pattern of government dictatorship will seize control. The freedom of the individual will be lost. The free-enterprise system will be wiped out.

The youth of America will be robbed of a chance to get ahead. Already we have reached a situation where the young man of today, starting from scratch and looking forward to a career in business, has little or no opportunity to establish himself in a small way. That is how many in this audience started and have succeeded.

I tell you that it is downright immoral to deprive our young men and young women of the opportunities that were open to every American in the past.

Undoubtedly, the man who will suffer most will be the man who works with his hands. Organized labor will lose all the legitimate rights that have been won through years of struggle. Labor unions will be outlawed, just as they have been in every country under the iron rule of socialistic dictatorship. Industry will be taken over by the government. The high living standards attained through the hard work of generations will disappear, never to be regained.

This threat of disaster is not something that may worry us in the distant future. It hangs over our heads at this very moment. We may see the tragic result within the lifetime of many in this room unless we turn about now and go the other way.

It would be most pleasing to Joe Stalin to see America in financial collapse. As long as the Communists carry on their cold war, we must strengthen our defenses. If at the same time we continue our program of reckless waste and extravagance, it will not be necessary for Russia to engage in a shooting war against us.

By our own hands we will bring destruction down upon us. That is the day for which the Communists are patiently and hopefully waiting.

That, my friends, is not a comforting picture. It is, however, the price that we will be forced to pay if through carelessness, indifference, wasteful spending, and excessive taxation we allow the liberty that is our sacred heritage to slip from our hands.

Earlier in my remarks I referred to the present state of the Nation as a war to decide the destiny of the United States.

I repeat, it is war—a hard, tough war.

If we are to save America we must not be content with a weak or hesitating protest against the spendthrift policy of Government.

We cannot denounce socialism on one hand and at the same time support Socialistic experimentation under the deceptive guise of social advancement.

We must not join with pressure groups seeking Government hand-outs or special privileges.

I have had a great many letters from individuals and business organizations who expressed themselves vigorously in favor of reduced Government costs, reduction in taxes, a balanced budget, and sound fiscal policies.

They denounced increased spending. Yet those same individuals and organizations urged and demanded Government funds to finance their own pet projects or selfish schemes.

We cannot cut down the cost of Government unless everyone is willing to recognize the terrible danger and to put aside selfish interest for the good of the whole country.

We must go out and fight—and fight hard. We must train our heaviest artillery against every tax and spend proposal that would hasten us along the path to a welfare state, a police state, or any other form of statism.

High taxes result in state control. State control now dominates nearly all European countries. Increasing taxes was the key move in the nationalization of Soviet Russia, Nazi Germany, Fascist Italy, and Socialist Britain.

In all these countries taxes were boosted sharply and public spending increased Private enterprise was weakened and finally destroyed. The government ceased to be a free form of government. The individual citizen lost his freedom. They first had what they called a leveling-off process. Then came the dole and finally servitude.

For 15 years government costs in America have rapidly increased. We are drying up the investment capital necessary for the expansion of our industries. No country can long survive when its people must pay more for government than they pay for food. That is what we are doing today.

In my career as a public official and as a soldier, covering 50 years, I have fought constantly to preserve and safeguard individual freedom. I do not propose, and I am sure you do not propose, to stand idly by while willful or unthinking men destroy the freedoms that have been bought by the blood of patriots and heroes in every generation.

I have been criticized many times because I have constantly preached economy in government and lower taxes. I shall continue to do so because I believe it is the most positive program that can be presented to the American people. It is the only program that will insure a future of freedom and opportunity.

I realize it would be pleasant and popular to advocate spending—a something-for-nothing policy—without regard for the future of America. But I assure you, with all the emphasis at my command, that I shall never engage in such a popularity contest. There is too much at stake for our country and the world.

In the present war the exponents of economy and decentralization of Government are fighting a rear guard action. They need recruits. They need thousands of Paul Reveres who will warn the countryside and the cities of the approaching danger.

As citizens, as businessmen, and as leaders in your county, your place is in the front line of defense.

Your manifest duty is to protect what has been built up through years of work and thrift.

But you have a greater obligation.

It is your job to spread the doctrine of Americanism, to make those who have been misinformed or misled aware of the peril to their jobs, their homes, and their freedom.

It is your job to point out that a free people are capable of administering their own welfare without an army of bureaucrats supervising their lives.

It is your job to join with the right-thinking men of labor and agriculture in keeping America solvent by demanding sound fiscal policies.

It is your job to talk with the boys and girls in your high schools, the young men and young women in your colleges and others just starting out in life. Tell them of the fundamental values that are embraced in freedom and the rewards that come from initiative, hard work, and thrift.

Impress upon them the lessons of our Nation's greatness—that this country was built by sturdy God-fearing men and women who depended upon their own efforts. They did not look to the Government for a handout when the going was rough.

They were willing to support the Government. They did not ask the Government to support them.

Fellow Americans, I have pointed out what seems to me to be our obligation and our responsibilities.

I do not mean to imply that human progress should be halted. I do not say that any of the essential functions of Government should be curtailed.

But I do say that we should advance in accordance with honest principles, sound fiscal policies, and within the limits of our ability to pay without danger to the over-all national economy.

In closing I ask that you remember that governments do not create anything; that Government spending cannot raise living standards; and that Government spending cannot make permanent prosperity.

Government cannot make the weak strong by making the strong weak. Our Government cannot be an influence for good in the world by destroying our financial structure.

Government left to chance may easily degenerate into dictatorship and slavery. Don't let that happen here.

This Government belongs to the people. It is our precious heritage.

Do not, through sheer indifference, let it slip through our hands.

America is the last remaining hope of a free world.

We can all help make that hope a reality. God grant that we may not fail. If we do—civilization may not have another chance in a thousand years.

Our National Flag

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an essay entitled "Our National Flag," by Lt. Col. Arthur M. Edwards, United States Army, retired.

Colonel Edwards is a resident of Contoocook, N. H. He is living in retirement there after faithful military service to his country. Embodied in his essay are not only some splendid thoughts with reference to our national symbol but also specific instructions regarding the proper use of our flag. I feel that this work of Colonel Edwards is especially timely.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

OUR NATIONAL FLAG

(By Arthur M. Edwards, lieutenant colonel, U. S. Army (retired))

The story of the origin of our national flag really begins with our Nation's history. From its many components arises the pattern of our Stars and Stripes which theme fades back into antiquity.

For the star is the ancient symbol of men and as a celestial goal for his sovereign soul points the way to eternally high ambitions and ideals. The stripe is a symbol of the rays of light shining in glory from the sun in alternate beams of red and white and lends itself to our flag symbolism.

A banner like the flag of the United States embodying both of these themes becomes a living thing breathing our national sovereignty for which loyal Americans suffer and die.

The first flags adopted by the different sections of our country represented the local features of a wilderness to be conquered and these banners served their purpose calculated to stir men to patriotic action in times of danger.

The first flag to resemble our present National Emblem was the so-called Grand Union Flag, conceived by a committee from Congress who waited upon Gen. George Washington in June 1775 after the first battles of the Revolution just after he had taken command in Cambridge, Mass., of the American Army.

The outcome of this conference was a colonial flag tending to unite the colonies but indicating more home rule than complete independence from Great Britain. It consisted of 13 horizontal stripes alternated red and white, 7 red and 6 white with red top and bottom, representing the union of the colonies, with a blue field or union in the upper left-hand corner where there was a design which blended the blood-red rectangular valiant English Cross of St. George with the pure white diagonal Scotland Cross of St. Andrew exemplifying the highest Christian virtues.

General Washington approved this banner and raised it on January 2, 1776, over the fort at Prospect Hill, Somerville, Mass., where he commanded the Army. In doing so he proclaimed, "We hoisted the Union flag in compliment to the United Colonies and saluted it with 13 guns." This flag had already been hoisted by John Paul Jones December 3, 1775, on the flagship *Alfred* of the small fleet of ships built by the Continental Congress and commanded by Commodore Esek Hopkins. This flag is also called the first Navy ensign and the Cambridge flag as there it was first raised by land forces.

As the Revolutionary struggle developed more desperate and bloody fighting with its consequent bitterness and our then mother country became more arrogant and tyrannical the idea was born of complete national independence and with it a desire for an appropriate national flag.

In the confusion of war, complete, authentic details of all incidents connected with the planning of our first Stars and Stripes are lacking. It is safe to say however that as Commander in Chief of the American Revolutionary Army, General Washington gave the final decision so that on June 14, 1777, Congress doubtless in deference to General Washington's wishes passed the following resolution: "That the flag of the 13 United States be 13 stripes, alternate red and white; that the union be 13 stars white in a blue field, representing a new constellation." Thus, June 14 is a day to be solemnized as National Flag Day.

The arrangement of the stars was not specified by law but General Washingto approved for the Army the plan of a circle for the stars symmetrically placed in the blue field or union to signify a complete continuous harmonious union of the old 13 Colonies to be indestructible as long as the stars representing sovereign States were not polluted by treason or the bright effulgence of the stripes of the flag smeared with political infamy.

That General Washington helped design this banner pattern is shown by the fact that he declared "We take the stars from heaven to represent a new national constellation. We take the red badge of courage from our mother country separating it by white stripes showing that we have separated from her, and the white stripes shall go down to posterity representing liberty."

And we may well say a holy cause it is when its virtue ever keeps pace with its valor.

It is certain that General Washington personally had one of these star-circle flags made for his own property to carry on his campaigns. Besides the circle of stars in the blue union there were other designs executed. The first Stars and Stripes had

the 13 stars arranged as a group so planned that the lines of stars blended the crosses of St. George and St. Andrew. The Bennington flag which inspired the Green Mountain men to decisive victory over part of British Burgoyne's army had 11 stars arranged as an arch in the union with a star in the two upper blue corners. These starry flags were soon used in battle after the flag law passed.

The 13-star flag was legal until January 13, 1794, when Congress authorized the addition of two stars and two stripes on account of admission of Vermont and Kentucky into the American Union. The new flag had the stars arranged in five staggered lines of three stars each in the union.

This banner had an adventurous life for it upheld our valor, virtue, and sovereignty for nearly 25 years. It was the original Star Spangled Banner which inspired the noble appeal to love and honor our flag by Francis Scott Key who, as a prisoner of war, wrote our national anthem while he anxiously watched our flag all night from an enemy ship as it floated over Fort McHenry, Md., in 1814. It was the first American flag to be hoisted over an Old World fortress. It conquered the Barbary pirates, sustained Commodore Perry to a glorious victory over the British on Lake Erie in 1813, and it helped Gen. Andrew Jackson smash Wellington's English veterans who attempted to invade our country at New Orleans January 8, 1815, and cleave it in twain.

Fearing that too many stripes would spoil the true design of the national flag, Congress passed a law April 4, 1818, returning the flag to its original plan of 13 stripes and providing for a new star to be added to the blue field to take effect on the Fourth of July next succeeding the admission of the new State.

Since 1818 additional stars have been added to the blue union until now there are 48 in six rows of 8 stars each. Now the salute by cannon to our Nation on July 4 is 48 guns, one being fired every 10 seconds. As the stars increased with the addition of new States various designs were invented. At one time all the stars were arranged as a larger star in the blue field.

To emphasize the symbolism of the national flag we may say that under laws untarnished by license the white stripes represent righteous and helpful liberty and worthy freedom which helps to achieve all that is best in our national welfare. Well does the poet say:

"May peace and order and beauty draw
Round our pure symbol of light and law."

The red stripe symbolizes bravery, physical and spiritual, to combat enemies at home and abroad and to oppose mightily all social, political and economic evils in peace or war. May we never falter in any supreme duty.

Then the red and white stripes blend with the blue union which stands for profound and endless loyalty to our country. Blue is said to be the color of the great mother force in life, the power that cherishes all that is loyal and true.

In this blue union are five-pointed stars, each an ancient symbol for men. Thus each may represent a sovereign State throbbing with the sworn loyalty of its citizens. Therefore righteous liberty and undaunted courage with exalted union must forever unite us into a mighty nation always prepared for security and safety. May we not learn a lesson from each five-pointed star with the five ideals of honor, service, valor, virtue, and protection?

We start with the first star point of honor which is always uppermost. This quality includes honorable dealings among ourselves and with all nations maintaining a just peace as long as it is right and proper.

Service, loyal and persistent, to our own country while being mindful of our international obligations and the needs of Christian charity.

Valor, which stands for defense when necessary against all foes within and without our borders.

Virtue, which is the achievement of all those righteous ideals which should govern our public and private relations.

Protection, the fifth star point suggests that every loyal citizen protect by all proper means the welfare of this country and in return secure protection of all his rights and privileges as guaranteed under our Constitution.

When the fair components of our national emblem are so harmoniously blended they signify a sublime and vital unity for national welfare.

Therefore, I urge these flag lessons upon all. Be loyal and the loyalty that lies in other men though sleeping but never dead will rise in eagerness to meet thine own.

Let us memorize to repeat on appropriate occasions the following: "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all."

At such a ceremony indoors, uncovered, the hand is placed over the heart as one faces the flag. Outdoors, men will then remove the headdress, holding same over the left shoulder with the right hand over the heart. Women have the right hand in the same position. Service people in uniform, covered or uncovered, will face the flag and give the military right-hand salute.

Other flag honors established by law and custom are: Always respect your national flag and show it proper courtesy. It is better to give too much than too little honor.

It should be raised, unfurled, quickly to the top of the flagstaff and remain there only between sunrise and sunset, except by special authority for patriotic purposes.

Even on Memorial Day, when the flag remains halfway down the flagpole until noon in memory of our honored dead, it should first be raised to the pole's top. All afternoon on this occasion, until sunset, the flag flies at full staff at the pole's peak.

Always lower the flag slowly and with dignity. On every occasion, handle it with due ceremony. Store it where it will not get soiled, injured, or neglected. Never place any object on or over the flag. Use colored bunting for decorations of red, white, and blue.

No flag is ever placed above our emblem, except the chaplain's banner with a blue cross on a white field in the Navy during divine service on shipboard.

In a group of flags ours is in the center and above the rest or, if in line, on the right of same at the point of honor following the idea in heraldry that the sword arm is on the right hand and is the point of danger and, therefore, of honor. It may be in front of the center of a line of other flags in marching or at rest.

The flag must never be used for advertising or any commercial or athletic purpose. Keep it sacred and supreme.

Never let the flag touch the ground or trail in the water.

Our flag is not flown in stormy weather, but should be displayed when the weather permits at authorized and specified times and places on public buildings and stationary flagstaffs and by everyone, if practicable, on the customary and lawfully specified holidays, including polling places on election days.

When displayed in the chancel or on a platform in a church, the flag should be placed on a staff at the clergyman's right; other flags at his left. If displayed in the body of a church, the flag should be at the congregation's right as they face the clergyman.

When the flag is on a staff projecting from a building, the blue union should go first to the peak of the staff. The union should always be right side up except when giving a sign of distress or danger.

When displayed over the middle of a street, the flag should be suspended vertically with the union to the north in an east and west street and to the east in a north and south street.

During the ceremony of hoisting or lowering or otherwise officially placing the flag or when the flag is passing in a parade or review, all persons present should face the flag, stand at attention and salute. Those present in uniform should render the right hand salute. Indoors in uniform uncovered this is also given. Those men not in uniform remove their headdress with the right hand and hold it at the left shoulder, the hand being over the heart. Women and uncovered men indoors and out should always place the right hand over the heart.

The salute to the flag in a moving column is rendered as the flag passes.

When the flag is displayed in a manner other than by being flown from a staff it should be displayed flat whether indoors or out. When shown either horizontally or vertically against a wall or in a window the union should be uppermost and to the flag's own right as it faces you or to the observer's left as you face the flag.

The flag should never be carried flat or horizontally in a parade but aloft and free. It is never dipped to any person or thing. Accompanying flags of less importance should render necessary honors.

Our flag should never cover a ceiling nor be used as a receptacle for anything or marked in any way.

It should never be used as a covering in the unveiling of a statue or a monument but may form a distinctive feature in a proper manner separately.

When the flag is used to cover a casket at a funeral it should be so placed that the blue union is at the head and over the left shoulder.

The flag should not be lowered into the grave or to touch the ground but given to the next of kin.

When our national flag is worn out, destroy it with proper respect in a solemn public or private ceremony. It is customary on such occasions to cut the blue union from the rest of the flag. It is then no longer an official banner and the separate pieces may be burned as stated.

If but slightly soiled a flag may be carefully washed but preferably dry cleaned.

Do not drape the flag over the hood, top, sides or back of a vehicle or of a railway train or boat.

When displayed on a motorcar, the staff should be firmly fixed to the front of the car.

You do not need to salute every piece of red, white, and blue bunting you see draped in public and private or flags as they fly from flag poles on buildings or small flags carried promiscuously by individuals. If you are a loyal American citizen, however, you should salute flags carried as colors or mounted standards by marching organizations or at proper ceremonies representing official national allegiance to our United States of America.

When our national anthem is played and the flag is absent, all present should stand and face the music. Those in uniform give military salute from first to last notes of the music. All others stand at attention removing headdress. If an entire audience anywhere or a soloist sings our anthem all stand but do not salute. When a flag is displayed, the flag salute will be given.

For the future I am constrained to say: "On guard, America." By valor and virtue forever stand firm and loyal to God and country. We have enemies both without and within our borders. Whether it inspires us to battle or toward the cultivation of virtuous citizenship, I ask every loyal citizen to show proper respect to our beloved national flag on every occasion that requires it. Teach your children to love and salute it. There can be no reasonable objection to such action.

May we all enter into a new covenant with our souls by showing more love for our country and the welfare of its citizens and more earnest and correct respect for our matchless banner. Always remember national Flag Day, June 14.

In our recent war our armed forces on land, on the sea, and in the air, and even underseas have added illustrious new glory to our Old Glory.

If we follow the above principles we shall never fail the crucial hours that may come to our Nation. Let us not give aid and comfort to our potential enemies by lack of proper national preparedness for defense, for we should keep America inviolate.

I have written a poem for the celebration of Flag Day. It is approved by clergymen to be sung to the church hymn tune Mendebras with words beginning "O day of rest and gladness." It follows:

O flag of strength and beauty
O flag of freedom's light;
Through thee we learn our duty
To show that right makes might;
With thee our own dear country
Will strive her work to do;
O pure and sovereign banner
Our dear red, white, and blue.

Today on war-sick nations
Thy light of freedom falls;
To help all righteous nations
Thy trump of freedom calls;
Thy starry splendor glowing
Will pierce all dark clouds through;
Rich life the world is owing
To our red, white, and blue.

Thy stars were sent from heaven
Thy rainbow from the sky;
That right in thunder-riven
Might cause all wrong to fly;
With all the world more glorious
In freedom's conscious right;
Our dear homeland victorious
In thy thrice blessed light.

I now close this flag courtesy with words I have writen to the music of the Army bugle call To the Colors which is used to honor the flag with the field music when there is no band to play the national anthem. These words are approved by the War Department as a worthy vehicle of flag tribute. They are not meant to replace the national anthem but to promote flag loyalty on appropriate occasions.

TO THE COLORS

To our flag, to our flag, to the red, white, and blue;
To its stars and its stripes may we ever be true.
We shall fight for the right in the strength of God's might
And be faithful in our service to the red, white, and blue.
Hail the red, bravery; white, liberty; blue, loyalty
In thy purity, sovereign emblem, we live and die for thee.

Editorial Comment on Address by Hon. James A. Farley Before New York State Bankers Association

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. GEORGE. Mr. President, some days ago the address delivered by Hon. James A. Farley before the New York State Bankers Association in New York City on January 24, 1949, was printed in the Appendix of the RECORD. I now ask unanimous consent to have several editorial comments upon that address printed in the Appendix.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Tacoma News Tribune of February 2, 1949]

WARNING BY FARLEY

James A. Farley, former postmaster general of the United States, won a great reputation as a wise and astute politician before he guided the campaign which elected Franklin D. Roosevelt to the Presidency in 1932 and again in 1936. Farley is now chairman of the board of the Coca-Cola Corp., one of the big positions in the business world. He still keeps in close touch with political affairs in this country and has probably one of the widest acquaintances of any American now living. This he supplements by numerous trips abroad which keep him in touch with world conditions.

Hence, the Farley predictions of the future which are infrequently given, are read with interest. At a recent meeting of the New York State Bankers Association the former Postmaster General gave a warning, which is significant. He told the bankers that the ever-increasing services coming from the Federal Government will impost financial obligations which will ultimately destroy the American way of life unless the present trend is halted.

The last election means, according to Farley's interpretation, "that the country has determined that the Government must, to an ever-increasing extent, bring its services to all the people. There may be differences as to the forms and amounts of such services but in general the United States has long since given up the notion that all that can be expected of Government is the maintenance of an Army and Navy, a Post Office Department and a diplomatic service.

"Undoubtedly there are many of you," said Farley, "and I think I share your views on this subject, who fear that in the multiplication of service we shall load down our Government and taxpayers with financial obligations that will ultimately destroy the American way of life. The serious dilemma of a demand for increasing Government services on one hand meets the danger of excessive taxation on the other."

To meet this condition, which thoughtful people everywhere realize, Farley urged greater economy and efficiency in Government. "We must get more public service for every dollar the Government collects from taxpayers, otherwise business activity will slow down. This prospect for the coming year should constitute a serious warning to Congress and the President to consider carefully the implications of our present rate of spending."

[From the Ansonia (Conn.) Sentinel of January 28, 1949]

ADVICE FROM JIM

James A. Farley pointed out the other day that when the national income is rising by inflationary forces, as it has in the past few years, the return of the tax receipts rises relatively faster than the national income. When the trend of national income is reversed, however, even by a relatively small percentage, tax receipts fall at a considerably larger rate.

This is important, Mr. Farley pointed out, because the drop in tax revenues may come rather soon, and at a time when the demand for Government services is increasing.

This, he pointed out, will present a dilemma. Mr. Farley does not think the answer to the dilemma is to hike tax rates, for the yield will not thereby be increased. Neither does he advocate the elimination of all the special services demanded of Government by our complex civilization. What he urges is insistence upon greater efficiency and more public service for every dollar that Government collects from the taxpayer. Frankly admitting that no private business could continue to exist on the basis of waste and inefficiency with which many Government departments operate, Mr. Farley rises above partisan considerations, which usually add more heat than light to such questions. He says neither the President nor the Congress is directly responsible but that these things have grown from failure to systematically reconsider the value of various Government functions at reasonable intervals. On the Federal level he urges every American to join in the effort to have the major recommendations of the Commission headed by former President Hoover put into effect.

Here is a problem that is going to affect the smooth functioning of useful public service as well as the pockets of the citizens. Mr. Farley's advice that it be attacked on a businesslike rather than a political plane is the soundest we have heard. Not only on Federal levels but on State and local levels the public must exact from its servants increased efficiency and greater value for the tax dollar. That's more easily said than done. Political expediency tends to encourage inertia until the problems accumulate to such magnitude that public resentment brings demand for sweeping amelioration of the conditions. How much better it would be for all citizens, regardless of party, to cooperate in overcoming that inertia. If the effort isn't made, if trends are permitted to go their merry way with no concerted demand for full returns from tax dollars, we are likely to awaken one day faced with a governmental structure so badly dislocated that an almost convulsive effort will be required to set things right.

[From the Erie Daily Times of January 26, 1949]

FARLEY ON ECONOMICS

James A. Farley is a solid business executive. He is a former chairman of the Democratic National Committee, an ex-Postmaster General. He is an unswerving partisan Democrat, though not wholeheartedly subscribing to all the isms projected by his party since 1940.

Mr. Farley, who is board chairman of the Coca-Cola Export Co., is a realist. He says that the national income cannot stay forever at its present high peak.

He told a meeting of the New York State Bankers Association Monday that Government and business should prepare for lowered national income, because this factor never has been stable and it will not be in the future.

Mr. Farley, who knows his business, private and political, calls for reduced expenditures in Federal Government and sees hope in the fact that former Republican President Herbert Hoover and Democratic President Harry S. Truman were apparently seeing eye-to-eye in this regard.

Mr. Farley's advice can be considered expert, for he was sitting prominently in the political picture that saw the extravagant rise of bureaucracy and the swelling of the Federal pay roll. When he rebelled, he broke with bureaucracy's patron—Franklin Delano Roosevelt.

Mr. Farley sees neither a depression nor a serious recession, though it is possible for history to repeat itself and throw us into another depression—the hope of our communistic enemies.

That isn't probable however—if we remain a strong and stable Nation at home, he pointed out.

Advice from Mr. Farley can well be taken as sound counsel to the country. For after all—the self-made Mr. Farley is as astute a businessman as he was a political administrator—a rare combination.

[From the Financial World, New York, N. Y., of February 2, 1949]

FARLEY WARNS THE NATION

Speaking before the New York State Bankers Association, but in effect addressing himself to the country at large, James A. Farley, former Postmaster General and one-time Democratic National Committee chairman, warned of the dangers of excessive taxation stemming from the demand for more and more Government services. He decried also the excessive cost of government and, speaking from his own experience, asserted that no private business could afford to operate under the conditions prevailing in most Government departments.

The present head of the Coca-Cola Corp. laid no direct blame on either Congress or the executive branch of the Government for the situation which, while long existing in the administrative establishment, has mushroomed in recent years. He attributed the situation partly to the excessive protections imposed by civil service, which render it virtually impossible for department heads to get rid of incompetents. He cited also the annual turn-over of 500,000 Federal employees a year, and the high cost of training replacements.

The demand for greater Government services, as Farley pointed out, means a vast increase in the cost of running the Government, particularly with so heavy a percentage of incompetents in departmental personnel. That cost can be held down only by efficient operation of the Government. Unless more public service is given for every dollar collected from the taxpayer, taxes will rise to the point where the whole structure of the country will be endangered. Mr. Farley urged that every American join in an effort to have the major recommendations of the Hoover Commission enacted into law and administrative practice.

Mr. Farley enunciated nothing that has not been said before by others. His views, however, add force to what others have said. His remarks and his endorsement of the Hoover Commission derive further interest because of the part he played in helping to oust Mr. Hoover from the Presidential chair and to install Franklin D. Roosevelt in his stead.

[From the Ithaca (N. Y.) Journal of January 29, 1949

TWO EXPERTS

If we were to summon experts for a discussion of government, we should consider James A. Farley and Lindsay C. Warren as top-notch material.

Mr. Farley was long in Washington as Postmaster General, and Mr. Warren, Comptroller General of the United States, has won a name as a Treasury watchdog there. The former has seen the wheels go around in the Capital from the inside. The latter has checked Federal expenditures for a long time.

Said Mr. Farley in a talk to a bankers' meeting, our Government should be organized for efficiency and for an end to overlapping and waste.

Said Mr. Warren to a House committee, the Federal Government is set up as a "hodgepodge and crazy quilt of duplications, overlappings, inefficiencies, and inconsistencies."

The former Postmaster General went on to point out how Federal costs are growing, and to urge that we "get more public service for every dollar that Government collects from the taxpayer."

The Comptroller General asserted that our system is "probably ideal for the tax eaters who wish to keep themselves perpetually attached to the public teat, but it is bad for those who have to pay the bill."

The point of this to the taxpayers is that under Herbert Hoover a commission is pointing out ways to eliminate some of the waste and some of the unnecessary pay roll leeches. Congress, it is said, for patronage or other reasons, may hesitate to let the President clean house.

The people should be clear about the situation. Experts in both parties testify to the ratholes for some of our tax dollars. No party should dare bar any sensible move to remedy this loss of the people's money.

[From the Johnstown (Pa.) Tribune of January 26, 1949]

AN EXPERT SPEAKS

James A. Farley, former Democratic national chairman, has handled a great deal of patronage in his time.

"No private business with which I am familiar," he said the other day, "could afford to operate under the conditions that prevail in most Government departments."

That should come under the heading of expert testimony.

[From the Salamanca (N. Y.) Republican-Press of January 26, 1949]

FARLEY FOR HOOVER REPORT, DISCUSSES BUSINESS OUTLOOK

James A. Farley, former Democratic national chairman and former Postmaster General, has joined President Harry S. Truman and other prominent leaders in both political parties in urging all Americans to unite in an effort to have the major recommendations of the Commission headed by former President Herbert Hoover enacted into law and administrative practice.

Mr. Farley threw the weight of his influence behind the Hoover Commisison in an address before the New York State Bankers Association in New York City Monday night, and also discussed the business and industrial outlook, as to which he is moderately optimistic.

"I do not anticipate depression or even a serious recession in business," said Mr. Farley. "There are too many factors supporting our economic system that are sound which were not present back in the twenties, to justify pessimism."

He pointed out, however, that "we cannot expect that our national income can always continue at the rate established last year," nor can we expect permanently and without interruption the volume of business that we have enjoyed in the years since the war. He noted that when the national income was rising as a result of inflationary forces, as it has been in the past few years, the Government's receipts from taxes rise relatively faster than the national income. By the same token, when the trend of national income is reversed, even by a relatively small percentage, tax receipts fall at a considerably larger rate. He urged, therefore, that the country be prepared for such a situation in the coming year, and argued against an increase in taxes, "because raising tax rates will not help much to keep us in the black, because the returns will be falling."

Under such conditions, Mr. Farley argued with logic, it is essential that through greater efficiency more public service be obtained for every dollar the Government collects from the taxpayer, and he declared: "No private business with which I am familiar could afford to operate under the conditions that prevail in most Government departments."

Neither the President nor Congress, he said, is solely responsible for waste and extravagance in the Federal Government. Activities and services have continued from year to year without any periodic reconsideration of the need or adequacy of the ways they are conducted. It was in this connection that he urged public support of the major recommendations of the Commission headed by Mr. Hoover, which has been engaged for months in the most thorough study of these matters that has ever been made.

UNESCO and the Development of International Understanding

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have inserted in the appendix of the RECORD an address entitled "UNESCO and the Development of International Understanding," delivered by Walter H. C. Laves, Deputy Director-General of the United Nations Educational, Scientific, and Cultural Organization, before the National Farm Institute at Des Moines, Iowa, February 18, 1949.

This address gives a very clear picture of the operations of UNESCO, and will be important in bringing about a clear understanding of the contribution this world organization is making to the cause of international peace.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNESCO AND THE DEVELOPMENT OF INTERNATIONAL UNDERSTANDING

(Address given by Walter H. C. Laves, Deputy Director-General of the United Nations Educational, Scientific, and Cultural Organization, before the National Farm Institute at Des Moines, Iowa, United States of America, February 18, 1949)

Mr. President and members of the institute, it is a very special pleasure for me to be here today. Reference has been made by the chairman to earlier meetings of the National Farm Institute. I recall particularly one which may well have been the first at which you had as guest of honor the then Secretary of State Cordell Hull. I attended that meeting as a minor guest, and on several occasions since have followed with interest the work done under the auspices of the National Farm Institute.

I recall these earlier sessions of the institute in relation to the subject of my address today because I think you have been carrying on activities which might very appropriately be labeled as of the UNESCO type. The kind of programs you have sponsored need to be carried on not only here but in all parts of the United States and throughout the world—east, west, north, and south. Efforts of this kind to get people to understand their immediate day-by-day, house-by-house problems in the perspective of the international world in which we live must be redoubled if we are to develop the kind of world consciousness that is required for living in this one world.

I had intended when I received your kind invitation in Paris to be present here today, to present to you a rather formidable document which was labeled on the front page of the last draft "Speech—National Farm Institute." It grew to be about 30 pages in length, as I was trying to tell you everything UNESCO means and does, but I didn't have time to write a short speech. Obviously, that speech will not come out today. Reading a speech to my many friends here anyway would be somewhat like reading her a letter when I visit my mother tomorrow in Chicago.

The thing I am interested in talking about is what UNESCO does. I would like to highlight certain of the activities which will give you the best sort of picture of what this organization of yours is doing. It is your

organization; it is one of the United Nations Organizations you as taxpayers are supporting; and if you do not know what it is and what UNESCO is doing, it is time one of us who is carrying on this work for you came and told you.

I shall emphasize program matters, but I wish I might have time to tell you something about the problems of building an international secretariat, starting from scratch without anybody, but with a large program consisting of resolutions adopted by the member states. The 46 member states have instructed us to implement the program resolutions, put them into operation, and pass forward in terms of action to the member states something they in turn can do toward international understanding.

It is a tremendous task to recruit people from long distances. Our headquarters from the beginning have been in Paris, but the people we need are in India, New Zealand, South Africa—all over the world. The task of getting in touch with them, bringing them over, organizing them, building morale, is a task that is time-consuming and sometimes heartbreaking. The joy in the work is that nearly everybody who has come has dedicated himself to do a job and is working with the sort of tempo which you knew so well during the last war. Victory then gave us the chance to do this job of creating the United Nations organizations.

I would like to tell you case histories of staff members—the problems of adjusting the work habits of a Chuck Weitz from Des Moines, Bill Purnell from Australia, and Leopoldo Monzon from Mexico—all of whom have to work together on common problems. Each has a different background, schooling, and outlook, but all agree on the end objective they have in mind. In UNESCO we are building international understanding among the secretariat members as some day common ends and common methods should contribute to greater international understanding throughout the world.

One might also say something about the techniques used by the Organization, including the holding of annual conferences in different parts of the world, thus making a special impact on the countries where we meet. Only 2 months ago we completed our third session of the general conference held in the Lebanon. Previous conferences were held in Paris and Mexico City. The effect of moving an organization into other communities of the world where otherwise there is no contact with the United Nations and its agencies is a difficult but important thing, no matter what the cost.

Now, what is UNESCO? I asked Harry Terrell that before lunch, and he said, "Why don't you ask the audience that question?" Well, it is one of the specialized agencies of the United Nations—an organization established by the member governments on the assumption that just as nations require domestic educational, scientific, and cultural institutions for promoting the general welfare, so the world community requires an organization which provides corresponding services to the world as a whole.

We are, in effect, an arm of the United Nations. The United Nations is in many respects a composite of legal, justice, legislative, police, and fire departments. A well-rounded world organization requires a series of specialized agencies like UNESCO which are looking after specific phases of the general welfare, including health, transportation, finance, and education. So the task of UNESCO is comparable to that of the World Health Organization, which is concerned with problems of public health on the international level, the International Labor Organization, or the World Bank.

UNESCO means different things to people in different parts of the world. Some are most concerned about reconstruction, some want access to scientific information, others seek first of all the achievement of literacy among their peoples. Different needs create different demands. Similarly, the national base for UNESCO differs according to different countries.

You have in the United States a national commission for UNESCO. It is a national organization which has 100 outstanding American citizens in it. In addition, there are numerous local, State, and community groups, which are carrying forward the ideas of UNESCO in the community in terms of building for peace through education, science, and culture.

This is as it should be, if the ends of UNESCO are really to be attained. We have a long way to go in the building of international organizations before they will even begin to do internationally the jobs that are now done by the national governments and local communities. In the constitution of UNESCO, the member states, including the United States, recognize this fact in the emphasis on the role of national commissions. In the constitution, the member states have accepted certain principles and certain objectives which they want established in the world. They want, for example, to insure that there is educational opportunity for everyone in the world irrespective of race, religion, or economic status.

Now what can an international organization do about that if the national member state of UNESCO does not itself provide educational opportunity? Nothing more than stimulate, encourage, occasionally provide publicity, technical assistance, or educational missions if requested. The real job of carrying out international obligations of this kind is the job of the member states. It is ultimately upon the people, you and your organizations, that the real responsibility falls.

That is why I say that the holding of the National Farm Institute is the kind of community action and activity that has to be undertaken all over the world in order to bring home to the people of the world how one acts in one world. We live in one world, and the furtherance of the general welfare depends upon thinking in world terms. The necessary world consciousness or ability to live as world citizens has not yet been developed.

I may sound at this point as though there is not much use having the UNESCO organization, but that is not true. Let me give some illustrations of what UNESCO, as an organization, does to help in attaining these ends. For the sake of this discussion, let me suggest that there are four principal kinds of things being done.

First, we are pressing to help reconstruct countries devastated by the war. This job is not yet over. I know many of you have had a chance to go to Europe in the course of the last 2 or 3 years. Some of you were there within the last few months. You have seen the condition of the war-devastated countries, the condition of schools, colleges, universities, the shortage of teachers, of school materials, books, buildings, roofs, tremendous shortages of scientific laboratory equipment. These resources have to be reestablished, and quickly, if the people of these countries are once more really to have opportunities for working in the world system.

One of our field workers came in the other day—he had been in Greece making a survey of the educational needs at the primary-school level. I said, "I guess things are going well in Greece now; lots of help has been going in there." "Yes; I suppose quite a lot has," he said, "but the picture I can't get out of my mind is the last school I visited. Two walls were left, no roof, no rooms, no floor, and, of course, there were no desks or chairs, no pencils or paper, but the kids were learning fast." I said, "How do they do it without the equipment?" "Oh, they were lying flat on their bellies in the sand; the teacher was saying, 'Four times two equals eight'; they would scratch it in the sand, wipe it out with their hands, and write, 'Five times two equals ten.' That is the way they did spelling and arithmetic. It was a slower process, and they are getting along. But it is not an efficient way."

The reconstruction job is a tremendous job, and here in the United States through the Commission for International Educational Reconstruction you have done a tremendous job in collection of materials and sending them over. You can't imagine the flood of letters and expressions of gratitude that come from these countries to which materials have gone. The important thing is to see this reconstruction work against the background of our wish to build a world in which there is understanding between peoples. To achieve this you must be sure the people have opportunity to learn enough to be able to understand. In war-devastated countries to date they don't have that because the school and college and university facilities are still lacking. UNESCO places reconstruction in the highest priority class.

The second kind of job is that of promoting the raising of standards of education in the under-developed parts of the world. In part this is a mattetr of combating illiteracy. You know that nearly one-half of the world's population is completely illiterate, and that proportion of the world's population cannot be forgotten. In that proportion of the population, people get hungry, have ambitions, have desires, want power, want to take care of themselves, want to improve their conditions just as do the literates. Until the illiterates have some measure of literacy, there is little likelihood of bringing them effectively into the work of the United Nations or of a peaceful world. Therefore, one of the principal tasks which UNESCO has been asked to give attention to is the development of fundamental education programs or campaigns against illiteracy. Here we are fortunate in that the new Director-General of UNESCO, though most recently foreign minister of Mexico, is especially well known in the world because of the great campaign he carried on in Mexico against illiteracy.

The task, however, is broader than teaching A, B, C, or 1, 2, 3. It is also a matter of combating illiteracy in living—including matters of health, nutrition, agricultural methods, civic education, improving the general welfare. In Haiti today, a combined mission of the United Nations, UNESCO, Food and Agriculture Organization, World Health Organization, is at work with the Haitian Government on a tremendous project involving a joint attack upon this many-sided problem of illiteracy.

In still other countries the need is for experts to improve existing educational facilities—classroom methods, teaching aids, teacher training, curricula, etc. As I speak here today, two UNESCO education missions, internationally selected and responsible only to UNESCO, are in the Philippines, and Siam for this purpose. Late this spring two others will go forth, one to Syria and one to Afghanistan.

The third kind of thing to which we are giving attention under request from member governments is the reduction of barriers to the flow of information and knowledge around the world—barriers which are partly due to traditional habits and channels of thought, or partly to currency difficulties and commercial obstacles or to other causes.

Let me give some concrete illustrations. We have four scientific offices outside of Paris—Montevideo, Cairo, New Delhi, and Shanghai. The purpose of these offices is to provide a place in a scientifically less developed part of the world to which the people can go and ask for information or about sources for information about the developments in the field of natural sciences which

will help individual research needs or community and national needs in, for example, health, agriculture, or pure science. The purpose is to prime the flow of technical knowledge from where it is to where it is most needed.

Then we have the UNESCO book coupon scheme to overcome currency barriers to the purchase of books. UNESCO sells coupons which are redeemable in hard currency. After they have gone from us to a soft currency accredited agent, they are sold for soft currency to a would-be book buyer. He sends the coupon to the book dealer in a hard currency country who sends the book to his soft currency customer and the coupon to UNESCO for redemption in hard currency.

Ideas and information are found in people and there are barriers to the movement of people. We have a limited number of fellowships to award to technicians, people in government or professions, or students. We provide fellowships which give them an opportunity to go for 6 months to another country to study. In addition there are hundreds of fellowships available, in the administration of which we are giving assistance, trying to get the movement of people where they are to where they ought to go, rather than on a helter-skelter basis.

The fourth principal way in which we are trying to carry out the program of the Organization is to try to promote positively this thing vaguely referred to as "international understanding." Here, first of all, there is the task of getting the member countries' attention as to what is being taught in the schools, which depends on what is in the teacher's mind and what is in the textbooks. An effort is being made to get countries to examine textbooks to see what is being developed in the minds of the children today which will influence their actions tomorrow.

Seminars of teachers and educational administrators have been held under UNESCO auspices to give an opportunity to these people from different countries to compare notes on the best methods to teach international understanding and world-mindedness. One such seminar was held in Paris in 1947, another in New York in 1948 and two related ones in Czechoslovakia and Great Britain. Material for the use of teachers when they returned to their homes and jobs were prepared and we understand that in several countries they are in fact already in use. Two seminars will be held in 1949—one in India on fundamental education and one in Brazil on illiteracy.

Finally, UNESCO has stimulated social scientists in a dozen countries to examine the factors and influences which condition the child's mind to respond as it does when mature to the various factors of nationalism and internationalism. Thus important raw material of knowledge should be discovered which will guide us in taking more positive steps for furthering international understanding through the educational and comparable means at our disposal.

Mr. Chairman, you still have a long program ahead of you this afternoon and I should not go beyond the 30 minutes allowed me.

I have wanted in this brief time to give you both a bird's- and a snail's-eye view of UNESCO. There is a dual danger in quick discussions of this kind—they can be so general as to leave no sense of reality or of the task to be done by the audience. Or, they can be so detailed as to hide from the listeners the greater potential in the idea which underlies all the Organization's activities.

UNESCO can be summarized at this stage in the following manner—UNESCO as an idea is but the latest development in a long history of freedom and the growth of democratic institutions.

UNESCO as a charter is a commitment by the governments and people of 46 states to work toward the achievement of the international common denominator there set forth.

UNESCO as an organization is an annual conference, an executive board and a secretariat whose function it is to promote, assist, stimulate and encourage work around the world on the implementation of the constitution found in the program adopted by the Conference.

UNESCO as a reality is the composite of effective work done in all member states by people and voluntary associations of every kind for the purpose of putting into practice at home the objectives in UNESCO'S constitution to which every member state has subscribed.

Shall America or Russia Rule the Air?

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, March 18, 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered November 4, 1948, by Col. Roscoe Turner at the national meeting of the Society of Automotive Engineers at Tulsa, Okla. The title of the address is "Shall America or Russia Rule the Air?" and I commend the address to the consideration of all Senators.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SHALL AMERICA OR RUSSIA RULE THE AIR?

(Speech by Col. Roscoe Turner, November 4, 1948, at the Society of Automotive Engineers national meeting, Tulsa, Okla.)

My fellow Americans, the last half century has witnessed the meteoric ascendancy of the United States to its present unparalleled position of world leadership. Gloriously victorious in two great world wars, this Republic has arrived at a place of influence, prestige, and power never before equaled by any nation in all the annals of human history. It is our duty to a struggling humanity to continue to exercise in this postwar period the same high quality of leadership that we have displayed against the cruel and barbarous onslaught of aggression and tyranny in the two world wars. We are living in a crucial period. The decisions to be made by the United States in the immediate future will determine the course of civilization for many succeeding generations. The challenge of this is to create permanent peace so that all mankind may dwell without fear of enslavement and death, but live in an environment of friendship and freedom. A strong and powerful United States is the surest guaranty for the perpetuation of a society of free nations. Air supremacy is the only way in which we can ever hope to lay the foundations for a permanent peace.

There are in our midst, influences that would deprive us of this leadership that has made ours the greatest form of government in the world. They are sowing discontent in our shops, factories, mills, schools, labor unions, our Government, and every walk of life. Without unity we can easily be conquered—economically, politically, and militarily.

We have never lost an armed conflict against the enemy because we have always united to defeat the foe, but we lost the peace after World War I and we may lose the peace after World War II because the minute we lay aside our shooting irons the politicians take over dividing us in our thinking, telling us only the pleasant things and keeping from us necessary information and vital facts that we should know. Between the politicians, bureaucrats, false labor leaders, and the Communists, we are being taken for a buggy ride from which we may never return.

We have more people on the Government pay roll than ever before. The bureaucrats are running things to suit themselves, regardless of the intent of the law. Our Government has Communists in many high places. Why can't we have loyal American citizens in all Government jobs? Why are we permitting war materials to be shipped behind the iron curtain? They are certainly going to give it back to us "red hot" right into the bodies of the American youth, just as Japan did to our boys in World War II.

How are we going to change it? Tell our Congressmen what we want done. Tell them to fire half the people on the Government pay roll. Tell them to reduce our taxes. Tell the State Department we want to know the truth about what is going on—no more of these private agreements by any individual—we want to look things over first. Tell our Congressmen that we want this country militarily strong enough to insure the peace and security of our citizens, their homes, and their businesses. The rest of the job we can do in our own free, democratic, enterprising way. Before we give a person employment, demand that he divest himself of all foreign isms, including communism. Help the labor unions divest themselves of all their false leaders. Again instill in the minds of the American people, young and old, the understanding that we must earn a day's pay each day we work if the employer is to continue in a position to pay. Featherbedding and loafing is just plain stealing from the employer and the consumer—and is un-American. Let's make democracy work by making it strong. To make it strong we must all work for full production in every line—on the farm, in the factory, in building, in transportation, in the mines, mills, and shops.

We must rebuild the desire to do things in the minds of the American people. As an example, the idea that laying 300 bricks in 1 day when the old master mason used to lay from a thousand to 1,500, or the carpenter who put up 50 boards when he could nail up 250, and the automobile boys that turn out 1 car in the time they should turn out 5, is all wrong and will destroy our country. The story is the same in all classes of work. We never received or achieved anything without working for it. Our way of life, our standard of living, is the finest in the world because of hard work of our forefathers.

We must cast off these false leaders that are telling us we can get something for nothing. It has been tried many times throughout the ages and it has always led its followers into slavery and despair. The Romans tried it under Caesar and wrecked the Empire. Now it is spreading again in Europe and these very countries who are trying it now are asking us to divide our dollars with them, plus the fact that we are short of everything we need, they want us to divide our production too.

What will be the answer? It is as sure as night and day. If we don't want to sink to their level of living and misery, we must go to work for full production, pick good leaders everywhere, think for ourselves some of the time and rebuild our military strength to insure the peace that we were promised in World War I and again in World War II.

We don't have a police force because we are crime-minded but to prevent crime and catch those that commit crime. We have a fire department—not because we are fire-

minded, but to prevent fires and put them out when they do get started.

We have our military forces—not because we are warmongers, but to preserve our peace and security. The stronger they are, the less likely we are to be challenged. A leopard will never attack a lion because he knows better. Human beings sometimes are not so smart, but if we are strong, the chances are in our favor.

We must have universal military training. The people who are against it are those who would keep us weak, or they are misinformed.

We must be supreme in the air. England ruled the waves and helped keep the peace for 100 years until challenged by Germany in 1914 and again in 1939. Without our help she would have lost in both instances.

We must rule the air to insure the peace because there is no one that can, or will, come to our aid in case we are attacked. Time will not permit. It will be fast and very destructive.

A little over 25 years ago a great soldier, aviator, and air prophet was in our midst crying as a voice in the wilderness for aviation and telling how it would change the world—our own Gen. Billy Mitchell. He gave up his career and died with a broken heart because our generals, our admirals, our Congress, and our people would not believe him.

It took World War II to vindicate him and prove his prophecies. The most horrible and costliest war in history. Germany and Japan heeded his words and built great air forces and only by the grace of God were they kept from conquering the world. If the Germans had followed up at Dunkerque, or the Japs at Pearl Harbor, the story would be different today. Time plus two oceans permitted us to take advantage of their errors and make up for our mistake of not heeding Mitchell's advice.

If Mitchell could appear before you tonight, you would shudder at the things he would tell you that are to come unless we awaken, because you would believe him this time. Having been an officer under his command in World War I, I am going to be so presumptious as to speak for his spirit here today. With the help of all, we think we can get the story over this time. He was no warmonger, and neither am I, but I am going to give you some facts to think about.

If Mitchell could have put his story over, we would have never had World War II. I will further verify this by the fact that in 1936 the French Air Force and Army were the strongest in the world. When Hitler ordered his troops into Rhineland, he knew France could crush them and he told his commanders to withdraw if France started to mobilize.

Why didn't France move? France wanted to balance the budget, and, furthermore it would be politically unpopular. Next, the Communists started to work with greater effort to undermine the Government of France, their army, air, and naval forces and their industry, while Hitler was awaiting the result.

My friends, we are following down the same road—time is running against us. We are now down to a second-rate air power, and Russia is working day and night on the atomic bomb. She is building her air power to bring them to us.

We, as people, dislike unpleasant things so we dismiss them from our mind. We just don't want to believe them. We have never suffered physical pain as a nation. We even forget those who have gone to foreign lands and suffered and died for us so that we might still enjoy this country of ours.

Our trouble is, we will not move until we are mad or scared. Pearl Harbor made us mad. Submarines popping up on our coasts scared us. So we, with the help of time and two oceans, got into high production and practically smothered the enemy with materials of war—and I am not discounting our boys who threw it at them.

Here is what we could have done if from 1921 to 1941 we had spent on air power $1,000,000,000 a year for each year, a total of twenty billions. We would have had the greatest air power in the whole world. Then Mr. Hitler and Hirohito would have tended to their own business.

This war has cost us already over two hundred and forty billions and we are still paying. So, we would have saved two hundred and twenty billion in cash, plus over a million casualties of our own, including over 300,000 that didn't come back—plus a bankrupt Europe that we are asked to support and loan money to, to buy our goods, not to mention all their losses and sufferings. Have you forgotten what air power did? Poland fell in 3 weeks, Norway fell in 2 weeks, Holland in 4 days, and Denmark in 3 hours.

General Eisenhower stated that without our controlling the air, the Normandy invasion would have been impossible. Winston Churchill said to his people after Dunkerque, "So many owe so much to so few," meaning the Royal Air Force. To mention another, the Japs also took good care of England's two largest battleships out of Singapore. Remember how our Air Force sunk 14 Jap ships in the Bismarck Sea without any surface aid and didn't lose a plane?

The airplane, plus the fire, the high explosive, and atomic bomb, saved us from having to invade Japan, thereby saving thousands of our boys and several billion dollars. High German officers testified that our air power defeated them. Need I go any further?

Our next Pearl Harbor will be the industrial center of the United States. Generals Eisenhower and MacArthur have both stated that future armies will travel through the air.

There are only two great powers in the world today. One a peace-loving, capitalistic United States; the other a ruthless, communistic, absolute dictatorship more horrible and ruthless than Hitler ever thought of being. Even in the Dark Ages, they never equaled Stalin's prison camps and forced labor. There are 14,000,000 in them right today.

Let me remind you that Russia has one of the largest airfields in the world just 4 minutes from our own soil—Alaska. She can launch from there 1,000 bombers and 1,000 airplane troop carriers of 300 fully equipped soldiers to each carrier. The bombers would burn our industrial cities to the ground. The troop carriers would land in Chicago and St. Louis, take our two largest rail centers, and cut the country in half. We only have 17 railroad bridges across the Mississippi and it is not like throwing up a bridge across the Rhine or Moselle River in Europe to put a railroad bridge over the Mississippi.

Even after all this has happened and if we are able to liquidate this force, provided our ground forces are trained and ready to fight, we must have air power to stop more from coming—but our production capabilities will be cut in a most serious way.

Don't misunderstand me. We must have a strong Army and Navy, a well-trained National Guard and Reserve; every citizen must have some coaching or training for their own protection because there will be no front line as in days gone by. War will be in every front and back yard, on every farm and in every factory—it will be everywhere.

There will be no surface invasions in future wars. A country or an objective will be destroyed and its ability to fight made impotent so that our surface forces will become occupying forces. This was the pattern followed by us with Japan in the close of World War II after the atom bomb.

But, we must still have a strong, well-trained Army and Navy—but with limitations on spending money, because they will fortify the moon as long as we give them the money. Every time there is an appropriation for the air forces, the Army and Navy wants a new appropriation for their respective services. The big question is, how can we pay the bill for this type of thinking and duplication of experimental and development work in both planes, rockets, and guided missiles.

We now have two Air Forces—United States Air Force and the Navy Air Force—both arguing who is to do the long-distance bombing. The thought is also advanced that competition between the two makes for better development. Do we have two atom-bomb plants? No; because we cannot afford it. Then why have two branches of our defense in competition with each other? Some high-ranking officers say that we must have competition to get the best out of the services. If that is true, why not two Presidents, two Secretaries of State—two of everything? Does a big manufacturer have to develop two laboratories to get the best possible product? No. He gets all the brains he has on the pay roll around the table and tells them to produce. Our military services cannot play with our security as if it were a ball game—a contest between them to see which one is going to get to the enemy first. No; we cannot stand the cost for this kind of competition. We must demand of Congress that our military brains be made to work together for our security.

I will tell you where the trouble is. No. 1—it starts at West Point and Annapolis and they never get over it. We should turn both of these schools into postgraduate schools for professional officers after they have learned a little about the economic side of our country in our regular universities and colleges. The best example of this is Texas A. & M., who has turned out more officers than West Point.

No. 2—stars and gold braid cannot be added to unless they keep getting more men to command. Of course, there are exceptions to be found everywhere. There are always men who rise above selfishness, and here is one I will quote. As far back as 1915, Admiral Peary said, and I quote, "In no way can we as a nation stand so effectively for forcefulness, for strength, and for world influence as by command of the air. Great and important as is a sufficient Navy for our safety, I speak advisedly when I say that our air service of the near future will be more vital to our safety than our Navy and our Army combined."

Another admiral, William B. Shoemaker, on reading the report of Billy Mitchell's bombing experiments in 1923, said, and I quote, "It's true, every bit of it—but, my God, we can't let this get out or it would ruin the Navy."

There is much pro and con on the subject of air power but we must demand that the services work as a team and not as kids with their toys. Just because the Air Forces have B–17's and 24's, why should the Navy have them, too? They did during the last war and they would not take the standard production model the Army bought—they spent millions more changing them. They almost got B–29's, but Arnold set his foot down and they didn't get them. The Navy must have carrier-based planes and when a big bomber is needed, a radio call should get them to work with the carrier forces. With the present requests for money from each of the services, we could bankrupt the country. Then, Stalin could take over without firing a shot. However, if we are supreme in the air, we can keep them away from our own homes and take it to their doors.

Now, let me define air power. Air power is not only military aviation, it is also civil aviation—the aviation potential of a country. The Air Force is the military part of air power, the force that can be applied directly against the enemy, but all other aviation supports it. So, any program which increases flying in the United States, which

supports its civil air lines, which increases air consciousness, is helpful to air power. If war comes, we will use our civil air transport to the maximum and it will not be enough. So, it will have to be expanded. The more it is supported and the more it is encouraged in national and international commerce, the less we will have to expand and the more nearly ready we will be.

Now let me further stress the commercial side. The more flying, the better. Do you know that our being so advanced in commercial aviation saved the day for us in World War II? When President Roosevelt asked for 50,000 planes, the military asked, "Where are we going to find the pilots and ground crews?" They didn't think it could be done and our enemies were sure we couldn't do it—but we did.

You will remember the old CPT program. Mamas and papas just raised the devil with the schools and colleges when it came out. They said it was a waste of taxpayers' money and going to kill and injure their boys. But thanks to the vision and foresight of three or four people in the Department of Commerce, it was an educational program both for students and public. It wasn't long until mama and papa did an about-face. When the quotas were full, they started writing their Congressmen, not only to get their boy in flight training but their daughters, too.

Then we got into war. Civilian pilot training program was changed to war training service. We added to this training and made instructors out of these boys and girls. Then, our next orders were to pick up everyone we could find with 200 hours or more of flying time and put them through an instructor's course. The net results were, we produced enough instructors on civilian planes to help train the pilots and mechanics by the time the military planes were rolling off the line. Therefore, with the help of civilian aviation, we did the impossible—help build the greatest air force the world has ever seen in a length of time thought impossible. I will not discuss how much the air lines contributed to the program because it is well known by you. We are now starting to build back our commercial and private aviation. The more air lines, the better. Let's demand feeder-lines for every community that will support them. They will pay their own way with proper management, in reasonable time. Let's look back to the beginning of the transcontinental air mail with the old modified Army planes. We never hoped to make them pay and they never could have paid their way, but that was the beginning of our great airline industry, both from a manufacturing and operations standpoint. Let's insist CAB and CAA cut out so much red tape and rules and regulations so you don't have to have a lawyer to interpret for you and a bookkeeper to fill out forms before every flight.

Now let's look at private aviation again. In addition to all our municipally owned airports, there are an equal or greater number of privately owned airports. If someone wants to start an airport and as long as it meets safety requirements, the development should not be obstructed by unreasonable laws, rules, or regulations—city, State, or national.

This brings one more point to mind—the surface carriers trying to enter the aviation field. All forms of transportation should remain competitive if the public is to enjoy the maximum benefit for them. As an example, the Pennsylvania Railroad has invested in its system a billion nine hundred million dollars. Our biggest domestic air line, the American, has twenty-five millions invested in its system. Taking from an old quotation, "For where your treasure is, there will your heart be also." No railroad expects to press the development of aviation. They just want to hamstring it so it will not cut in on their traffic too much—just like they did the river traffic, trucking and bus business. They stopped at nothing in this battle, pushing through both State and Federal laws. They are now trying the same thing on aviation. Every State legislature in the last 4 years has had a railroad sponsored bill to put aviation in each State under the public service commission who know nothing about aviation and most of them afraid to fly. We have defeated them in every State except Montana, Mississippi, and New Hampshire. They are going to continue this because just last month in Indiana the transportation committee called a meeting to see about putting economic controls on under the public service commission. Aviation is fighting for its life and your life, perhaps—and our country's future liberty.

We are living in a new age—an aviation and atomic age. Are we capable of meeting the challenge? Has World War II been fought in vain? Are we to lose our liberties, our freedoms, our schools, and our religions to atheists? Are we going to see our cities leveled to the ground and the enemy walk into our houses and shove bayonets through our loved ones? It was done to others in World Wars I and II and will be done in world war III. We hold in our hands not only our own fate but the fate of the world. We could be headed for a second dark age here on this earth.

Let us keep faith with those who have died trying to help keep us free. We will accept the challenge. May God give us the wisdom, strength, and courage to throw out of our way all obstacles of selfish cliques and elements in our path so that we may build the world's strongest air power to preserve the peace—so our beacon of light and hope will shine throughout the world and we must rule the air.

Displaced Persons

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Displaced Persons," from the Eau Claire Leader for March 9, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DISPLACED PERSONS

Senator ALEXANDER WILEY, Wisconsin Republican, is championing the cause of thousands of displaced persons in Europe whose only hope in life is to gain admittance to the United States.

We commend the Senator for his sincere efforts to remove misunderstandings and differences which have developed over this law. We trust he will not only be successful in securing endorsement of an amendment he recently introduced, but in including later his sound ideas on further changes.

Senator WILEY's amendment would revise the cut-off date of the displaced-persons law from December 22, 1945, to January 1, 1949. The new cut-off date means that displaced persons, many of them refugees from Communist-dominated countries, would be benefited by the Displaced Persons Act along with the displaced persons who have been in camp for nearly 10 years.

"This issue should be above partisan politics," Senator WILEY said. "Above the question of personalities. It is a topic meriting our highest, cleanest, most sympathetic thinking and action."

The Senator's amendment is heartily endorsed by the Citizens Committee on Displaced Persons, as well as other proposals for changes in this law outlined by Senator WILEY in a recent statement. These include:

1. Increase the number of DP's to be admitted to 400,000 over a 4-year period from the total coverage under the act, which is now 205,000.
2. Repeal the provision mortgaging future immigration quotas.
3. Eliminate requirement for job and housing assurances and substitute adequate provision for DP not to become a public charge.
4. Elimination discrimination because of race, religion or national origin in current DP law.
5. Increase number of war orphans to be admitted and raise age from present 16 years.
6. Adequate provision for political and religious refugees fleeing from Communist countries.
7. DP's in and out of IRO camps should have equal opportunity to be admitted.
8. Eliminate Baltic groups preference provision of present law.
9. Repeal rigid 30 percent priority for agricultural workers.
10. Give the Attorney General full authority to regularize status of DP's already in the United States without congressional approval.
11. Loan arrangements should be made for inland transportation of DP's.
12. Expellees shall be admitted without competing either with DP's or with persons normally eligible under the German and Austrian quotas.
13. Screening to eliminate those who favor overthrow of the Government along with those who had participated in political, racial or religious persecution.

Senator Wiley, who was chairman of the Senate Judiciary Committee last year says that the present statute was only a compromise stop-gap mechanism. "Now the time is overdue for an overhauling of this mechanism along the lines laid down above," he declared.

We agree with him.

The Tennessee-Tombigbee Inland Waterway

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1949

Mr. RANKIN. Mr. Speaker, I shall not take the time to answer the gentleman from Ohio [Mr. HAYS] on the question raised in his 1-minute speech, because I want to talk about a project that means more to the people along the Ohio River than any other one of its kind that has ever been proposed. I refer to the Tennessee-Tombigbee Inland Waterway, which was authorized by both Houses of Congress more than 2 years ago. It passed the House by a substantial majority, passed the Senate by a vote of 44 to 21, and was signed by the President. All we need now is an appropriation to begin work on it.

We are asking that funds with which to begin its construction be included in the civil functions appropriations bill.

It will mean the savings of untold millions, yes, hundreds of millions, of dollars to the people along the Ohio River, the Illinois River, the Mississippi, the Monongahela, the Allegheny, the Wabash, the Tennessee, the Cumberland, the Tombigbee, the Arkansas, and all of their tributaries—as well as to the people along the Great Lakes and the Gulf of Mexico.

It is the most important project of its kind now before Congress. As, I said, it is already authorized by law, and should be constructed without delay. The Army engineers say that it is the only project that can be developed anywhere on the face of the earth where the traffic can be transferred from one major watershed to another with so much ease, so little expense, and such tremendous savings in transportation costs and distances.

It is 869 miles from Cairo, Ill., to New Orleans, La., down the Mississippi River. It is the finest inland waterway on earth for downstream traffic, and probably the worst one for upstream traffic, owing to the swift current of its majestic flow.

We have a protected intercoastal waterway from New Orleans to Mobile, 156 miles. It is protected by a long range of partially submerged islands that holds back the turbulent waters of the Gulf of Mexico.

It will be 481 miles from Mobile to the Tennessee River up this slack-water route along the Tombigbee behind 18 locks and dams. It is 215 miles from the point where this project enters the Tennessee River at the mouth of Yellow Creek, downstream—mind you—downstream—on the Tennessee River to where that stream enters the Ohio River at Paducah. Then it is downstream 47 miles on the Ohio from Paducah to Cairo.

The round trip is 1,768 miles of which 1,131 is downstream on the Mississippi, the Ohio, and the Tennessee Rivers, and the rest of it is slack water. It is equal to a slack, or still, water route from the Gulf to St. Louis, and at the same time it saves the swift current of the Mississippi for downstream traffic.

Now let me show you what that will mean to the shippers throughout the entire Nation.

I am placing a map of this project out in the hall where every Member can see it. On that map there are photographs, which were supplied me by the Army engineers, of barges carrying 14,000 tons going down the Ohio, the Illinois, and the Mississippi. One of them is loaded with automobiles which probably came out of Detroit, another is loaded with steel and machinery from Pittsburgh, and the other one is loaded with various materials, probably coming out of St. Paul or Minneapolis.

When those barges reach the Gulf of Mexico, they are usually loaded up with oil, timber, bauxite, cottonseed, cottonseed meal, tropical fruits, and other raw materials.

Here is a table, prepared by the Army engineers, showing the cost per ton for shipping material back up the Mississippi, and the cost per ton to ship it by way of this Tennessee-Tombigbee inland waterway, the savings per ton and also the savings per tow of a barge carrying 3,500 tons and also that of one carrying 14,000 tons:

	Via Mississippi, per ton	Via Mississippi, per tow of 3,500 tons	Via Tombigbee-Tennessee, per ton	Via Tombigbee-Tennessee, per tow of 3,500 tons	Average savings per ton	Average savings per tow of 3,500 tons	Average savings per tow of 14,000 tons
From New Orleans, La., to—

SAVINGS ON TRAFFIC TO POINTS ON THE UPPER MISSISSIPPI, THE MISSOURI, THE ILLINOIS, AND ALONG THE GREAT LAKES

You will note that a barge load of 14,000 tons going from New Orleans to Cairo would save $9,800 on its fuel bill alone, which is more than the profits the operator of such a barge line now realizes from a round trip.

One of these 14,000-ton barge loads going from Mobile to Cairo would save $20,160 on its fuel bill alone.

One going from Birmingham or Demopolis to Cairo would save $28,140 on its fuel bill alone.

Going from Columbus, Miss., to Cairo, it would save $32,480 on its fuel bill alone, from Aberdeen, Miss., to Cairo it would save $33,880 on its fuel bill alone, and from Fulton, Miss., to Cairo it would save $38,280 on its fuel bill alone.

That means that these savings would apply to every barge, and every vessel, going from any one of these points to Cairo, Ill., or to St. Louis, Mo., to Minneapolis or St. Paul, or to any other place on the upper Mississippi; or to Kansas City, Omaha, or Sioux City on the Missouri; or to Chicago or any other point on the Illinois, or any other place along the Great Lakes.

SAVINGS ON TRAFFIC TO POINTS ALONG THE OHIO AND ITS TRIBUTARIES

Now let us take the Ohio River and see what the savings would amount to along that majestic stream and its tributaries including the Cumberland, the Monongahela, the Allegheny, and the Wabash.

A 14,000-ton barge load going from New Orleans to Paducah, or to any other point on the Ohio River, including Cincinnati, Wheeling, Pittsburgh, and every other point on that stream, as well as every point along the Cumberland, the Wabash, the Allegheny, and the Monongahela, clear up into West Virginia, would save $11,680 on its fuel bill alone.

If it went from Mobile, Ala., to any point on the Ohio or any of its tributaries, the savings on its fuel bill would be $22,160.

If it went from Birmingham or Demopolis, the savings on its fuel bill would amount to $30,100.

Going from Columbus, Miss., it would save $34,440; from Aberdeen, Miss., it would save $35,840; and from Fulton, Miss., it would save $37,240 on its fuel bill alone.

As the Army engineers have pointed out, there is not another project on earth, or a place where one can be constructed, that would provide such tremendous savings in transportation costs and distances with so much ease and so little expense.

NATIONAL DEFENSE

Now let us see what it will mean from a standpoint of national defense.

Every intelligent person knows that the greatest defense plant on earth is our atomic-bomb establishment at Oak Ridge, Tenn.

Now let us see what the savings would amount to on materials being transported by barge or boat to Oak Ridge or to any other point on the Tennessee River above the place where this project joins that stream.

Going from New Orleans to any point on the Tennessee River above the place where this project joins the Tennessee, the savings on the fuel bill alone on 14,000 tons would be $20,020.

Going from Mobile, the savings would be $30,380.

Going from Birmingham or Demopolis, the savings would be $38,360.

Going from Columbus, Miss., the savings would be $42,940.

From Aberdeen, Miss., the savings would be $44,100; and from Fulton, Miss., $45,500.

That would be the savings on the fuel bill alone on a barge load of 14,000 tons.

In addition to that, it will give us an additional outlet from Oak Ridge to the sea, which may be vitally necessary in case of an emergency; and it will shorten the water distance from Oak Ridge to the Gulf of Mexico by approximately 800 miles.

I hope each and every Member of the Congress will study this map which you will find out in the hall back of the Speaker's stand, and study these figures which the Army engineers have worked out and support our amendment for funds with which to begin the construction of this great enterprise.

Remember this project is all American, and it will benefit all the American people. If it was in Europe, it would have been constructed long ago, or would be constructed immediately—at our expense.

I am just in receipt of a news dispatch from Paris, France, to the Atlanta Constitution, which says:

French and Italian interests, planning to construct a vehicular and railway tunnel beneath Mount Blanc to connect France and Italy by a direct route, expect to obtain Marshall-plan funds for the project.

There is no telling how many hundreds of millions, or even billions, of dollars that project will cost. Someone suggested that if this Tennessee-Tombigbee inland-waterway project could be moved to Europe, we might have less trouble in getting funds for its construction.

But I am appealing to you as Americans—Members of the American Congress—to support us in our efforts to construct this all-American project, which means more to the people you and I represent than any other one of its kind that has ever been proposed.

It is just as sure to be constructed as the night follows the day, and the sooner we get it started, the better it will be for all concerned. As I have shown, it is badly needed for transportation purposes, as well as for national defense. Let us not neglect it and thereby invite another Pearl Harbor.

In Stalin's Footsteps

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. JENNER. Mr. President, how far can we go and yet preserve our constitutional government and free-enterprise system?

I have here an article written by Felix Morley, entitled "In Stalin's Footsteps," which reveals the shocking provisions of H. R. 2756, titled "Economic Stability Act of 1949."

The revelations in this article should be read by every citizen of the United States. To say that the provisions of H. R. 2756 now pending in the Banking and Currency Committee of the House are shocking is to put it mildly.

Mr. President, in order that these revelations may be widespread, I ask unanimous consent that the article be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN STALIN'S FOOTSTEPS

(By Felix Morley)

The proposed Economic Stability Act of 1949 is at the moment resting quietly in the House Committee on Banking and Currency. But the import of this truly extraordinary measure is not minimized by the fact that it is currently receiving little publicity. Its sponsors do not want advertisement just yet.

A close reading of the bill, H. R. 2756, explains why the administration is not at the moment inclined to invite public scrutiny for this monstrosity of its own creation. The clear purpose of the legislation is to impose a centrally planned economy on the United States. Thus it is the keystone of the gateway to national socialism, climaxing the program of civil rights, restoration of the Wagner Act, public housing, social security, socialized medicine, rent control, and Federal command of education.

H. R. 2756 was introduced, without fuss or fanfare, by Representative BRENT SPENCE, of the Fifth Kentucky District, on February 15. Mr. SPENCE is a reliable Democratic wheel horse who has attained chairmanship of the Banking and Currency Committee by virtue of his 10 terms in Congress. This bill of his has no direct relationship to either banking or currency and has gone to that committee merely because a favorable pro forma report can be expected there whenever desired.

It is not impossible that Congressman SPENCE has read the bill which bears his name but he certainly did not draft it. The preparation of the measure is said to be the work of a small and zealous committee headed by Secretary of Agriculture Charles F. Brannan. Hearings will not be requested until the Taft-Hartley Act is well on its way to repeal, and perhaps not unless the filibuster of the southern Democrats is broken. But, eventually, we shall see the Spence bill in the headlines.

Since H. R. 2756 runs to 42 printed pages, and is clever as well as unscrupulous, it is suggested that readers of human events request their Congressman, or perhaps Mr. Spence himself, to furnish them with copies. It is difficult to name another official document which more clearly reveals the intent of this administration to develop totalitarian government. It can also be said with assurance that the more attentively the Spence bill is examined, the less likely will be the chance of its passage, even by the Eighty-first Congress.

II

Really to understand the implications of this measure, one should be familiar with the way the great Stalin 5-year plan was put over in Soviet Russia. Consciously or unconsciously, our planners are following procedure utilized by the Russian Communists 3 years ago.

It is perhaps insufficiently realized that the U. S. S. R. also has a bicameral Congress, much like that of the United States, to which the Council of Ministers—under the chairmanship of Stalin—is at least nominally responsible and accountable. That is the wording in article 65 of the Constitution of the U. S. S. R., obtainable in an English edition from the Soviet Embassy in Washington.

Article 67 of the present Russian Constitution states that: "Decisions and orders of the Council of Ministers of the U. S. S. R. are binding throughout the territory of the U. S. S. R." But it is to be remembered that this council is appointed by the supreme Soviet, which is in turn selected by those whom the Communist Party defines as "citizens." Although non-Communists are now allowed to vote, only loyal Communists can be candidates for office.

The point—for present purposes—is that a semblance of constitutional procedure is carefully maintained in Moscow, as in Washington. Therefore, when it was decided to inaugurate the great Stalin 5-year plan, an enabling act had to be adopted by both houses of the supreme Soviet, divided into a Soviet of the Union and a Soviet of Nationalities. These are respectively representative of voters by election districts and of voters as citizens of the various federated Soviet Republics—like our House and Senate.

So the present Russian 5-year plan was not just ordained by the Kremlin. First it was necessary for the supreme Soviet to adopt a law promulgating the plan, which was done on March 18, 1946. The Spence bill is the counterpart of that Russian law.

If one places the text of this Soviet law, of 3 years ago, side by side with the proposed Economic Stability Act of 1949 the parallelism in thought and even in wording, is seen to be extraordinary. It is difficult to believe that those who drafted the Spence bill were unfamiliar with its Communist prototype. It is certainly easy to see that the political objectives of the Kremlin bill of 1946, and of the White House bill of 1949, are identical.

III

The Soviet act pays tribute to "our great leader, Comrade Stalin," and authorizes him to delegate the necessary administrative authority to appropriate members of his Council of Ministers. The authorization which the Spence bill would grant is more impersonal than that of its Communist counterpart. Our pending bill says (sec. 104 (a)):

"The administration of this act is vested in the President, who may delegate any and all authority hereunder to such departments, agencies, or officials of the Government as he may deem appropriate."

As soon as the Soviet act for a 5-year plan was adopted Stalin and his advisers were free to enlarge, modify, or alter its provisions as they felt desirable. Let us note the parallel latitude which would be given to President Truman under the Spence bill.

Under section 104 (c): "The President may issue such rules, regulations, and orders as he may deem necessary to carry out the provisions * * * of this act."

Under section 201 (a): "* * * The President shall from time to time designate materials or facilities with respect to which he finds that a shortage * * * threatens to affect * * * the national security."

Under section 204: "Whenever the President determines that it is necessary * * * he may make loans * * * to State governments or subdivisions or instrumentalities thereof for the expansion of capacity and production. Such loans may be made without regard to the limitations of existing law and on such terms and conditions as the President deems necessary."

Under section 205 (b): "Whenever the President determines that it is necessary * * * he may * * * construct new plant facilities * * * for the expansion of capacity and production. Such contracts may be made without regard to the limitations of existing law and on such terms and conditions as the President deems necessary. * * * For the purposes of this section, the President is authorized to acquire real property * * * by purchase, lease, or otherwise, as he deems necessary."

Under section 302 (e) (1): "The President may * * * make such inspection of the books, records, and other writings, premises, or property of any person, and make such

investigations * * * as may be necessary or appropriate in his discretion."

Under section 401: "The President may by regulation or order require sellers of any commodity which significantly affects the cost of living * * * to give up to 60 days' notice to the President * * * of any intended price increase with respect to any such commodity." This is followed by authorization to fix prices "in the judgment of the President." There is, however, one really humorous safeguard in section 402: "The President shall not 'establish maximum prices for a commodity' unless 'it is determined by the President' that 'the proposed action is administratively feasible.'"

IV

We have quoted only a few instances of the completely dictatorial power over the national economy which the Spence bill would vest in the uncontrolled hands of the President. Like its Russian counterpart of 3 years back, this pending legislation bases its case on "national security," on the "carrying out of the foreign policy of the United States"—whatever that may be—and on the more abundant life.

But the cold, grim fact is that the tyrannical implications of the Spence bill are worse even than those of the act passed by the Supreme Soviet of the U. S. S. R. 3 years ago. That legislation, at least, said with much precision precisely what steps Stalin should take to increase production in specific industries. Under the Spence bill, the blue sky is the limit. Whatever the President says—that goes.

There is, of course, plenty of eyewash in the Spence bill. It asks these emergency powers for only 5 years, and for a shorter time in the case of some provisions. A lot of sops are thrown to small business. Farmers are assured (in sec. 405) that they will get parity prices, regardless of price controls for industry. Labor is solemnly told (in sec. 406 (a)) that the purpose of the Economic Stability Act of 1949 is not to prevent wage increases "but rather to further the objective of preventing price increases which tend to destroy * * * the value of the wage-earner's dollar." It is even provided (sec. 406 (c)) that higher wages "may not be considered as an increase in cost of production for the purpose of adjustments in price ceilings * * * until 6 months after the effective date of the wage increase."

However, there is something doubly horrifying in this attempt to make farmers and labor and small business believe that their freedom will be preserved while free enterprise as such is struck down. As dictators move to assume power, they always argue that only the minority will suffer—that the majority will benefit—from the tyranny that is planned. So Stalin praised his own 5-year plan when he urged adoption of the necessary enabling law by the Supreme Soviet.

Guam Assembly Walk-Out

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. POULSON. Mr. Speaker, the following information on the Guam situation was released March 8 by the Institute of Ethnic Affairs:

"I hope that Congress and the American people will understand the significance of the walk-out by the Guam Assembly at their meeting on March 5," John Collier, president of the Institute of Ethnic Affairs, stated today.

"That walk-out, staged in protest against naval administration, dramatically indicates their desire for an organic act and civilian government.

"It should prompt the Navy and Interior Departments immediately to forward to Congress the organic acts they have had under consideration for many months.

"It should stimulate Congress to take action in defining the political status of Guamanians, a treaty obligation which has been neglected for 50 years."

"December 23, 1948, marked the fiftieth anniversary of military law in Guam," he continued. "For half a century Guamanians have been subjected to the arbitrary rule of naval governors, few of whom have stayed longer than 2 years. They have no constitution. They have no court appeal beyond the Secretary of the Navy. Until the last 2 years, the Guam Congress has had advisory power only. Though the full facts are not yet available here, it has been learned that the present walk-out was in protest to what Guamanians said was an attempt by the Navy to curtail their legislative authority."

It is significant that the last act by the adjourning assembly was unanimous approval of enactment by the United States Congress of organic legislation and civil rule. It is equally significant that the Guamanians feel they must go on strike to get the United States Congress to take an interest in their needs.

Citizenship, organic legislation, and civilian administration were recommended for Guam by an agreement of the Secretaries of State, War, Navy, and Interior, communicated to Congress on June 18, 1947, by the President.

On February 11, 1949, President Truman addressed a letter to each of the four Secretaries, stating his intention, upon enactment of organic acts, to designate the Department of the Interior as the civilian agency responsible for the administration of Guam.

On March 3, 1949, Interior Secretary J. A. Krug stated that in his opinion a target date ought to be set for a transfer of administration on Guam.

(More than 350 leading residents of Guam are members of the Institute of Ethnic Affairs.)

[From the Washington Post]

NAVY ACTION PROTESTED BY GUAM ASSEMBLY

GUAM, March 5.—The Guam Assembly walked out in protest today against what it said was an attempt by the United States Navy to curtail its legislative authority.

The walk-out occurred after the Navy government refused to permit contempt warrants to be served on a civil-service employee charged with refusing to answer questions of a congressional committee. Assemblyman Carlos Taitano said the assembly would remain in adjournment until the United States Congress acts on a bill to give Guam organic and civil government.

Democracies Can Solve the German Problem by Atlantic Union

EXTENSION OF REMARKS

OF

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. FLANDERS. Mr. President, I ask permission to have printed in the Appendix of the RECORD an editorial from the Memphis Press Scimitar. I do this because it expresses so clearly a very serious doubt which has been arising in my mind as to the tendency we are pursuing in our foreign relations of relying so heavily on armaments and alliances, and neglecting the political possibilities involved in our original intentions with regard to the United Nations and similar efforts.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Memphis Press-Scimitar of Wednesday, March 9, 1949]

DEMOCRACIES CAN SOLVE THE GERMAN PROBLEM BY ATLANTIC UNION

(By Edward J. Meeman, editor, Memphis Press-Scimitar)

As goes Germany, so goes Europe and perhaps the world.

Hitler tried to conquer Russia and use her enormous resources to bring about Nazi domination of the world. He almost succeeded, but because of our help, Russia was able to throw out the invader.

Now Stalin would like to reverse the process. He would like to bolshevize all of Germany as he already has the eastern half and employ German know-how to effectuate Russian Communist rule of the world.

We were under the illusion during the war and in the period that followed immediately after, that Soviet Russia intended to cooperate with the western democracies to preserve the peace of the world and, in doing so, that the east would join hands sincerely with the west to keep Germany harmless. We soon found this was never the Communist intention.

We have no long-range plan to take the place of the east-west cooperation which we want, but can't have. We have only our day-to-day extemporization, such as the Berlin air lift, brilliant and brave, but only a stop-gap.

WHAT CAN WE DO?

Is there something we can start, equally brilliant and brave, which will grow sounder and stronger through the years?

Yes; there is. We can unite the free Atlantic world in a permanent federation. Thus we can erect a power so great and so preponderant that it will be a great magnet which will attract Germany into it. Germany will be compelled to qualify as a democracy in order to gain admission.

Our occupation even of the western half of Germany cannot continue forever. We cannot afford to let Germany be conquered by Soviet Russia from without or fall prey to Communist plots from within. We cannot afford to see Germany become an entirely independent nation, free to go fascist or militarist again, throw her weight around, bargain cynically between east and west.

Federation of the free is good in itself. Twice in this century the free world has been attacked by an aggressor because the free world was divided and the aggressor thought he could successfully challenge one part of it. Each time the free world has slowly united—politically, militarily, economically—gathere its strength and thrown off the attack—but each time at tremendous cost, and with the aggressor's strength bringing the free world close to defeat.

For the third time an aggressor challenges the free world. Obviously, the way to discourage him from attacking is to unite the free world in time of peace. The pending military alliance is the necessary first step. We should plan now to follow it by permanent, unbreakable union.

As a byproduct of such an Atlantic federation, we shall solve the German problem.

For such a federation would be a mighty magnet which would attract the Germans into it.

COULD DO NO HARM

In such a federation, the Germans could do no harm, for they would have only a minority of votes in determining the policies—the proved nonaggressive United States, Canada, Britain, Holland, Belgium, Norway, etc., would hold the majority.

But the undeniable ability of the Germans in scientific, technical, mechanical, industrial and military fields would be at the service of freedom, building security and prosperity for us and for themselves.

Before the rise of Kaiserism and Hitlerism in Germany, Germans were decent, harmless, and spiritually close to England and the United States, and there was mutual admiration and trust between the Germans and the other Atlantic peoples. Through federation, this happy condition can be restored.

Letters Commending Francis Lloyd Jones and John N. Kostelnik for Heroism

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two letters written by the Yale Association of Washington State commending Mr. Francis Lloyd Jones, of Seattle, and Mr. John N. Kostelnik, of Renton, Wash., for their courage in saving the lives of Yale students who were victims of an airplane disaster last January in Seattle.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

YALE ASSOCIATION OF WASHINGTON,
Seattle, Wash., February 7, 1949.

Mr. JOHN N. KOSTELNIK,
417 Grady Way, Windsor Hills,
Renton, Wash.

DEAR MR. KOSTELNIK: The members of the Yale Association of Washington extend to you their admiration and gratitude for your courageous action in saving the lives of the Yale students who were victims in the tragic accident of January 2, 1949, when a DC-3 transport plane crashed at Boeing Field.

Your gallant choice in entering the blazing plane and risking your life instead of retreating for your own safety was heroic. If you had not done so, the disaster would have been greater by additional casualties. Your unselfish conduct deserves the highest commendation. You will never be forgotten by the students or their families.

Copies of this letter are being sent to the boys who survived, to their families, to President Seymour of Yale University, to Mr. William Allen, president of Boeing Aircraft, and to Mr. Jacobsen, your supervisor at Boeing Aircraft.

Very truly yours,
TENNYS BELLAMY,
Vice President.

YALE ASSOCIATION OF WASHINGTON,
Seattle, Wash., February 7, 1949.

Mr. FRANCIS LLOYD JONES,
10855 Crestwood Drive,
Seattle, Wash.

DEAR MR. JONES: The members of the Yale Association of Washington extend to you their admiration and gratitude for your courageous action in saving the lives of the Yale students who were victims in the tragic accident of January 2, 1949, when a DC-3 transport plane crashed at Boeing Field.

Your unselfish conduct deserves the highest commendation. You will never be forgotten by the students or their families.

Copies of this letter are being sent to the boys who survived, to their families, to President Seymour of Yale University, to Mr. William Allen, president of Boeing Aircraft, and to Mr. Jacobsen, your supervisor at Boeing Aircraft.

Very truly yours,
TENNYS BELLAMY,
Vice President.

Nomination of Col. E. W. Palmer as Outstanding Business Leader of the South

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter addressed to Col. Hubert F. Lee, editor and founder of Dixie Business, by Lawrence J. Linck, executive director of the National Society for Crippled Children and Adults, Inc. The letter is with reference to Col. E. W. Palmer, a native of Meredith, N. H., who is this year being nominated by Dixie Business as one of the outstanding leaders of the South.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE NATIONAL SOCIETY FOR CRIPPLED CHILDREN AND ADULTS, INC.,
Chicago, Ill., February 16, 1949.

Col. HUBERT F. LEE,
Editor and Founder, Dixie Business,
P. O. Box 119, Atlanta, Ga.

DEAR COLONEL LEE: I was tremendously pleased to receive information that Col. E. W. Palmer, distinguished president of the National Society for Crippled Children and Adults for 8 years, has been nominated as one of the South's foremost business leaders for 1949. I do not believe that there is anyone among my Nation-wide circle of friends whose lifetime has been so full of devotion to humanitarian causes as has that of Colonel Palmer.

As secretary of this society I know particularly of Colonel Palmer's remarkable contribution to the development of services for handicapped persons throughout our country. For the 8 years he has served the National Society for Crippled Children and Adults as its president, and the many, many years before that, during which he was interested in the cause of the handicapped and served it in many ways, both nationally and in his own State where he has been president of the Tennessee Society for Crippled Children and Adults, he has made a great contribution to this program.

It is under his outstanding leadership and with his valued guidance that the national society has grown from a federation of some 20 State member societies to a truly Nation-wide federation, with State member units in every State, Alaska, Hawaii, and the District of Columbia. There are more than 2,000 local units active in this work at this time.

Colonel Palmer's vision of the needs of the handicapped of the country and his desire to see services extended to reach all of those who have physical handicaps has been an inspiration to those of us who have worked with him. He has been in the forefront of the all-important movement to spell out of the good work done for crippled children a realistic, practical program of services and employment.

Nor has Colonel Palmer's interest been confined to the handicapped. I know from personal experience that he has done a yeoman service in Rotary International, in community fund services, in Boy Scouts of America, and State and local planning with service bodies—to mention only a few of the many causes to which he has devoted himself; in addition to his almost unbelievably active life in connection with the development of the Kingsport Press to one of the most outstanding in the country and participation in State and local civic affairs. He also had a splendid record of service to his country in wartime.

I heartily second the nomination of Colonel Palmer as an outstanding man of the year. He is truly a man who has left his mark on his community, his State, and upon the writer.

Sincerely yours,
LAWRENCE J. LINCK,
Executive Director.

Moral of the Inferior Potatoes

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. POULSON. Mr. Speaker, first it was little pigs; now it is potatoes. What next?

This editorial from the February 25 issue of the Los Angeles Times should make every Member of Congress stop and think. With high prices, pressure for higher taxes, millions starving throughout the world, we should make it our business to find out why our Government, in order to keep the price of potatoes high for the benefit of the growers, spent last year $200,000,000 of the taxpayers' money to buy these fancy potatoes which they disposed of to processors who usually use low-grade potatoes, and then destroyed the rest; while as a result the American housewife was forced to pay ridiculously high prices for inferior potatoes which the growers had no difficulty selling due to the shortage of potatoes created by these enormous Government purchases.

The editorial follows:

MORAL OF THE INFERIOR POTATOES

Many housewives wondered last year, when they were ransoming those ill-favored potatoes from their grocers, why prices were so high when quality was so low. They had heard, of course, that the Government was destroying surplus potatoes, which did not square with the scarcity prices they paid, but they did not know the whole story, because it was not told. Here it is:

Last year the Department of Agriculture spent $200,000,000 of the taxpayers' money to keep the price of potatoes high for the benefit of the growers. The Department

fixed a support price of $2.92 per 100 pounds for the best grade of potatoes and $1.46 for inferior grades.

Potato acreage was smaller than it had been, but production methods were improved, and one of the greatest crops in history came to market. The farmers, naturally, sold their best potatoes to the Government for the fancy price of $2.92 per 100 pounds. (That's $1.75 a bushel.) The Government disposed of these fancy potatoes to processors who usually use low-grade surplus potatoes (for production of alcohol, starch, and flour) and to livestock feeders. Still there were good potatoes left, and the Government destroyed them.

The Government didn't have to buy the low-grade potatoes. By buying the best it had created a shortage, and the farmers had no difficulty in getting rid of their inferior product, generally at a better price than the $1.46 per 100 pounds the Government would have paid for them.

So the housewife was really gouged in three ways. In the first place, due to Government interference, she paid a higher price at the market for potatoes—any potatoes—than she would have paid if supply and demand could have come into balance. In the second place, her taxpaying husband was compelled to contribute a little of the $200,000,000 which the Government paid the farmers so that she would have to pay the higher market price. And in the third place, she was denied any choice among potatoes; she had to take the inferior ones and like it.

And she is not through with it yet. Support for potato prices was to have ended December 31, 1948, but Congress yielded to pressure when the price-support bill came up last June and agreed to maintain the old price level until the whole 1948 crop is marketed. After that there will be a little relief, unless the Eighty-first Congress decides to undo the work of the Eightieth.

This potato story illuminates the report of the agriculture task force of the Hoover Commission, which has just been released. The task force, headed by Dean H. P. Rusk, of the Illinois State College of Agriculture, opposes high, rigid farm price supports because they "expose the Government to large financial losses." It was not within the directive of the task force directly to consider the gouged consumer; it was concerned exclusively with Government efficiency and economy, with its eye on such items as the $200,000,000 spent on potato support last year, most of which was lost money.

The task force indorses the flexible (and lower) supports of farm prices in the bill passed by the Eightieth Congress. The farm organizations are divided on the matter and there is much lobby pressure on the Eighty-first Congress to go back to the old short-sighted policy of guaranteed full parity prices in the market place.

The wiser farm leaders know, however, that parity, or 90 percent of parity, or any other fixed price can't be paid, particularly in a depression period, without rigid marketing control, dumping abroad, surpluses, and the sort of waste that occurred with the potatoes. They also know that farm income does not depend always on the prices paid. The amount of products sold is a factor also. If a farmer produces a Government-restricted crop at a high Government price, he may make less than he could get by producing an unrestricted crop at a lower price.

The Hoover Commission submitted the task force's report without comment, not desiring to get into the political brawl over price supports. But it has been made as one of the recommendations for better and cheaper Government. It is not hard to understand what the task force means after reading the story of the potatoes.

You Are Paying the Bill—Feeding the Cow That Gives the Milk

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, last week you were told that the Federal Government paid out to States, under cooperative arrangements and for relief and other aid, exclusive of grants and loans, during 1932, $269,425,252. In 1948, for like purposes, it disbursed $5,551,054,046. Perhaps a very few wondered where Uncle Sam got the money. He got it from you.

Every individual, if he had been forced to pay his per capita share of the taxes collected by local, State, and Federal Governments, would, during the years 1932 to 1948, inclusive, have paid the following sums:

Per capita tax receipts of Federal, State, and local governments

Year	Federal	State	Local	Total
1932	$14.43	$15.24	$36.02	$65.69
1933	14.31	13.81	33.09	61.21
1934	23.03	15.76	34.84	73.63
1935	28.06	17.54	36.46	82.06
1936	30.23	20.57	35.78	86.59
1937	37.21	23.53	34.99	95.73
1938	41.94	24.31	35.44	101.69
1939	37.01	23.76	34.55	95.32
1940	37.52	25.31	34.34	97.17
1941	52.15	27.33	35.85	115.32
1942	92.33	29.60	34.49	156.42
1943	157.56	29.61	34.78	221.95
1944	301.05	30.64	34.96	366.65
1945	308.99	32.81	36.53	378.33
1946	274.40	37.72	38.71	350.83
1947	252.55	41.54	41.68	335.77
1948	263.99	47.75	45.58	357.32

Federal tax receipts increased on a per capita basis by 1,829 percent.
State tax receipts increased by 313 percent. Local tax receipts increased by 126 percent.

Change in pattern of tax receipts for selected years

Year	Federal tax	State tax	Local tax	Total
	Percent	*Percent*	*Percent*	*Percent*
1932	21.90	23.30	54.80	100
1933	23.37	22.56	54.07	100
1943	70.98	13.34	15.68	100
1948	73.88	13.33	12.79	100

Note how, in 1932, the Federal Government took but 21.9 percent of the total tax you paid, but that, in 1948, it hit you for 73.88 percent of the total sum you paid for taxes. Your local tax rate dropped from 54.8 percent in 1932 to 12.79 percent in 1948.

The foregoing figures, if you care to analyze them, give you a very clear picture showing that the Federal Government isn't really giving you anything. It is just taking more of your tax dollar and, after shaving it for administrative expenses, handing a part of it back to you and, instead of letting you spend what it hands back as you wish, it tells you just how you are to spend it.

That kind of procedure, continued, means that ever-increasing taxes will be taken from you by the Government and, in the end, the Government will tell you how you are to live, in what business you are to engage—in short, we will have socialism—and if you want to know what that means, take a look, not only at Russia and her people, but at Great Britain and its Labor government.

That is the kind of a government that the CIO, which has recently taken over the Democratic Party in Michigan, intends to give that State.

Want to give up more tax dollars—and have Washington take more of each tax dollar?

Submarine and Antisubmarine Warfare

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

IMPORTANCE OF SUBMARINES

Mr. MERROW. Mr. Speaker, the significance of submarines in the event of another war cannot be too strongly emphasized. In fact, submarine and antisubmarine warfare is growing in importance. Any power attempting to operate over vast stretches of ocean must be able to control the sea lanes. The submarine is not only invaluable in destroying enemy shipping but it is rapidly developing into one of the most potent antisubmarine weapons. This weapon will be of inestimable value in clearing the waters of enemy subs if we are called upon to engage in extensive shipping.

Russia, which is not a great sea power, is very much interested in possessing an efficient submarine fleet with underwater craft of all types so that she would be able to sink the ships of any country endeavoring to send material and men overseas for the purpose of conducting military and naval operations. It appears that the Soviet Union is placing major emphasis on the development of an exceedingly efficient submarine fleet to prevent any country from operating its vessels within the coastal waters or in reaching the coastal waters close to the Soviet Union.

After World War I, and particularly since World War II, there have been major developments in submarine construction. At the present time both the United States and Russia are pushing the improvement and the construction of underwater craft as rapidly as possible.

RUSSIAN INTEREST IN SUBMARINES

Since the end of World War I in 1918 the Russians have evidenced concern in building an effective submarine fleet. The Soviet Union first acquired a sizable number of submarines from Great Britain and the United States, and between the two World Wars several additional submarines were obtained from various other sources. A few of the smaller types were manufactured in Russia. The Soviet Union is trying to insure the

country against an attack from overseas and therefore is concentrating on the building of submarines instead of other types of naval vessels. It is easy to understand why a large portion of the Russian submarines are of the coastal-defense type. If the coastal waters are kept clear of enemy shipping the invasion of Russia would be impossible. The Kremlin is pressing for the building of an excellent submarine fleet.

The planners in Moscow realize full well that should a conflict occur with the United States a submarine fleet would be of prime importance in severing the Atlantic and Pacific lines of communication. We well remember how for a considerable period of time in the last war we were losing the battle of the Atlantic as the German submarines sent to the bottom many tons of Allied shipping. In order to prevent an invasion of the Continent of Europe or of Asia, the Soviets are determined by the strength of their submarine fleet to control particularly the coastal waters. The Soviet Union lays particular emphasis first on her armies, then on air power, and then on submarines.

RUSSIAN STRENGTH AND CAPABILITIES

The Soviets have more than 70 very small submarines of approximately 200 tons each. These underwater craft are unable to operate more than 100 miles offshore. They would not constitute a threat of any magnitude against shipping and against naval forces unless the Navy were operating close to the Russian shores. This coastal submarine fleet is for the purpose of preventing the delivery of any equipment to any Russian territory or to contiguous areas.

MEDIUM-RANGE SUBMARINES

A significant number of the Russian submarines are of medium range, with a cruising radius of about 5,000 miles. They could not be expected to operate any more than 2,000 miles from their bases. With these medium-range submarines they hope to prevent any shipping from moving in the waters that would give a possible antagonist a chance to sail even close to the shores of Russia or Russian-dominated territory.

LONG-RANGE SUBMARINES

The Russians have approximately 75 long-range submarines capable of reaching our coasts in the Atlantic and in the Pacific. These long-range submarines give us concern because they can move across both oceans to molest our shipping anywhere between our coast and the coasts of Europe and Asia.

In addition to these they have an indeterminate number of type XXI German submarines. This is the snorkel. It is a Dutch invention which the Germans copied. The submarine is streamlined with increased battery capacity. It has a speed as high as 18 knots submerged for short periods of time.

In reference to this type, four were delivered to the Russians after the war and the Soviets took the parts for many more—perhaps as many as 20. It is possible that the Russians are assembling submarines from these parts. The actual number, of course, is not known. It is thought that should war occur within the next few years, only a few of these submarines would be encountered. The Russian preparations are clothed with great secrecy, and it is next to impossible to secure reliable information on the size of their submarines, the extent of their fleet, or their effectiveness.

It is a well-known fact that plans and possibly parts for the type XXVI submarine were captured by the Russians. This type submarine features the closed cycle power plant which permits submarines to operate below the surface and without aid of the snorkel. It utilizes hydrogen peroxide, which decomposes in the presence of a catalyst, giving up oxygen. Another closed cycle type uses liquid oxygen instead of hydrogen. A closed cycle engine operates without air. The Navy has reproduced both types.

With the XXVI the Germans contemplated reaching a submerged speed of 25 knots an hour for a very limited period. There are many technical difficulties which must be overcome before this submarine will become a practical operating unit. We may be sure that the Soviet Union is exerting every effort to make this submarine a practical underwater craft.

THE SNORKEL

The much-advertised snorkel is a breathing tube designed to supply air to Diesel engines. This permits the submarine to operate with the hull beneath the surface and only the tip of the snorkel exposed. The snorkel would be used not through choice but through necessity. A submarine on the surface for the purpose of charging batteries is vulnerable to aircraft. This drives it to use of the snorkel for protection.

While remaining submerged, the submarine is greatly restricted in its power to carry out its mission. As an illustration, its capacity to locate targets is seriously handicapped, but, in addition, it is restricted in its ability to navigate and to communicate with home bases or other intelligent sources. The Russian submarine fleet, as constituted today, could impose some restrictions to United States control of the seas and our use of merchant fleets and naval forces. This causes us grave concern since we do not know just how powerful and how effective is the Russian submarine fleet. Should war occur we could well run into serious difficulty in maintaining our shipping.

ANTISUBMARINE WARFARE MEASURES

To combat this growing fleet of Russian submarines, strong methods are imperative. We must not relax in equipping ships and aircraft with the devices and weapons needed in antisubmarine warfare. Most careful attention must be devoted to the training of adequate personnel to man these ships and aircraft.

The increased complexities of antisubmarine weapons and devices demand higher standards of training than were previously required. In addition to providing "live" submarines for training with the surface and air forces, a most serious problem of maintenance of equipments and weapons is presented. The maintenance of equipment is becoming a major problem of the Navy. It increases materially the cost of keeping antisubmarine forces in readiness for combat. Complicated electronic equipment is beyond the normal capabilities of operating personnel to maintain in working condition. This is leading to the necessity for more and more stocking of expensive packaged units.

Antisubmarine warfare is divided into four principal categories as follows:

First. Submarines may be destroyed at their bases, assembly yards, or anchorage by bombing.

Second. Submarines may be destroyed in their harbors and passages of egress to the sea by the use of mines. Mines may be laid by submarines, surface ships, or aircraft.

Third. Submarines may be attacked and sunk when encountered on the high seas by antisubmarine forces.

Fourth. The submarine weapon may be evaded or destroyed by surface ships.

THE SUBMARINE AS AN ANTISUBMARINE WEAPON

The submarine is rapidly being developed into one of the most effective antisubmarine weapons. In World War II, 70 Axis submarines were sunk by the submarines of the Allies. While it is true that antisubmarine warfare was not the primary mission of Allied submarines, it should be kept in mind that they were successful when encountering and fighting craft of their own kind. The future use of submarines for this work is extremely important.

The United States submarine fleet has as its primary mission the training of antisubmarine forces. It has been the experience of the Navy that in training there is no substitute for the "live" submarine. We have 80 underwater craft as part of our fleet, but antisubmarine training leaves very little time for any of the other types of operations. Many more submarines could be employed usefully for this purpose. It is necessary to provide sufficient funds to supply an adequate number of submarines so that there can be full training for the detection and destruction of enemy underwater craft.

Special types of submarines are now under development for evaluation, including the personnel transport, the cargo transport, the oiler, the radar picket, the guided-missile launcher, and the laboratory for testing new devices. The radar picket type is particularly significant for it may be employed either as a picket with a task force or used to establish offshore early warning stations to give information on approaching enemy aircraft. This could well be essential in the defense of this country against enemy air raids.

ANTISUBMARINE SHIPS ON THE SURFACE

In the active fleet, the Navy possesses 134 destroyers and 12 destroyer escorts in commission. There are 6 escort carriers and 2 light cruisers all equipped for antisubmarine warfare. By the end of the calendar year 1949, 1 escort carrier and 2 light carriers will be equipped for antisubmarine warfare in addition to what the Navy currently possesses. Anti-

submarine employment is the primary task of the destroyer, destroyer escort, and antisubmarine warfare carrier. These ships receive regular progressive training in antisubmarine warfare by drilling the attack teams on shore, on realistic training devices, and at sea on actual submarine targets. This is considered essential since past experience has demonstrated that skill in antisubmarine operations is almost directly proportional to the time and effort devoted to operational training.

Besides the active ships the reserve fleet comprises 210 destroyers, 217 destroyer escorts, and 12 CVE's of the 105 class. All are equipped with World War II antisubmarine devices. With trained crews and modern antisubmarine warfare equipment, these ships can be made as effective as the active fleet units. It must be realized and it cannot be too often emphasized that placing these ships in full commission and equipping them will require first funds and then time to accomplish.

There are available in the active and reserve fleets 384 miscellaneous types of ships fitted with antisubmarine equipment. Approximately half of this group is of the small coastal type of ship while the other half comprises types primarily designed for purposes other than antisubmarine operations. However, these latter ships could be employed in antisubmarine tasks if the demand should grow strong enough.

ANTISUBMARINE AIRCRAFT

Antisubmarine aircraft fall into two general categories: carrier-based and shore-based patrol types. At the present time there are nine qualified patrol squadrons which are specialized in antisubmarine warfare. It must be borne in mind that these squadrons consist of aircraft more specifically designed for antisubmarine warfare. They are not adequately equipped for all phases of convoy support and killer group operations.

As more of the highly specialized fighting equipment becomes available, it is planned to emphasize antisubmarine warfare in all multiengine squadrons except those designated for other special missions. This plan is designed to provide 29 squadrons of 10 planes, each trained and equipped for antisubmarine operations.

Two escort and one light carrier group are now operating our convoy support killer group. In addition, a light carrier group is being activated. These aircraft have the antisubmarine configurations but in the case of patrol squadrons have limitations as to the equipment carried. Replacement aircraft for both carrier patrol types have been prototyped and will be soon evaluated.

The primary mission of the aircraft will be to augment the surface forces in escorting convoys. Aircraft not so employed will be used for carrier/surface ship killer groups in the case of antisubmarine aircraft and for VP-killer groups in the case of patrol squadrons, teaming up with surface ships or submarines for the latter groups.

If the country is forced into war, the Navy will immediately be faced with the task of maintaining secure from enemy threat lines of communication on all the seas. As presently envisioned, the threat will come primarily from submarine attacks against Allied merchant ships and naval vessels. Studies indicate that our antisubmarine forces should be employed generally in the same manner as they were in World War II, at least in the initial phases of the conflict. It is most difficult to predict with any degree of accuracy and in any detail the antisubmarine techniques that the last analysis will be required since these measures will finally be determined to a great degree by the tactics of enemy submarines. The problem is under continuous study and review. The training of the operating forces of the Navy is being keyed directly to the results of these studies.

FUTURE DEVELOPMENT IN ANTISUBMARINE WARFARE

Future antisubmarine warfare development may be conveniently divided into the following categories: One, research; two, development; three, evaluation; four, procurement; five, installation; six, training; seven, maintenance. This applies to all the weapons that are being developed for the purpose of maintaining our shipping lanes and meeting the menace of enemy submarine attacks in another way.

RESEARCH

The Navy is experiencing difficulty in recruiting young scientists in undersea warfare research. It has become increasingly difficult to obtain experienced scientists to work on the many problems in the very specialized field of undersea warfare research. The reasons for the increasing difficulties lie in the fact that there are no commercial counterparts which deal in such matters as underwater acoustics, hydrodynamics, and many related problems.

It is imperative to have a long-range program established with sufficient funds to give hope to scientists that when they enter this field of endeavor they have a reasonable assurance that their employment has some degree of permanence. The scientists feel that time devoted to undersea warfare research places them at a disadvantage if after a short term of employment they are released from the Navy and are forced to seek employment elsewhere.

The problems peculiar to antisubmarine do not prepare these men for employment outside of the Navy. A policy of providing sufficient funds to give permanent employment to scientists in this work should at once be adopted in the interests of national security.

DEVELOPMENT

Some development work is being undertaken in the research laboratories. It is more usual, however, to have it carried on by the cognizant bureaus, that is Bureau of Ships, Bureau of Aeronautics, or Bureau of Ordnance. Development work with ships, weapons, or other devices used in antisubmarine warfare is expensive. The unit price is higher since the prototypes are limited to a few in number. It must be pointed out that a shipbuilding company, with its constant overhead, requires a volume of business in order to reduce unit prices, and that when plans for building ships call for reduction, the saving is not in direct proportion to the number of units canceled.

EVALUATION

After development, ships, weapons, and other devices are assigned to the fleets for evaluation. In a large program, the operational development force employs many types of ships, aircraft, and their associated personnel. The evaluation prior to delivery to the fleet is an important step in the development of tactics, techniques, and capabilities of the new devices.

PROCUREMENT

When the ship, weapon, or device has been evaluated and accepted, a considerable lead time is necessary for procurement of the ships and aircraft for the fleet. Procurement programs are from 1 to 4 years ahead of the actual installations.

INSTALLATIONS

The installations follow the procurement, but in a large program are carried on more or less simultaneously.

TRAINING

The most important part of the program is the training of personnel in the use of new equipment. Training methods must be employed which not only train our Naval personnel quickly and efficiently but are capable of training large numbers of new men upon mobilization. Training devices, although expensive, save a great deal of time for ships and aircraft by installing the systems ashore for instructing personnel before they become embarked, or have seen service.

MAINTENANCE

Throughout the entire program maintenance must be kept in mind at all times. Simplicity of assembly, packaging of units, and access for repairs are essential to continued effectiveness of the equipment.

FUTURE TRENDS

While it is difficult to predict the size and composition of future antisubmarine warfare forces, it is now quite clear that the submarine will play an increasingly important role—a role equally as important as aircraft. It is indicated that surface craft may be found to be less capable of protecting themselves against the submarine, and will become less useful as an antisubmarine warfare type. Aircraft of the Navy on primary assignment and aircraft of the Air Force on collateral assignment will always be required in large numbers to deal with enemy submarines.

In any future conflict, we must not lose sight of the fact that great quantities of shipping will be necessary and in order to protect the shipping lanes we would have to be in a position to destroy the enemy's submarine power. As the submarine itself develops into an antisubmarine weapon, it will play a major role in keeping the shipping lanes free

from danger. Warfare changes as scientific progress is made. It is perfectly clear that we must have an all-powerful Naval air arm and an all-powerful submarine fleet if we are to prevent the occurrence of another war. No power must be allowed to think that there is any possibility of defeating the United States by destroying its shipping.

The Atlantic Pact

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Atlantic Pact," published in the Washington Post for March 19, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATLANTIC PACT

Publication of the text of the North Atlantic Treaty confirms our feeling that the pact is more a defensive alliance of the old-fashioned type than a regional agreement conforming to the letter and spirit of the United Nations Charter. Without a doubt some military agreement was necessary. Of that the facts of the world situation afford ample proof. The enforcement provisions of the Charter had become merely pious protestations as a result of Soviet sabotage. A new sense of security, in consequence, had had to be imparted to nations struggling back to their economic feet. The question lay in the means. A wiser and less complicated course than a comprehensive alliance of the nature that is now before the American people—assuming the need for comprehensiveness—would have been the plan suggested by Hamilton Fish Armstrong, editor of Foreign Affairs. Mr. Armstrong had proposed that the Soviet-created gap in the Charter be filled by a new pledge of consultation and action in case the Security Council was veto-tied in enforcement.

This could have been worked out simultaneously with the development of the original Atlantic community. The Atlantic community, as we understand it, was initially to be limited to the five Brussels powers and North America. That is to say, it was to be strictly regional, providing security as the spur not only to recovery but also to unity. Who was responsible for enlarging the scope of the Atlantic community in the manner that is now announced? It is said that the British took the first move by suggesting that the pact be thrown open to the Scandinavian nations. The British wanted protection at the Skagerrack against Soviet submarine activity in the North Sea. There could be no argument against other entries when this opening was made; hence the admission of Portugal and Italy.

We have no doubt that other candidacies will be entertained as time goes on. Indeed, provision is made for accessions to the treaty by unanimous agreement. Or these other candidates might be brought into a Mediterranean pact in working relation to the North Atlantic Pact. In this way there will be built up a comprehensive military alliance on the very borders of Soviet Russia. This is the reason that the general reaction stresses the military aim. And this accounts for some of the misgivings expressed while the pattern of the Atlantic Pact was under discussion. "Our fellowship with the peoples of western Europe, and particularly of Scandinavia," said Mr. Dulles recently, "ought not to seem to bring United States military might directly to Russia's border."

A good motto for diplomacy is to "look to the end." In this context the question is, What will the Soviet reaction be? Will the Muscovites be intimidated or provoked into retaliation? Nobody can tell, though the present disturbances in Yugoslavia, Finland, and Iran are hardly indicative of Soviet acquiescence. Mr. Dulles says, "It would involve a high tribute to Soviet leaders to assume * * * they would exercise more self-control than would our people under comparable circumstances, as, for example, if the Soviet Union had military arrangements with a country at our border."

To be sure, there can be no going back to the original plan limiting the pact to the Brussels powers and North America. But the military accent of the present arrangement could be softened, and a new tack embarked upon simultaneously with it, if the United States were to take the lead in the promotion of a real partnership with western Europe. A plea is now before Congress to call an international convention for a federal union of the free nations. The appeal is sponsored by many enlightened Americans, including former Justice Owen J. Roberts, former Secretary of War Robert P. Patterson, and former Under Secretary of State William L. Clayton. We applaud the move. Favorable action upon it would restore statesmanship in the dominant role in the making of our world policy. It would harness a pro to an anti, and show the world that the maintenance of peace is as much the American goal as preparedness for war. This is the way to wage peace that Secretary Acheson insists is American policy.

Communists

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article appearing in the Boston Post, Boston, Mass., Wednesday, March 16, 1949:

DORGAN BLASTS HARVARD SAVANT—DEMANDS SHAPLEY QUIT BECAUSE OF RED SYMPATHIES AT ANNUAL EVACUATION DAY DINNER

Denouncing Prof. Harlow Shapley, of Harvard, as a Communist sympathizer, clerk of Suffolk Superior Civil Court Thomas Dorgan last night was roundly applauded by nearly 800 persons attending the annual South Boston Citizens Association pre-Evacuation Day dinner by calling on President Conant to fire Shapley from the Harvard faculty immediately.

CALLS ON HIM TO QUIT

Dorgan charged that Shapley has been consorting with Communists and Communist sympathizers and asserted, "I say to Professor Shapley, you resign from Harvard because the constitution of Massachusetts says you don't belong there.

"I call upon the citizens of south Boston—a section which has sent thousands of her sons forward to fight for liberty and democracy in all wars—to insist that Shapley be replaced on the Harvard faculty, and if he doesn't resign we should force President Conant to fire him."

Dorgan, one of the principal speakers at the annual pre-Evacuation Day dinner at the Hotel Vendome, was cheered to the echo as he demanded the well-known Harvard savant quit his post.

CHARGES VIOLATION

He charged that Shapley had violated every principle of his profession when he invited seven Communist educators from Russia to participate with him in a public program in New York's Waldorf-Astoria Hotel, March 25, 26, and 27.

By his actions, Dorgan said, Professor Shapley also violated the constitution of the Commonwealth of Massachusetts which specifically states all preceptors of colleges, especially in the University of Cambridge (Harvard) must teach chastity, obedience, and love of country.

"In my opinion," Dorgan said, "he has failed in his duty—teaching love of country, as ordered by the Founding Fathers—when he invites Communists to speak against our Government, our culture, and our democracy in a public forum."

WORLD FIFTH COLUMN

"One of those so-called Russian educators only recently insulted every aspect of American democracy in a speech that was carried by the press and over the radio of the world. This man, who will be Professor Shapley's guest at the New York affair, described the Statue of Liberty—that symbol of our heritage—as nothing but a symbol of an organization of thieves and burglars. He described our culture as nothing but disgusting filth.

"Yet this man and six of his fellow Communists have been invited by one of our Harvard professors to share a public platform with him and speak on—of all things—world peace. In my estimation this is nothing but an international fifth column, engineered by the Kremlin."

SPEECH KEYNOTE

Dorgan's speech set the keynote for the annual dinner. His declaration that we should follow the lead of St. Patrick, who drove the snakes out of Ireland, and drive the Communists out of the United States was endorsed by several other speakers, including Mayor Curley.

While Mayor Curley confined himself to the over-all subject of driving Communists from our shores, Dorgan directed his attack against educators who help further the cause of the alien doctrine. He said the citizens of South Boston should awaken from their lethargy and stamp out this danger before it has a chance to overwhelm us.

"The first step should be to stop Professor Shapley," he said. "We just can't stand by and allow him to invite Russians to spread their lies and their propaganda from our public stages. We should demand—as I have demanded—that he quit his position. And, if he doesn't quit of his own volition, we—the citizens of South Boston—should start a city-wide movement to force President Conant to force the resignation of Professor Shapley."

REPORTED ILL

Professor Shapley, one of the best-known educators in the country and regarded as one of Harvard's leading faculty members, was reported by members of his household to be ill in bed last night. They said, however, that he "didn't wish to answer Mr. Dorgan again. He merely wants you to know he has no comment to make at this time."

Clerk Dorgan's electrifying address came after other speakers had warned of the danger of communism and had likened the present world situation to that of the era when St. Patrick, patron saint of Ireland, had gone forth from England to spread the doctrine of Christianity in a pagan world.

Mayor Curley, commenting upon this situation, said, "What we need in this world today is another St. Patrick to lead us back to sanity and to stamp out communism, which even now threatens to stamp out civilization as we know it.

"I happen to love America," the mayor said, "and it disturbs me to hear more and more people talking about communism every day. I think we should dedicate ourselves to the task of wiping that evil out before it gains a foothold. I think we should adopt the attitude that this is our country, and our form of government, and that we love it and cherish it above all else.

"If we hear people complaining about this America of ours and contrasting it to Russia we ought to say to them: 'If you don't love the country that gives you a living, if you don't love the country that guarantees you freedom, then get on the next boat and go and live in that country you profess to love so much. We'll be better off without you or your kind.'"

OTHER SPEAKERS

Other speakers on the program included assistant attorney general Lenahan O'Connell, who proposed that a monument be erected in South Boston to the memory of Gen. John Sullivan, whom General Washington designated as officer of the day when the British evacuated Boston on March 17, 1776.

"The greatest of all early Irish-American patriots hasn't even a marble or concrete column to memorialize his greatness. Surely in all of South Boston," he said, "there must be some small plot of ground upon which a memorial to General Sullivan can be erected."

Senate president Chester A. Dolan, former Senator Edward C. Carroll, who acted as toastmaster, and governor's councilman Patrick J. "Sonny" McDonough, also spoke.

No Mandate for Socialism

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article under the title "The Election of November 2, 1948, Gave No Mandate for Socialism," by James H. McGraw, Jr., president of the McGraw-Hill Publishing Co., Inc., appearing in the Washington Post for March 21, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of Monday, March 21, 1949]

THE ELECTION OF NOVEMBER 2, 1948, GAVE NO MANDATE FOR SOCIALISM

The President and those who support his legislative program have objected to the substance of my previous editorial, which appeared under this headline: "Now is the time to fight socialism in Washington."

In that editorial I explained how Washington is poised to follow the disastrous policy of forcing industry to skimp on new plants and new equipment. That policy landed Britain in the numbing embrace of the Socialists. I cited the experience of Britain to show how such skimping on industrial tools can bring a nation to economic stagnation—and socialism.

The President, in his recent Jackson Day speech, brushed aside this warning * * *. "They are again trying to frighten the people with the old worn-out bugaboo that socialism is taking over in Washington." Senator FRANCIS J. MYERS of Pennsylvania asserted that I was guilty of "warfare against any reasonable effort to keep our system of free enterprise working."

These criticisms may be sincere. But they are not well-founded.

I want to show why they are not well-founded by basing this editorial on Washington rather than Britain.

In Washington the administration has proposed a legislative program, the key parts of which would clearly put the country far on the road to socialism. Let us see how.

There are two steps in the process:

First. The Government, by its taxation program, undermines private industry so that it cannot provide itself with the necessary new plant and tools.

Second. The Government itself steps in to provide the plants and equipment that it has blocked industry from getting. That is socialism.

Here is how Washington is promoting socialization of the steel industry—and of other industries.

Steel has been expanding its capacity and improving its equipment chiefly by plowing back its profits. During the last 3 years it has spent $1,400,000,000 for new plants and new tools. That was more than the companies had available from their own earnings. But profits provided more than half of that money—more than $700,000,000. The remainder came from loans and from depreciation reserves set aside out of the earnings to replace worn-out equipment.

Profits must continue to provide the funds needed to pay for the bulk of the steel industry's necessary expansion. That is because private citizens, their income slashed by heavy taxes, have not been willing to buy steel stocks even at prices ruinously low for the companies and their present stockholders. The stock market currently prices the mills and other facilities of the Nation's principal steel-producing companies at far less than 50 percent of the cost of reproducing them.

Let us take another example. Profits are essential to expansion in the electric light and power industry also. This year private companies are planning to buy $2,000,000,000 worth of new plant and equipment. To do that without going overboard in debt, they must sell to the public some $300,000,000 worth of common stock. A squeeze on their profits would make that sale virtually impossible.

For tens of thousands of small-business enterprises profits afford virtually the only practical source of funds for new equipment and expansion.

In the face of these and many other examples that might be cited, what is the most effective way to prevent industry from reequipping itself and expanding its capacity to meet our essential needs?

Obviously, it is to cut down profits. And that is what the administration is trying to do. The President has declared that steel prices are too high, and is demanding that Congress raise taxes sharply on all corporations.

There you have the first step toward socializing industry.

Next comes step two. Have the Government supply the tools and equipment which, by taxation, it prevents industry from getting.

The administration has proposed legislation to carry out this second step. It is called the Economic Stability Act of 1949, for short, the Spence bill.

This bill gives the President the power to provide industrial facilities—in steel, power, or any other industry—where he finds that a shortage is hampering or is likely to hamper the economy.

True, the bill says that the Government is not to construct new plants if private companies will do it through Government loans, on terms prescribed by the President. That may be just one step short of complete socialization. But it is only a short step. And the Spence bill authorizes the Government to take that step.

By itself, the administration's Stability Act sounds harmless enough. It would have the Government build plants only as a last resort. But it provides also that if private enterprise cannot turn out all the goods the country needs, the Government can and should step in and provide the equipment to do it.

Now, take that power together with an administration tax program that undercuts the ability of private enterprise to supply the new plants and equipment it needs out of its own earnings. That combination promotes Government ownership and operation of industry.

And that is socialism.

The American people, of course, have the right to live under any system they choose—capitalism, socialism, fascism, communism, or what have you. But before socialism or any other ism is imposed upon us from above, the people should know the facts. If this editorial shall have contributed in some small degree to that end it will have served its purpose.

The election of November 2, 1948, gave no mandate for socialism.

JAMES H. MCGRAW, JR.,
President, McGraw-Hill Publishing Co., Inc.

North Atlantic Treaty

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., March 20, 1949:

NORTH ATLANTIC PACT MARKS A MILESTONE IN UNITED STATES HISTORY—SEEN AS GREATEST UNITED STATES MOVE SINCE MONROE DOCTRINE—WARNS REDS AWAY FROM FOUR CONTINENTS

(By John Griffin)

There has been quite a fanfare about the North Atlantic treaty, and there should be. For it is one of the most momentous agreements ever made and, for the United States, it is the greatest move since the Monroe Doctrine.

It means, in simple language, that aggressors have been warned away from a vast area. The Monroe Doctrine told them to stay away from the Western Hemisphere, and that policy has worked. It is now extended to

four continents and is supplemented by the established, though unwritten policy that guards a large part of the fifth continent.

So, all in all, it establishes a guaranty that aggression will be opposed by the United States in almost every part of the world, opposed by the armed power of the United States. Whether the extended policy will work is another question, for the protection of Latin America was accepted by other nations as a natural thing, inasmuch as the Western Hemisphere is remote from Europe and Asia.

ACCEPTED BY OTHERS

Geographically, the Monroe Doctrine covered a natural area and, to Europeans, appeared to carry the inference that so long as they observed America's position on this side of the world, America would refrain from interference on the other side.

Thus the North Atlantic treaty moves into another field in that it guarantees members against aggression in Europe and Africa. And in that respect there will be resentment on the part of some nations who are under the influence of Soviet Russia.

But the treaty is not a result of a sudden American determination to push its influence; it is more an outcome of the desire of the other member nations to obtain the protection of the United States. Their desire for American protection is as great as our wish to be in a position to protect ourselves.

It is easy to place too much confidence, however, in treaties. Many times in the past there has been a sweep of confidence as a result of agreements between nations. One was the lamented Kellogg-Briand Pact, in which the nations agreed to abandon force as an instrument of national policy.

In the first burst of enthusiasm that usually follows an agreement between nations, hope is high. Later, when national interests conflict with the general policy of treaty members, some excuse is usually found to circumvent the terms of the treaty.

COULD GO WRONG

And this new treaty doesn't necessarily insure against such a possibility in the future, and there is no guaranty that national interests won't again frustrate the hopes of the peoples concerned. It is much too early to believe that national interests, which are sometimes known as patriotism, won't be triumphant over treaty agreements.

But Americans ought to realize right now what this new treaty means, for it must receive the approval of the United States Senate before it can become effective. And there is going to be a lot said about it in the Senate before there is a final ratification or rejection.

It is a great departure from traditional American policy because it commits the United States to use armed force against any nation or combination of nations that attacks one of the treaty members.

Technically, there is no change in the constitutional provision in the United States that only Congress has the right to declare war, and so technically there is no break with the tradition that held in this country ever since it was organized.

But actually, as Secretary of State Acheson frankly explained, the United States would be bound automatically to counter an attack on any ally, perhaps even by the use of armed force.

OBVIOUS COMMITMENT

That is an honest and candid statement by the Secretary of State, and it is well that it should be clearly stated so that everyone will know just what the commitment is. And furthermore, it is perfectly obvious that there is such a commitment in the treaty, else it would be a weak and unworkable agreement.

If the United States is going to enter any defense agreement with other nations, it can hardly expect to offer only moral support. Moral support is a noble thing, but unless it is accompanied by real support, it can't do much in the world of today to assure peace and progress.

As a matter of fact, it wouldn't be honest for the United States to enter such a treaty with all sorts of reservations and expect other nations to go into it with the determination to give active support to one another. It looks very much as if this is an all or nothing situation.

So long as that is clearly understood, the process of getting Senate approval can follow our regular constitutional procedure. All the cards on the table, a full, free, and frank discussion and an honest determination to do what is best for the United States will result in a decision with which no fault can be found.

There is nothing sacred about our long-time policy of no entanglements with foreign nations. That policy has served for many years. If the American people feel that conditions have changed so much that it is necessary to reverse that policy and enter upon a new one, they can do so in good conscience.

MUST KNOW MEANING

What is imperative is that all the facts be known and all the possibilities examined by the proper authorities, in this case the Senate of the United States, so that the people may be properly informed as to the course they are taking.

All the evidence to date is that the Government officials concerned with drawing up the treaty are honest and open about it, and the Senate will have full opportunity to exercise its fundamental right to accept it or reject it.

If the Senate, which is supposed to be responsive to the will of the people, rejects the treaty, that is the end of it. If the Senate accepts it, there can be no withdrawing. This is a turning point in history.

The Filibuster

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. THOMAS of Utah. I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address entitled "The Filibuster," which I broadcast over the facilities of radio station KSL at Salt Lake City on March 16, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

By the time this broadcast reaches you the Senate may be in one of its periodic filibusters. What is the philosophy behind a filibuster? It has its origin in a perfectly proper theory, which is that a group of Senators has the right to use all of the rules of the Senate to full advantage of any individual or any group. That sounds good.

Those who indulge in a filibuster maintain that liberty is preserved by protecting minorities. It is. There can be no protection for the individual unless the majority is restrained. The ideals of any democracy which operates on the theory of common consent must operate not only on the theory that the majority shall rule but also that the minority shall be protected. That is the essence of our Bill of Rights. Nothing shall be done outside of due process of law. No branch of our Government should act in an arbitrary way. Congress checks the President, the President in turn checks Congress, and the courts look after not only the welfare of the people but also see to it that neither Congress nor the President act arbitrarily or that together they destroy what we call liberty. Therefore, a filibuster seems justified. Right can never be measured by might, and it sounds as if liberty must be preserved at all times and at all hazards by a willful minority. Those are the reasons for unlimited debate in the Senate.

Common sense is supposed to be the rule, and most things are done by unanimous consent. But there came a time when Government itself was stopped because a willful minority talked so long that governmental action was prevented. This brought about the present rule of 1917, and cloture, for the first time, was imposed upon the Senate. This rule has seldom been applied, because, as I said, nearly everything is done by unanimous consent.

Let's think through this problem of a filibuster. We don't want to cut out debate, of course, but the Senate has, as a whole, some rights quite as much as any individual in it. Any government, and especially the American Government, whose Constitution leaves so much to common consent, can cease to exist any time a rule of reason is not followed. We can't remove from the President his power of discretion. There is no way for the President to force Congress to act. As for the Supreme Court, it can hand down decisions, but the power of enforcement rests with the executive branch of the Government. There is in the Presidency, in the Congress, in the Supreme Court, and in all of the bodies of government an inherent right to act to preserve their own identities. In a sense that right is reserved to the individual man when he says he has a right to self-preservation. When it comes to the Senate, the Senate not only has a right to self-preservation but it also has a responsibility imposed upon it by the law written in the Constitution. How long would our Government last if the Senate did not assume its full responsibilities and it should say, "Since the President needs money to carry on the departments of government and since we have the power to appropriate money, we just won't appropriate." That is a commonplace situation that arises from the provisions of most constitutions of the world. In practically every constitution I have studied where money is appropriated for government's use by a parliament, nearly always there is a provision in the constitution that, in the event the parliament fails to provide money for the continuation of government, the government will then use the budget of the year before. That provision in constitutions of other countries assumes the inherent right of government to continue even if one of its branches fails to assume its responsibility. But we did not go so far as to make that part of our constitutional law. We took it for granted that the President would act as a President should; that Congress would act as a Congress should, and that the courts would act as the courts should. Our Constitution was not set up with any idea that the Government, under the Constitution, would come to an end through failure of any counterpart of our Government to assume its duty and responsibility to the whole Government.

We have existed splendidly under our Constitution for 170 years. Yet, in our Constitution there isn't a single safeguard which assures and guarantees that all of the branches of our Government will fulfill the duties of those branches. In all of our 170 years of history we have only put one President on trial. The inherent powers of the President and Presidential discretion have both grown bigger and broader as our country and our country's activities have grown

bigger and become broader. We have learned to realize that common consent and common sense are very much more powerful than several other factors in the governmental framework. A comparison of our Constitution with the constitutions of a dozen other states shows that there are more safeguards, more guaranties in the constitutions of other countries than there are in ours. Yet those countries do not function as effectively as ours. That is why writers say it is the common sense of the American people that has made them what they are. That is, also, why jokesters in other governments say there is a special providence that looks out for the welfare of little children, drunken men, and the United States.

A filibuster brings up all of these questions. If you were President of the Senate, would you take a Senator off the floor who was not talking on the subject and who was definitely trying to make his talk last as long as he could and who was literally wasting the time of his 95 colleagues? A Senator has certain rights and if you try to take him off the floor, the discussion of those rights immediately takes place.

In the House of Representatives they have what is called the mace, which resembles the old Roman bundle of sticks with the old Roman eagle on top and symbolizes the authority of government. When a Member of the House becomes too disorderly, the Sergeant at Arms takes the mace and waves it in front of the disorderly man. He is supposed to get scared and desist; but the mace is never used that way once in a generation, and we get along entirely without one in the Senate. Members of various parliaments in the world have said to me more than once, "What! Don't you have a mace in the Senate?"

I said, "No."

"Well, how do you preserve order?"

I answered, "We don't. We don't have to preserve it. Our Senators are taught proper conduct and they live up to it."

The filibuster is within the rules. Some people say that our country has never been held back by a filibuster and that it has preserved liberty and has kept our Government from improper action. I do not agree with that. In fact, I know it is not a true statement. Generally a filibuster is against a bill. This time, though, we have a filibuster against an interpretation of a rule. There is a fear on the part of those carrying on the filibuster that if the rule is changed their rights will be impaired. Correcting a rule in the Senate does not in any sense change our constitutional methods. How ridiculous this argument to keep the Senate from changing a rule becomes when one realizes that the Congress of the United States can declare war by a simple majority vote. It can impose taxes. It may actually hurt people by a simple majority vote, but it must not change a rule by a majority or a two-thirds majority vote. That is the logic of the present situation.

The people of the United States condemned the old kind of filibuster by the adoption of the twentieth amendment. But, in spite of that, those who are now filibustering think that the heavens will fall if we decide that cloture shall extend to a motion dealing with procedure as well as the shutting off of debate when a law is being enacted. If we should win this filibuster in the sense of forcing those who are filibustering to give up, this is all we will have accomplished.

We have had cloture since 1917. But it has been interpreted that cloture could not extend to a motion in regard to procedure. Therefore, the commonest filibuster was one wherein a Senator moved to correct the Journal, and he did it by suggesting that the prayer of the Chaplain should be stricken from the Journal or some other such meaningless motion, and then the filibuster was started. The man from Mars would surely remark that our Senators are talking a lot about a very small thing.

The outcome I dare not predict. But, judging from the past, the odds are in favor of those who are filibustering. The filibuster is a unique American custom. The institution of a filibuster is like the word itself. It has been made out of whole cloth and is awfully hard to explain to anyone who is not an American.

Mr. Crossman's Political Fervor

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. GEORGE. Mr. President, before asking unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared in the Atlanta Constitution on Friday, March 18, 1949, I wish to call specific attention to certain features of the editorial. According to the editorial, the Hon. Richard Crossman, labor member of the British House of Commons, visited Atlanta last week and delivered an address before the Americans for Democratic Action, which, according to the editorial, modestly describes itself as a "liberal, non-Communist labor organization." In the course of the address, Mr. Crossman is reported to have said the conditions of the British working class are superior to the conditions of American workers. He proceeds further to say that housing is better in Britain, and that British farmers are more prosperous and under less government control than the farmers in America. "Such declarations," the editorial properly observes, "are, of course, ridiculous."

But nevertheless, Mr. President, it would seem that high British officials on their visits to America should cease utterances of this kind. Such utterances and others which have preceded it certainly give some pertinence to the concluding paragraph of the editorial, which says:

Perhaps instead of continuing to pour money into Britain the Congress should ask the Labor Government to help us out with that $3,000,000,000 budget deficit that's said to be causing concern in Washington.

I ask that the editorial in its entirety be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. CROSSMAN'S POLITICAL FERVOR

It is unfortunate that Richard Crossman, Labor member of the British House of Commons, who was here last week, chose to belittle and deride the United States with what was reliably reported to us as "unbecoming malice."

The speech in question was before a meeting sponsored by the Americans for Democratic Action, which calls itself a liberal, non-Communist labor organization. No reporters were present. The audience was comprised almost solely of labor-union leaders and members. Evidently these circumstances led Mr. Crossman to feel safe in asserting that conditions of the British working class are superior to those in America—that they are better fed and better housed.

In Britain, said Mr. Crossman, workers can buy meat. In America they can't afford it.

Mr. Crossman should have qualified his statement. British workers can buy meat. They can get 4 ounces per week each. Prices are lower, it is true, but the difference is made up in government subsidy, a subsidy which constitutes a severe drain on Britain's financial resources, and which would not be possible without the assistance of the American capitalism which Mr. Crossman took so much pleasure in belittling.

That, however, was only part of the rosy picture Mr. Crossman painted of present-day Britain. Housing is better, he asserted, and British farmers are more prosperous and under less government control than those in America.

Such declarations are, of course, ridiculous. American farmers are not yet required to account for every egg, and houses built in this country are not restricted to a single bath. Neither do our farmers face a shortage of working animals because such a vast number of horses have found their way into the butcher shops.

The point is, however, if Britain is in such wonderful condition as Mr. Crossman said, the American Congress and the American people have been and are laboring under a terrific delusion. On the one hand we are told that Britain needs, in fact, must have for continued existence, the $980,000,000 in Marshall-plan aid now before Congress. And on the other hand a member of Parliament, high in Labor Party circles, boasts—at least before selected audiences—that the American workingman in effect enjoys a lower standard of living than his British counterpart. Presumably Mr. Crossman would say that is because the British workingman has a Socialist Labor Party to look out for him.

Perhaps instead of continuing to pour money into Britain the Congress should ask the Labor Government to help us out with that $3,000,000,000 budget deficit that's said to be causing concern in Washington.

Absence of Spain From Western European and North Atlantic Defense Plans

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article with reference to Spain's absence from the western European and North Atlantic defense line-up, by William Philip Simms, appearing last week in the Washington Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SPANISH GNAT

(By William Philip Simms)

Spain's absence from the western European and North Atlantic defense line-up is widely regarded here as the most glaring of all existing international incongruities. The United States and Latin-American countries, at least, are expected to seek a remedy.

Portugal—invited to join the Atlantic defense treaty made public here today—has protested against Spain's exclusion on the

grounds that it not only weakens the pact as a whole but Portugal's position in particular.

Military experts agree that if Russia attacks, nothing short of the Rhine could stop her first thrust. With overwhelming land superiority, she should be able to overrun Germany and the Low Countries in a matter of days.

This makes France, Spain, and Portugal important. Spain and Portugal occupy more than half of Europe west of the Rhine, with 232,000 square miles as against France's 212,000.

Spain is ostracized largely because of Soviet objections. The Kremlin pretends to be horrified over Franco's collaboration with Hitler. Briefly, here are the records of Franco and Stalin:

Stalin, in August 1939, joined hands with Hitler to divide up Europe. Stalin was to have Lithuania, Latvia, and Estonia, half of Poland and other loot. Hitler could take the rest. The Nazis attacked Poland from the west, the Red Army from the east and met at a prearranged line about midway. Stalin and Hitler then announced Poland had been wiped from the map.

The Stalin-Hitler partnership continued until June 1941, when the two dictators fell out and fought over further division of the spoils.

Regarding Franco, Winston Churchill says in his newly published memoirs:

"He thought only of Spain and Spanish interests. Gratitude to Hitler and Mussolini for their help never entered his head. * * *

"We wanted not only an unmolested Gibraltar but the use of the anchorage of Algeciras for our ships and the use of the ground which joins the Rock to the mainland for our ever-expanding air base. On these facilities depended in large measure our access to the Mediterranean.

"Nothing was easier than for the Spaniards to mount—or allow to be mounted—a dozen heavy guns in the hills behind Algeciras (whence) they could at any moment be fired and our naval and air bases would become useless." Moreover, Franco "could have allowed Hitler's forces to traverse the peninsula, besiege and take Gibraltar * * * and occupy Morocco and French North Africa."

Yet, despite Nazi pleading and threats—since revealed in German records—Franco did none of these things. Instead—

"By subtlety and trickery and blandishments of all kinds," adds Churchill, "he succeeded in tiding things over and keeping Spain out of the war to the inestimable advantage of Britain."

The United States and other democracies—to Russia's advantage and not their own—now refuse to send their ambassadors to Madrid. On the other hand, they maintain normal diplomatic relations with Moscow and her satellites—that is, save where western diplomats have been summarily kicked out.

The incredible part about it all, however, as seen from here, is that while it swallows the Soviet camel with such apparent ease, the west strains so painfully over the Spanish gnat.

St. Patrick's Day

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the New York Times of March 18, 1949:

ST. PATRICK'S DAY

It may be significant that St. Patrick, though he loved the Irish, was not, according to the available authorities, born in Ireland. In this he resembles most of the rest of us. But the Irish took St. Patrick to their hearts and he took them to his heart. There was warmth in him and warmth in them, and the combination has made St. Patrick's Day something more than was originally contemplated. The Irish haven't lost their saint, but a lot of other people have taken him on, people of many races and people of more than one religion. When the bands come along playing Killarney or the Kerry Dances, when the green badges flower in Fifth Avenue's early spring, who is there who doesn't want to cheer for the good and great man?

We may ask ourselves why St. Patrick has attained this position, and there may be any number of answers. He was serious, but the Irish made him gay, too. He was a crusader who wouldn't put up with paganism or any sort of wrongdoing, but he was human and understanding, too. The personality of him comes down the centuries, cheerful and lovable, and one believes he would have enjoyed the parade and the music and the sight of people having a good time. We like to think that the Irish are generously willing to share their day and their saint.

Economic Conditions in Connecticut

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. BALDWIN. Mr. President, this Congress will be called upon to make certain substantial appropriations for a great many things. I think we should always have before us the fact that we must have a high level of employment in the United States, and we must review all our programs in the light of that necessity. Bearing out that statement, I ask unanimous consent to have inserted in the RECORD a statement in the form of a news report from the Labor Commissioner of the State of Connecticut, concerning unemployment compensation which is being paid in that State, and the extent of unemployment there.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE IN GRIP OF RECESSION, DECLARES EGAN—LABOR HEAD SEES NO INDICATION OF HALT IN RISING JOBLESS FIGURE

HARTFORD, March 5.—Connecticut's jobless roll has jumped more than 10,000 in the past month, and the State is now definitely in the grip of a recession, according to State labor commissioner John J. Egan.

Egan said he saw nothing to indicate a halt in the steadily swelling unemployment figure.

FIFTY-SIX THOUSAND ONE HUNDRED TWENTY JOBLESS

There were 56,120 Connecticut people on the jobless list February 26, according to the commissioner. This represents an increase of 10,567 since January, he reported.

New lay-offs include 650 who were indefinitely laid off at the U. S. Rubber Co. footwear plant at Naugatuck. Another 520 workers were laid off at the Waterbury Tool Co., which announced it would suspend operations indefinitely starting next Wednesday.

Commissioner Egan added a further gloomy note with the comment that there may be a buyer's strike in progress in Connecticut. Even persons with jobs are slackening their purchases, he said.

Egan pointed to the fact that lay-offs have principally been in consumer-goods industries, such as hats, shoes, clothing, tires, radios, toys, and silverware. So-called heavy-goods industries have not been so hard-hit.

CAUTIOUS MANUFACTURERS

The commissioner said some lay-offs were due to cautious manufacturers who are uncertain of future price trends. These men do not want to be stuck with large stocks produced at fairly high costs, he said.

In an attempt to avoid this, Egan said, a manufacturer will close his plant for a few weeks, as a precautionary move. If his stocks do not appreciably drop during this time, the plant will remain closed, a third, possibly a fourth week, and so on, until his inventory has been reduced.

NEW HAVEN LEADS

New Haven leads the State in the number of claims for unemployment compensation. That city's total of 9,172 claimants last week compares with 8,770 in Bridgeport; 7,073 in Hartford, and 6,274 in Waterbury.

New Haven's total represented an increase of 350 over the previous week. The latest total includes 275 workers at the Churchward boat yards in West Haven who have since returned to work, however.

While there were no large lay-offs in the New Haven area last week, there were numerous lay-offs by small plants.

Address of Mr. Howard Marshall to the Mississippi Valley Association

EXTENSION OF REMARKS

OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. BATES of Kentucky. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of J. Howard Marshall to the Mississippi Valley Association meeting in St Louis, Mo., on February 7, 1949:

Mr. Chairman, members of the Mississippi Valley Association, it is a great pleasure to be here today.

Perhaps I ought to start by saying that ever since I have been with the Ashland Oil & Refining Co., I have felt myself very much a part of the Great River Valley which is embraced by the Ohio-Mississippi system and its tributaries. Ashland itself is on the upper reaches of this river system and our principal refineries are located where Ohio, West Virginia, and Kentucky come together on the Ohio River. Because of our own intimate association with this river system, we know a great deal about the magnificent work which this association has carried on throughout the years and which has contributed in such an enormous measure to making that river system what it is today. It is, therefore, a particular privilege to be able to stand here and salute the work of this great association.

Your good executive secretary has asked me to talk on How the Inland Waterways are

of Value to the Railroads. Let me confess at the outset that after a week spent in the oil fields of Texas, I am not going to intrude upon you a prepared or formal address. Perhaps in the light of the topic that has been assigned to me, that is just as well.

I do not know exactly why an oilman was selected to talk about values to the railroads. It may be because the oil industry, of which I am a part, uses all forms of transportation. I have not looked up specific figures, but I know that the oil industry is one of the very largest users of transportation, including particularly the railroads. On the other hand, it may be that an oilman was asked to talk about transportation because the oil industry is a supplier of products to all parts of the transportation industry. Whether you or your goods move by air, rail, boat, barge, truck, or bus, that movement is always lubricated and more often than not powered by oil. Indeed, since the railroads themselves are one of the largest customers of the oil industry for lubricants, Diesel fuels, and fuel oils, the oil industry is vitally concerned for the continued success of railroad operations.

Still another reason for my appearance here might be that not being directly in the railroad business, it may be easier to see the forest for not looking too closely at the trees. Perhaps, and this is a perfectly human side of any business situation, since we in the oil industry are not concerned every morning with a particular piece of railroad track or a particular freight customer, we can afford the luxury of taking a long-range and possibly a somewhat impartial view.

Certainly, I cannot pretend to be an expert on railroad matters. Indeed, you may decide that I am no better informed on railroad matters than is the general public, who, according to a member of the Securities and Exchange Commission, rush out to buy Seaboard Airline—a railroad—every time the aviation stocks run up on the New York Stock Exchange.

Actually, I approach a talk on how the inland waterways are of value to the railroads, with fear and trepidation. It might be charged that I am not unprejudiced. All of us who have lived a reasonably active business life come away with some competitive scars. I might as well be honest about some of mine. My mind runs back a few years to battles in the Oregon Legislature when I used to live on the west coast. Then the struggle was against certain railroads resisting a repeal of an Oregon law that made you unload big over-the-road transports, originating in Chicago, into a truck about the size of a small Ford pick-up when the load reached the Oregon border. We lost and probably you still have to put the load in the pick-up truck.

My mind also runs back to the battles during the war to build the Big Inch pipe lines. I remember, and again I confess not pleasantly, the effort on the part of some of the railroads to insist that the wartime demands for oil on the east coast and in Europe, with tankers being torpedoed by the dozens, could be supplied in the hundreds of thousands of barrels of daily requirements by dragging it across half a continent in tank cars carrying an average of 10 barrels per day. Of course, we must all salute the railroads for bringing some 200,000 barrels a day from Texas to the North Atlantic when they organized themselves to do it, but, a wartime problem running into many times 200,000 barrels could not and was not met by feeding oil into the east coast in 10-barrel-per-day eyedroppers. The larger problem was only solved by Federal legislation to get the rights-of-way to build the pipe lines to win the war, all of which illustrates the fundamental point that bulk commodities must often be supplied in larger units than a carload if demands are to be supplied.

Competitive scars such as I have recited, all of us acquire over the years. Yet, despite the scars, I do believe that, viewed in any reasonable perspective, conflicts in interest between the rail carriers and those moving commodities on the inland waterways are more apparent than real. That may seem to be a strange statement from someone who has confessed so much in his competitive background as I have to start this talk.

One incident caricaturing the manner in which competition can distort our perspective comes to mind from the early days of the war. Ralph Davies, then the Deputy Petroleum Administrator and formerly the executive vice president of the Standard Oil Co. of California, had a lovely dry sense of humor. One morning when we received a report that a Standard Oil tanker had rammed into the back of a Shell tanker while running in convoy at night, he looked at me and with a slight smile said, "You know, the boys ought to stop that kind of competitive stuff; don't they know we have a war on?" Today, in peacetime, between the rails and the inland water carriers, there is probably a lot of competitive name calling that we could well do without. And much of the past ought to be forgiven, forgotten, and buried.

After all, it is only natural for any transporter to rivet his attention upon a particular type of traffic or a particular customer that might be lost if some other method of transportation became available and then spend entirely too much energy rowing around about who is going to get appropriations from the Government, whether tolls are going to be charged on the waterways, whether or not railroad rates will rise in relation to barge rates, or whether truck rates will shift in relation to both of them.

These rows about particular pieces of business, particular appropriations or particular rates tend to make us forget that fundamentally we are all part and parcel of the transportation industry and that the thing that matters most of all to all of us, over any period of time, is the total volume of all transportation.

In recent months, we have all heard much of the pleas of the railroads for higher freight rates. For those of us in business, this is something that we can all understand and with which we sympathize. We all know how our own costs have mounted. We all know with what problems we are confronted in an effort to make both ends meet, to keep our costs down, and not price ourselves out of the market. We can understand the predicament in which the railroads unquestionably find themselves in connection with their rate structures. But to a railroad, as with most other business, although it is frequently not expressed, their actual interest and concern is not in rates alone, but in rates times volume. This is the fundamental theme of everything I have to say this morning. The financial problem of the transportation business, including both the railroads and the inland water carriers, is a function of rates times volume.

No man in his right mind is likely to stand up and argue to you or to railroad people that the wide development and improvement of the inland waterways is likely to cause any general increase in railroad rates. I certainly would not insult the intelligence of this audience by so arguing. What the inland waterways have to contribute to the railroads relates to volume—perhaps the most important part of the rates times volume equation.

How is this true? What is it that the waterways have to contribute on the volume side of railroad income? There are at least two ways. First of all, waterways cause the growth of new industry that would not grow without waterways. An example may serve to illustrate the point. This morning I have been sitting alongside one of the leaders of the Big Sandy Valley Association, which has for its purpose the canalization of the Big Sandy River in somewhat the same way as the Ohio was first developed, and as later the Kanawha River was developed from Charleston into the Ohio River. That association has compiled some very interesting figures which show that during the years after the development of both the Ohio and Kanawha waterways, total railroad revenues for all railroads that parallel those waterways increased by leaps and bounds.

While I do not doubt that when those waterways were first constructed, many a local railroad-traffic manager worried about the loss of a particular piece of business—a short-run effect, if you will—the end point over the long run was the development of great chemical industries, great manufacturing industries, great oil refineries, up and down the whole length and course of the Ohio and Kanawha Rivers and their tributaries.

Those industries would not have been located there; they would not have grown and prospered, had it not been for the development of those waterways, and while it is true that the rails may have lost some heavy bulk traffic, over the years this was more than counterbalanced by the in-bound movement of materials, supplies, and goods for the great communities that grew alongside these rivers, for the construction and the development of the industries that grew there and for the out-bound movement of vast quantities of high-rate manufactured and finished products which these new industries produced and shipped to consumers from the factories erected as a result of water improvement. In the light of such benefits to the rails, our plea to our railroad friends is for a long run rather than the short-term view.

There is still a second way in which the inland waterways and the inexpensive bulk transportation which they provide is of great value to the railroad industry. In the last analysis, the demand for most products is a function of its cost and a function of its price to the consumer. All of us as Americans have had the story drilled into us since we were schoolboys that one of the best features of a free American economy has been its emphasis upon low costs, low prices and high volume.

Obviously, if all bulk materials were compelled to move on long hauls by what is inherently a somewhat higher cost system of transportation, this tends to increase, or prevent the decrease in, prices to consumers and, thus, diminish the total volume of goods that might otherwise be sold. This inevitably reduces the total potential volume of transportation for the whole transport industry including the railroads.

Actually, in numerous places, inland waterways are today contributing to a more stable railroad rate structure. Let me use a simple example. The chairman of my board of directors is fond of remarking that it costs us less to ship a gallon of gasoline by barge from our refineries at Ashland, Ky., to Pittsburgh, Pa., a distance of some 400 miles, than it does to ship that same gallon of gasoline by railroad tank car from our refinery to the city of Ashland, a distance of about 10 miles. I hasten to point out that no implied criticism of the railroads is justified from these figures. Rather, they serve to illustrate a point. If our refinery were compelled, without the waterways, to secure its bulky raw materials—crude oil by the millions of barrels—from far down the reaches of the Ohio River and on down the Mississippi at Baton Rouge and New Orleans, distances of many hundreds and sometimes over a thousand miles, in tank car quantities at rates which would be profitable to the rails, then either we would never have started in business or we would have priced our products out of the market. In either event, we would not now be using the railroads at the higher freight

rates that exist today to move large quantities of petroleum products back into the many places from the rivers and from the terminals by rail to consumers.

The consumer's pocketbook, sometimes forgotten in the last 2 or 3 years, can only stand so much. It is only by providing low-cost transportation for long-haul bulk movements that a maximum amount of finished products can be produced within the price ranges at which most consumers will buy. And it is the maximum amount of buying which can provide the rails with the largest volume of traffic from river points back to inland points where the rails are the only efficient and satisfactory method of moving the commodity.

What is said here may become the more important in the light of the so-called basing-point decisions of the United States Supreme Court. I am sure most of you know in general terms what those decisions purport to decide. Somewhat oversimplified but probably not overexaggerated, those decisions, unless altered by Congress or other court or administrative rulings, require that much of American industry change its pricing methods from that of an f. o. b. delivered price to the consumer to an f. o. b. mill, manufacturing, or warehouse point.

In the past all of us have been able to average our freight costs over wide areas. We can take little more than the actual transportation cost close to our manufacturing plants and a little less than actual freight cost at points further removed from our plants and factories. It now appears that we may have to price all our products on a factory base. This means that over various vast areas we may no longer average out our freight costs. If this occurs, our waterways, often the only means of cheap transportation for bulk materials to widely dispersed factories, plants, and warehouses, are the more essential, not only for the manufacturer or the producer, but equally for the railroads. Given waterways, despite factory pricing, there will still be left enough room at distant points in the price-volume-demand equation to permit paying the kind of freight rates that the rails need and desire to sustain their own business.

Certainly this is true in my own industry. If all gasoline and all heating oils and all crude oils in the great Mississippi-Ohio River Valley watershed had to be priced on the basis of the cost of crude oil or products in the Southwest, plus all rail freight to destination, although the rate might look attractive to our friends in the railroad industry, I can assure them that the volume would shrink to a point where the total revenue would probably not yield a profit. We would simply have succeeded in pricing ourselves out of large segments of the market.

One further thought in this same connection in relation to the inland waterways. I have heard from the platform here this morning from our friend, the Congressman, a great deal about foreign trade. To me, it seems illogical, unreasonable, and not good for the railroad interests which serve the great interior region of the United States and which parallel our rivers to turn over to seaboard cities the sum total of industry and manufacturing that may relate to the inbound movement of raw materials from foreign sources.

Within recent years we have heard much of the gradual decline and using up of the rich iron ores of the Mesabe Range. In recent months we have heard that for the future much of America's iron ores will probably come from the Hudson Bay region and possibly from South America. One simple question: Is the iron and steel industry, in the absence of adequate inland waterways, to be moved to the east coast, to the Gulf coast, and to the west coast? Or are our inland waterways to be such that there is efficient and economical bulk transportation to the Middle West, to Pittsburgh, to the steel centers of the interior basin, so that we may have an opportunity to compete upon an economical basis with our coastal regions?

I could ask you the same question with respect to oil. If, as I suspect, we become increasingly dependent upon the importation of certain amounts of crude oil, and foreign crude oil tends to make the market for crude oil generally, as United States crude has up until now, then is most of our refining industry to be concentrated on the seaboard? Is this beneficial to our interior railroads? As sure as we are standing here, unless we have economical, cheap bulk transportation into our interior basins raw materials from abroad will be processed at the seaboard, and finished products, lesser in weight and smaller in volume, moved inland by the more expensive means of transportation.

Looking to the long run and viewing prices and their effect upon total demand and the total movement and exchange of all commodities, it is my firm conviction that the railroads in general and inland roads in particular will find it very much in their best interest not to oppose, but rather to support, inland waterways. For inland waterways frequently are the only economical way by which the rails in their turn can be provided with a sufficient volume of materials to move at rates under which they can prosper.

I suspect I could produce no more dramatic illustration of what I am trying to say than a page taken from the history of our own company. This I can do without embarrassment for during most of the period while these developments were in the making, I was not with the company. And the exceptional job that was done was the work of others and in which they can rightly take great pride. Back in the early thirties, our company's only refinery was located near the city of Ashland, Ky., close to the mouth of the Big Sandy River where it flows into the Ohio. It refined some 4,000 barrels a day of crude oil. It got that crude oil from the oil fields of eastern Kentucky, long since declined to the point where they no longer can possibly supply the needs of the region. It remained a relatively small refinery until the late thirties.

At that time, it took to the rivers. Starting in a small way with one tow boat, it rapidly expanded its river operations. Shortly before and during the war, it added four large tow boats which today, with modifications, provide about 9,000 horsepower. It added to its fleet of barges until today some 60 large-capacity barges are a part of that fleet. It added smaller tow boats for what might be termed, shuttle service.

The company expanded its sources of raw materials so that long since it has left the oil fields of eastern Kentucky as its principal source of crude oil. It still draws some 4,000 barrels of supply from that region but the balance of its supplies are drawn from the Ohio-Mississippi River system, from Owensboro, Ky., from Evansville, Ind., from Mount Vernon, Ind., from Buckhorn and Gibson Landings in Louisiana, from Baton Rouge, from New Orleans, and, upon occasion, even south of New Orleans, almost to the point where the Mississippi flows into the Gulf. Today, instead of the 4,000-barrel refinery of the early thirties, there exists at Ashland, Ky., a 40,000-barrel refinery.

Instead of railroad freight bills which in those early thirties aggregated for the year only a few tens of thousands of dollars, our railroad freight bills at the present time are approaching $3,000,000 a year. This benefit to the rails has occurred not in spite of but because of a jump in our river traffic from a paltry 2,300 tons per year to an actual 1,400,000 tons in 1948 and to an estimated 2,000,000 tons in 1949.

Here is a laboratory sample of what the waterways can do for the rails. Had it not been for those waterways, the Ashland Oil & Refining Co. at Ashland would not be there today and the Chesapeake & Ohio and the Norfolk & Western and the rest of our connecting carriers would not have this $3,000,000 annual customer on their lines.

In conclusion, let me say that I do not want to ignore the fact that railroads and trucks and busses and deep water vessels and barges on the inland waterways are all to some extent competitors. The lines between what it is efficient to move by one means of transportation versus another means of transportation are not fixed things. They are not mathematical lines. These lines ought never to be fixed or determined by any over-all plan, policy, or governmental method for dividing up the business; rather, they should be fixed by competition.

This country should have competing groups within the transportation industry. This is the American way of finding out what is most efficient today and allowing the future to decide what is most efficient tomorrow. As a nation, we cannot afford to be dependent upon any one or two or three methods of transportation.

We heard some remarks here earlier today about John L. Lewis. Those of us in the oil industry, when we think of interindustry competition, often say that John L. is our best salesman. Certainly he has sold more fuel oil than any salesman who ever worked for the oil industry. Given competition between coal and fuel oil, no matter how strong any group or individual becomes in one industry, this Nation has an alternative. Measured in these terms, neither pipe lines, railroads, airlines, water carriers or highway transporters should ever be relieved of the necessity of competing with each other. For the national good, the development of all forms of transportation must be encouraged and assisted. Fundamentally, this is a question of each group constantly experimenting to find the means and methods for moving particular commodities at the lowest cost.

It is particularly essential in time of war to have many available forms of transport. Had we not had the rails, the waterways, the seaways and highways as alternative means of transportation, interweaving, interlocking, and holding this country together, the outcome of the last war might have been very different and the outcome of the next, if there is a next, even worse.

I would like to come back at the end with the beginning. I started by saying that the essence of any transportation business was not rates alone but rates times volume. To all of us in the transportation business, ourselves as well as the rails, let us resolve to focus our eyes more on increasing the size of the future transportation pie as a whole rather than focusing only on how big a slice we can carve out of a present pie which is far smaller than it will be and ought to be if we all go work on the whole pie.

Addresses at 1944 Memorial Day Services at Gettysburg

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. MARTIN. Mr. President, 2 weeks ago today the Senate was deeply shocked by the announcement of the death of Senator Broughton, of North Carolina.

Senator Broughton never addressed this body, and so its Members never had the privilege of hearing his eloquence. During the remarks made by Senators in the Senate following the announcement of the death of Senator Broughton, mention was made of certain exercises held at Gettysburg, Pa., at which Senator Broughton addressed the assembly of governors and citizens of the Commonwealth of Pennsylvania. I now ask unanimous consent to have printed in the Appendix of the RECORD introductory remarks made by myself at that time; and also the addresses made by Senator Broughton, then Governor of North Carolina; and by the Senator from Massachusetts [Mr. SALTONSTALL], then Governor of Massachusetts.

There being no objection, the addresses referred to were ordered to be printed in the RECORD, as follows:

MEMORIAL ADDRESS BY HON. EDWARD MARTIN, GOVERNOR OF PENNSYLVANIA—TAKEN FROM PROCEEDINGS OF THE GOVERNORS' CONFERENCE 1944 MEMORIAL DAY SERVICES AT GETTYSBURG

My fellow Americans, 81 years ago there was fought on this field one of the decisive battles of history. The men who fought on these hills and in these little valleys were the flower of American manhood.

They fought with the skill and courage that are the heritage only of freemen. The graves of their dead of July 1863 were—when November came—forever consecrated as the last resting place of all those who here made the supreme sacrifice for the right as they saw the right.

The causes of that war and the strategy of its campaigns do not concern us here. They belong to history.

We are now in a global war to determine whether freemen have the right to govern themselves and whether freedom of speech, freedom of religion, and freedom of action in the pursuit of human happiness must perish, perhaps forever, from the earth.

As a people and as a Nation we stand before the bar of history. This is our day of terror and pain, courage and wrath. It is our day of judgment.

This Nation is a Union of States. Each State is guaranteed sovereignty by a written Federal Constitution. The Governors of these States are assembled here on this hallowed ground. More surely than any other group, they know the tides of public sentiment.

They stand here pledging all the great power that is in their hands that this destructive war shall be fought to a successful conclusion and that peace shall be based upon the eternal principles of justice, freedom, and right. Only in that way can we have a lasting peace.

It is fitting and right that the Governors' Conference should observe this day dedicated to our soldier dead on this field.

One speaker is from the Old South and the other from the Old North. Representing the Old South is the Governor of North Carolina—a scholar, statesmen, and patriot—His Excellency J. Melville Broughton.

Representing the Old North is the Governor of Massachusetts—soldier, statesman, and patriot—His Excellency LEVERETT SALTONSTALL.

MEMORIAL ADDRESS BY HON. J. MELVILLE BROUGHTON, GOVERNOR OF NORTH CAROLINA—TAKEN FROM PROCEEDINGS OF THE GOVERNORS' CONFERENCE 1944 MEMORIAL DAY SERVICES AT GETTYSBURG

We are assembled before a shrine sacred to the North and South alike. It is altogether fitting that these great sections of our Nation, once divided but now united, should in this momentous hour of world history join in a solemn pledge of unity and loyalty.

In his immortal Gettysburg Address, Abraham Lincoln uttered a prayer for the preservation of government created by democracy. Today the world is engaged in a war in which democracy itself is challenged. Evil forces—Nazi, Fascist, and pagan—tauntingly have flouted democracy in all the earth and plotted its destruction.

Only future historians will be able to measure the narrow margin by which civilization was saved in those tragic days from Dunkerque to Tobruk. But we are the living witnesses of this redemption. So today, on this immortal site made forever sacred through the shedding of blood by our forefathers, North and South, we may humbly give thanks to Almighty God, not only that this government "of the people, by the people, for the people" has been preserved, but the right of democracy throughout the earth to establish and maintain such government has been victoriously asserted.

Gettysburg, more than any decisive battle in human history, marked a conflict of deep convictions. No conquest of territory was involved, no selfish ambition for leadership existed, no race or religious entanglements moved the opposing forces. Men of the same blood, all possessors of equal heritage of freedom and tradition, men whose forefathers had fought side by side at Yorktown and whose sons would later fight together in battles across the seas, opposed each other in mortal conflict because of what they believed. Thus Gettysburg has become not merely a historic battlefield, but a shrine. Victor and vanquished alike are honored. Spiritually, it is a memorial to American ideas as symbolized by two of the greatest Americans of all time—Abraham Lincoln and Robert E. Lee.

Futile indeed would be any attempted addition or supplement to what has been said here with such perfection as to constitute one of the immortal expressions of all time. With propriety, however, the question can be asked: Has our Nation lived up to the heroism of those noble men who made the supreme sacrifice or to the ideals of the martyred President who sought to bind up the Nation's wounds?

Thrice since that memorable event has our Nation been challenged by foes from without. Each time our people responded with courage and unity worthy of our highest ideals. From the stirring victory of Admiral Dewey at Manila Bay to the historic defense by the men under MacArthur and Wainwright at Bataan and Corregidor, the valor of American manhood has shown with increasing luster. Midway, Guadalcanal, Bizerte, and Cassino are among the hundreds of triumphs on sea and land and in the air in which men of the North and South have joined to hold high an unsullied and undefeated flag.

More than this, it is possible to say that no unworthy cause has enlisted the might and power of American arms. We have engaged in no aggression, sought no territory, practiced no oppression. We seek only that men everywhere shall be free. We have been moved by the conviction that military triumph alone is no justification for war; that there must be the triumph of a worthy cause; that beyond the cross of war there must be for all mankind the glory of a new day, the peace of a better world, and freedom of the human spirit.

Those who are disturbed by our participation in world conflict and international affairs should restudy the words of the great Lincoln. On this very spot, made as memorable by his words as by the deeds of those whom he exalted, he pleaded with almost agonizing earnestness that liberty and democracy should not perish from the earth. Isolationists will find no support in the life or words of Abraham Lincoln. In a speech at Independence Hall at Philadelphia, on his way to his first inauguration, he exclaimed:

"I have never had a feeling, politically, that did not spring from the sentiment embodied in the Declaration of Independence. That was not a mere matter of separation of the Colonies from the motherland, but a sentiment in the Declaration of Independence which gave liberty not alone to the people of this country, but hope to all the earth, for all future time."

In these great utterances there is the broad and true implication that without world freedom there can be no world peace; that oppression anywhere threatens liberty everywhere; that freedom of religion and speech cannot be limited by international boundary lines.

North and South stand united today. No economic, political, or religious differences threaten our unity. We are together determined upon victory in the great cause for which we fight. Our bond of friendship and loyalty is sealed by the blood of our sons who side by side are fighting at this moment on far-flung battlefields to preserve an America worthy of Washington and Jefferson, Lincoln and Lee.

Victory in this epochal conflict will be won. Whether soon or late, it will be complete.

In the spirit of our forefathers, in a manner worthy of our sons, ours is the high responsibility and the precious privilege of preserving here at home the heritage for which they fight; to resist indifference, complacency, and cynicism; to see that isolationism and reaction do not again break the heart of the world.

If we are faithful to our trust, we shall, when the victory is won, be able to give affirmative answer to the immortal inquiry:

"Oh, say, does that Star-Spangled Banner still wave
O'er the land of the free and the home of the brave?"

MEMORIAL ADDRESS BY HON. LEVERETT SALTONSTALL, GOVERNOR OF MASSACHUSETTS—TAKEN FROM PROCEEDINGS OF THE GOVERNORS' CONFERENCE 1944 MEMORIAL DAY SERVICES AT GETTYSBURG

"It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced." So said Abraham Lincoln on this spot 81 years ago. They fought for the preservation of the Union, in order that our country might become a more secure and better place in which to live, to raise a family, and to find greater opportunities to get ahead in life. The Union was preserved and we have watched the United States become the best country on the face of the earth. We have profited by living under a system of government in which each one of us has his part to play. We have seen our land become a good place in which to work, to live, to acquire an education, and to raise our children. We have seen, through the skill, the imagination, the courage, the resourcefulness, and the perseverance of our citizens hundreds of amazing inventions become ordinary necessities of life. All have brought us more comforts and a fuller understanding of one another.

During the same period we have seen the world devastated by the two greatest wars in history. We have seen men attempt to place might over right. We have fought in both these vast wars to preserve the principle that right is always the master of might.

We are still engaged in the second of these wars. We here at home must do our utmost to help our boys end that war with an early and complete victory. At the same time, we must see to it that we preserve for them the freedom of opportunity and of life that we now enjoy, and thus uphold those principles which Abraham Lincoln so clearly advanced.

The handclasp here of North and South is proof that our country is no longer divided. The fact that the great-grandsons of the boys in blue and gray are fighting side by side in all corners of the world indicates the united spirit of that Union. What becomes of our country in the future rests largely in their hands. They will be the dominating force in civic affairs. We must give them the chance to complete their education, to be rehabilitated, and to be retrained so they may be employed in useful work. We must guide them and see that they assume their responsibilities as well as enjoy their privileges. They have become experts in war. It will be our fault if they do not become experts in peace.

The spirit of our soldier dead demands of us a united effort which no boundary lines can mark.

It demands a greater unity of purpose between the officers of government and people in business. A country cannot go forward where government seeks to destroy opportunities in business and business seeks to weaken the reasonable authority of government.

It demands more unity between those who manage business and those who work in factories. We must insist upon the willingness and ability of the labor leaders to cooperate with the management of our industries; to have the courage to make necessary readjustments in hours and wages in order that some industries may live; and, above all, to do their part within their unions to make it possible for returning soldiers to get employment. We must insist that management cooperate with labor. Management must recognize that unions are part of our national life and take them more into its confidence. Our stupendous war production comes from the team play among government and labor and industry. It is due also to plain, hard work and the inventiveness and skill of our workers. The fervor and unity of wartime effort must be continued in peacetime.

The spirit of our soldier dead demands more unity between those people who work in our great industrial centers and our citizens who work on the farms and feed those workers in industries. We must maintain equal opportunities for farmers and workers alike.

It demands more unity between the executive, the legislative, and the judicial branches of our coordinated system of Government. Each must use the authority and the powers given to it by our Constitution in a spirit of common understanding.

The spirit of our soldier dead demands of each one of us for the other a feeling of friendliness, whatever may be our religion or our color. Our boys fight side by side, whether they be Protestant, Catholic, or Jew, or whatever may be their racial descent.

It demands that we, by our actions at home, show our men in active service that we understand the problems, the dangers, and the tragedies that they are daily facing in our behalf. Too many of them are disturbed at what they read about us.

Today this invisible unity is our most pressing need—not only to speed the day of victory, but to lay a foundation for lasting peace. Long before the end of the Civil War, Lincoln saw the tremendous problem of effecting reunion. Today on a far vaster scale are emerging the problems of economic and social rebuilding.

The security of our country is our sole concern. But events have proved beyond a shadow of a doubt that the future security of our country depends upon the stability of the world. We must assume our full share of neighborly responsibility. In doing so we must beware of any holier-than-thou attitude. We must assume a spirit of give and take. We must prepare ourselves by a better understanding of our neighbors throughout the world. There must be a closer meeting of our thoughts, our emotions, our beliefs, our goals. The all-important thing in the days to come is the will to cooperate, to understand each other, to work together here in the United States, and to get along with our neighbors elsewhere.

For this unfinished work we must pray for those qualities which Lincoln so clearly portrayed in his own life—his courage, his forbearance, his perseverance, his willingness to understand the other fellow, his capacity for hard work. Above all must we exercise the integrity of purpose in our private and public dealings that was so characteristic of him. We have come too much to assume that all good things in this world will be handed to us upon a platter. They come only by hard work and through the force of personality and character. Today, too, we need vision. We find ourselves in the present war because we lacked the imagination to foresee along what course the cross-currents set up by the last war were leading us.

In working for a greater understanding and more unity in our own country and with our neighbors throughout the world, we must always remember that the qualities needed for success are born in the hearts and minds of each one of us. The leaders of our country can succeed only if we each understand the problems that face us and are willing to contribute our share of the effort needed to solve those problems.

The words that Lincoln said here reached the hearts of men for all time because of their clearness of statement and their fullness of emotional and spiritual purpose. Let us here today dedicate ourselves to the principles that lead to a love of home and family, to simplicity in our way of life, to confidence in the future, and to faith in God. Let us remember today that our country has become a great Nation through unity of purpose and action. Let us here resolve in 1944, on the day dedicated by us to our soldier dead of all wars, that we shall preserve the heritage of the age that is past and hand it on in even fuller measure to the age that is waiting before.

President Truman Favors Action in This Session on Legislation Providing Statehood for Hawaii

REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. FARRINGTON. Mr. Speaker, in a letter addressed to A. T. Longley, Chairman of the Hawaii Statehood Commission, under date of March 12, President Truman makes this statement:

I attach great importance to the enactment by the Congress at its present session of legislation to enable Hawaii to become a State. This measure has my unqualified endorsement and is receiving my personal attention and active support.

I call this to the attention of the House at the present time by way of expressing the very deep gratitude we of Hawaii feel to the President for the unqualified support he has consistently given legislation providing immediate statehood for Hawaii. His letter to Mr. Longley expresses his support with greater emphasis than any previous utterances.

President Truman recommended the admission of Hawaii to the Union as a State in his message on the state of the Union at the opening session of the Eightieth Congress and again in his message on the state of the Union at the opening of the present session of Congress.

But at no time has he given as much emphasis to his support of this legislation as he does in this letter.

The Hawaii Statehood Commission, to whom the letter is addressed, was an agency created by the Legislature of the Territory of Hawaii. Its mission is to support enactment of this legislation. Its membership consists of representative citizens of both major political parties. Its activities are financed entirely and exclusively from funds provided by the Territory of Hawaii.

The House Committee on Public Lands on March 8 voted to report H. R. 49, to enable Hawaii to become a State. I recommend strongly to the Members of the House that they read the report of the committee, House Report 254, which is now available in printed form.

The chairman of the Public Lands Committee hopes to obtain in the near future a rule for the consideration of this legislation and it is, of course, the very earnest hope of all of us of Hawaii that action will be taken by the House in the not too distant future.

The full text of the President's letter to Mr. Longley is as follows:

THE WHITE HOUSE, WASHINGTON,
Key West, Fla., March 12, 1949.

Mr. A. T. LONGLEY,
Chairman, Hawaii Statehood Commission,
P. O. Box 3775, Honolulu, T. H.

MY DEAR MR. LONGLEY: I wish to thank you for your letter of January 9, in which you express appreciation for the support I have given to the people of Hawaii in their efforts to attain statehood.

I attach great importance to the enactment by the Congress at its present session of legislation to enable Hawaii to become a State. This measure has my unqualified endorsement and is receiving my personal attention and active support.

I am aware of the important contribution which the Hawaii Statehood Commission has made toward the attainment by Hawaii of statehood. Please extend to the members of the commission my best wishes.

Very sincerely yours,

HARRY TRUMAN.

Rent Control

REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. O'HARA of Illinois. Mr. Speaker, it will be of interest to all my colleagues, I feel, to know the reaction of many of the people of Chicago to the passage by this distinguished body of a rent-control bill which did not adequately meet the serious problems of our large centers of population.

On March 16, the day following our action here, the City Council of Chicago

passed two resolutions which clearly reflect this adverse reaction.

A wave of resentment such as I had predicted is sweeping the metropolis. This should not be minimized. This resentment is especially keen among the thousands of our citizens who are permanent residents of hotels. It is also intense among those who are concerned with the growing gravity of the problem of financing the proper maintenance of municipal services, because to them it seems unfair that we in this Congress should act to place upon municipalities greater financial burdens in the matter of rent control.

I have received many letters voicing this resentment. The writers cannot understand why when northern, eastern, and western Democrats to a man join in overcoming reactionary opposition to TVA and other good works primarily in the interest of the plain people of the South the same understanding should not have been accorded by the distinguished Representatives of the South to the problems of the plain people of the urban centers. North, south, east, and west, the plain people everywhere in the Nation depend upon a united democracy to advance the cause of human welfare.

Mr. Speaker, human welfare is neither a sectional nor a partisan question, as I know all my colleagues agree; and I should like to believe that there is equal agreement that today adequate rent control is a pressing aspect of the human welfare of all our citizens and emphatically so in great urban areas such as the one a part of which I represent.

Certified copies of the resolutions passed by the city council of Chicago have been sent to the President of the United States and to the Members of the House of Representatives and of the Senate. Those resolutions officially reflecting the public opinion of the people of the city of Chicago I hereby bring to the attention of the House and ask the thoughtful consideration of my colleagues. The resolutions follow:

Resolution protesting against proposal for local option in rent control, adopted by the City Council of the City of Chicago, March 16, 1949

Whereas rent control continues to be one of the major problems confronting every community in America, Chicago being no exception; and

Whereas recent reports emanating from Washington indicate the possibility that although rent control may be continued, provision is to be included granting so-called local option on Federal rent control; and

Whereas experience in the city of Chicago has indicated that local control is costly and involves extensive administrative detail and supervision; and

Whereas it would be unwise to place the expense and administration of rent control in the municipalities, creating dual supervision and control and added expense; and

Whereas the financial condition of Chicago and other municipalities is such as to deny it the opportunity to properly provide for the expenses of a rent-control commission and the administrative detail to make such controls effective: Now, therefore, be it

Resolved, That it is the sense of the City Council of the City of Chicago, and we do hereby recommend that if the Congress of the United States continues rent control, such control be retained exclusively in the jurisdiction of the Federal Government, thereby insuring a continuity of operation and permitting a full use of the experience gained by the Federal Government during the time rent control has been supervised and regulated by it; and be it further

Resolved, That copies of this resolution be immediately forwarded by air mail to the President of the United States, the Members of Congress, the two United States Senators from Illinois, and the Federal Rent Control Administrator.

STATE OF ILLINOIS,
County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of the certain resolution adopted by the City Council of the City of Chicago at a regular meeting held Wednesday, the 16th day of March A. D. 1949.

Witness my hand and the corporate seal of the said city of Chicago this 16th day of March A. D. 1949.

[SEAL] LUDWIG D. SCHREIBER,
City Clerk.

Resolution for inclusion of permanent residents in hotels in rent-control bill adopted by the City Council of the City of Chicago, March 16, 1949

Whereas existing Federal and State legislation imposing rent controls upon residential renting accommodations affords inadequate protection to the many thousands of Chicago citizens who are permanent hotel residents; and

Whereas the City Council of the City of Chicago has heretofore recognized the extreme hardships suffered by this group of tenants and attempted in the year 1947 to alleviate these conditions by enacting a rent-control ordinance under apparent authority conferred by an act of the General Assembly of Illinois; this ordinance afforded but temporary relief, the Supreme Court of the State of Illinois having declared said ordinance invalid for the reason that the enabling act excluded from the definition of housing accommodation hotels for the accommodation of permanent residents as well as for transient guests; and

Whereas permanent hotel residents are still in dire need of the same protection conferred by law upon tenants of other housing accommodations and the same considerations of public health, safety, and welfare are involved: Now, therefore, be it

Resolved by the City Council of the City of Chicago, That this council respectfully urges the Congress in any new rent-control legislation it enacts to make clear that permanent residents of hotels are afforded the same protection from unwarranted and abnormal increases in rent as that given to tenants in other types of residential occupancy.

The city clerk is hereby directed to transmit a copy of this resolution to the President of the Senate and to the Speaker of the House of Representatives.

STATE OF ILLINOIS,
County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of a resolution adopted by the City Council of the City of Chicago at a regular meeting held Wednesday, the 16th day of March A. D. 1949.

Witness my hand and the corporate seal of the said city of Chicago this 16th day of March A. D. 1949.

[SEAL] LUDWIG D. SCHREIBER,
City Clerk.

Welcome Address of John H. Connaughton, President of the Federation of Citizens' Associations of the District of Columbia, at Its Thirty-ninth Annual Banquet at the Mayflower Hotel, Washington, D. C., March 9, 1949

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. BRYSON. Mr. Speaker, at a recent dinner given by the Federation of Citizens' Associations of the District of Columbia it was my privilege to hear the president of the Association, Hon. John H. Connaughton, deliver an address. Believing that this address is of public interest, under unanimous consent, I include it in the Appendix of the RECORD as follows:

Mr. Toastmaster, distinguished guests, ladies and gentlemen: We have reached another milestone in the life of the Federation of Citizens' Associations of the District of Columbia, and it is now my happy privilege to welcome you to our thirty-ninth annual banquet. Another year of progress has passed into history, and we face a new year of possibility.

Robert Browning, in his Summum Bonum, said:

"All the breath and bloom of the year in the bag of one bee;
All the wonder and wealth of the mine in the heart of one gem;
In the core of one pearl all the shade and shine of the sea;
Breath and bloom, shade and shine, wonder wealth, and how far above them;
Truth, that's brighter than gem,
Trust, that's purer than pearl;
Brightest truth, purest trust in the universe—
All were for me in the kiss of one girl."

So, we bid farewell to the old and look with confidence to the fortieth year of our existence with all its possibilities. Realizing that all our efforts may finally be summed up in one accomplishment, with all we hope to be; and imbued with the justice and truth of the thing we would do, we hope to perform it, so that our efforts may earn the plaudit "Well done." It may appear to us as we survey the accomplishment of the past that we feel that there is much that should have been done that is yet undone. That the effort which we have given has not produced its share of accomplishment. Yet life is not to be measured by the distance run or the figures on a dial, but by the manner in which we ran the race.

"You are beaten to earth? Well what of that? Come up with a smiling face.
It's nothing against you to fall down flat,
But to lie there—that's disgrace.

The harder you're thrown, why the higher you bounce;
Be proud of your blackened eye!
It isn't the fact that you're licked that counts;
It's how did you fight and why?"

It may be that in the past year and in other years, that we have not been victorious all the time, but we have kept our eye on the goal, and ultimately we shall succeed.

The present time in the history of the world is fraught with problems. It is now a

time that searches men's souls. It is a time for strong hearts and clear, clean minds that can think straight through the problems of a troubled and confused world. Never has the right been challenged as it is being challenged now. Never has there been more confusion in the hearts of men than at the present moment. It is the time for placing first things first.

So it is in the District of Columbia there are many problems to solve, and we assert now that these problems are our problems, and will have to be solved by us. They cannot be properly evaluated by those who are strangers to our relationships; nor can they be adjusted by abuse by those who do not know of what they speak. We claim the right of all people everywhere, not only in America but in all the world, to work out our own salvation with fear and trembling. We believe that we know the conditions here, and know better than any nonresident how to reach the needed adjustment, if there be any adjustment to make.

Certainly our condition will not be improved by misstatements by nonresidents, nor by distortion of facts by self-appointed committees. The experience of the past year has demonstrated that these committees get themselves into a labyrinth of error, and are compelled to retract and restate, so that their contribution to the sum total of the problem is a mass of confusion.

The District of Columbia occupies a position in the organization of this Nation which is unique. Washington is a city set upon a hill which cannot be hid. Our status was fixed by the Constitution which gave life to this Nation; that status has not been changed in over 150 years of national existence, although many provisions of the Constitution have been altered during this time. It is true that within the Constitution a variety of governments could be constructed for the people of the District of Columbia. A number have been so constructed with varying experience. However, the people of Washington enjoy less self-government now than at any time in their history. We are the example of the superlative step child in government. We have problems that confront this commonwealth which exceed in population that of several of the States, and yet we have little voice in the solution of those problems. Every year the ever-growing budget of a rapidly growing city presents itself for consideration, and while it affects the economy of almost a million people, we have no official voice in its consideration, and about all the influence we exert in finding a solution for the fiscal problems of Washington is the still small voice of persuasion. We are faced with the question of supplying funds to pay the cost of operating a great metropolitan area, yet all we can do is plead for fair play.

We respectfully ask Congress to listen to the people of Washington when Washington problems are involved, and disregard such maverick groups as the committee of ninety, that functioned so inefficiently during the last year. Our problems of social relationships, fiscal affairs, and so forth, will be solved properly by the people of Washington, if nonresidents will keep their noses out of our business.

It is our considered opinion that Congress has never fully recognized that Washington is the Capital of the United States, and that it has been treated more as the Capital of the District of Columbia. This notion should be eliminated, and Congress should assume its fair share of the fiscal burden of the District of Columbia.

There is a growing feeling that unless a proper adjustment of the tax load is made between the people and the Federal Government, that more and more property owners will dispose of their homes and move to nearby Maryland and Virginia. This would create a condition that would not be wholesome, and would provide us with a deserted village to which we could point as the Capital of the Nation. The people of Washington and Congress should be interested in maintaining this city as a home for a satisfied people.

It should not be necessary to provide an exact figure or ratio, which should be designated as the portion which the Federal Government should assume, in providing finances for the operation of the District of Columbia. The problem of providing these finances should be assumed by Congress, as they have the entire control of the taxing power and the spending power. It is not fair to ask us to provide the funds, when we have no power of taxation, and when we have nothing to do with the appropriation of the money for spending purposes.

The duty to raise the money and the power to expend it should be assumed by the same agency. It is roughly estimated that the Federal Government owns and controls about 20 percent of the taxable area of the District, and that private owners and private business interests own slightly less than 50 percent of such area. The balance is owned by charitable, educational, and eleemosynary institutions that are tax-exempt. We are not objecting or complaining about this condition, but we say that it is entitled to a fair recognition by Congress, and that the tax load should be adjusted upon a basis of fairness to the District of Columbia and the Federal Government.

Since the taxable property holdings of the District of Columbia are divided between the Federal Government and private interests on a ratio of two to five, then it would seem fair to us to consider this revenue-producing property by itself and divide the load between the Federal Government and the District in this proportion. This would allocate to the Federal Government about 30 percent of the fiscal requirements of the District of Columbia, and which in a budget of $100,000,000 would require the Federal Government to contribute to this budget about $30,000,000.

Under present conditions, the Federal Government pays much less than this amount, with the result that we are hard-pressed in Washington to find tax sources. Our real estate is bearing all the load it can carry, and any additional charge will result in impairment of values and also in removals. A proper comparison of our real-estate taxes with other jurisdictions will disclose that we are paying all the traffic will bear. A percentage comparison does not give us a fair picture, but a consideration of the amount paid per home unit will disclose a fair evaluation. Our real estate is valued at its fair value for tax purposes, while in many other jurisdictions it is valued at one-third and in some instances slightly more. A fair study will disclose that taxpayers of Washington are bearing their share of the load of governmental cost.

We are the victims of the condition that caused the Revolutionary War. Taxation without representation is tyranny. It may be that we need another Boston tea party to call the attention of the people of the United States to the condition here.

We realize that there is a constantly growing demand upon the part of citizens of the United States for a reduction in spending, and a consequent reduction in taxes. It is much easier to tax those who have no voice than those who participate in government. If Congress contributes more to the budget of the District of Columbia, this reflects in the Federal tax load, so it is easier to listen to the voice of the ballot than the voice of persuasion. Thus, they take the course of least resistance. That this condition asserts itself in all such instances was evidenced when the Hoover committee report reached Congress. One Congressman said, "Everyone is in favor of it, but there will be nothing done about it." When the shaving process begins, any group that is affected will cause their friends to put pressure on Members of Congress to save their jobs, and every other group will do the same thing, and a multiplicity of pressure groups involved will involve every reduction proposal, and nothing will be done.

When our problems are under consideration, there is no franchise involved to make our voice audible. However, it is gratifying to know that when the people of the District of Columbia are interested in their own problems, and make intelligent approach to their solution, we secure results that are gratifying. As an illustration of this result-producing activity, I want to call attention to the recent reduction in the budget of the District of Columbia, which was reduced in the approximate amount suggested by the spokesman of our fiscal-affairs committee, Mr. Clifford H. Newell, and along the lines suggested by him. Again I say, when the people of Washington become interested in their own problems, and make a proper study thereof, they find the proper solution.

In this connection, I know that the character of service that I am recommending to you, is one of self-sacrifice for the collective good of this place we call home. We have made progress in many ways, and have secured favorable action by Congress on District problems, which are the direct result of the work of the Federation of Citizens Associations and its affiliated bodies. This result has been made possible by the spirit of sacrificial service which our membership has rendered; and because we are the best cross-section of the citizenship of Washington. The Federation and its member bodies coordinate their activities, and cooperate fully with all that are interested in the same program.

IN UNION THERE IS STRENGTH

Then the thoughtless may say that it is not worth while to spend individual effort for the common good; that it seems that the fight is an endless one; and that defeat seems to be the portion many times of those who fight for the things that are worth while. It may seem, as it seems to many now that evil overwhelms us; that the foes of good are in the ascendency. This is not a new thought or condition; it has ever been true. Many years ago it was written—

"Truth forever on the scaffold,
Wrong forever on the throne,
Yet that scaffold rules the future,
And behind the great unknown,
Stands the God of our creation
Keeping watch above His own."

History of the past has convinced us that no efforts put forth for good are ever lost. It may be like the bread cast upon the waters which may not return for many days, but its return is sure. And the harvest will be an hundred fold.

So may I close by suggesting a homely little phrase as our guide in trying times, "Keep on keeping on." If we do so and do not become weary in well doing, we will find that we shall reap if we faint not. Life will be real, and worthwhile, and we can evaluate it with the poet, happy and content, in the realization of work well done.

"Tell me not in mournful numbers,
Life is but an empty dream,
For the soul is dead that slumbers,
And things are not what they seem.

"Life is real and life is earnest,
And the grave is not its goal,
Dust thou art, to dust returneth,
Was not spoken of the soul.

"Not in pleasure nor in sorrow
Is the measure of our way,
But to live that each tomorrow
Finds us farther than today.

"Art is long and time is fleeting,
And our hearts though strong and brave,
Still like muffled drums are beating
Funeral marches to the grave.

"Trust no future howe'er pleasant,
Let the dead past bury its dead,
Act, act in the living present,
Heart within and God o'erhead.

"In the world's broad field of battle,
In the bivouac of life,
Be not like dumb driven cattle,
Be a hero in the strife.

"Lives of great men all remind us
We may make our lives sublime,
And departing leave behind us
Footprints on the sands of time.

"Footprints which perhaps another
Sailing o'er life's weary main,
Some forlorn and shipwrecked brother
Seeing may take heart again.

"Let us then be up and doing,
With a heart for any fate,
Still achieving, still pursuing,
Learn to labor and to wait."

Addresses by Senator McMahon and David E. Lilienthal on the Occasion of the Opening of Oak Ridge, Tenn.

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. McMAHON. I ask unanimous consent that there be inserted in the Appendix of the RECORD a copy of an address I delivered at the ceremonies incident to the opening of Oak Ridge, Tenn., on Saturday, and also a copy of the address delivered by the Chairman of the Atomic Energy Commission, Mr. Lilienthal on that occasion. The Vice President also delivered a very excellent address on the subject. I do not have his manuscript, since he spoke without manuscript, but I hope to receive the record of his address from the transcript of the broadcast, and to insert it in the RECORD at a later date.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR BRIEN M'MAHON, CHAIRMAN OF THE JOINT COMMITTEE ON ATOMIC ENERGY

We are here today to commemorate an historic event. We are opening the town of Oak Ridge. We are expanding the area of freedom. The fences which once surrounded this area and restricted the comings and goings of the people of this community are to be torn down. I congratulate you. You who live here are well aware, I'm sure, of what this will mean in your own lives, but the larger significance of this event in the face of world history may not be equally obvious.

Today, something is happening here which is contrary to the current of the times. While, everywhere throughout the world, the areas of freedom are contracting, here, in the least likely of places, the boundaries of freedom are expanding. While here at Oak Ridge you tear down the fences, as much as possible, almost everywhere else you look you can see new fences, new controls, new restrictions against thought, speech, and action. What you are doing here today is, of course, typically American, in the tradition of the independent far-seeing men and women who made the America we know and love by continually expanding, not only the physical frontiers, but the boundaries of human knowledge as well.

The atomic glare, which your gigantic plants helped to create, is lighting up the skies of the world. Those aggressors who otherwise might have nothing to deter them now pause before the might of the atomic bomb. And because they respect its power, we dare not let it fall into their hands.

Had the Soviet Union joined the rest of the nations of the world in accepting our just and generous offer to share the secrets of atomic energy under conditions providing for effective control, there would today be no need for us to lock up our secrets, or barricade part of our liberties. But that offer was not accepted, the strange peace became a war of nerves, the hard answer turned into the cold war. That is why we have had to weight ourselves and our free economy with a burdensome load of taxation to provide the protection which comes from strength. For the first time in our peacetime history, we have had to reach into our homes for the young men who can be trained to bear arms in the defense of their country. We have had to take from the schools and the basic research laboratories the inquiring minds of the scientists and put them to work on problems of national defense. For the first time in our history we have been forced to suspend freedom of knowledge. We have had to attach to certain fields of inquiry the sign "Verboten—except by permission."

Because we are aware of the dangers which surround us in this restless and fearful peace, we have been forced to do these things against our wishes, against our will, and against the day of possible aggression. We who have fought for freedom because we love it, now find ourselves curtailing our own freedom. Yet we, of all people, know that only when the mind of man—every man—is free to pursue truth to its uttermost extent, to acquire knowledge to the limits of its ability, is there real freedom. Where the gates have been shut on knowledge, there progress halts. To permit the creeping vine of secrecy to grow on the wall of science is to encourage the spread of the ivy over the entire surface, for all knowledge is necessarily related.

The man who is shut off from even one fact of knowledge lives in doubt, however small. He can only know that policies involving his life are being made by other men who may—or may not—have all the facts. Without freedom to know, he becomes less free to act. His participation in society becomes more and more restricted. More and more he is told what to do and what to think. And the end is not yet in sight. The trend is decidedly toward more armaments, more foreign aid, more taxes, more oppressive weights upon our free economy and our free society. That is the trend of the tremulous times in which we live.

Here at Oak Ridge, however, we are today at least, running against the tide. Here we confront a cruel paradox. We are opening this town—we are winning a small victory in the perpetual battle for freedom but, on other fronts, we are forced to retreat from our ideas and our ideals. To defend freedom, to protect our Nation, we are compelled to threaten the basic freedoms.

Yet we must continue to hope the day will come when through international control of atomic energy, all fences are removed from the city of Oak Ridge. We must continue to hope the day will come when the tremendous forces of atomic energy, harnessed in these plants, will work entirely for man's benefit. Meanwhile, we must cherish, more than ever, the ideal symbolized by the opening of this town today. We must continue to work and strive so that the spiritual forces of freedom may overcome the repressive forces of the iron curtain. The outcome of this struggle lies in some near offing of history that will set the course for man for ages to come. You here today will probably be called upon to help make that decision.

As the gates of this city open, let us dedicate ourselves to the duty, here symbolized and here crytallized, of reopening the gates of the free mind everywhere in the world, through the liberty which, in our day, can come only under effective international control of atomic armaments.

REMARKS OF CHAIRMAN DAVID E. LILIENTHAL, UNITED STATES ATOMIC ENERGY COMMISSION

This is a strange celebration, probably the first of its kind in the United States.

Here in a small town in Tennessee are gathered thousands of people, a gathering honored by the presence of the Vice President of the United States, a number of Senators and Congressmen, the Governor of the State. What is the occasion of such a celebration?

This morning the gates through the fence surrounding the town of Oak Ridge have been opened, for good. After today it will no longer be necessary to carry a pass or to arrange to visit a resident in order to enter the Oak Ridge townsite.

The strangeness and uniqueness of this event lie not in the taking down of the gates, but in the fact that they were ever up in the first place. A visitor from Mars, seeing the high fence, the gates, the guards might wonder: Is this an American town, or is this a forced labor camp celebrating liberation?

It is not natural for an American town to be closed off from the normal free flow of people and commerce and culture. It is not natural and normal that Americans would be willing to consent to live behind barriers.

It is in this fact that lies the deeper significance of this occasion. For the young history of the town of Oak Ridge is a reassuring example of an old American trait; the ability to adjust to an emergency, without losing sight of our basic principles. Americans are individualistic, self-reliant people. But, when it is necessary, they will take effective measures of self-protection, even go so far as to live behind fences. But only when it is clearly necessary. It has to be justified in each case. This is the important thing.

The moment it is no longer justified by the facts, most Americans want no more of it.

More than 5 years ago the town of Oak Ridge was established in an immediate and serious emergency. This country had embarked on a daring program whose very existence we tried to keep secret. The town of Oak Ridge grew up behind fences and guards; its name never appeared in the Postal Guide, its telephone exchange was never listed at central.

But we move from fact to fact. There is no reason today why nearly 40,000 Americans should secrete themselves from public view.

But it is necessary to keep secret and to protect the very important work that goes on in these production plants over yonder. So a new, and very strong fence has been built around the plant area. By confining the guarded area to these essentials, the physical security of the plants has been maintained.

This business of constant reassessment, in the light of present facts and conditions, is symbolic of the whole problem of security and secrecy in the atomic energy program.

The paramount objective of the atomic energy program—a responsibility the Commission feels deeply—is to assure the common defense and security. How can that be best achieved?

First of all, we must always remember this: the American rule is freedom. Freedom is the rule of our way of life; secrecy is the exception to the rule. There are places—unhappy places—in the world where secrecy is

the rule and freedom the exception. Not with us.

It is through the open, free interchange, and movement of ideas and people that this country has thrived—to become the strongest, the most prosperous, and happiest Nation in the world.

It is this ideal of openness and freedom that is the heart and soul of America. This is what our huge national efforts and expenditures are designed to defend and to make secure.

There is also a very practical everyday reason to make sure that any departure from the traditional American way is clearly necessary.

Guards and fences and secret stamps on documents in themselves do not provide real security. If it were just a matter of fences, safes, and guardhouses, it would be a simple problem.

But genuine security has a positive as well as a defensive side.

What we are trying to do in the United States is maintain and increase our leadership in all phases of atomic-energy development. To do this, we need the best efforts and best ideas of many people—scientists, engineers, technicians of all kinds, management, and labor.

It is an open and competitive atmosphere that best calls forth the good new fresh ideas, and the best effort of men and women. But against this we must set the immediate, compelling fact that the state of the world is such that it would be naïve and imprudent not to try to conceal from others substantial areas of the atomic-energy program. And this the Commission is doing.

So the whole question of secrecy and security becomes a matter of balance, of weighing factors one against another, just as factors were weighed when the question was whether the town of Oak Ridge should come out from behind high fences.

It would be a gigantic delusion, and one that could cost the American people their freedom should we ever come to act on the belief that secrecy and security are always the same. They are not always the same. Sometimes secrecy is necessary and is the best way to further our security. In other cases secrecy impairs our own security, our own military and physical safety. The factors must be balanced, with a coolness of judgment and without jitters, in each particular case.

So where necessary we shall have to continue secrecy and guards and fences. But let us do it on a common-sense basis, only when it is necessary.

When Oak Ridge was first settled, it was distinguished for its rows of hastily built houses and huts set in a sea of red mud. But today it looks very much like an ordinary town. The more normal in appearance it becomes, the happier the Commission will be, and the happier the people of Oak Ridge will be, we believe.

But Oak Ridge is not, nor is it likely soon to become, a completely normal town. For while there are some 36,000 people living here, there are 150,000,000 people in the country who are concerned with this particular town. These are the people who put up the money to build it, the people in whose interest the plants are operating, the people to whom we are accountable.

What goes on in the town of Oak Ridge is of direct financial interest to the people of the United States, just as what goes on in the plants directly affects the national interest.

Now, does the fact the people of the United States own this town, all of the land, and practically all of the buildings mean that there is no room at all, in the development of the town, for individual initiative, for private enterprise, for local self-government?

The Commission believes there is a middle way. The manager here, as in Hanford, Wash., is working on ways to permit the leasing of land for commercial facilities. The Commission has authorized the sale of land to church organizations for religious or educational buildings to be erected at the expense of the church organizations. Other plans are being studied looking toward a more normal community in an economic sense.

This will take time and is not without difficulty, but it is worth the time and the effort.

Oak Ridge played a great role in days of war. May it perform even greater deeds in the building of a world at peace.

Under Modern Conditions, the Policy Which Government Follows in the Matter of Balancing or Unbalancing the Budget, of Increasing or Decreasing the Public Debt, Has Tremendous Influence on the Daily Life of American Citizens

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. BOYKIN. Mr. Speaker, never in history has our Government had to face the problem of managing the public debts that it faces today.

Fortunately, we have as Secretary of the Treasury in the personality of your good friend and my good friend, John W. Snyder, a man distinguished by the genius of his leadership as well as one who inspires the solid confidence of all of his fellow men.

No Nation in history has had to struggle more to manage a debt so huge that it taxes both the ability and the willingness of our people to meet it.

Enormous as was our indebtedness when we emerged from World War I, it still was insignificant as compared with the one that exists today.

By way of contrast the problems which faced our country then pale into insignificance.

Mr. Speaker, it is no disparagement to point out that subsequent to World War II and in May 1920, it was practically impossible for the municipalities and States of these United States to sell a single issue of bonds, even though they carried as much as 5 percent interest per annum.

The lack of confidence in the ability of the Treasurer of the United States to manage the debt of that day was so shattered—that a single break in Government bond prices carried United States Liberty Bond issues to discounts of almost 20 percent below par.

Billions of dollars were lost to the holders of all types of bonds, Federal, State, county, municipal, and other bonds, with the financial panic that then swept the country.

True understanding, and the real test of successful debt management is best expressed in the situation which exists today with respect to the value of all outstanding issues.

With more than two hundred and sixty billions outstanding, no one person has lost as much as a single penny. This has been due to the effectiveness of stabilization—the Federal bond program and the successful management of the debt. These are wholly and directly attributable to the understanding, will, skill, and ability of John Wesley Snyder—the greatest Treasurer this Nation has had since Alexander Hamilton.

It is indeed no happenstance that John Snyder was able to meet the the tremendous task assigned him by the President of the United States when he called him to serve as the Secretary of the Treasury of the United States.

Mr. Speaker, I do not have to tell you that John Snyder is no Wall Street tycoon. That he is no feudal baron called into office to serve the vested banking interests of our country—that he is now and has always been a true public servant.

When scarcely 23 years of age John Snyder entered the banking field as a bookkeeper for the First National Bank of a little city in Arkansas. In one aspect or another he has been in the banking business all of his life.

He knows the banking problems of the small-business man, the cotton, the peanut, the tobacco and the wheat farmer. He knows the fiscal problems of the cattle and the hog raisers and to my own mind, no man in the history of our country, with the possible exception of Hamilton, has had such a comprehensive experience and understanding of banking and currency as that possessed by Secretary Snyder.

His steady advancement in his chosen profession had so marked him among those of his profession in the Middle West that it is small wonder he was called into service by the Comptroller of the Currency of the United States in 1931.

There, serving as the principal assistant to the receiver of banks, he conducted all administrative duties incident to the liquidation of a vast number of insolvent national banks subsequent to the world wide depression of 1930.

During the next 5 years, which followed his induction he proved himself to be probably the greatest administrator and authority on bank liquidation that this world has ever seen.

Mr. Speaker, it was not until 1940 that Mr. Snyder was brought to Washington as special assistant to the Chairman of the Reconstruction Finance Corporation Board. To this duty later was added those of the assistant to the full board of directors of that mammoth fiscal organization.

It was here that his superb talents were directed to developing a program to provide for the building, the equipment and expansion of war defense plants, and from the inception of the War Plants Corporation, Mr. Snyder was installed as operational vice president and Director.

Within 1 year from the day upon which that huge corporation was founded, more than one thousand million dollars had been committed to the construction and equipment of stupendous industrial

plants in order to more successfully, economically and expeditiously prosecute the war effort.

By the end of 1944 commitments in excess of ten billions of dollars, covering aircraft, steel, machine tool, aluminum, magnesium, chemical and ordnance facilities were financed. With prudence, sagacity, economic and financial soundness and in wisdom—monies had been advanced for plants to manufacture synthetic rubber, aviation gasoline (facilities and pipelines) and the United States Defense Plant Corporation owned not alone nearly 1,000 new, huge, gigantic manufacturing concerns but had also financed the expansion of hundreds of privately owned industries in 46 States of the Union.

Outside of the continental limits of the United States, likewise, commitments had been made for the production of critical and strategic war materials in other countries which ran into the millions of dollars.

Over this vast banking operation John W. Snyder, war buddy, bosom friend, confidant, and beloved coworker of President Harry Truman—exercising full sway—presided as active administrative officer.

Was it to be wondered at that President Truman took a keen and personal interest and delight—when on May 14, 1947 and upon the recommendations of the War Department and of the Medal Awards Board—in presenting to his good friend and coworker, John W. Snyder, the Medal of Merit for "exceptionally meritorious conduct in the performance of outstanding services to the United States."

While John W. Snyder served his country in the Fifty-seventh Field Artillery with distinction in World War I, he served his country with even greater distinction in the field of banking in World War II.

Upon the completion of his task in Washington he returned to St. Louis to take up his duties as vice president of the First National Bank, but his reassociation to the First National was short-lived, for, in April 1945, President Truman again called him back to Washington to serve now as the Federal Loan Administrator.

It was in this capacity that he took the first official steps looking to the return of a peacetime economy by the immediate elimination of all overlapping activities in the RFC.

It was on the direct recommendation of John Snyder that we in this House of Congress passed legislation whereby to consolidate and absorb all five subsidiaries into the main organization of the RFC.

He thereupon caused the abolishment of the War Damage Corporation and fostered and refueled the formulation and institution for a long-term program to aid all business, large and small, in order to meet the financial demands and impacts of reconversion.

Then, in July 1945, the President appointed him Director of the War Mobilization and Reconversion. He immediately initiated an action program to deal with major problems of production and employment and to implement all economic adjustments necessary to a transition from war to peace.

In preparation for VJ-day, he organized and held successive conferences with the heads of all pertinent Government agencies to map out procedure. This to to the end that when Japan sued for peace the machinery for a transition to a normal economy was all ready to be set in motion—the construction industry was freed from restrictive wartime controls, other limitations were eased or removed—labor difficulties were adjudicated and labor strikes in such essential industries as steel and coal mining were quickly settled with both minimum of delay and dislocation in the reconversion program.

Mr. Speaker, I know John W. Snyder. I have been knowing him good—and for a long, long time.

I know that there has been no problem out of the hundreds in Government to which he has put his hand but what he brought—order out of chaos—success out of failure—and profit out of losses.

Now, Mr. Speaker, I do not believe that there is a single man sitting on either side of the aisle or in both Houses of Congress that did not feel a glow of pride when, on June 25, 1946, John W. Snyder, with all of his great, proven talents and greater abilities, was called to serve by the President as the Secretary of the Treasury of these United States.

Mr. Speaker, the responsibility of that office has grown steadily and tremendously—year by year—since the time it was administered by Alexander Hamilton. The Secretary of the Treasury is today charged by law with the management of the Nation's finances. He superintends the collection of all the internal revenues of the National Government. He directs the form and keeping of public accounts, prepares recommendations for taxation programs and for the support of the public credit.

The Secretary of the Treasury determines methods and policies relating to the procurement of Federal supplies. Under his jurisdiction comes the Coast Guard, the Secret Service, the Bureau of Narcotics, Customs and Internal Revenue. Through the Bureau of the Mint and the Bureau of Engraving and Printing, he supervises the coinage and printing of all the money in the land.

Last, but not least, of all the stupendous tasks with which this eminently great public official is charged are all activities of the Bureau of Accounts and of Public Debt. An indefatigable worker, it is the latter single activity that keeps John W. Snyder at his desk until the late hours of the night in the conduct of transactions with respect to Government bonds and Government securities.

Mr. Speaker, one can never think of John W. Snyder, the Secretary of the Treasury apart from Harry Truman, President of the United States. There are probably no two men in our country today whose regard—one for the other—surpasses that of these two great, distinguished public servants.

They compliment one the other in their every expression and every public act. The Nation is justly proud of both President Harry Truman and John W. Snyder.

Mr. Speaker, on February 23 last, Secretary Snyder addressed the National Press Club with respect to the problems that confront our Nation in the matters of its fiscal policies and affairs.

It was such a profound talk, so full of solid, factually sound economics and business principles that in order to better absorb it I have myself read it not once but several times.

I found it so replete with human interest interwoven with fundamentals made applicable to the problem of debt management which now faces this Nation that I want to make it possible for every Member of this House to read it.

I am, therefore, Mr. Speaker, with the unanimous consent of my fellows, submitting it as part of the proceedings of the Congress today. The speech of Secretary John W. Snyder is entitled "Confidence, the Keystone of Fiscal Finance."

CONFIDENCE, THE KEYSTONE OF FISCAL FINANCE

(Address by Secretary Snyder before the National Press Club, February 23, 1949)

Confidence built this Nation. Confidence wrote the Declaration of Independence at Philadelphia, and it armed the soldiers of the Revolution who made good that Declaration at Trenton, and Kings Mountain, and Yorktown. Confidence drove covered wagons, laid the steel of our transcontinental railways, and set up the assembly lines from which come our automobiles, refrigerators, radio sets, and every other expression of our national progress. It has turned back every military challenge to America, and it has animated all our great endeavors to build for freemen society and an economy to which we may look for ever-increasing spiritual, social, and material welfare.

National confidence is not made up of any single element. It embraces such diverse factors as the confidence of people in the security of their homes and families, in the permanence of their jobs, in the safety of their investments. It includes confidence in the efficiency of their economic system, in the soundness of their banking structure, in the integrity of their lawmakers, and in the impartiality of their courts.

Above all, national confidence depends on the financial soundness of the Government.

Time was when changes in Federal fiscal policy had relatively slight effects on our national life. But, under modern conditions, the policy which Government follows in the matter of balancing or unbalancing the budget, of increasing or decreasing the public debt, has tremendous influence on the daily life of American citizens.

If we look back at the period since the final victories of World War II, we can look with satisfaction on the way in which our economy has progressed. We have had no postwar slump. It is true we have had a rise in prices. But this has not been accompanied by violent speculative booms nor has it been accompanied by a great dislocation of production or scarcity of goods. On the contrary, goods are now flowing on the market in increased volumes and so are tending to restore the normal conditions under which healthy competition can prevail in industry, with sellers looking for buyers and not the customers bidding up prices on a black market.

The favorable situation today contrasts markedly with the lack of financial confidence during a critical period after the First World War, when the great speculation boom in commodities and in goods of all kinds reached its peak.

In May 1920, 91 issues of municipal bonds offered on the market remained unsold. Most of them were small issues, but important cities like Cincinnati, Columbus, and Syracuse received no bids whatever for bonds offered at a 5 percent interest rate.

Financial confidence at that time had been severely shattered by a break in Government bond prices, which carried the Liberty bond issues to discounts of almost 20 percent below par. With financial confidence severely damaged, with business inventories greatly overexpanded, and with heavy speculative commitments in the commodity markets, the stage was set for the historic price decline of 1920.

The situation today is sharply in contrast. For example, last week the city of Memphis, Tenn., sold a $4,500,000 bond issue for general city improvement purposes at a net interest cost of less than 2 percent. Last week, also, Duke Power Co. readily sold a $40,000,000 30-year bond issue at an interest cost of just over 2⅞ percent.

I do not mention these as particularly outstanding issues. The 2-percent yield on the Memphis bonds is a common yield today on municipal issues of this type and quality, while high-grade utility bonds commonly sell under 3 percent.

I mention them as concrete examples of the favorable terms on which our cities and corporations can meet their capital requirements, and can carry out their projects for improvement and expansion, when the Nation's financial structure rests on a sound foundation of confidence. If we look at certain of the countries of the world we can see that the fiscal policies which some of them have pursued in the war years and in the period following, have undermined popular confidence in the integrity of their country's money, and in the security of the debts which their governments owe to the individual citizens.

The relative stability of our own financial markets has resulted from the policy which the Treasury and the Federal Reserve System have developed in maintaining the stability of Government bond prices. We have carried out a policy of restraining undue advances or declines in prices of Treasury bonds.

To those businessmen who are haunted by memories of the 1920 price decline, I should like to emphasize that the situation in the Government bond market now is infinitely stronger. In place of the marketable Liberty bonds which so many investors sacrificed at wide discounts, we now have savings bonds which can always be redeemed at their specified values. In place of the laissez-faire market policy of that day, we now have the benefit of a firm stabilization policy.

In place of the great loss of confidence in the bond market in 1920, we now have a strong market trend which shows every evidence of continuing confidence. This is apparent also in the current sales of savings bonds, which have exceeded redemptions in every month during the past year. The total value of savings bonds outstanding is at a record level, as is also the total for series E bonds alone.

The effectiveness of our bond-stabilization program and the success of our Federal-debt management policies to date should not give rise to a feeling of complacency. This would indeed be a grave mistake.

The Second World War has left the United States with the burden of a huge national debt—a debt which now exceeds $253,000,000,000, and which compares with a debt only one-tenth as large—$25,000,000,000—in 1920. Some $50,000,000,000 of the debt must be refunded each year. And the handling of the refunding operations and the retirement of the debt have an important bearing on investor confidence.

The Federal debt now constitutes some 55 percent of the total debt of the Nation, both public and private. It has become the dominant factor in determing interest rates on private debt and the return on private investments. Of the bonds and other securities which represent the Federal debt, one-third is held by the banking system, one-fourth is held by individuals, largely in savings bonds; another one-fourth is held by insurance companies, business corporations, and other nonbank investors, and about 15 percent by Federal agencies and trust funds.

With the debt so widely held, and so important an influence on our financial and economic structure, I have considered it essential to enlist the cooperation of many groups, whose advice I seek in working out problems relating to debt management and Government financing. The representatives of banking, insurance, and industry have set up a number of advisory committees to work with the Treasury Department on matters of mutual concern. In addition to these regular committees, various groups are consulted from time to time in working out details of our fiscal program.

Encouraging progress has been made in reducing the debt, until the present fiscal year. As a result of the 1948 tax reduction, however, the prospect is for a budget deficit of $600,000,000 in the current fiscal year, and for an even larger deficit next year. By every standard of sound business practice, to run the Government at a deficit during the most prosperous year in our history does not seem to me to make good sense.

No business would have confidence in a corporation, heavily encumbered with both long-term and short-term debt, if it did not make provision for a systematic reduction of its debt during years of high prosperity. Only through such a policy can full confidence be maintained in the financial soundness of the United States Government.

I well realize that a tax increase is never popular. And, believe me, it takes a good deal of moral courage to advocate a tax increase at any time. But if we cannot pay our current expenses, and if the debt cannot be reduced during the height of peacetime prosperity, it is difficult to picture a time when it can be reduced with less inconvenience.

The interest cost of the Federal debt will be with us year after year, regardless of whether the income to pay it may be low or high. At nearly $5,500,000,000 annually, it now amounts to 13 percent of total Federal expenditures.

There has been some tendency recently to argue that reduction of the debt should be postponed until the business outlook becomes clearer, in view of recent downturns in prices and a falling off in certain lines of business.

But, every winter since the end of the war, a wave of business apprehension has swept the country. None of the earlier fears have materialized to any important extent. However, they have been highly beneficial in taking up business slack. They have put a damper on many speculative projects. They have led to cautious inventory policies in nearly all industries. They have encouraged bankers to adopt conservative loan policies. In short, by impelling everyone to prepare for a recession, they have protected the country against such a recession.

Now, in this fourth postwar year, we have reached a stage where the wartime accumulation of demand has begun to be satisfied.

We did not reach this condition all at once, however. Under cover of the continued strength in the heavy industries, the soft goods lines have for some time been making their readjustments to normal buyers' markets. Various luxury goods completed their readjustments earlier. This is another important contrast to the situation in 1920, when the unprepared-for price decline caused a simultaneous slump in almost all lines of business.

These developments have represented, for the most part, a return to normal buyers' markets and normal competitive conditions. They are part of the essential process of maintaining the economy on a sound basis.

The return of buyers' markets means that we are approaching those conditions which are normal to this country, wherein private enterprise functions to its fullest extent, and competition becomes most effective. Under such conditions, we get down to the most efficient production methods, we turn out the most attractive merchandise, we devise more economical distribution methods. In short, we shall get back in full stride to produce better goods at lower prices, which has been the basis for our rising standard of living.

The return to buyers' markets has been accompanied by a considerable decline in prices of agricultural products. The decline has been shared by food prices, and living costs have decreased slightly.

The drop in farm and food prices is attributable to normal demand and supply factors—a steadily improving supply of farm products throughout the world.

It has not been caused by any heavy liquidation of speculative holdings, as was the case in 1920, nor is it likely to be prolonged, as in that instance, by any important liquidation of inventories.

One proof of the latter statement can be seen in the trend of commercial, industrial, and agricultural loans, which are used chiefly for carrying inventories. In 1920, as in all other economic contingencies in which stocks of goods have backed up in trade channels, the holders were obliged to carry them by substantially increasing their bank loans.

This year, in contrast, loans have declined noticeably in the past 2 months, instead of increasing. In fact, they have been leveling off for some months, which is further evidence of a healthy inventory situation.

The return to buyers' markets has also been accompanied by an easing of the wartime pressure for continuous capacity operation of factories, even during the winter months. In many industries this year we have returned to the prewar seasonal pattern, when production was eased up during the unfavorable winter weather, railroad operations were slackened, and unemployment was somewhat increased.

In the steel industry, and a number of others, however, the wartime pressure for continued capacity operation still prevails.

Despite these various cross currents, the tide of basic national confidence continues as the dominating feature of the business situation.

There is good reason for this basic confidence. While unemployment showed some increase in January, the important news was that total civilian employment reached the highest level of any January on record.

While retail stores in recent months have found more difficulty in selling goods, the important fact is that total personal incomes in both November and December rose to new record levels. There is a vast difference, of course, between unwillingness to buy goods and inability to buy.

While residential construction has slackened recently because of the high price of houses, the volume of heavy construction awards in January exceeded all previous records for the month.

One reason for the continued boom in heavy construction is the great accumulated demand for new public construction projects of States and municipalities. Because of this factor, the volume of all types of construction this year is expected to reach a new high level, $1,000,000,000 higher than in 1948, according to estimates of the Department of Commerce.

The great shifts of population during the war years, and the 17,000,000 growth in population during the past decade, in fact, have created such a need for expansion of public and private utility services, schools, hospitals, highways and other public construction, that this factor alone will be a powerful business influence for several years to come.

The greatest support to business activity in the years immediately ahead, I believe, will be new developments in many kinds of consumer goods. These, together with the development of new factory equipment, new production techniques, and the rapidly broadening use of new synthetic materials, offer the essential foundation for an incomparable era of prosperity in the years ahead.

I think it reasonable to expect that this period of prosperity will continue, but it is not likely to be realized automatically. It will require constant watchfulness on the part of all groups to prevent the development of unbalanced conditions. We must guard against overbuying by business in excess of normal needs, by consumers in excess of ability to pay from current income, and by speculators.

On the other hand, we must guard against underbuying, for that also contributes to economic instability.

I pointed out earlier that confidence had been a very important ingredient of the forces which built America. And the same confidence that helped accomplish so much for us in the past will help accomplish much more for us in the future.

Confidence is self-reliance plus great expectations. It is not something occult and unreliable; when its foundations are sound, it is as understandable and dependable as muscle and machinery.

Its dependability increases with the weathering and testing of experience. If our confidence has seemed to fail us briefly in times gone by, we know now what economic mistakes paved the way for those failures by undermining the foundations. Knowing those mistakes, we can see to it that they are not made again. And that is precisely the goal at which Federal fiscal policies are aimed.

But as important as is the balancing of our dollar values, there is always the equally important responsibility for balancing our human values. In the ultimate solution of our economic and political well-being, we must find a common denominator upon which to build a careful balance of social and material welfare. We must find the wisdom, the resources, and the resolution to create a spiritual purpose and aim that will keep us moving progressively forward along the road of better living.

Are We Headed for Military Dictatorship?

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the magazine Pageant for April 1947:

ARE WE HEADED FOR MILITARY DICTATORSHIP?

(By Maj. Alexander P. de Seversky)

Will the military destinies of America be put into the keeping of a single individual vested with almost dictatorial powers? Will his personal prejudices and strategic blind spots become the main factors in formulating plans for national security involving the very survival of our country? Will a straitjacket of regimentation be put on our Military establishment under the pretexts of efficiency and economy?

To all these questions the answer is "Yes"—unless the American people and their Congress recognize the menace in due time and act to head it off.

They are under terrific propaganda pressure to give one man, the Secretary of National Defense, unlimited authority to enforce unity and discipline at the highest military levels. If that organized pressure succeeds, it will mean that military concepts will be frozen at a time when drastic changes and revaluations are called for.

Because of the advent of new weapons, the world faces a revolution in methods of human conflict. We shall be sunk, militarily speaking, if we do not have a defense setup that permits the full exploration and development of new ideas. As in all other branches of a nation's life, there are diehards obsessed with the true and tried, alarmed by innovation. They are pulling for the kind of bureaucratic controls which stack the cards for orthodoxy and military reaction.

A furious struggle is under way among the three services—Army, Navy, and Air Force—over so-called missions and appropriations. The public watches from afar in growing bewilderment. The danger is that in sheer exasperation we may accept the solution being offered—power of final decision lodged in the Secretary—without understanding the implications of this step.

The impression has been spread that the differences involved are mere bickerings; the kind of pettiness that can be ironed out by a strong administrative hand. This is not only untrue but unfair to our military leaders. Each of them is fighting for his innermost strategic convictions, sincerely certain that his answer is the proper one. The disputes are not petty but refer to the most fundamental strategic problems. They are matters of life and death for our Nation.

Shall they be resolved in the democratic fashion, with the people making the vital decisions? That is the issue, the concealed issue, in the current to-do about military organization.

No one denies that tactics and weapons are the concern of military experts and must be kept secret. But strategy—the over-all plan of war—is another matter. That involves the investment and deployment of our whole national effort. It cannot be concealed from the world; for it announces itself clearly anyhow in the industrial set-up, in foreign policies, in the nature of the training program for youth and in a lot of other ways. It should not be kept secret, for if our security program is to serve as a deterrent upon would-be aggressors, they must know what awaits them if they precipitate war.

The memorable congressional battle over the 70-group Air Force in 1948 brought a major dispute into the open, where it belongs. The first thing to be noted is that it was not trivial but went to the heart of our security plans. The second and most significant fact is that the answer by Congress at that time was almost unanimous for the "insubordinate" Secretary of Air, overruling the views of the Department head.

Suppose that appeal to public opinion had been forbidden, or that we did not have an Air Secretary as courageous and patriotic as Mr. Symington. The air power argument would, in that case, have been suppressed. Our people would not even have known that a conflict in basic strategic concepts existed.

Yet the present trend is toward sealing off further democratic appeals by endowing the same Department head with total authority. Congress and the President would no longer choose among alternative military programs. They would be limited to confirming a single view, without knowing whether it had been arbitrarily imposed and whether it really represented the consensus of military thought.

The right of the various services to appeal to the President, to explain their respective concepts to Congress, was not thoughtlessly inserted into the National Security Act of 1947. It was the core of the compromise reached by the services in shaping up the so-called unification law. Its purpose was to preserve popular control over major strategic planning and prevent arbitrary decisions by the Defense Secretary.

It is precisely that right the advocates of more power for the Secretary would abrogate. If they have their way, the most important result will be the disciplining, which is to say, the muzzling, of proponents of any strategy but the one chosen by the Secretary and his favored advisers. That is the underlying purpose of the campaign for unity; everything else is trimming or double-talk.

The elder services, backed by vested industrial interests, already have a stranglehold on strategic planning. At the head of our military set-up, at this writing, stands a man whose pro-Navy bias is notorious. His voice prevails in the Joint Chiefs of Staff, which is composed of two admirals, one ground general and one air general. Only the possibility of carrying its case to the people saves the Air Force from complete subjection to the surface services.

The pressure for one-man domination has been an organized public-relations campaign, obviously under the direction of the office of the Secretary of Defense. The same pattern of arguments, sometimes the same wording, leave little doubt on this score. The drive was spearheaded by an array of inspired articles repeating the theme song of more power for the Secretary.

After public opinion was sufficiently prepared and softened, came the recommendations of the Hoover Commission Subcommittee on Military Establishment, headed by Ferdinand Eberstadt. It echoed the same song. This was hardly a surprise; Mr. Eberstadt, like Mr. Forrestal, has long been a partisan of the naval viewpoint.

Finally, on the eve of 1949, Mr. Forrestal released his first report on the National Security Establishment. The crux of the document was a demand for full authority on all disputed strategic questions.

The thinly disguised objective of this drive is the elimination of Congress and the President as real factors in making primary military decisions. Disagreements, no matter how fundamental, would be treated as family affairs. Conflicting views would be reconciled, public relations would be coordinated, the inevitable differences over internal policies would be kept from becoming topics of public debate.

At a number of points, it is true, the Forrestal report gave lip service to democratic discussion. But these generalized privileges will mean exactly nothing if, in the concrete, conflicts will be kept secret to give an illusion of harmony; if irreconcilable differences will be resolved by one man and his single view presented to Congress as if it represented the combined expert military opinion.

One of the inspired build-up articles made proposals which would give the Secretary of Defense exclusive power to draft military budgets and full authority over their presentation to Congress; power to require the services to speak with a single voice and summarily to discipline those who speak out of turn.

In short, the kind of power that would preclude the possibility of another Gen. Billy Mitchell taking his minority view to the country; or of a Symington openly challenging decisions he might consider calamitous for the national defense.

In an article of his own, Mr. Forrestal followed up with a demand for the right to hire the Secretaries who head the Army, Navy, and Air Force. In that article he described the National Security Council as the most important instrument ever developed for welding the Nation's military and foreign policy. Its permanent members, under the chairmanship of the President, are the Secretaries of State, Defense, Army, Navy, Air Force, and the Chairman of the National Security Resources Board. With three of the seven members being both hired and fired by the Defense Secretary, he would, in effect, control four votes, a clear majority. His demand amounted to packing the all-important Council.

Perhaps because the public reaction to his idea was so sharply unfavorable, Mr. Forrestal took a different tack in his year-end report. He now proposed that the Secretary of Defense shall be the only representative of the National Military Establishment on the Council. But that, again, would make him the dominant personality in that body. As sole spokesman for the entire military set-up, at a time in history when military considerations are paramount, his views would of necessity prevail. Foreign affairs, national economy, nearly everything is today so intimately bound up with strategy that his voice would drown out all other voices.

Unhappily the Eberstadt subcommittee yielded completely to the spurious logic of efficiency and economy stressed in the public-relations build-up. Somehow the committee bypassed the central problem of this period which is reorientation of strategic thinking. A smooth-running machine will hardly serve our best interests if it is running in the wrong direction; if its boldest strategic thinkers are efficiently gagged.

The crux of the problem is in the search for a proper strategy. And in this connection, I am convinced, the drift toward centralization of authority is dangerous. It must be arrested and reversed. Under modern conditions, the conditions of total war, strategy affects a nation's economy, industrial set-up, education, standards of living, foreign policy. It is reflected in our political system and our very civilization. In effect we would therefore be installing a fuehrer, his arbitrary power tempered only by congressional control of the purse, which, unfortunately, can control only the size of our fighting forces but not the nature of the strategy they implement.

We face a momentous choice between democratic and totalitarian methods in the all-important military domain. Shall competing military concepts be subjected to public scrutiny and appraisal? Shall the people, through Congress and the President, surrender the right, heretofore unquestioned, to know, to judge, to give the final verdict on fundamental military decisions?

Advocates of regimentation insist that Congress, being a bunch of civilians, is not qualified to make strategic choices; that the matter is too technical. This is a dangerous theory, and one that denies our whole philosophy of self-government.

If the bunch of civilians is unfit to explore and decide over-all strategy, then it is equally unfit to decide atomic-energy policy, foreign policy, and other highly complex and specialized phases of national life. These, too, are technical. Yet Congress, after studying conflicting views and claims, has always laid down the main lines of policy.

We have flourished on this basis. Therein lies our greatness and invincibility. In the last war the democratic way proved that it had the telltale advantage of flexibility. It could force needed changes. It could unfreeze mistakes. A lively and enlightened public opinion was able to break through tradition and vested military privilege. The totalitarians, by contrast, were stuck with their mistakes. There was no public sentiment that could challenge the entrenched stupidities of a leader.

I have long believed that the chief reason for Germany's defeat was the regimentation of its military machine at a time when scientific advances demanded basic changes. My judgment was fully confirmed by Hermann Goering, head of the Luftwaffe, immediately after his capture. When I interrogated him, he talked frankly as one airman to another. The gist of his story was that the myth of an all-knowing fuehrer stopped the creation of strategic air power after the loss of the Battle of Britain showed the need.

Hitler was in effect his own secretary of defense. He exercised precisely the kind of single dominion over strategy which we seem foolishly minded to assign to our own Defense Secretary. Goering and others who understood this blunder could not appeal to the German people. His efforts to build a real bombing fleet, Goering complained, were hopeless. His "beautiful bombing fleet was used up in the miserable role of freight cars carrying shoes, blankets, and mittens to Hitler's ground forces."

As he talked, I thought of the immense advantage of our free life. We, too, entered the war with the wrong kind of aviation and strategy. We had ignored and discounted air power. We tried to bomb Germany without escort fighters. But our public opinion intervened. In due time, strategy was revised to meet new technological realities, planes were redesigned, escort fighters were provided. Our high command was obliged to reckon with a ground swell of popular resentment even in time of war.

In the final analysis it was democracy that gave us a winning edge over totalitarian foes. But the kind of centralized power, immune to democratic curbs, that licked Germany seems to be sneaking up on America. We have need for vigilance.

I have a high regard for the abilities and patriotism of Mr. Forrestal. But like every other official, he is the product of his biography. A naval lieutenant in World War I, Secretary of the Navy in World War II, he was the most energetic opponent of unification.

It would be a miracle if regimented power in his hands did not condemn our military program to a strong naval slant—this at a time when navies have lost their old strategic functions and have been largely turned into a supply service. The effect of an omnipotent sailor upon American military thinking could be as disastrous as the effect of an omnipotent corporal proved in Germany.

This is not a criticism of Mr. Forrestal. He would be untrue to his conscience if he did not work zealously to promote his honest convictions. The proposed centralization must be judged in principle, whether he remains at the helm or is replaced by another Secretary. We are in the midst of formulating a national strategy; the fate of America, and in a sense of the whole world depends on the decision. To vest total power in this transitional stage in a single person—sailor, soldier, or airman—is contrary to the very principles of American society.

Sooner or later the American people, by democratic process, will decide whether ours is primarily a land, sea, or air-power Nation. The sooner that decision is reached the better; the world situation is too critical for excessive delays and fumblings. Personally, of course, I consider it inevitable that the decision will be to rest our strategy on air power, with land and sea forces as supporting elements.

But whatever the choice, the Military Establishment will then be revised accordingly. At the head of the Joint Chiefs of Staff we shall place a land, sea, or air specialist (as the case may be) who, as the chief of the Joint Chiefs of Staff, will assume responsibility for basic strategy. Above him we shall still need an unbiased, open-minded civilian Secretary of Defense, representing and accountable to the people. He would be the intermediary between the military set-up on one side, Congress and the President on the other side.

The unified Department will then correspond to the reality of a unified strategy. But pending such a democratic commitment, at a time when strategic concepts are still contending for primacy, it would be strategic suicide to give any individual the decisive voice. The great military debate cannot be settled by arbitrary edict. To order military planners to compromise on their sincerest convictions solves nothing. Indeed, it amounts to a guaranty of dispersed and unrealistic planning.

We must grasp the fact that in such things there can be no true compromise. A strategy is either right or wrong—and we can't risk being wrong. Three separate strategies are worse than none; they can only dissipate our economic substance and make sure that none of them will attain the momentum for victory.

Let me give a homely comparison: Suppose a river is to be crossed and three experts—a bridge builder, a ship designer, and a tunnel specialist—were called in. Each man will insist that his own method of crossing the river is the most sensible, economical, and efficient.

Would it make any sense to lock them in a room like a hung jury until they reach a compromise verdict? Since no single structure can be devised to embody the principle of all three river-crossing methods, a compromise is impossible.

In the end those who hired the specialists, having heard the three sets of claims, would order the one they deemed most desirable, placing the particular specialist in charge of the project, with the others cooperating. The employers wouldn't have to be engineers to do this—simple logic, common sense, is enough.

The same holds true in choosing a strategy, providing all the contending specialists have a full chance to defend their claims. The ultimate choice must remain with the American people.

World War II ended on the threshold of the most far-reaching changes in the history of warfare. Inventions promising to recast the whole pattern of war-making emerged, some of them in the very last stages of the struggle.

Guided missiles, rocket artillery, radar, jet propulsion, supersonic speeds, and global range of aircraft, new fuels, the atom bomb and atomic energy—a partial inventory indicates the scope of the change and the challenge. Accepted military notions must be overhauled. The whole foundation of the World War strategy was obsoleted overnight. The ability to carry decisive destruction to the heart of an enemy nation at immense speeds over global distances through the skies canceled out most military assumptions of the past.

But precisely in this period of transition a drive is under way to impose in the military sphere conditions that will give political advantage to the old ideas and will discipline the new ones into impotence.

The Defense Act was a sorry compromise imposed by naval obduracy as the price of giving air power the equality it was entitled to in any case. Like all laws which run contrary to democratic logic—witness the prohibition experiment—it can be enforced only with the tools of regimentation.

The very fact that the Secretary of Defense insists on the power of final decision should serve as a warning that the law is unreasonable. The determination to enforce it by giving him more authority can lead only to revolts within the Military Establishment, followed by disciplinary sanctions against

rebels and the loss of vital military brains to the country.

Until the American people have made up their minds about the one stategy for their country, we must give the three services the largest measure of autonomy within the framework of the unified organization. Far from increasing the Secretary's grip on strategy, it must be relaxed. His rule must be that of a truly impartial umpire; of an interpreter of the opposing theories for the President, Congress, and the public.

Enjoying real autonomy, each service will be in a position to present its case fully and without interference. The central issue of strategy will then be resolved, like all vital issues in our Republic, by democratic means. The people will know all the facts as a basis for intelligent action.

The thinking airmen of the Nation, convinced that a department geared to air power is inevitable, welcome open competition of ideas. They believe it will shorten the period of transition. The attempts to conceal strategic conflicts, to keep them a family affair, have orginated almost entirely with the diehards.

The most vital question facing our people is whether the United States shall be a land-, naval-, or air-power Nation. War or peace, victory or defeat, liberty or subjection—all depend on the right answer at the right time.

The one certainty is that we cannot be all three at the same time. In relation to our potential enemy, we are a have-not Nation in manpower and resources. If we continue to build indiscriminately, we shall not only wreck our economy but endanger our free way of life. If the proponents of centralized power for the Secretary of Defense succeed, we shall be pinned down indefinitely to the profligate three-way strategy.

Our only safety is in deciding upon one strategy and putting all we have behind it. But such a decision in the nature of the case cannot be made by admirals, ground generals and airmen who are committed to their respective traditions. The people must make it. I am confident that if the democratic channels are not tampered with, the choice of the people will be air power.

My Native State of California Observes California Centennial

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. DOYLE. Mr. Speaker, by unanimous permission heretofore granted me, I take great pleasure and pride as a native son of California to present for the information and record of those who hear and those who read the outline of the observation in California of the California centennial celebration now in progress.

It is said that the native-born, in the State of California, are unique amongst the citizens of other States because many years ago there were organized two democratic, nonprofit groups of citizens, composed of citizens born in the State of California, to wit: The Native Daughters of the Golden West and the Native Sons of the Golden West. These two groups have as their chief objectives the preservation of historic landmarks of California and the perpetuation of the California tradition of the pioneer spirit. Needless to say, these two important organizations, within the geographical borders of the State of California, have done outstanding work in the protection and preservation of those natural resources and monuments which might otherwise be lost sight of or have fallen into decay. I am proud to be numbered amongst the members of the Long Beach Parlor, No. 278, Native Sons of the Golden West. The entire citizenry of California and the Nation owes much to the Native Daughters and Native Sons of the Golden West.

Needless to say, Mr. Speaker and colleagues, I am not only very proud of the fact that I came to the light of day in the great State of California, but I am deeply grateful for the privileges which have been extended to me as a resident of my native State of California. Then, too, I have benefited throughout the public schools of this State, in my educational processes, before attending the University of Southern California where I met and later married a native Californian. Mrs. Doyle and I are the proud parents of three native-born Californians, to wit: a son and two daughters. My grandson, also a native of California, is the only child of my youngest daughter.

The California Centennials Commission has recently issued a very appropriate booklet entitled "California Centennial, 1948–49–50," which gives a brief picture of the said centennial observance. Without undertaking to diminish in your esteem your own loyalty to the State which you represent, I am certain that you and each of you will find pleasure and benefit in reading the following record of California's centennial:

THE GREAT SEAL OF THE STATE OF CALIFORNIA

The great seal of the State of California was introduced in the convention which framed the constitution of the State of California September 29, 1849, and adopted October 2, 1849.

Around the bend of the ring are represented 31 stars, being the number of States of which the Union will consist upon the admission of California. The foreground figure represents the Goddess Minerva, having sprung full-grown from the brain of Jupiter. She is introduced as a type of the political birth of the State of California, without having gone through the probation of a territory. At her feet crouches a grizzly bear feeding upon the clusters from a grapevine, emblematic of the peculiar characteristics of the country. A miner is engaged with his rocker and bowl at his side, illustrating the golden wealth of the Sacramento, upon whose waters are seen shipping, typical of commercial greatness; and the snow-clad peaks of the Sierra Nevada make up the background, while above is the Greek motto "Eureka" (I have found it), applying either to the principle involved in the admission of the State, or the success of the miner at work.

THE CALIFORNIA CENTENNIALS COMMISSION

As authorized by legislation enacted to further the centennials celebrations, Gov. Earl Warren appointed a five-man California Centennials Commission on September 15, 1947. The Governor also designated members who serve as the legislative committee—Senator Fred D. Weybret, of Salinas, and Assemblyman Thomas J. Doyle, of Los Angeles—and named the 25 who serve as the centennials advisory committee.

One of the first steps taken by the commission was to provide itself with a staff adequate to assume the great volume of detail which grows out of a project of this nature. Two offices were established. The San Francisco office, located in the Ferry Building, is directed by George Heinz, executive secretary of the commission. As southern California manager, Lloyd D. Mitchell is in charge of the Los Angeles office at 1212 Wilshire Boulevard.

While each office functions separately to serve its respective area, the work of both is coordinated. On the staff are competent administrative and field personnel. Acting under the direction of the commission, they assist in carrying out the provisions of the centennials legislation, counseling with groups throughout the State in the planning of centennials activities.

In one of its first meetings, the California Centennials Commission adopted certain tentative policies, to define the scope of the commission's activities. As the requirements of the program become known, the commission may revise these policies for a more effective administration of centennial plans.

The commission has defined the qualifications for eligibility to receive State financial assistance within the meaning of the legislation which created the program. First, such centennials celebrations should be commemorative of some historical event of particular significance to the State or locality. Second, they must be of public interest, and third, they may not be commercialized.

As to the extent of State participation, it has been determined that funds will be allocated on a matching basis: The State will meet half of the approved expenses, with an equal sum to be guaranteed by the locality sponsoring the event.

As for the other phases of the centennials program, the commission encourages the suggestions of all interested parties. It recommends that localities stimulate an interest in California history by marking and preserving historical landmarks, reenacting historic events, and by other means. The commission also recommends that public-spirited organizations adopt centennial motifs and themes in their advertising and publicity and that producers of public attractions present programs representative of the centennial period. In fact, it is the general purpose of the commission to stimulate interest in the centennials in every way possible and to encourage a wide participation.

CALIFORNIA'S CENTENNIALS CELEBRATIONS

By reenacting the thrilling events of early California we gain a more intimate knowledge of the pioneer spirit which brought our State into the Union; we acquire a broader appreciation of its traditions and romantic background; we enjoy looking behind the scenes of history, to see the beginning of our great agricultural endeavor, our industries, mineral production, lumbering, fisheries, the development of recreation and travel and the expansion of our world trade.

California has an amazing story; it has a part in the chronicle of many nations and the Gold Rush made the State symbolic of a promised land of plenty. A century ago tens of thousands of adventurous souls traveled from all parts of the world to seek this western paradise. It was an Odyssey of heroic mold. Many found their hopes realized, some in the golden sands of the Mother Lode, others in fields which proved even more profitable. They were the builders of the foundations of our great Commonwealth. In recalling their courage and vision we may find a new inspiration for the future.

But, apart from the thrill and interest in reliving the dramatic scenes of early California, there is a splendid opportunity for the development of a greater community

spirit throughout the State, a neighborly cooperation which will make us better citizens—more aware of the heritage of the past, more appreciative of the abundant resources of the land in which we live, more adequately prepared for the glorious destiny that lies in the century ahead.

"California, land of gold * * * at the right hand of the Indies * * * close to the terrestrial paradise."

So wrote Ordones de Montalvo, Spanish teller of tales, in a chivalric romance of the fifteenth century. Thus a myth came into being which was to be transformed into reality.

Hernando Cortes seized the Aztec kingdom of Mexico in 1521 and sent our troops in search of further spoil. An expedition, led by Fortun Jimenez, crossed the gulf and discovered the peninsula of Lower California. Jiminez was slain by Indians but his followers returned with tales of a new land of high mountains and rugged coasts which they believed to be that fabled country of which Montalvo had written, California, the land of gold.

In 1542 came Juan Rodrigues Cabrillo who sailed up the coast of Lower California and discovered a port which he called San Miguel (now San Diego). He continued northward, paused at the Channel Islands and Santa Barbara, but failed to find harbors of consequence beyond Point Concepcion.

In 1579 Sir Francis Drake, commander of the *Goulden Hinde*, landed on the northern coast of California on his voyage around the world. He was hospitably received by the Indians and, in solemn ceremony, took possession of the country in the name of Queen Elizabeth of England. He called the white-cliffed harbor New Albion and returned to Britain with glowing reports of a new empire where "there is no part of the earth to be taken up, wherein there is not some likelihood of gold or silver."

Sebastian Vizcaino led a Spanish expedition in 1602 which founded San Diego and Monterey and, late in the eighteenth century, came Father Junipero Serra, Gaspar de Portola, Juan Bautista de Anza, Juan Manuel de Ayala, and others, all seeking to extend the conquest of church and state in the New World.

Missions were soon established along El Camino Real, "The King's Highway," one day's march apart from San Diego to Sonoma. Presidios were built to guard the many harbors and the air of old Spain clung about the rambling adobe walls of the haciendas. The early explorers were disappointed in their search for the fabled gold and precious stones with which the western wilderness was said to abound but many a settler found life easy and profitable in raising cattle and sheep and in various forms of agriculture.

The years from 1782 down to the time of the American occupation have been called by historians, the romantic period of California. This was the era of the dons, great landowners, whose Castilian hospitality was a byword. It was the day of hidalgo and vaquero, caballero, and conquistador, of thrilling rodeo and gay fiesta. It was during this period that other nations began to take a greater interest in California. Russians, who had established trading posts in Alaska, secured a tract of land on the Sonoma coast and constructed a settlement known as Fort Ross, which consisted of a stockade enclosing a church and several other structures, and a number of buildings located outside the enclosure. For 30 years they remained, but hunting and trade finally ceased to be profitable and they disposed of their holdings to Capt. John A. Sutter (later referred to as general), George Vancouver, English explorer, on his visit to California, revived the claims of Drake. Ships of many lands called frequently at the ports of the western coast.

Across the Rockies, too, there was a growing curiosity about the West. Trappers had found wealth in the fur trade; merchants from Boston had come around Cape Horn. John A. Sutter of German birth but a Swiss national, reached California in 1839 and received permission from Governor Alvarado to establish a colony and build a fort on the Sacramento River. He gave it the name of "New Helvetia. Fremont describes the fort as a quadrangular structure of adobe, mounting 12 pieces of artillery and capable of admitting a garrison of 1,000 men; this at present consists of 40 Indians in uniform, one of whom is always on duty at the gate. The whites in the employ of Sutter numbered 30 men. The inner wall is formed into buildings comprising the common quarters, with a blacksmith, and other workshops, the dwelling house with a large distillery, and other buildings occupying more the center of the area.

On April 11, 1822, Spanish rule in Alta California had some to an end. Mexican governors replaced the Spaniards, the missions were secularized and gradually fell into decay. By 1840 there was an increasing influx of immigrants from the States and organized parties braved the hardships of the plains and mountains to seek out this new land of promise.

The United States Government sent Lt. Charles Wilkes and John C. Fremont to explore the country. President Andrew Jackson sought to acquire both Texas and California by purchase from Mexico, without success. President John Tyler continued these efforts. In 1842 Commodore Thomas Jones, commander of the Pacific squadron of the United States Navy, was anchored in Peruvian waters when he received word that war had broken out between Mexico and the United States. Fearful that some foreign power might take this as an excuse to seize California, Commodore Jones sailed to Monterey Bay and called on the port authorities to surrender. The American flag was raised only to be lowered when it was found that the war rumor was false.

Meanwhile Daniel Webster, Secretary of State in Tyler's Cabinet, had proposed a three-point plan which included the acquisition of California, the satisfaction of claims of American citizens against Mexico, and the settlement of the Oregon boundary dispute with Great Britain.

As overland migration from the States rapidly increased, the Government at Washington felt the need of a source of information on the development of political matters in the West. President Tyler therefore appointed Thomas O. Larkin, a Monterey merchant, as American consul. Larkin had come to California in 1835. The new consul did his work well, keeping Washington informed on the activities of the Mexican leaders and supplying eastern periodicals with an abundance of material on the opportunities for settlers on the Pacific coast.

President James K. Polk was inaugurated in March 1845, and immediately began the renewal of negotiations for the purchase of California. When these attempts again failed, Consul Larkin was advised:

Whilst the President will make no effort and use no influence to induce California to become one of the free and independent States of the Union, yet if the people should desire to unite their destiny with ours, they would be received as brethren, whenever this can be done without affording Mexico just cause for complaint.

Larkin proceeded to win the cooperation of leading citizens in the cause of California's independence. Among these were Gen. Mariano Vallejo and Gen. Jose Castro, Jacob P. Leese, of Sonoma, J. J. Warner, of San Diego, and Don Abel Stearns, of Los Angeles. There were other forces at work, however, seeking the same objective. John C. Fremont, on a Government exploring expedition with a considerable army of followers, was also eager to play a part. On June 14, 1846, at dawn, a small band of American settlers under the leadership of Ezekiel Merritt, surrounded the house of General Vallejo at Sonoma and the General soon found himself a prisoner of war. To whom are we to surrender? asked the wife of General Vallejo. Then it was found that there were no definite orders from Fremont and many wished to back out of the affair. Benjamin Ide, however, stepped forward and assumed the leadership. The bear flag, symbol of the independence of California, was raised, and Vallejo and his companions were sent in custody to Sutter's Fort.

William L. Todd, a member of the revolutionary party, later described the making of the bear flag: We procured in the house where we made our headquarters, a piece of new unbleached cotton domestic, not quite a yard wide, with stripes of red flannel about 4 inches wide * * * on the lower side of the canvas. On the upper left-hand corner was a star, and in the center was the image made to represent a grizzly bear, so common in the country at that time. The bear and star were painted with paint made of linseed oil and Venetian red or Spanish brown. Underneath the bear were the words "California Republic."

Whether Fremont was responsible for the uprising is a matter of historical debate, but at least he accepted the result and turned over the prisoners to a member of his company with explicit instructions on their care:

"You will retain Messrs. Vallejo, Preuxdon, Leese, and Carillo at the fort of which you are hereby placed in full command. * * * Iron and confine any person who shall disobey your orders—if necessary, shoot any person who shall endanger the safety of the place."

The California Republic was short-lived, for, on July 9, Fremont received word by courier that war with Mexico had been declared and that Commodore John Sloat had raised the American flag at Monterey on July 7.

The members of the Bear Flag Battalion were immediately sworn in as volunteers in the United States Army, and Fremont was given a major's commission. San Diego and Los Angeles were occupied, at first without opposition, but later the native Californians rallied a small body of armed men, and skirmishes ensued in which many were killed and wounded. American forces reoccupied Los Angeles on January 10, 1847, and 3 days later Fremont and Andres Pico signed the Cahuenga Capitulation, which ended hostilities. The Treaty of Guadalupe Hidalgo, which ceded California to the United States and officially ended the war, was signed a year later on February 2, 1848.

Only a week before James Marshall, who was constructing a sawmill for John A. Sutter on the South Fork of the American River, had found some shining metallic particles in the mill race. He gathered about 3 ounces of the substance and hurried to Sacramento, where he and Captain Sutter tested it and decided that it must be gold. They tried to keep the discovery secret, but the news spread and the trails were soon crowded with the rush of prospectors bound for the treasure area.

It was not long before the whole world learned of the new El Dorado. Immigrants set out by the tens of thousands. Some came by sea around Cape Horn and others across the Isthmus of Panama; still others came by oxcart or horseback across the plains. Many met death at the hands of the Indians or in the snow-clad Rockies and Sierra. Disaster had befallen the Donner party in 1846 and struck again as the Manly expedition toiled over the barren wastes of Death Valley in 1849. But the crowds still came in ever-increasing numbers, all seeking a land of promise where the stream-beds were said to be lined with gold.

From 1846 to 1849, California had almost as many "governors" as under Mexican rule. Commodore John D. Sloat, who had assumed command with the seizure of Monterey of July 7, 1846, resigned and Commodore Robert F. Stockton took over the administration. In January 1847, Stockton appointed Captain John C. Fremont as military governor. Fremont was replaced in 60 days by Gen. Stephen W. Kearney, who 60 days later was succeeded by Col. Richard B. Mason. Mason served until the appointment of Gen. Bennet Riley on April 12, 1849. The government during this period was described as "part military and part civil and part no government at all—the laws were most variant and variously conceived—and the courts were as unique as the government and the laws. They were American-Mexican, military-civil, with a good degree of the vigilante."

Meanwhile Congress delayed organization of a territorial government until the citizens of California took matters into their own hands. Brig. Gen. Bennet Riley, the military governor, called a general election for a State constitutional convention. The delegates met on September 1 in Colton Hall, a Monterey schoolhouse, and, on October 13, 1849, the convention completed its deliberations. A month later the constitution was ratified by 12,000 votes.

More delays ensued while Congress debated but finally a bill for the admission of California into the Union was passed and President Millard Fillmore affixed his signature to the measure on September 9, 1850.

So the myth of the fifteenth century had become a reality. California entered into statehood and a century of progress, to fulfill her destiny as "a land of gold, near the terrestrial paradise."

How the Communists Behave in China

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an article from the March 19 issue of America. It should dispel some of the myths that the Chinese Communists are not the same as Communists everywhere else, which myths have been so carefully and successfully cultivated by American Communists and fellow travelers and their dupes in this country.

RED CLOUD OVER CHINA—THE FLYING TIGER SPEAKS HIS MIND

(By C. L. Chennault, major general, retired, U. S. Army)

As the red cloud of Communist aggression pushes steadily southward over a war-weary, devastated China, both the American and Chinese press are flooded with speculation and surmises concerning the significance of the advance. As usual, Red propaganda—aided by the sometimes unwitting apologists among our own ranks—is capitalizing on the indecision and uncertainty of the resistance forces. The tried-and-true method is to conquer by division, to gild the uglier features of the Red pestilence with a shiny coat compounded in equal parts of agrarian reform and liberation of the people. But underneath the varnish are unmistakable indications of the same mad lust for power and the same ruthless disregard for human rights that have characterized Soviet communism the world over.

Mao Tze-tung, Li Li-san, Chu Teh, Lin Piao, Chou En-lai, and the other lesser Chinese Communist leaders have been disciples of Marxism almost as long as Stalin himself. Communist propaganda finds it expedient to suggest that Commissar Mao might just possibly turn out to be a nationalist first and a Communist second. Such suggestions become ridiculous when viewed in the light of everything Mao has spoken and written in recent years. He has repeatedly stated his unequivocal adherence to the principles of communism, his loyalty to the Cominform program of world domination, his abhorence of America and all America stands for.

All the Communist propaganda methods of slander and falsehood are being employed. When the Government imposes food taxes to support its armies, the Communists scream "The people are being starved." The Communist troops, carrying out food-foraging expeditions even more ruthlessly, suggest that this is a people's food committee program. If the government executes a Communist spy, the Reds roar that they'll get the war criminals responsible. For their own part they think nothing of exterminating whole villages if the latter do not properly cooperate with their liberation.

Other choice bits of Communist propaganda have been ladled out to Chinese and foreign observers. Before the capture of Mukden it was suggested that foreign businessmen should remain in the city, presumably to participate in an early resumption of international trade. The latest information seeping out, not through a free press but by word of mouth from refugees who managed to escape liberation, tells that Americans are held incommunicado, that the only businessmen getting any trade are Russians.

During the siege of Tsinan and after the capture of the city, foreign missionaries were invited to remain and assured of noninterference. For a short time, but long enough for Communist radio stations to publicize their reactions, many missionaries were enthusiastic about conditions. Lately an ominous silence has descended over their gullibility. Reports tell of hospitals and schools permitted to operate only as Communist institutions, teaching and practicing Communist principles.

As of this date, March 1, 1949, foreign and Chinese business and professional men in Shanghai and Nanking are receiving the same soothing-syrup promises of fair treatment and freedom of operation—the same promises so easily given and broken in Tsinan, Mukden, Tientsin, and Peiping. It is strange indeed that many still choose to believe these promises despite house arrests, suppression of missionary efforts, restriction of free travel, and heavy censorship of non-Communist news dispatches from occupied cities. Communism can no more change its methods than a leopard his spots. Ingrained in the Communist creed and upbringing is the doctrine that the end justifies the means. A Communist has no normal sense of moral responsibility nor any individual sense of honor. His tools of trade are murder, pillage, and outrageous falsehoods repeated so often that the more gullible begin to believe.

It is unfortunate that the American people have been so completely confused as to the aims and methods of Chinese communism, thanks to the wide publicity given to the writings of American journalists, well known among their fellow correspondents as Communists or fellow travelers. One such correspondent recently published a book purporting to outline the changes that have taken place in China since the end of the war. That correspondent had not been in China for even a single day since 1944.

In view of the confused thinking of our own State Department, it is no wonder that the American people themselves are confused. Our people have been told about agrarian reform, people's armies of liberation, etc. Actually there is only one real issue: Is or is not an alien communism being forced down the throat of a people who do not want it? Even our State Department knows there can be only one answer to that question; that a small group of native traitors, supported and armed by Soviet Russia, is conducting a successful and aggressive attack on a free China that has traditionally extended the hand of friendship to our country and its people.

In recent years such "pinko" reporters as Teddy White, Harold Isaacs, Annalee Jacoby, Darrell Berrigan, Harrison Forman, Edgar Snow, and Anna Louise Strong have won a wide audience in America. It is interesting to note that those few among them who have chosen to return to China visit the areas of free China, where they travel as they please, write as they please—not the Communist areas they so greatly admire. In Communist China, as is now being proved, correspondents have no freedom of movement, no freedom from censorship, no right to investigate or inquire.

There is no such thing as the perfect Nation in this imperfect world, and I would be the last to claim that present-day China is the answer to man's troubled existence. But like the great majority of the world's people, I hate communism for its vicious abridgments of human freedom, for its blood lust, and its lording of the state over the people. Communism, like any sprouting, living organism must grow or die. Democracy, as we know it, and communism cannot live in harmony side by side. The spirit and soul of those among us who are free cannot rest or be oblivious to the enslavement of millions. Christianity cannot tolerate such indifference.

It is high time that Americans grasped the true facts of Soviet Communist expansion in China. Every step of the Communist tide shows evidence of careful, Moscow-planned direction. The mere fact that for over 20 years the small groups of Communist bands were confined to the hills of remote northwest China, only to burst forth in a flood since the World War, is absolute proof of suddenly acquired outside aid and direction.

As I write today, communism has already achieved a main objective. By pushing to the northern bank of the Yangtze, it has virtually secured Russia against any possibility of air attack on her vital Ural region or trans-Siberian railroad from Asia. With her back door firmly secured, Russia is now free to go ahead with her aggression against Europe, shoving the Western Powers ever deeper and deeper into the impossibility of winning what must be a defensive war.

Every diplomatic move we have made since VJ-day has added another link to the chain which will bind us to the defense of a shrunken Europe—where we cannot hope to win. Instead of organizing and supporting the freedom-loving peoples of all the world, peoples of all races, religions, and creeds who are opposed to communism, we stand by with folded hands while our friends and potential allies are being submerged, one by one, in Asia. With Asia communized, a war for survival will be inevitable.

Grave as the situation is today, I do not believe we have lost the final battle yet. We still have a chance, if the freedom-loving peoples of the world will look the facts of Asiatic Communist expansion in the face. We can still supply the small amount of needed military and other help, together with supervisory personnel, to turn the Red tide.

Basing-Point System Automatically Results in Identical Prices—No Chance for Buyer To Receive Competitive Prices—Moratorium Should Not Be Granted by Congress

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. PATMAN. Mr. Speaker, one of the iniquitous results of the basing-point system is the absolute identity of prices, down to the ten-thousandth of a cent. Under the basing-point system, destination prices to any given customer are exactly the same from all sellers. Differences in manufacturing costs among the various sellers, differences in transportation charges, differences of every kind are all wiped out. No competition—just pay your money, for you have no choice.

That the basing-point system does result in the absolute identity of destination prices, is proved by data revealed in sealed bids to governmental agencies. Lower prices can appear only when some member of the basing-point group makes a mistake in applying the system, or when some recalcitrant supplier deliberately competes and thereby violates the system. Higher bids are a convenient method by which any supplier may effectively eliminate himself, while offering a semblance of competition.

The following table presents data on identical bids in the cement industry over a period of more than 10 years and computed from specified bids submitted to State and Federal purchasing agencies. The figures clearly reveal how perfectly the basing-point system automatically destroys competition and makes the buyer the victim of this collusive and monopolistic system.

Cement—Manufacturers' destination prices bid to Government agencies

Year	Barrels	Number of destinations	Number of manufacturers bidding [1]	Total number prices bid	Bids at formula prices		Bids above formula prices		Bids under formula prices	
					Number	Percent	Number	Percent	Number	Percent
1927	[2] 453,545	129	15	1,359	1,355	99.70	2	.15	2	0.15
1929	[2] 9,035,027	579	77	7,713	7,342	95.19	237	3.07	134	1.74
1930	[2] 9,050,435	558	59	4,662	4,553	97.66	60	1.29	49	1.05
1934	[3] 2,900,000	4	12	[4] 38	38	100.00				
1935	[3] 1,000	1	8	8	7	87.50	1	12.50		
1935	[3] 10,000	1	3	[5] 6	6	100.00				
1936	[3] 8,000	1	18	18	18	100.00				
1936	[3] 500	1	14	14	14	100.00				
1936	[3] 6,000	1	11	11	11	100.00				
1937	[3] 1,200	2	15	[4] 29	29	100.00				
Total	21,465,707	1,277	222	13,858	13,373	96.50	300	2.16	185	1.33

[1] Includes duplications where the same manufacturer bid on more than one invitation.
[2] Bids to State highway commissions on numerous projects.
[3] Bids to Federal agencies on individual projects.
[4] Some manufacturers did not bid for all destinations.
[5] Counting as separate the bids by individual manufacturers for cement in bulk and in bags.

These figures were based on investigations of the Federal Trade Commission in its price bases inquiry (1932), and in its *Cement Institute case* (37 F. T. C. 87). The 1927, 1929, and 1930 bids were all to various State highway commissions for shipment to more than 1,250 destinations in the nine States of Illinois, Indiana, Iowa, Louisiana, Maryland, Missouri, Oklahoma, South Carolina, and Wisconsin. The general showing is that, by years, from 95 to 99.7 percent of the bids were identical with the basing-point destination price. In no year did the number of bids which were at a less price amount to as much as 2 percent of the total number of bids. Or, to put it another way, the basing-point system produced approximately 99 percent uniformity in price.

For the smaller number of bids to Federal agencies during the years 1934 to 1937, inclusive, the showing of uniformity of bid prices is even more striking. For six of the seven individual projects covered, 100 percent of the bids carried identical prices. For the seventh project, seven of the eight bidders named prices strictly in accordance with the basing-point system. One bid higher destination prices, thereby indicating a probable lack of interest in the business.

Taking all of these bids together, we find that out of a total of 13,858 prices bid for shipment to 1,277 different destinations, only 1.33 percent were at prices less than required by the system.

Any moratorium would in effect set aside the decision of the United States Supreme Court outlawing the basing-point system. This is the system that resulted in 99 percent uniformity of price, as the above table shows, and which is not competitive but collusive and discriminatory, as the Supreme Court in a 6 to 1 decision found it to be.

Russian Communism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, an important article has just come to my attention. It deals with the problem of Russian communism. It appeared in the Ukrainian Quarterly, volume III, No. 4, 1947, and was written by Dr. Roman Smal Stocky, now professor of modern languages at Marquette University, and formerly a professor at Warsaw University. During the last war Dr. Stocky was imprisoned by the Nazis.

Mr. Speaker, the article referred to is entitled "The Promethean Movement." Dr. Stocky has revealed in a concise and forceful manner the struggle of the subjugated nations in the Soviet Union for freedom. Too few people in the United States realize that these small nations are actually fighting Red Russia against what appear to be terrific odds. Ultimately they will prevail because they have God and right on their side, but it may take a long, long time. We in this country must always support the cause of right, and if the principles of the United Nations mean anything we must speak out now against godless communism, which has pressed its iron heel upon liberty-loving people

Mr. Speaker, Dr. Stocky says in part:

The American public has not yet grasped the fact that all the problems which now confront the United States in world policy, especially in Europe, have their roots in the mistakes made after World War I.

Then follows an enumeration of the errors which, in the writer's opinion, caused World War II:

(a) The responsibility for World War II:

"The methods of dictatorship over peoples which were first applied by Czar Ivan the Terrible and then extended and improved by Lenin and Stalin with police terror, arbitrary shootings, mass exile to concentration camps at hard labor, the annihilation of the freedom of thought, faith, word, press, social organizations, and courts—found their imitators in Italy and Germany.

"The application of these Soviet Moscow methods—which were tolerated through long years by the League of Nations against the subjugated nationalities—to Ethiopia, Spain, Czechoslovakia, Poland, and Albania led to World War II.

"At the true source of the war was that anarchy and lack of consciousness of law in international relations which was caused by the methods of the totalitarian dictatorship of Soviet Moscow. The creator of this dictatorship is Stalin. He and the totalitarian dictatorship of the Communist Party in the Soviet Union with its immoral, inhuman views and methods are the real causes of World War II, which brought terrible bloodshed and disaster to the whole world."

(b) The accusation of Stalin:

"We, the peoples enslaved by Soviet Moscow, accuse Stalin before world public opinion of these crimes:

"(1) In August, 1939, he concluded with Hitler the nonaggression pact and the secret treaty concerning the partition of Poland and the annexation of western Ukraine. Thus, through his friendship and collaboration he guaranteed for Hitler security in the East and gave him the opportunity to start World War II.

"(2) He violated the Briand-Kellogg Pact of August 27, 1928, signed by the U. S. S. R. in London.

"(3) On September 1, 1939, he violated the nonaggression pact previously concluded with Poland and by means of his armed aggression—the invasion of Poland from the east—he helped Hitler to defeat Poland.

"(4) Afterward he violated the right of self-determination of the population of western Ukraine by annexing it.

"(5) After the Red army occupied western Ukraine, he forcibly removed hundreds of thousands of Ukrainians and Poles into concentration camps in the north, in Siberia and Turkestan. Then he introduced the regime of the Communist dictatorship in western Ukraine and his NKVD physically liquidated the democratic Ukrainian parties and deprived everyone of all basic human rights.

"(6) He violated the right of self-determination of the Ukrainian population of Bukovina by the annexation of their territory and enslaved them by the same methods.

"(7) He perpetrated the greatest single mass murder known to the civilized world by exterminating in the forest of Katyn more than 10,000 prisoners of war.

"(8) From September 1939 until June 1941 he sent to Hitler over 1,000,000 freight cars of corn, manganese, iron ore, and other raw materials which he had stolen from the unhappy population whom he was oppressing. Thus, he is guilty of participation in the criminal aggression on Belgium and the Netherlands by Hitler and the further catastrophical rout of France.

"(9) He violated, despite nonaggression pacts, the independence of Estonia, Latvia, and Lithuania and, by armed aggression, occupied Estonia, Latvia, and Lithuania and established everywhere the regime of totalitarian Communist terror and annihilated the whole intelligentsia of these nations.

"(10) By means of armed aggression he violated the independence of Finland with whom he had also a nonaggression pact and tried to occupy it.

"(11) Finally he violated the right of self-determination of Carpatho-Ukraine, annexed its territory, enslaved its population, and murdered its legal President, Monsignor Woloshyn.

"All willful actions of aggression, brutality, and banditry are war crimes. Stalin and his collaborators must be prosecuted as war criminals before the International Court, taking into account the definition of aggression of Soviet Foreign Commissar M. Litvinov (declared at Geneva, September 21, 1937): 'An aggression remains an aggression whatever the formula beneath which it is disguised. No international principle can ever justify aggression, armed intervention, the invasion of other states, and the violation of international treaties which it implies.'"

(c) The progress of World War II in eastern Europe and its result after the struggle of the subjugated nations against Hitler and Stalin:

"The course of affairs of World War II in eastern Europe showed clearly that quest for national liberation of the peoples enslaved by Moscow is the basic problem in this part of the European Continent. There will exist neither order nor quiet there until these problems are solved.

"It is historically proven that Hitler's armies continued to advance toward the east as long as he could conceal his aims and his policies concerning these peoples. Having used deceitful propaganda and provocative promises, Hitler succeeded from the first in attracting some of the youth of the oppressed peoples for the common struggle against the Red terroristic Moscow. The moment it became clear that Hitler had no intention of respecting the right of self-determination of the people of Ukraine, the Baltic states, White Ruthenia, the Don and Kubania, a powerful guerrilla movement for national liberation broke out in his rear. Even those young men who formerly had been deceived by Hitler's propaganda embraced then the idea of the armed struggle against Hitler's totalitarianism and the Nazi occupation. Many leaders of the young men and thousands of patriots paid for their struggle against Hitlerism by being tortured and shot by the Gestapo or by imprisonment in concentration camps as enemies of the Third Reich.

"The victorious procession of German armies in eastern Europe was stopped, not by Stalin, but by the fighting of the national partisans of the Ukrainians, White Ruthenians, and Lithuanians who aimed at liberation. Stalin understood this very well when at the critical moments of the battles near Moscow and Stalingrad he tried to save himself by broadcasting proclamations of true national liberation. He also made different tactical concessions in an effort to calm the national and religious feelings of the peoples living in the U. S. S. R.

"He accepted even and signed solemnly the Atlantic Charter. The peoples oppressed by Red Moscow did not believe even for a moment that Stalin was sincere in this acceptance, but they believed the United States and Great Britain, who acknowledged and understood this signature as an obligation of Stalin regarding all the oppressed peoples.

"After sacrificing millions of human victims and suffering enormous losses of their property during this war, the peoples oppressed by Stalin believe that they have an indisputable right to demand that the United States and Great Britain protect their interests and compel the unlimited dictator Stalin really to fulfill his promises as to the application of the principles of the Atlantic Charter in the U. S. S. R.

"A year has passed since Hitler's Germany surrendered to the democratic states, but, unfortunately, the United States and Great Britain have not obtained Stalin's agreement to maintain the principles of the Atlantic Charter.

"Thus the results of World War II have given no freedom to the nationalities oppressed by Stalin. Moreover, Red Moscow has used the same technique of aggression that formerly was employed to enslave Ukraine and Caucasus, to deprive of freedom also Poland, the Baltic states, Finland, and the Balkans. The turn of Czechoslovakia will come. The war started by a small Munich compromise with the dictatorship of Hitler and finished with the grandiose total compromise with the dictatorship of Stalin.

"World War II ended with the establishment of a new League of Nations—the United Nations. But the same Stalin who unmercifully destroys all peoples whom he oppresses by depriving them of every human right and turning them into slaves of the totalitarian Soviet regime has been given the opportunity to underwrite the democratic statutes of the United Nations."

(d) Warning of Stalin's world war III:

"We, the nations oppressed by Red imperialistic Moscow, now warn the public opinion of the world. Stalin's provocative and aggressive methods led to World War II. If the United States and Great Britain do not oblige the Union of Soviet Socialist Republics really to carry out the principles of the statutes of the United Nations regarding the peoples enslaved by Stalin and thus allow the Soviets to apply their methods of provocation and aggression in international relations—we will face world war III.

"We must acknowledge that Stalin does not want and cannot live without his methods of aggression, penetration, compulsion, and removal because he wants to take advantage of the present moment, when all European peoples are weakened, to realize the Communist Stalin doctrine demanding the whole of Europe and Asia, including the Middle East and the Suez Canal, to be his sphere of influence—the last step to the communistic world revolution.

"Instead of the fallen Hitlerism, a still more dreadful totalitarian Stalinism is threatening all the free democratic nations—Stalinism, the old root and organizational prototype of fascism and nazism. Besides the Promethean nations already oppressed by Soviet imperialism, there are new victims of the Bolshevik aggression suffering now under Stalin's yoke: the Latvians, Lithuanians, Estonians, Finns, and the peoples of Central Europe: Poles, Czechs, Slovaks, Hungarians, Austrians, Bulgarians, Romanians, Albanians, and Yugoslavs. Soviet aggression is openly threatening Korea, Manchuria, China, Turkey, and all the peoples of the Near East. * * *

"In the course of the past 25 years, since the Promethean League was organized, we have warned constantly the free nations of the world of the coming danger of Moscow's imperialism to all mankind. Now we appeal to all the peoples again, calling them to protect themselves against the mortal danger hanging over the world and to defend the humanitarian foundations of human existence, living in the soul and nature of men and given them by our Lord, to defend themselves against this terrible danger of conquest by propaganda and aggression of the international satanists.

"The responsibility for the disaster of the new war would fall on the Stalin dictatorship and also, in the same degree, on the unprincipled opportunism of the United States and Great Britain which allows the Soviet Union again to break all the principles of the Atlantic Charter and of the United Nations as regards internal and foreign politics."

(e) Atlantic Charter, United Nations—appeal to the public opinion of the United States of America, and Great Britain:

"Faithful to the principles of the Atlantic Charter, the Promethean League of the peoples subjugated by Soviet Moscow from now on takes the name Promethean Atlantic Charter League and calls upon all American and British citizens to organize corresponding leagues of the friends of our cause for the moral support of our legal demands and for the security of a just and lasting peace.

"Let them, the free citizens of the western democracies, help us to explain to the world that the best democracy of the world, as shown by Communist propaganda using all the methods of Goebbels, is really a disgusting dictatorship of the Bolshevik Party with its concentration camps and its NKVD; that the attained socialism in the U. S. S. R. proclaimed solemnly by the same vociferous propaganda is in reality a state capitalism of the worst kind, based on the compulsory labor of slave workers; that there is no fundamental difference between bolshevism, nazism, or fascism; no capitalist class in any country is able to exploit the workers to such a degree as the Communist bureaucrats and commissars are exploiting them in the Soviet Union. Let them explain to the world that the solution of the national question in the Soviet Union proclaimed by Red Moscow by the creating of the so-called independent republics is a fiction and deceit by which Moscow systematically annihilates and Russifies the individual, separate, subjugated peoples.

"Therefore the peoples oppressed by Moscow will always and everywhere support the principles of the United Nations and of the Atlantic Charter, because only their fulfillment can save the world from world war III, which is being prepared by Stalin's new 5-year plan. Our task is hard, because the Soviet Union as a member of the United Nations will constantly and consciously sabotage all efforts toward democracy and peace."

Mr. Speaker, the right of self-determination is a principle that must not be abandoned. Our silent dead of two world wars will not rest if we are derelict in this important matter.

Civil Rights

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 21 (legislative day of Friday, March 18), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "This Is Worth Our Best," by Prof. Howard W. Odum, which appeared in the January 1949 issue of the Southern Packet.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS IS WORTH OUR BEST

(By Howard W. Odum)

From all walks of life in the South—old and young, men and women, white and Negro, rural and urban—people are asking, as never before, soul-searching questions about what is best for the South to do in this time of crisis and conflict in the Nation. They are searching with equal earnestness for responsible answers to their inquiries as to what are the actual facts of this staggering dilemma and what is the relation of these facts to the inescapable issues to be faced. They not only want answers, but they want to have a part in determining the right answers.

So, too, all over the country, in all the other regions, millions of other people are asking the same questions and insisting on having a part in answering them; for, after all, the participants and the programs of action are broadly regional and national, rather than narrowly sectional and partisan.

The reason for this intensification and broadening of concern, in addition to the normal effects of a changing South, a changing Nation, and all-world civilization, are mainly fivefold. In the first place, the South's distinctiveness in its tradition, practice, and legalization of segregation and its Negro-white caste system is in the spotlight as never before. In the second place, the South itself has long been trying to find ways out of its multiplying dilemmas. In the third place, the South must face the rulings of the Supreme Court that many of its practices are unconstitutional. In the fourth place, the Presidential election of 1948 clearly reflected a mandate from the American people for the application of the civil liberties principles to all Negro-white relationships. And finally, the social pressure from national agencies for leadership and communication is so intense and uncompromising—and the difficulties of resolving differences are so great—that rare maturity and wisdom are needed to avoid tragic consequences.

Our regional approach, therefore, constitutes in reality an appeal for the creative South to work out its own positive, practical adjustment to today's crisis rather than to be driven, coerced, and politically patronized into a negative defense to meet the letter of constitutional decisions. The appeal is for scientific and statesmanlike ways of achieving a powerful and enduring reconversion program within the framework of a stable culture, a sound economy, a just morality, a changing folk psychology, a workable political democracy, and all set in the framework of an America of sanely balanced natural geographical regions.

This is an extraordinarily difficult task, worthy of any people and worthy of the challenge of world dilemma in which survival and welfare are at stake. Yet the challenge for the creative South to achieve such mastery is more specific. Here it is not only the hope for positive and noble attainments but for the emergence of an articulate South that will substitute for much of its fears and frustration a new faith in itself. It promises to make the South a more useful part of a great nation.

And it is an appeal to the Nation for a larger measure of understanding, sympathy, and wisdom and a willingness to reconsider some premises of its crusade which have special sectional meaning.

Below we give one set of answers. This is a sort of agenda with which the South may well begin the second half of an epochal century. Here are things to be done after the manner of the age-old formula, "God helping us, we can do no other." Can the South achieve so great a mastery? How long will it take? What are the costs of success and the penalties of failure? How much can it depend upon a mature and wise nation to cooperate? What are the alternatives and the cost of each? What else is better or wiser or surer, and what else will happen? And do we want it to happen? Have we cataloged too much or too little, or just about the right goals?

DR. ODUM'S 21-POINT GOAL FOR THE SOUTH AND THE NATION

1. First, to abide by the decisions of the United States Supreme Court on these matters as on all others.

2. To adjust our culture and economy to national civil-rights legislation for which apparently a clear majority of the people of the United States have voted and to do it in such ways as to reduce outside interference to the minimum. This is a democratic America, governed by majorities through geographic representation to safeguard against the tyranny both of majorities and minorities. The democratic way is to try it.

3. To stop, at all costs, prevailing lawlessness by violence and by evasion. This means in every community and in every State sharp warnings, strict law enforcement, severe penalties within the law.

4. To continue the sure and steady progress which the South has made toward increasingly greater opportunity for all people to have access to resources and work in the South or to migrate to other regions where nearer equal opportunities may be guaranteed.

5. To accelerate the prevailing southern processes of improving race relations and of increasing and equalizing educational facilities for all the people.

6. To provide professional and higher graduate instruction for qualified individuals of both races in the same institutions.

7. To continue progress in agricultural, economic, and industrial development and in the conservation and use of resources.

8. To continue progress in public services, as in public education, public welfare, highways, conservation.

9. To help all southerners see the justice of today's normal wants of Negro people.

10. To help the whole Nation understand the problems—human, political, and economic—in changing a biracial civilization rooted in two centuries of growth.

11. More specifically, to convert from segregation to nonsegregation in many practicable areas such as transportation and other public services.

12. To guarantee opportunity for all citizens to vote without hindrance, and to eliminate the poll tax.

13. To work for effective legislation toward the sure elimination of lynching.

14. And to do all of these things calmly in climate of what the Alsop brothers and others accurately describe as "The hatred of southern influence in Congress" and of the accelerated propaganda, interregional conflict, regional libel, and name calling currently prevailing.

15. Again, to undertake a comprehensive and a scientific inventory of the South and the Nation so as to provide specifications for the future, in which the promise and costs of conversion from general segregation to attainable programs of nonsegregation may be examined, revised, and adopted.

16. And finally, this calls for a greater degree of cultural and political maturity than the South now has, and by the same token a striving for that maturity which is the goal of the good society.

17. Still more, willingness to reexamine the basis of the southern credo as a substitute for protest, bitterness, and secession-mindedness.

18. In the face of bitter attack and vested frustration by many irresponsibles, isolated from the reality of living democracy, to protect the great mass of Negroes from outsiders who would weaken or destroy their extraordinary systems of schools, churches, industry, and self-developed programs which have amazed the world by their mastery and by the effectiveness of their training grounds for progress and leadership.

19. In this transitional era to stop, through wholesome methods, the almost universal trend toward frustration of Negro youth growing from ideologies of despair, bitterness, hate, and aggression; and through interracial cooperation to substitute hope based on both promise and actuality.

20. To stop being afraid of democracy. Thousands and hundreds of thousands of southerners are saying in substance, "Let's try some of these things out; maybe they will work, but if not we will keep on trying."

21. And finally, somehow to stop this intersectional bitterness and to do the job before us in spite of all the complexities and cultural immaturity of many groups; to take the controls away from partisan extremists; to guard against those ideas and acts which seek to inflame and divide the people through irresponsible agitation and violence.

Something besides words

These tasks call for work more than words. Certainly it would appear that argument and debate are largely futile. We all agree that practically everything that is said is true anyway. But what else is true? It is provincial to argue segregation when the Nation outside the South has made up its mind that it will not even consider negotiations on any basis except that of the elimination of segregation, and the South insists that this is not even subject for debate.

The southern Dixiecrats reflected immaturity when they set up as a standard of judgment for voting for a President of the United States the index of his favor to the South and his agreement on racial segregation.

Some of the Nation's intellectuals are so immature as to assume that age-old race prejudice and religious folk conflicts have been purposely put on like a garment—and that a simple edict from Congress will cast off the garment and make all people over.

Many southerners are so naive as to assume that the southern regions can continue in an isolation which takes pride in its segregation economy in a changing world! So, too, those southern folk who, hot headed and lawless, retard progress in all aspects of regional development, are often matched by those who, crying for peace and brotherhood, set the stage for war with fighting words and class conflict.

Besides the ingredients of hard work, endurance, and maturity, these tasks call for giving up something rather than trying to

get more: for resolving differences rather than for the shedding of blood; for bridging the yawning chasm of distance and difference with strong structures, rather than breaking through weak timbers into a flooding stream of revolution or plunging to destruction in too short a leap.

Know the facts—and face them

Less dramatically and more realistically our tasks call for knowing the facts and facing them; for a better understanding, by all, of the practical situations involved, and, by opposing groups, of each other. Of the general facts and situations basic to next steps, the understanding of changes going on in the South currently will help clear the way for southern action and interpret the situation to South and Nation. Of these changes, four appear fundamenal for our purposes.

The first of these is reflected in the larger area of social and economic development, including population changes from rural to urban, agricultural and industrial development, economic structure as well as technological advances and fiscal matters of public services. Here the rate of recent change in the South has been greater than for the Nation as a whole. The second has to do with changes that have taken place among the Negroes in the South, in which there has been almost a complete change in many aspects of Negro life and culture and especially in ideologies and attitudes. The third has to do with ideologies and attitudes in the white South. Here there has been little change, except in the case of individuals, smaller groups, and leaders. On the other hand, at least temporarily, there appears to have been a solidifying of the protest defense attitudes. The fourth change reflects an extraordinary acceleration of the trend toward coercing the South to conform to the national ideology of equality of peoples.

All these changes have resulted in increased tensions, in the rise of the Dixiecrats, in the seeming futility of southern leadership, and in retarding progress in much of the total structure of the South's present-day society. They have also challenged the South to take stock of itself anew and to move forward. These assumptions may be tested by a further glimpse of example of these changes.

FOUR CHANGES IN THE SOUTHERN PROFILE

I. Standards of achievement

Changes seem to be in the following areas in the increase of wealth and of income; in the rise of the general standard of living with considerable improvement in rural living standards, in urbanization and therefore the bringing about of a better balance between the country and the city; in increased balance between agriculture and industry, and in a balanced agriculture; in increased mechanization of agriculture; in an awakening to the meaning of conserving resources; in great strides in technology, such as research, specialization in manufacturing, transportation, communications; in increase in public works and special public social services; and in increase in public education and public recreation. These changes, greater than in the total nation, reflect an extraordinary transformation in the total southern economy and culture.

II. The new Negro

With reference to the Negro, the main changes seem to be in the following area: a large migration out of the South, and therefore a decreasing ratio of Negro people to the total population of the South; the increasing articulation of the Negro in national affairs and politics and the consequent backwash of influence upon the Negro in the South; a large migration from the rural South to southern cities, tending to make the Negro an urban rather than a rural people; a very considerable increase in educational opportunities and especially in high-school and college enrollment; a rising standard of living, the rise of a middle- and upper-class Negro; changes in the Negro worker, especially the woman worker; the rise of the "new Negro" and especially a "new" Negro youth; the development of an extraordinarily able Negro leadership; an aggressive attitude toward segregation; an increase of frustration and aggression. Perhaps the simplest way to emphasize the change is to point to the almost complete newness of the Negro with the "oldness" of the whites and to sense the near pity which the new intellectual Negro has for the southern whites who are called liberal.

All these changes, often little known and understood by the white South, manifest a significant change in race relations and in the ratio of the Negro to the total cultural South. For it is not only that the Negro has developed important upper and middle classes; it is not only that he has developed a magnificent leadership, and that thousands have taken advantage of higher educational opportunities; it is not only that Negro youth, sensing the epochal spiritual change in racial attitudes and led by Negro leadership of the Nation and South, is willing to experiment with every type of equal opportunity; it is all this and more. It is as if some universal message had reached the great mass of Negroes, urging them to dream new dreams and to protest against the old order.

III. The white South

The third current of change, namely, the ideologies and attitudes of the white South can be understood only in relation to the social pressure from outside which is discussed in the next paragraph. In general there has been an increase in sectionalism and the recrudescence of the North-South concept; in the light of improvement in most everyday aspects of Negro life and of great progress by the Negro, a tendency on the part of the white South to insist on having credit for these changes and for the continuing improvement within the framework of segregation; a freer discussion than formerly; but in reaction, a sharpening of resistance and a reinforcing of opposition to changes in segregation practices; an increase in thought and talk about racism; revolt against the Supreme Court decisions with reference to voting and higher education; and more articulate opposition to Federal legislation affecting the South; the still solid South with minor threats of secession from the Democratic Party; some progress in southern organizations for civil rights; a relatively large number of young college students and returned GI's advocating a more liberal practice with reference to race relations; considerable progress in organized labor advances; strong reaction against change by the young people who work on farms, in factories, and who operate the trucks and taxis; some recrudescence of the Ku Klux Klan.

IV. The South's reaction

With reference to our fourth level of change, namely, the accelerated trend of outside pressure for complete transformation of the southern segregation pattern, it helps us to understand the situation if we look at these pressures in the light of the South's unchanging attitudes as described above. But it also reminds us that today and tomorrow are not yesterday.

The intensity of the South's reaction, seemingly so difficult to interpret to other regions, is after all an inevitable and logical product of the folk process. In the first place the extremity of Southern reaction is often matched by the extremity of attack, as when notable authorities would ascribe age-old race prejudices to the perversion of southern whites. The South, of course, considered it the other way around. Yet, the South is the only major regional culture I know of in the world where the segregation and exploitation of the Negro is considered as a part of virtue in preserving western civilization.

Although the South's convictions are based upon cultural traditions and frontier heritage, they are present-day realities. The South explains them as elemental.

The Past Colors the Present

First, there is the universal law of differences, such that no two individuals are alike, thus resulting in a wide variation of personality. There is then, by the same token, the age-long differentiation of ethnic groups, commonly assumed to be races, the most liberal characterization of which is that they are the product of cumulative differences over long periods of time in the framework of different environmental pressures. Nevertheless, throughout the world of all time and spatial relations, the mode of the world's collective behavior has reflected more different ethnic groups than have ever been counted.

Third, there is the assumed verdict of the old school of biologists that heredity is an important factor in all human aggregations as well as animal aggregations, and it has been the common assumption of traditional ideologies that races differ, in terms of certain measurable traits such as cephalic index, texture of skin and hair, color, and certain other traits used primarily for identification and differentiation. The South has been accustomed to cite this as scientific sanction for the policy of separation.

There has been the assumption that, in the great religions of mankind, class distinctions and ethnic groupings have constituted a part of the basic structure of the cultures of which those religions are the primary index. This, from the southern viewpoint, was no less true in the great Hebrew tradition, both in the Old and New Testaments, in the earlier assumptions of hewers of wood and drawers of waters and the later assumptions of servant and master. This became one of the major trends in the fabric of southern folkways and mores with reference to the Negro.

There was, then, the more specific tradition of the South set in the total framework of slavery.

There was next the abolition of slavery and the epochal experiment and trial of making the slave a freeman under terms of the reconstruction.

To the other traditions were then added the powerful structure of caste based on sex and race and the intensification through discussion, trial, and error of certain of the principal southern folkways and mores.

There was still again a rationalization by the South of what was idealized as Americanism. Not only in the old days, but even up to yesterday the American goal has often been set as "the preservation of American man and western culture." The South has always assumed, and backed its assumptions with the intensity of all its institutions, that the American way was different from and better than the European or oriental and that the South itself was a bulwark of Americanism.

There was the final consideration involved in the structure for American democracy, namely, its geographic representations and its Constitution through which the Nation derives its permits and power through the States and through majority rule. And that majorities as well as minorities have a right to choose how they will be governed.

To all these were added the day-in-and-day-out accusation that the South can do nothing well, enjoy no rich life, achieve no value, because it sins in segregation. Springtime and seasons may come, love and romance may abound, great achievements may be recorded, but they are as sounding brass and

tinkling cymbals, until the South has satisfied the world on the issue of segregation.

Now, the trend of outside pressure literally to ignore all of these basic conditioning influences is so complete a change that much of the South is caught up in the twofold dilemma: first, of catching its breath from such an overwhelming and startling challenge, and, second, of resentment and emotional demagogic reaction.

We must work for the right ways

Now, since this is a major problem of American democracy—the failure to meet which might very well destroy the soul of the South and cripple a great Nation—manifestly it deserves the best that social science and political strategy can achieve; the same sort of basic inquiry which was undertaken in the statesmanship which was made articulate by the founding fathers rather than being relegated to a simple moral or a complex emotional issue, or left to vested frustration, political demagogery, or intellectual exhibitionism. It would be unbelievable, if it were not true, that the South and the Nation, facing their greatest domestic dilemma of the century, would not set up means and procedures for the same statesmanlike inquiries as are assumed in other major situations.

What we propose, therefore, is to continue this American way in a reasonable and radical departure from our present and past strategies. This means that we begin now on the agenda which we have listed, but also that in this critical stage we must undertake such comprehensive inquiry, through new research and inventory, as will make possible through conference, legislation, and planning, a statesmanlike and workable blueprint for an enduring program of reconversion. There are four main steps involved.

The first of these is a new and comprehensive appraisal of the South's resources and people in all their traditional and historical backgrounds and in the light of the most complete 1950 census inventory possible. This would be the new southern regions projected into the decades ahead.

The second is a reappraisal of the structure of American democracy, with its organic elements of geographic representation, State participation, and judicial structure, with all the hazards of majority and minority rule and the ideals of American democracy. This is a test for judicial and legislative adaptation to the modern world.

The third is a complete appraisal of the total segregation picture of the South and of the Nation with inventory as it relates to the total structure of American society.

The fourth is an appraisal, in terms of actual programs, of what, in priority schedules and total costs, will be involved in the enactment of changes demanded by constitutional specifications and human progress.

Two Ways Forward

We must begin, as indicated; and we must continue with more knowledge and maturity than we now have.

A Hedge Against Inflation

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Human Events:

A HEDGE AGAINST CONFISCATION

(By Frank Chodorov)

When Henry Adams was learning the trade at the American Embassy in London (he tells the story in his Education), he made the discovery that political ethics and private ethics are at opposite poles. Adams remarked upon this to an older hand at diplomacy and naively asked whether all politicians are dishonest. To which query he received this reply: "I should not advise a young man to begin his career by thinking otherwise."

To ordinary mortals, like you and me, this cynical observation on political integrity may be shocking, but that is because we assume that politicians are ordinary mortals, which they are not. Men placed above the common herd cannot be circumscribed in their behavior by the rules of conduct prevailing below. What is honest or dishonest in the realm of principle may be just the reverse in the rarefied air of political expediency.

When, therefore, the residents of Mount Olympus do behave in human manner, the matter is worthy of mention. Take the British Labor Party. For decades it had been telling the people of England that, come their innings, labor would nationalize industry. There was no question as to the intention. Through such articulate representatives as the late Mr. and Mrs. Webb, and the current Mr. Laski, they made it quite definite. If, in 1945, the British electorate did not know what they were voting for, they could blame only their ignorance, no charge of duplicity could be brought against the British Labor Party.

Mr. Truman and the Democratic Party leadership, on the other hand, are running true to the traditions of their trade. It is dishonest, if we insist on judging their actions by copybook standards. For, they are promulgating a political program completely unrelated to the historical pronouncements of the party. True, during the past 15 years much was done by its dominant section to indicate a strong inclination toward the socialization of industry. But most recommendations were in the name of emergency—suggesting temporary measures called for by a passing condition. At no time was it specifically announced that the party had abandoned Thomas Jefferson in favor of Karl Marx.

Nor were we told by Mr. Truman during the recent campaign that in voting for him we would be voting for out-and-out socialism. His strong espousal of New Deal economics suggested to many that his return to power would herald the end of private enterprise in America. That, however, was only an inference. He did not say so. His platform did not say so. What he did say and what he is now undertaking are at odds, and by the standards prevailing in private life, veracity is strained.

II

This observation is sharpened by the Spence bill, carefully analyzed in the last issue of Human Events. Since this legislation was drafted by a Cabinet committee, headed by the Secretary of Agriculture, and is sponsored by the chairman of the House Banking and Currency Committee, the bill must be considered as an official pronouncement of administration intent. This, then, is a part of what Mr. Truman seeks:

1. Authority to set maximum and minimum prices for commodities and manufactures at Presidential pleasure.

2. Authority to make loans and direct the expansion of facilities for increased production, or to build and operate such plants, at will.

3. Authority to make mandatory allocations of priority for the use of scarce materials, also at untrammeled executive discretion.

4. Authority to nominate a coordinator of economic affairs. (Hinting at an office similar to that occupied by the British "economic dictator," Sir Stafford Cripps.)

Well, there it is. Regardless of preelection statements, Mr. Truman now proposes to move in on industry, by putting overseers in plants of his selection, or by buying up the management with subsidies, or by opening (with our tax money) plants which—with the help of tax-supported subsidies—will drive efficiency to the wall.

That Mr. Truman will get his way seems probable to me. There will be a lot of jabberwocky before he does, but since the opposition party seems almost equally without principle, or equally liberal, the march toward socialism will be unimpeded. You can be sure that when the propitious "emergency" arises, when the hobgoblin of war frightens us out of our wits or the fear of unemployment further depresses the value of liberty, the rats of bureaucracy will infest the hold of American business. Ultimately, of course, the ship will sink, but in the meantime there will be cheese for all.

There is no use frothing at the mouth at the turn of events. Silly, indeed, is the pointing of a Sunday-school finger of scorn at political duplicity. As with young Henry Adams, any expectation of something else is due to misunderstanding of political standards. Nor need you worry about the future of America, for the coming generation will find comfort in the conditions to which they were born and trained; it has always been so.

Only you and I, because we have known better times, have a problem on our hands. Our habits of thought and behavior will make it difficult for us to slither into the slough of national socialism. But, precisely because of our experience in self-reliance, we should not find it too difficult to devise some hedge against what we know we must endure during the rest of our lives.

III

The first hedge that suggests itself, because it seems easiest to accomplish, is to find a place in the new hierarchy. No doubt, many lieutenants of industry will do so, for one must live, and if one can live only by pushing one's snout into the public trough, so be it. Besides—the reasoning goes—the big shots have always run the national show, and now that the arena is so vast and the mob scenes so colossal the politicians will not be able to do without managerial skill. Perhaps.

In the transition from private enterprise to socialism, however, there is a hedge that might furnish a little temporary relief for those who are uninterested in the Federal pay roll. In this country the ownership of capital is so widely decentralized that nationalization cannot be accomplished in one fell swoop, as in Russia, but must take the course of purchase, as in England; therein lies the bit of protection.

There are indications that this hedge is already taking shape. Shortly before the introduction of the Spence bill the United States Steel Corp. declared an extra dividend and announced its intention to split up its common shares. Soon afterward, General Motors voted an extra dividend, and then came news that such large corporations as American Telephone & Telegraph and Du Pont de Nemours are planning to increase their issues by variations of the split-up method.

Now, the reason for splitting up stock is simply to induce wider public participation in the ownership of the corporations. And the obvious question is, Why do the directors seek wider distribution of ownership at this time? What is the urgency? According to reports, there are now upward of 5,000,000 holders of listed securities. Is it not reasonable to infer a desire to build an even more formidable pressure group against possible confiscation?

Intent, as every lawyer knows, is most difficult to prove, and where so many directors are involved even the intimation of a concerted purpose would be ridiculous. But the fact remains that the more widows and orphans who hold stock, the more difficult it would be for the State to move in ruthlessly on the corporation—or, the more likely that the State will pay generously for what it confiscates.

And the price must move up as the number of bidders increases. Not only will the splitting of the stock attract more buyers, but so will the payment of higher dividends. The two moves cannot be disassociated, particularly when they are simultaneous.

Especially telling is the payment of higher dividends at a time when business is experiencing a drop in sales and prices in general are tending down. It would seem the part of wisdom now to build up larger reserves against indicated contingencies. What, then, is the reason for the distribution of capital?

There is also the tax situation to be taken into consideration. If and when Mr. Truman has his way, levies on the funds of corporations will be increased; in fact, his program of socialization will compel such a course. Distribution of earnings to stockholders, then, could be an anticipatory measure; since the tax collector will get it anyhow, why not pay it out and let the stockholders bear the brunt?

IV

As Will Rogers used to say, I know only what I read in the papers. I do not pretend ability to predict stock-market quotations; that is something for soothsayers only. But, putting together the known facts, and mixing in the known inclinations of the normal human being, one comes to the conclusion that Mr. Truman's socialistic proposals have been anticipated in Wall Street. If that is so, the market offers a hedge against the confiscation of property in the offing.

It is at best, as said, a very temporary hedge. If you should contemplate it, please remember that. You cannot escape the vise of socialism. Whatever you may gain by market operations will soon be wiped out by taxation and depreciated currency.

England is buying out private industry with bonds. In spite of ERP, these British bonds can now be bought on the New York market at a considerable discount. The British bondholders are willing to take a hefty loss in order to get dollars which will fetch them something. They thought they took a good profit when they sold their industries to the state, but now they know, like Faust, that you cannot win when you make a bargain with Mephistopheles.

Italy, Portugal, and the Pact

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which will appear in the national Catholic weekly, America, in its March 26 issue, on the subject of Italy, Portugal, and the pact:

ITALY, PORTUGAL, AND THE PACT

Now that the debate on the Atlantic Pact has begun, we hope that the State Department will answer the questions about it that are puzzling and public. One of them is: How can Italy and Portugal, which are not members of the United Nations, be legally eligible to join a regional defense arrangement within the framework of the UN? In a remarkable press conference on March 9, Secretary of State Dean Acheson, after admitting that the ideal of an effective universal security system is not attainable at the present time, declared in the next breath that this does not mean that the treaty is unfaithful to the United Nations. In every word and in every thought, it abides by the structures of that organization.

We have not, however, seen any official State Department reply to the question we noted above. At the risk of seeming presumptuous, we suggest that the following considerations might help toward the answer.

Articles 51 and 52, which are cited as the legal foundations of regional defense pacts, do not consider the question whether UN members may exercise the collective right of self-defense in company with nonmembers. Nor is there anything in these articles which specifically prohibits member states from entering regional arrangements with nonmember states. Since there are no specific prohibitions, it appears that members of the UN and nonmembers may join in regional defense pacts.

Such a move, while not violating the letter of the Charter, would not contradict its general spirit either. The right of self-defense, whether individual or collective, is so fundamental a right of states, as of individuals, that it seems untenable to hold that UN members could not undertake collective treaties for self-defense with nonmembers.

Moreover, article 52 specifically states: "This article in no way impairs the application of articles 34 and 35." Article 35 declares in part:

"A state which is not a member of the United Nations may bring to the attention of the Security Council or of the Assembly any dispute to which it is a party if it accepts in advance, for the purposes of the dispute, the obligations of pacific settlement provided in the present Charter."

These obligations of pacific settlement are enumerated in article 33, and include "negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice." In view of this obligation on the part of nonmembers to resort to regional arrangements, it is arguable that the Charter permits members and nonmembers to join in regional arrangements. Since the Charter does not specifically prohibit members and nonmembers from joining in regional pacts, and since there is a strong presumption that it actually permits such arrangements, there seem to be no legal obstacles in the way of including Italy and Portugal in the Atlantic Pact. Why not tell the American public that officially?

He That Ruleth His Spirit Is Greater Than He That Taketh a City

REMARKS

OF

HON. JAMES B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1949

Mr. HARE. Mr. Speaker, those of us who are not Irish join with them in rejoicing in their festivities, but in these days of apparent unrest and threatened change and with reference to that which has taken place during the present Congress and especially on yesterday, I want to call the attention of the Members of the House to one phrase in the greatest Book that has ever been written:

He that ruleth his spirit is greater than he that taketh a city.

What World Thinks of United States—Report on a 3-Year Tour—Our Approach to World Problems Is Called Outmoded—State Department Upholds Status Quo Against Asia's Grass-Roots Revolutions—America's Prestige Has Dropped Since War—An Interview with Joseph Fromm, Far Eastern Editor, United States News and World Report

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include a most interesting and enlightening interview that appears in the March 25 issue of the United States News and World Report.

Mr. Joseph Fromm, far eastern editor of United States News and World Report, has just returned to America after 3 years of reporting that took him around the world.

During his travels, Mr. Fromm watched the beginning and the growth of the American occupation in Japan. He was in China when the Communist sweep began, and he foretold the collapse of the Chiang Kai-shek government's control over millions of Chinese. In the last year, Mr. Fromm has been on hand for the fighting in Indonesia, the revolution in Indochina, the pro-Communist uprising in Malaya, the warfare in Palestine and elsewhere. He has covered the cold war from Korea, through the Middle East, to Spain. Mr. Fromm is in the United States for a vacation before returning to his post in the Far East.

The editors of United States News and World Report sat down with Mr. Fromm in their conference rooms to discuss his impressions of the trend of world events. His opinions appear below:

Question. How does it feel to be back, after all that traveling, Mr. Fromm?

Answer. Fine. This country looks good.

Question. What impressions did you get overseas? Do people think there is going to be a war?

Answer. I found very little feeling of a prospect of war most places I went. That is true in Spain, for example. And it certainly is true in China. There is little feeling out there about a war between America and Russia.

Question. What about Iran?

Answer. In Iran I found generally that the people didn't think there would be a war. They were jittery, all right. They recognize that if there is a war any so-called containment policy won't contain anybody there. As far as effectively checking the Russians, that isn't even a prospect.

We've been putting in $100,000,000 worth of military equipment—so-called surplus—and we gave it to them with a $10,000,000 credit. They started trying to develop an Iranian army. One of the men who is active in it told me that if the Russians marched into Iran the Iranian Army would run to the south. The only effective resistance might be guerrilla warfare.

Question. What is the biggest impression you got, over-all?

Answer. I think the outstanding impression concerns America more than anything else. People everywhere seem to think the American approach to world problems is out of date. From the representation of the State Department I got the impression, as I talked with them at embassies and such places, that the United States is playing with the world as though the countries were just chess pawns and there were no human beings involved. Lots of times the people don't seem to be taken into consideration at all.

There seems to be a tendency to think you can buy nations. You can pour $2,000,000,000 into China, but you're not going to buy China. There is a revolution going on throughout Asia. It's a popular, mass revolution—right from the grass roots. But our policy, much of it, anyway, is still based on the prewar status quo. That is the impression of lots of people in Asia.

AMERICA'S LOST PRESTIGE

At the end of the war I was flabbergasted at the amount of American prestige. In Malaya, in Indonesia, people would pick me up and throw their arms around me. In Indochina it was the same thing. They expected America to be the champion of nationalist movements.

You can imagine the terrific letdown of these people when they decided America was on the side of the colonial powers. For instance, the first Prime Minister of the Indonesian Republic told me: "America has betrayed us. America is supporting the Dutch." I ran into the same thing in Indochina, where the people are fighting the French.

The Communists always are on the side of the nationalist movements. In Indonesia, the Communist line is: "The Americans have betrayed us. The Russians have agreed to trade with us. So you see who our friends are."

Question. The Russians are trying to take advantage of the situation out there?

Answer. I'd say, rather, that they have taken advantage of a historical situation and we have not. I don't credit their intelligence. I think the United States just failed to sense an opportunity.

Once in Saigon I had a conversation with three young men who are fighting the French. I asked one of them: "Why do you follow Ho Chi Minh. He's a Communist. Don't you realize what might happen to your country?"

They were amused. The man I was talking to laughed at me and said: "You mean Ho Chi Minh is a nationalist. The French have destroyed every other nationalist organization here. We would rather have Indochina ruled by a native Communist than an Indochina ruled by the French."

COMMUNIST ARGUMENTS IN CHINA

Question. Where do they get the money and the instruments to spread this communism?

Answer. The point is, it doesn't take much. Take the little farmer in China who gets up at 5 in the morning and works until dark and after. He pays 50 to 60 percent of his crop in rent, another 20 percent in taxes, and then the Army comes along and takes 10 percent more. He sees no chance of a change.

Then the Communists come along—with no money whatsoever—and merely say: "Look. Why are you doing this? Why don't you join us and fight for your rights here?" You don't need money to mobilize that.

Another thing, in China the Communists got a lot of free guns and ammunition. It was Japanese stuff the Russians neglected to turn over to Chiang Kai-shek's Nationalists. That lasted a few years.

Now, though, I would say that 70 percent of the Communist equipment is American. I know of one case where the Communists trapped a Nationalist Army and got the equipment of 50,000 men. In Mukden, everybody knew that the Nationalist troops and officers were selling their guns on the streets. In Tientsin lots of guns were smuggled to the Communists.

Question. What's going to happen in China now?

Answer. I think the Communists are going to set up a coalition government.

Question. Dominated by Russia?

Answer. To this extent: In international affairs. Communist China is going to cooperate with Russia because, after all, they probably reason that if there is a war and Russia is defeated then they lose too. But I think on internal affairs, the Communists will not let Russia say: "Now, you will do this."

Question. Could the United States have kept China? Or was the allegiance to Russia so strong that nothing could be done?

Answer. In the first place, I certainly think there was a possibility of preventing the Communists from taking over all of China. General Marshall, during his mission out there, felt that the Communists dominated maybe a fourth of the country at that time and the Kuomintang—the Chiang Kai-shek government—had three-fourths. General Marshall brought them together, but a lot of people think that the Kuomintang didn't want a coalition.

People out there say General Marshall did a marvelous job. But, unfortunately, he had to leave at a critical period and the whole thing blew up. I think our policy after the Marshall mission was based on the idea that it was possible to crush the Chinese Communists. But, actually, I don't think we could have done it. They have too much popular support. They are too strong.

Question. How important is China from the standpoint of peace in the world?

Answer. Industrially, China is so backward that I can't think the country itself is any threat to peace. If one is thinking in terms of war, the fact that the Communists are taking over means Russia's Asiatic flank is safe. But I don't think anybody is thinking about invading Russia through China.

Politically, the situation might have the effect of heartening a lot of people in Asia. The people in Indochina, for instance. They may say: "Now we have a big brother to the north." Many people who weren't Communists before are going to think it might be a good idea to become Communists.

Question. Will it have any effect on India?

Answer. India is pretty remote from all this. I think it will remain neutral. One thing, though—the Communists in India seem to have learned some lessons from the Communists in China. They've gotten into the labor unions, and they are pretty strong there. But I think they are counting on rural India to be the strength of their movement, as it was in China.

DOUBTS ABOUT JAPAN

Question. What about Japan?

Answer. Our new policy seems to be to forget about reform and put recovery first in Japan. It seems to me the primary objective of United States policy in Japan is, first, to get Japan off the American dole and, secondly, keep down the Communists.

But almost everybody recognizes that a self-sufficient Japan requires the cooperation of the countries of Asia, particularly Manchuria. That is the main source of soybeans, coal, iron ore, cotton and wool. The whole Japanese economy in the past—Manchuria was the backbone of it.

Manchuria is Communist now. They aren't going to trade with Japan. And the Chinese Communists aren't going to cooperate in trade with Japan if there is any hint that America is building the place up as a military power. The same thing is true in the Philippines. It is political suicide there to advocate trade with Japan.

The President of the Philippines was upset about it when I talked with him. He said: "You're building up a reactionary Japan as a base against Russia. You're buying dubious allies. We fear a resurgent Japan far more than we fear Russia."

I think these reactions are largely a result of our shift in policy during the last 18 months.

SHIFT IN UNITED STATES POLICY

Question. Shift in what policy?

Answer. The United States policy in the occupation. During the first year the main theme was that Japan had to be democratized. That was the basic policy. The breaking up of the zaibatsu (big monopolies) was one of the major things. But now I think we've scrapped the whole policy of zaibatsu dissolution.

Question. There have been almost no reparations?

Answer. That's right. Certainly it has been to a large extent Russia's fault. But also on our part, we haven't desired to have reparations.

There is a great conflict in our policy. On the one hand, the State Department says our only objective is to make Japan self-sufficient. But then a committee of engineers hired by the Army made its Report on Reparations and Economic Reconstruction, and people in Asia were flabbergasted. This report came out and advocated the retention of practically all prewar Japan's industrial capacity—a capacity that the United States, in early policy, admitted included a tremendous amount of what they call obvious excess capacity.

And people out there began to wonder. If, as we had said before, so much industry was obvious excess, why was it suddenly necessary to retain it in Japan if our policy is only to develop a self-sufficient and democratic country?

Question. Is it possible the events in China have caused a policy switch in Japan?

Answer. Yes. I am sure that we have switched the emphasis in Japan as a result of that. Apparently we haven't decided yet what we want to do. In other words, one branch of the Government says we want Japan to be self-sufficient, and then the Army indicates we want Japan to be a military base.

We've got to decide whether we want Japan as a military base. If we do, then I think we'll have to subsidize the economy indefinitely. Because, if that is United States policy, we won't get the cooperation of China, or the Philippines, or Australia. They are are not going to assist in the development of a militaristic Japan.

JAPANESE AS ALLIES?

Question. In case a war came, would the Japanese people be America's allies?

Answer. I would say the way the political trend in Japan is going now, that in 5 years you will see the working class violently opposed to America, and the small group of politicians and former war lords on the side of the United States. Whether the Japanese people would fight for us, I would say, is extremely questionable. Anyway there would be a very effective fifth column, because the Communists have some extremely capable leaders and they are well organized.

We've already seen the results of the recent elections there, in which the Communists made a relatively spectacular showing. That trend started quite a while ago. There was one case where a tax was imposed. It hit the workers pretty hard. The result was that

there were strikes—which were banned—and the Socialists who had to apply the tax were accused of being antilabor. Feeling was such that a lot of workers turned to the Communists.

One of the Communist leaders used to tell me: "Every time General MacArthur bans a strike we make votes." Of course, the Communists want to make the situation appear: the Americans against the workers and the Communists, and I am inclined to believe they have pretty well succeeded. That is demonstrated by the election results. I think the trend of United States policy now will start pinching the farmers, so that in the next year or two the farmers will feel that they have no one to turn to except the Communists.

Question. Are the Russians mixing into the Near East-Palestine business?

Answer. Not very much. The Russian, for the last 25 years, have had a consistent policy in the Middle East. They've changed tactics, but the ultimate objective always has been the same: to dislodge the British and the French from the position on Russia's flank.

Palestine showed that up. First, the Russians supported the Zionists, then they opposed them. They supported the Arabs, and then they supported partition. They always looked at it against the background of what the British were doing at the time. Their idea has been to get Britain out, wherever possible.

Question. Is there much Communist infiltration in the Near East and Middle East?

Answer. Not a great deal. In Israel you have a small Communist Party. Of course, I have read stories that the Russians are sending a lot of spies and such things, but I am very dubious of that.

I would say that there is less prospect of communism in Israel than any country I have visited. There is less class conflict, for one thing, less social conflict. Labor relations are excellent because the unions are part of the government. The workers have a very strong position already, so the Communists have nothing to offer these people.

I talked with a lot of people there. By supporting Israel consistently, the United States has achieved a position where the Israeli Government is pointed very much in the direction of America, both politically and economically. The party that controls the Government favors what its spokesmen call "neutrality." In other words, they want to be friendly both with Russia and America, and deal with them. I would call it a pro-American neutrality.

Question. What about the Arab countries?

Answer. Practically all the experts I talked with said there is less prospect of real communism throughout this whole area than anywhere else. Among the Arabs, the real bar to communism is the feudalistic, religious barrier.

From Russia's point of view, she didn't have to be worried about adopting an all-out pro-Israel policy. She probably didn't care if she embarrassed all the Communists Parties in all the Arab countries. For 25 years they haven't been able to do anything, anyway.

The Communists are working along the lines of Russian foreign policy to get rid of foreign powers in the Middle East. That means Britain, France, America, etc. So you find the Communists collaborating with nationalist groups. You find them very active with the violently antiforeign movements.

So far as United States policy is concerned, we don't have to worry about the Arabs cutting off the oil. As it has worked out—and as most of the people who have spent a lot of time there point out—the Arabs need us more than we need them. In Saudi Arabia, King Ibn Saud gets a lot of American dollars for his oil. He wasn't going to cut off the oil and bankrupt his country to fight over Palestine.

I think the effect of the United States policy in taking a position that was against the Arabs, or at least a position backing Israel, has put our relations with the Arab countries on a very realistic basis. As far as the ordinary people of those countries are concerned, America's attitude doesn't mean a great deal. There isn't much popular opinion in those places. The Arab countries are far more backward than any others in Asia.

And our policy in America has shown the people who run the Arab Governments that they have to watch their step more than we have to watch ours. In other words, they need our economic assistance, our trade and our purchase of their oil. And they know it. The friendship of Israel is probably as important as the friendship of all the other states, collectively. Israel is obviously there to stay. It is going to be the most dynamic country in the whole Middle East.

Question. Did you get into Greece?

Answer. Just for a day or two, on my way to Italy.

Question. Then you wound up in Spain?

Answer. Yes. Madrid was my last long stop.

Question. After all that, what is your impression of United States policy? Are we playing a lone hand in foreign relations? Or are we following the British? Just what are we trying to do?

Answer. In the Near East, at one time, we followed the British. Now we are pretty well playing our own hand.

In Asia we just don't seem to have any consistent policy at all. People I've talked with feel it is a sort of policy of compromises, of half measures. This doesn't apply to western Europe, maybe. But in Asia, the Middle East, and in Spain, American policy has been negative almost universally.

Question. We're putting up a lot of money, aren't we?

Answer. That's just it. America is spending billions, apparently with the idea that we can buy world support with our money. But the chances are it will mean spending money indefinitely because the people themselves are offered nothing very dramatic.

For instance, a worker in Italy has been getting 200 grams of bread a day. If we didn't go in and help, he would be cut to 150. But he isn't much impressed with the fact that he still gets 200 grams. That isn't going to turn him against communism.

What is going to turn him against communism is if he gets 300 grams of bread a day and has a reasonable tax system or a reasonable land system—that's the sort of thing that will persuade him.

CASH VERSUS PERSUASION

Question. That costs, too, doesn't it?

Answer. Yes. My point is nothing is being done to persuade the people. One might say that the United States bought off Italy last year in the election over there. But the fact remains that nothing has been done yet to persuade the 30 percent of the people or so who voted Communist to vote against the Communists next time. So, to make any headway, we have to buy them again.

Question. If we didn't put dollars in China, in Italy, and Greece—if we gave nothing but moral support to the people who are opposing Communists—could these anti-Communists win? Some people in the United States get frightened every time the Communists make the slightest gain.

Answer. That's it. It seems to me the great danger is that the United States will get so terrified as its policies backfire in some parts of the world and the Communists take over, that we might do things that are audacious to the point where they will be provoking.

The Russians go in and back the Communist Party whether the Communists are in power or not. They go along with the revolutionary movement. Most people today are a great neutral mass. They can see no reason to support America and no particular reason to support the Communists. They are not going to fight Communists if they come in, and they are not going to fight on America's side to throw Communists out.

Question. What do you think about Spain?

Answer. Franco is wooing us now, but it is on his terms. I calculate it would mean an expenditure of $2,000,000,000 to make Spain an effective ally, and what would you have after you spent the $2,000,000,000?

Anybody who goes in to help Franco now has to take Franco as he is. When we suggest reforms, people in his government always say: "Our economic situation is so delicate that if we do anything it might cause unrest and we would have nothing to fall back on. But if you came over with $200,000,000 or $500,000,000, then we would be able to consider these things."

The idea seems to be that once you're in you can't get out. And once you're in they don't have to do anything to keep you in. Some of the men over there are talking themselves into a conviction that, if we don't give them economic assistance, there will be riots and the Communists will take over.

I just don't believe it. I have not found a single well-informed member of our Embassy staff there who sees any prospect of a civil war in Spain. They say in the whole history of Spain there has never been a revolution as a result of hunger.

COST OF AID TO SPAIN

As far as Franco being an ally, I think what the United States would wind up with is this: We would spend a lot of money to build up his economy. But the economy obviously couldn't support a country that was on the alert for war. Therefore, we would constantly be required to subsidize Spain's domestic economy indefinitely. It wouldn't be a 5-year program. It would be a 10-year program, or 15. Even so, what would we wind up with?

The Spanish people still, despite the absence of a more positive American policy, are very definitely pro-American. Many of these people do not like Franco. They have no hope whatsoever of getting any aid. Therefore, any aid you put in—even though it might prevent the wheat ration from being reduced—wouldn't have enough dramatic effect to convince the people it was good, because they price they would be paying would be their last hope of getting rid of Franco.

The hope of getting rid of Franco stems from the prospect that the Spanish economy will deteriorate to the point where the people around Franco will decide that American aid is so imperative they will compel him to step down. It's difficult to predict whether this pressure would force Franco out. It is a very distinct possibility, but Franco's retirement would not really solve the Spanish problem.

Question. One thing is clear, anyway. The world really seems to be in a mess doesn't it?

Answer. That's right—quite a mess.

Labor's Fight Against Communism

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. MULTER. Mr. Speaker, I am sure that every Member of Congress is interested in the fight being waged by labor against the spread of communism. The following item which appeared in the New York Herald Tribune on March 17,

1949, is a most enlightening article on the subject:

THE SPLIT IN THE WFTU—COMMUNISM PREPARES AN OFFENSIVE FOR LABOR CONFLICT ON A GLOBAL SCALE

(By William J. Humphreys)

PARIS.—No matter what course Soviet diplomacy takes in the future, it is certain there will be no Communist peace offensive on the international labor front. A pattern for social conflict has been drawn on the east-west lines already familiar in politics; opposing forces are rallying supporters; all signs indicate the battle will be fought on a global scale.

This prospect of universal struggle was brought sharply into focus by the split in the World Federation of Trade Unions (WFTU). Non-Communist trade unions recently withdrew from this intended foundation of worldly understanding in a belligerent mood. They walked out determined to reorganize themselves into a new labor international that could challenge the WFTU for leadership.

There was no alternative to this decision, according to its authors. They say that for 3 years they had been cooperating with Communists in an effort to create a fraternity of trade-unions of the world, irrespective of considerations of race, nationality, religion, or political opinion. This was the forum prescribed by the WFTU constitution, adopted October 3, 1945.

But what non-Communists got for their pains was expressed in the leave-taking charge leveled at the WFTU. This labeled the organization as a Communist monopoly. In greater detail this charge meant Communists had exploited the WFTU's funds and world-wide machinery to set down Soviet propaganda wherever there was a trade-union affiliate.

The charge meant finally that the non-Communists—who were a helpless minority witnessing these operations—had to jump overboard to save themselves. Those now in the water admit it will be a long, hard swim to win solid ground.

The principals pulling for the shore are the American Congress of Industrial Organizations (CIO), the British Trades Union Congress (TUC), and the Dutch Trade Union Federation. The three were the representatives of the non-Communist minority on the WFTU's executive bureau. They tried first to have the bureau suspend all WFTU activity for at least 1 year. When this face-saving attempt was overruled they jettisoned themselves as a last resort. Their action was a signal for all non-Communist affiliates to follow their example. Once all sympathizers have withdrawn there will be reorganization.

In the interval time is being lost. The WFTU split occurred January 19. In the intervening weeks the Communist leaders now in undisputed control of the organization have been making time count. Moreover, they have shown themselves willing and confident to meet the non-Communist challenge. There are obvious factors to buoy their feelings about undertaking social welfare on the round-the-world basis.

In the first place numbers and organization—including the political support of Communist parties everywhere—are on their side. The non-Communists, on the other hand, will have to build a new international secretariat, and they will retain only about 25,000,000 of the WFTU's original 70,000,000 members.

Secondly, the Communist trade unionists have the advantage of working in media they know how to exploit. The media are the familiar surroundings of discontent. Underprivileged workers in western Europe cradled Marxism. The main lines of Marxist propaganda since then have not changed. Outside the motherland of the Soviet Union communism's present expansion has ridden the crest of unrest spread and accentuated by the economic ruin of the Second World War.

In the purely speculative field there are many European observers who think the Soviet Union, possessing an ally like the far-flung WFTU, never would go to war until she had exploited this agency to the fullest. Their reasoning is that there is no risk to Soviet security in having millions of non-national trade-union sympathizers to carry out a campaign of obstructionism against the Marshall plan, or American aid in other parts of the world.

Immediately after the western reactionaries quit the purged WFTU directorate outlined a program to play its trump cards. Acting like a giant Red Labor Internationale—which, in fact, is what it is—the Communist executives and their willing fellow travelers laid down a program to exploit worker unrest in Europe, Asia, Africa, and Latin America. In Europe the Communist Parties and the Communist trade-unions are counted on to execute their part with a minimum of direction. It is in Asia and Africa, where the western democracies have their colonial holdings, that the Communist trade unionists intend to use most of the WFTU'S prestige and resources.

The first manifesto after the purge called the Communist shot in this direction. The new directorate in this communiqué promised to support "all colonial and semicolonial peoples who are fighting for their independence and standard of living." This departure from the nonpolitical provisions of the constitution to agitate for independence provoked no opposition. If it is true western society and economics are weakest in the colonial territories of Great Britain, France, the Netherlands, Belgium, and Portugal, it also is true the Communists know where to concentrate their attack.

The colonial drive—already making itself felt on the French Ivory Coast—is one phase of the new campaign designed to expand rather than hold the present WFTU lines. There are four other specific phases that demonstrate the WFTU can work where it would please Moscow most.

First is the far eastern trade-union conference planned for May in Peiping. This meeting is intended to mobilize delegates from India, Pakistan, Burma, Indonesia, and Indochina, as well as to give the WFTU an extending footing in China, the host state. The conference, as non-Communists see it, is an answer to the recent southeast Asia gathering, sponsored by Pandit Nehru, at New Delhi. From the Peiping meeting is expected to come denunciations not only of all European or white authority, but also of all native bourgeoisie.

Secondly, the WFTU has decided to expand its membership by admitting Japanese and German trade-unions of Leftist persuasion. Opposition by western occupation forces would be countered by charges that democratic rights are being violated.

Thirdly, the WFTU is going to try to recapture the following of the international trade secretariats. These are the directorates of the professional unions, like railway men, public-utility workers, and school teachers—the sort of organizations that are associated with the American Federation of Labor. The international secretariats never joined the WFTU. They were afraid of its Communist majority. Now they have been told to come in or prepare for a fight.

Fourthly, the WFTU has entrusted Vincente Toledano, the Mexican trade unionist on its executive bureau, with the preparation of a favorable climate in the Latin-American countries. The project calls for a conference either in Cuba or Mexico of men who are ready to echo the pro-Communist slogans of the WFTU in the Western Hempishere.

And the counterattack? Observers outside international trade-union activities say one of the greatest handicaps for the non-Communist forces is a lack of dynamic leadership. Communist leaders, on the other hand, are credited with an intense understanding and appreciation of the stakes involved. Moreover, the Communists, thanks to the first party principle of discipline, are never worried about shades of opinion and attitudes struck by prima donnas—of which trade-union activity has its share.

What is said to be required of the non-Communist forces is a new sense of urgency about their responsibilities and a willingness to submerge personal differences. A problem on the latter score is the position of the A. F. of L. vis-à-vis the CIO. The former never joined the WFTU because it maintained the point of view no one can collaborate with the Communists. The CIO now admits that in principle but says just as conscientiously that collaboration had to be tried. Not to have tried would have made world labor skeptical: Socialist and Social Democratic opinion could have thought here was a purely capitalistic isolation of the Communist states.

But Walter Schevenels, a veteran trade unionist and former assistant secretary-general of the WFTU, thinks the fight can be won, and fairly so.

A Belgian who was the secretary-general of the non-Communist International Federation of Trade Unions—which the WFTU supplanted—Schevenels thinks Communist gains have been made at the expense of the Socialist and Social Democratic Parties because these laborite organizations first collaborated with and later were "hampered and paralyzed" by Communists. None of the moderate labor organizations could, in principle, denounce communism without denouncing trade-union principles.

"We should not be afraid," Schevenels says. "Our democratic way always is faster and finally brings a greater measure of well-being for people than the Communist method. Moreover, we don't destroy human values and the individual. Labor all over the world will understand this once we start to talk back.

"We are changing the world for the better more quickly than the Communists with our existing political systems. These systems are no more capitalistic today than the Russian system is socialistic."

But, Schevenels says frankly the Russian system is off to a head start among millions of workers and peasants.

Organized Labor and the TVA

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Union Register of Portland, Oreg., official publication of the Lumber and Sawmill Workers, AFL, dated February 25, 1949, and entitled "Labor Fares Well Under the TVA Plan":

LABOR FARES WELL UNDER TVA PLAN

With the League for CVA receiving the support of State federations of labor, and the League itself launching an educational program, let's take a look at labor relations under the TVA, described in a recent news release as relatively free of strife during the Authority's 15 years of life.

A recent special edition of the Bonneville Power Authority's Currents tell us that unions representing various crafts in the trades and labor field were recognized by TVA in collective-bargaining relationships from the beginning.

Wage rates are determined through negotiation at an annual wage conference. Other related questions confronting management and labor are worked out through joint procedures. As experience has matured machinery and procedures for carrying on these relationships have been strengthened.

In 1937 the American Federation of Labor unions, which had locals with TVA trades and labor employee membership, joined together in the Tennessee Valley Trades and Labor Council to coordinate their activities. in 1940 TVA and the council negotiated a written agreement.

It does not set up a closed shop, but does provide that employees will be encouraged to participate in employee-management relationships through membership in the unions affiliated with the council.

TVA and the Trades and Labor Council jointly conduct and administer apprenticeship programs, both craft and industrial. In addition, a system of joint cooperative committees consider suggestions, from both labor and management, concerning the efficiency of the job and technical improvements that might be made. They also consider matters of mutual interest, such as absenteeism, welfare, job conditions, safety activities, and training programs. The joint classification committee reviews and acts upon all requests for changes in the trades and labor classification system.

With this kind of a labor-relations program in action we can readily see the reason for a recent press release stating: "Labor leaders have grown to trust TVA, it was reported last week, and TVA authorities have learned they can rely on the labor leaders."

Can Rent Control End?

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. GOODWIN. Mr. Speaker, I have never been able to find any ground upon which I could in good conscience justify a vote for an extension of rent control since the cessation of hostilities and in this connection, under leave to extend my remarks, I commend to my colleagues the reading of an editorial from the Boston Herald of March 19, 1949. If we must have continued control, I very much prefer it be done by the States rather than by the Federal Government. I am satisfied that if we really want to help the shortage of rental houses we should put an end to this unjust rent-control law. The editorial follows:

CAN RENT CONTROL END?

In June 1947, Congress wrote a rent-control law to permit the abandonment of control by February 1948. In February 1948, it wrote another bill to permit the abandonment of control by March 31, 1949. It is now writing a law to permit the abandonment of control by June 30, 1950. The more we approach the end, the farther the end recedes into the distance.

Dubious Congressmen put the question to some of the control proponents in committee hearing a few days ago: "Was this to be the last bill Congress would have to write, or would there be another and another?" And the candid answer was, no one could tell.

By this time it must be obvious that rent control is a self-perpetuating device. And it is bound to be. If you hold the price down on something, you have a shortage, and as long as there is rent control there will be at least an apparent housing shortage such as to make the lifting of control look perilous. So perilous that Gov. Chester Bowles, of Connecticut, a controller from way back, is certain rioting will ensue.

Theoretically the transition to a free rental market could be done by gradually easing the controls. The House has attempted to do that by a bill to guarantee a fair return. The Senate is considering a bill in which some increases might be allowed.

But practically the fair-return provision is administratively unworkable, and the Senate increases are too restrictive. If this were all that could be offered, Congress would do better to adopt the Republican stopgap 90-day plan and see what the next few months will do to our economy.

There is, however, a provision in both bills to permit the States to take over rent control, and it is here that the best hopes lie. Apartments are not a commodity in interstate commerce. Except in a war emergency, rents ought never to be adjusted by a Federal agency. The arguments for governmental decentralization are particularly effective in this field.

We may not get better rent-control laws from the State house than we have been getting from the National Capital. Indeed, the Dever administration's handling of the MTA is a sad augury. But at least the legislature is closer to us than Congress and is more able to measure and conform to the needs and opinion of Massachusetts. Outraged landlords and perturbed tenants would have a much shorter trip to air their views. If rent control can't end, at least it can be our rent control and not Washington's.

Amendment to the Wage-and-Hour Law

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I have received from Messrs. D. R. Boozer and Ray Henson, of the Millersbend Lumber Corp., of Pine Hill, Ala., under date of March 4, 1949:

MILLERSBEND LUMBER CORP.,
Pine Hill, Ala., March 4, 1949.

Hon. FRANK W. BOYKIN,
House Office Building,
Washington, D. C.

DEAR FRANK: We don't bother you often, but we are runing into a serious situation that compels us to write you and give you our views and ask you to help us because we need it—and bad.

We have been in the lumber business, livestock, naval stores and cattle business just about like you have practically all of our lives, except the time we spent overseas in World War I. I was wounded, but I am thankful to say I struggled through and returned home and have been able to make a living by working hard and with our mutual friends here in the First District of Alabama.

We employ about 263 men. We are operating 3 sawmills, planing mill, and veneer mill, and our men are more than satisfied. We have talked to our men, and without the exception of any man, they have told us, and we are telling you, these men want to work and need to work. We live here in the country where the men have their homes, their livestock, their gardens, and their fields, and they have to have the pay roll we have every Saturday to make a go of it. They are very anxious and glad to go along at from 60 to 65 cents. The minimum wage was 40 cents. We are not paying anybody as low as 40 cents, the minimum wage, but we are paying everybody 50, 55, and 60 cents, and skilled men up to $1.75 an hour. We do not believe it is best, with the conditions the country is in at this time, to jump wages from 40 to 75 cents an hour, which is almost a hundred percent, especially when the product that we are manufacturing has fallen 33⅓ percent. It just doesn't make sense.

We are advised that the Government bought about 7,000,000 feet of pine lumber in Charlotte, N. C., 2 weeks ago. This was lumber that had gone through the dry kiln and planing mill at a cost of about $50 a thousand. The Government bought the 2 x 4's for $30 per thousand or a loss of about $20 per thousand.

If you put on a minimum wage of 75 cents an hour at this time you will shut down every small sawmill operator in the South—not only shut him down but break him and throw all of the people out of work.

Does the Government have to tell us from Washington what we are to pay the people that work for us? We are paying all we possibly can, and are paying from the above scale higher than the minimum wage, and why jump it practically 100 percent at one time. Why not take it in even steps and not throw everything out of balance down here? These people need this work.

I do not believe we are going to be able to pay our income tax this year because every time we take in a dollar or cut a stick of lumber we pay the Federal Government alone at least 25 percent. For instance, if we take in a thousand dollars or sell a thousand dollars worth of trees or stumpage, we pay the Government $250. Then we have a State income tax that we have to add to the above pay. Then we have to pay social security and unemployment compensation, and also a severance tax. Every time we cut a tree down we pay the State 20 cents a thousand.

When you spoke here last year you told us about the great leaders there. You particularly told us about Hon. SAM RAYBURN, Speaker of the House, from Texas, Hon. JOHN MCCORMACK from Massachusetts, Congressman BOB DOUGHTON, of North Carolina, Congressman CLARENCE CANNON, of Missouri, and Congressman WHITTINGTON, of Mississippi, and we had a regular feast. You told us that you had just talked to the Speaker over long distance telephone in Texas, and that the Democrats would win the House back and he would be our Speaker. You told us he understood all of our problems, lumber, timber, cattle, manufacturing, and farming business. Can't you get him to help us, and can't you get all of the leaders there to understand that this just won't do at this time? Things have and are slipping bad here and unless the brakes are put on, we are going into a terrible slump that many people will never survive.

The people that work with us are satisfied. Can't you leave them and us alone and let us struggle with our own problems? We will send the tax money there if we can operate, but we can't operate under the conditions we hear we are going to have. We know you understand the situation here thoroughly. Can't you explain it so they will understand it?

I do not believe our party wants to put us out of business, but, of course, if they

do, that is a different thing. Let's use some common sense. Any experienced businessman will tell you we are telling the truth.

Frank, put this letter in the CONGRESSIONAL RECORD where our friends can see it.

The people here know how close we are to you and about our friendship since we were boys, and they have asked us to tell you these things, and get you and the other fair-minded men there in Congress to be sensible and reasonable and not listen to some bureaucrat that does not understand and has never made a pay roll. Do not let them ruin our business.

We will be perfectly willing to go to 65 cents at this time but then we won't make enough profit to live on.

Please let us hear from you. We are depending on you.

Sincerely your friends,

MILLERSBEND LUMBER CORP.,
By D. R. BOOZER, *President*.
RAY HENSON,
Secretary-Treasurer.

Hon. Sol Bloom

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eulogy delivered by Dr. Herbert S. Goldstein at the funeral services held at the West Side Institutional Synagogue for our beloved former chairman, the Honorable SOL BLOOM:

To the honored dead, SOL BLOOM, his devoted daughter Vera, mourners, relatives, and friends: We are gathered here this afternoon to pay a most deserved tribute to an American patriot and a prince in Israel. Words are too feeble for an occasion of this kind, especially when one is eulogizing a friend of 42 years standing.

SOL BLOOM was the product of an immigrant Jewish home. He was an illustrious example of the son of poor immigrants who rose from lowly surroundings to extreme heights. In no other country but the United States could we find this experience. Emerson said, "America spells opportunity."

Congressman BLOOM was appointed Director General of the George Washington Bicentennial Celebration. He threw himself into that task with matchless zeal. In every city, town, village, and hamlet, he revived the spirit of the founding fathers, by bringing the life story of Washington to the fore. As Chairman of the United States Constitutional Sesquicentennial Commission he wrote a book on the Formation of the Union. This volume was 1 of the 10 books that the late lamented Franklin Delano Roosevelt kept on his desk for ready reference. Here was a man who had just 1 day of formal public-school education, and yet he was the author of a number of well-written books. In them he displayed a profound understanding of our country, these blessed United States of America. More recently he wrote a book on Our Heritage which is an outstanding source for modern American history.

I think the book he liked best, was his smallest one entitled "One With God Is a Majority." SOL BLOOM was a God-intoxicated Jew. He could truly say, "This is my God and I shall glorify Him." No day passed in his life without his saying prayers. He would walk with me on the street and he would occasionally stop, leaning on the cane he sometimes used, look up to heaven, and offer a prayer of thanksgiving for the goodness of God and for the opportunities extended to him for service. SOL BLOOM was an orthodox American and a devoted Jew. Those titles are generally synonymous. The better the Jew, the better the American. Every Friday evening of his life, he sanctified the Sabbath. He sang the Kiddush, the prayer of sanctification, ushering in our Holy Sabbath. He broke bread and uttered the prayer of thanksgiving to God Almighty for His bounteous gifts. I remember when we met in San Francisco. He was the United States delegate for the United Nations Charter meeting, and I the representative for the Synagogue Council of America for the State Department. My good wife, and I went over to visit him at the Fairmont Hotel one Friday afternoon. He opened a closet and said "Look, here are two candles which I shall light tonight in honor of the Sabbath. Here are two rolls that will act as my chalah, my Sabbath bread, over which I shall pronounce the Kiddush." SOL BLOOM never smoked on the Sabbath, though he was a very heavy smoker. When he attended services, he would come early and stay to the very end, particularly on the Day of Atonement. The wisdom preacher, King Solomon, after whom SOL was named, declared, "Those that are wise of heart seize the opportunity to do good deeds." SOL BLOOM was not only a smart man, but a wise man. He was a religious humanitarian. I never heard him say "No" to any call that was made upon him, whether it was Christian or Jewish. Yesterday Dr. Gabel, the superintendent of the Home for Hebrew Convalescents called me up to say that on Monday he had received a check from the Congressman to have the inmates of the home have a dinner, in honor of his birthday. Every year on his birthday he would either go personally or send his check to the Catholic Orphan Asylum in Washington to have the children made happier on that day, by a special treat. I can personally tell you that there were hundreds of requests that I have made of him in behalf of displaced persons, of refugees, of those who lived behind the iron curtain, and he always saw to it that the door to the State Department and the offices of the Ambassadors involved, were open to me.

He was an envoy for good deeds. I was very close to SOL BLOOM, but I do not think there was a man or a woman who knew him, that did not feel the same way. There was something about his personality that found its way into your heart. One always felt that here was a man, who tried to be a close friend.

I do not think it is my function to speak of the political and international activities of the Congressman, except to say that there too, he was dominated by his religion, because, as he would often point out that the Hebrew word for greeting is shalom "peace." Our prayers every day, three times a day, close with the prayer for peace.

SOL BLOOM died on the 7th day of Adar, which is the day of the death of Moses. Like Moses, of old, he died seeing the horizon of the promised land of peace, but he was not privileged to write the documents for world peace. As far as Palestine or Israel is concerned, Congressman BLOOM did more than any other Jew to help in urging the nations of the world to partition Palestine into a Jewish and Arab state.

Never did he flag in his zeal for Palestine, not only politically but spiritually and religiously as well.

The greatest influence in his life was his mother. Whenever he spoke of his sainted mother, tears would well up in his eyes. I would like to say to mothers that the heart of a real mother is the schoolroom of the child. I know of no other woman of whom this can be said more fittingly than SOL BLOOM's mother, because SOL BLOOM's formal schooling was only 1 day in duration. The rest of his schooling he received from his mother's wisdom and faith.

SOL BLOOM was a marvelous husband. No matter where the mission was, he would never go without his wife.

To Vera, his daughter, he looked for erudition and companionship. I should like to say to Vera, whom I have known from her early childhood, Vera, you are freighted with a heavy responsibility to carry on father's religious, civic, and patriotic work. When Lincoln drew his last breath, Stanton, who was at his bedside said, "Now he belongs to the ages." In a similar vein we can say of SOL BLOOM, "Now he belongs to the annals of history." I pray to God that the soul of SOL BLOOM may be gathered unto his eternal resting place, and that he may serve as a guardian angel to his beloved daughter. May he serve on high as a guiding star to America, for peace and for justice. Amen.

Northwest Feeling on the Columbia Valley

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. MITCHELL. Mr. Speaker, on March 13, the Washington Post published a lengthy article about the proposed Columbia Valley Authority by Mr. Tom Humphrey of the Oregon Journal. This article, which I believe to be distorted and biased in its emphasis on the opposition to CVA, was inserted in the CONGRESSIONAL RECORD on two separate days, March 14 and 15. Because of the one-sided character of Mr. Humphrey's article, I have written a reply, published in the Washington Post of March 19, which I include as a part of my remarks:

NORTHWEST FEELING ON THE COLUMBIA VALLEY

(By Representative HUGH MITCHELL, Congressman from Washington)

Mr. Tom Humphrey's lengthy article, TVA-Type Proposal for Northwest Marshals Formidable Array of Foes, published in your issue of March 13, merits a reply. Mr. Humphrey writes with the heavy hand of bias against a Columbia Valley Authority. As associate editor of the editorial page of the Oregon Journal, Portland, he comes to his task with the preconceived editorial opposition characterizing that paper. By his own assertion that the newspapers of the Northwest do not favor a CVA, it can be inferred that he fancies himself one of the formidable array of foes.

Mr. Humphrey tries to convey the impression that except for myself and a little band of CVA advocates, the weight of Northwest opinions is heavily on the other side. He passes over quickly, with disparaging remarks, groups or persons known to favor CVA and devotes the greater part of his extended article to quoting CVA opponents and presenting their arguments.

By using this technique in reverse, had he been so minded, Mr. Humphrey could just as easily have described CVA's formidable array of friends. The point is that Mr. Humphrey is using your newspaper to editorialize against CVA rather than to write a balanced and responsible report of developments in the Pacific Northwest attending the proposed legislation. Avowed and bitter enemies of CVA are already giving Mr. Humphrey's article considerable publicity.

Widespread support for a CVA by Northwest farmer and labor organizations is dismissed by Mr. Humphrey in these slighting words: "Grange masters of Oregon and Washington, who will buy anything with a public power label on it, are whooping it up. Several labor leaders have climbed on the bandwagon."

To put the facts in better perspective, it should be noted that Grange and labor leaders have given long and careful study to CVA legislation. The League for CVA, which has been in existence since 1945, when I first sponsored CVA legislation in the United States Senate, includes among its officers and directors representatives of the Washington and Oregon State Granges; Washington and Idaho State Federations of Labor; the Congress of Industrial Organizations; and the Oregon, Idaho, and Montana Farmers' Unions. Upwards of a million persons are represented in these organizations.

Mr. Humphrey writes that "approximately 100 agricultural, industrial, and promotion groups" in the Pacific Northwest are opposed to CVA and later cites as the authority for this statement the Pacific Northwest Development Association of Portland, Oreg. That organization is dedicated primarily to fighting CVA and so the reliability of its assertion should be suspect from the start.

Some weeks ago the association released to the local press a story that 75 organizations were opposed to CVA, a few of which were listed in the news account. A Spokane resident, who was acquainted with the manager of one of the business groups mentioned in the news story, called him on the telephone and discovered this interesting fact: the listing of his organization as opposed to CVA had never been authorized. This manager, a responsible business executive, did not oppose CVA in principle, although he had some idea of his own about the composition of the CVA board.

From personal knowledge I can say that many businessmen of the Northwest are positively interested in CVA legislation, particularly those in smaller businesses that look to CVA for technological assistance. The more progressive chambers of commerce in the region do not go along with the staid and stuffy leadership of the older groups in a few cities.

Whatever the extent of the business opposition cited by Mr. Humphrey, certainly more careful inquiry and evidence are needed than an unverified and one-sided report of the Pacific Northwest Development Association.

Mr. Humphrey writes that "Every major newspaper and more than 85 percent of all newspapers in Oregon, Washington, and Idaho are on record against CVA, strong as they are for development of the Columbia Basin." Even if this be true, editorial opinion is not a very good index to the views of the average citizen, as our recent experience in a national election so convincingly demonstrates.

That the more conservative dailies of the Pacific Northwest editorial-wise are sadly behind public thinking is generally well known. The Seattle Times is one of the largest in this class. A typical Seattle Times anti-CVA editorial under the horrific title "Grasping Tentacles of a Valley Authority" turns out to be an abridgement and rehash, with only minor changes in wording, of a statement in a brochure distributed by P. L. Smith, high-paid lobbyist for the National Association of Electric Companies. There are sufficient reasons to believe that the views of the private power lobby, no matter how well received by some editorial writers, are quite unacceptable to the majority of citizens in the Pacific Northwest.

Actually the newspapers of the Northwest are not so adamantly opposed to CVA as Mr. Humphrey tries to make out. The Seattle Times in its better moments, the Portland Oregonian, and other papers, daily or weekly, large or small, have called attention to the need for a more efficient and more comprehensive program of Columbia River development. The Wenatchee World, under the direction of Rufus Woods, has long been a pioneer in this field. Doubts or reservations on particular points of proposed CVA legislation, expressed by some newspapers, are not the same as the blind and die-hard opposition which characterizes papers like the Spokane Spokesman-Review.

Mr. Humphrey also stretches the point when he places municipal-power agencies, including Tacoma and Seattle City Light, into the category of strongly opposed. These municipal agencies which have a long and outstanding record of performance in the public-power field, naturally want to know how they will fare under CVA and they have raised pertinent questions. Full protection of municipal-power interests will be provided in CVA legislation.

Of the seven Governors in States involved in the Columbia Basin, Mr. Humphrey identifies five on record in opposition to valley authorities, but he omits to mention the relevant fact that four of these five are Republicans. The intemperate haste with which the Republican Governors of the Northwest States greeted President Truman's CVA proposal suggests the narrow partisan character of their opposition.

Governor Langlie, of Washington, for example, had pledged in his opening message to the newly assembled State legislature "to examine, critically, any proposed Federal legislation which would subject our power and irrigation resources to further national control," but a few hours after the President's announcement calling upon executive agencies to draft new CVA legislation, Governor Langlie expressed his unqualified (and uncritical) opposition.

The Republican Governors of Oregon and Idaho also made immediate protest. Subsequently, when aides of the President went to the Northwest to confer with the League for CVA on positive legislative recommendations, Langlie complained with ill grace that he had not been consulted. Other opponents of CVA took up the hue and cry. It is obvious that Langlie & Co. are attempting to make a partisan issue of a proposal that has adherents and advocates in both parties.

Adding up his formidable array of foes, comprised mainly of Republican, State, and congressional leaders, the more conservative newspapers and business groups and private power companies, Mr. Humphrey concludes that most of the people of the Pacific Northwest reject the CVA method of regional development. This is a curious kind of arithmetic. More suggestive is the vote of 71 to 26 by which the newly elected house of representatives in the State of Washington passed a memorial endorsing CVA. I daresay this comes closer to portraying public sentiment in the Northwest than Mr. Humphrey's formidable array of foes.

The Plight of Our Elderly Citizens Is a National Disgrace

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. VAN ZANDT. Mr. Speaker, hearings are now in progress before the House Committee on Ways and Means regarding the liberalization of the provisions of the Social Security Act.

Last week I submitted my views to the House Committee on Ways and Means and under leave to extend my remarks in the CONGRESSIONAL RECORD I am inserting my remarks at this point:

Mr. Chairman, I appreciate the opportunity to appear before you and the members of the committee to discuss the importance of broadening and liberalizing the Social Security Act.

All of you are familiar with the efforts I have been making since I first came to Congress, to liberalize the provisions of the Social Security Act. On various occasions I have introduced amendments to the Social Security Act and made every effort to have them considered by Congress.

In addition, I have joined with groups such as the Townsend Plan, American Pension Plan, and others in support of legislation to provide an adequate old-age pension for the benefit of millions of Americans who are in the twilight of life and dependent upon old-age assistance or other forms of social security benefits.

Time and time again statements have been made on the floor and the CONGRESSIONAL RECORD has been full of impassioned pleas for action by the House leadership with respect to improving benefits under the Social Security Act. The present plight of elderly citizens is a national disgrace and has existed for the past several years.

It is a known fact that social security is here to stay and that it is intended to provide elderly citizens with a means of livelihood in their declining years. Yet we seem to forget, in viewing earned social-security benefits, that the formula used in computing them has never been changed since the law was first passed. Meanwhile, the cost of living has soared to the point where it has doubled itself. Since 1933 the cost of living index has increased considerably. It is common knowledge that persons gainfully employed are having a difficult time in making both ends meet.

The Congress of the United States has ignored the elderly citizens of America, who, by their labor and taxes, built this great Nation. Yes, we have forgotten them in turning our attention to world problems. Hardly a day passes that we have not heard on the floor of the poor unfortunate people abroad. When you pick up your daily newspaper it is not uncommon to find full-page advertisements directing your attention to the needs of millions of persons abroad. This week the House approved an appropriation of $16,000,000 for destitute displaced Arabs and Jews in the Middle East. But there is not one word said in defense of millions of our own American citizens who are on starvation diets and restricted in many instances to one scanty meal a day.

Let us examine, for a moment, the amount of financial assistance we have given to the peoples of the world. According to the United States Department of Commerce, from March 11, 1941, to December 31, 1946, in the form of lend-lease aid alone, the American taxpayers contributed $50,243,996,159. In addition we have contributed toward world recovery since July 1, 1945, the sum of $25,495,052,923 which has been allocated as follows:

United Nations Relief and Rehabilitation	$2,700,000,000
United Nations Organization	41,426,162
Lend-lease (postwar)	2,163,000,000
International Monetary Fund (authorization)	2,750,000,000
International Bank	635,000,000
Export-Import Bank (loans authorized)	2,258,300,000
Loans to Great Britain and Philippines	4,390,000,000

War Department, grants for relief	$1,771,926,293
Surplus property sales (credits extended)	1,148,000,000
Greek-Turkish loan (authorized amount)	400,000,000
Relief in occupied area (Army)	2,230,000,000
International Relief Organization	71,073,000
International Refugee Organization	182,327,468
Economic Cooperation Administration	4,754,000,000
Other appropriations for foreign or international objectives by Eightieth Congress	300,000,000
Total	25,495,052,923

With the passage of the Marshall plan by the Eightieth Congress, we have obligated ourselves to spend what may amount to more than $17,000,000,000 which no doubt will be only a starter in bailing out Europe from its financial mess.

When you add together all of these sums for foreign aid you have the almost unbelievable total of over $90,000,000,000 being sent abroad to help foreign nations.

In other words, since this Nation was founded in 1776 until 1933—a period of 157 years—we spent, in conducting the affairs of Government, less than $90,000,000,000. Yet, in 7 years we have sent abroad over $90,000,000,000, which should not be such a bad record in the eyes of foreigners for a nation that has been called repeatedly a "race of Shylocks."

Let us recognize the fact that all groups in America have received some recognition with respect to the increased cost of living. Virtually all employees in Government and industry have received wage increases. Yet, little attention has been given to the plight of our elderly citizens receiving old-age assistance and no attention has been given to those who earned retirement benefits under the Social Security Act.

For example, in the State of Pennsylvania in 1948 the minimum figures for bare existence of an individual amounted to $20 for food, $4 for clothing, shelter maintenance $25, and incidentals $4, or a total of $54.

The cost of living in Pennsylvania is typical of conditions in the United States. Yet in Pennsylvania in 1948 the average old-age assistance paid was $23.52 per month. At the same time, retired employees under social security received an average monthly benefit of $25 with $13 additional if married or a total of $38 monthly.

In some States many recipients of old-age assistance receive $10 to $15 a month and are told to live on such an allowance. Yet at the same time Great Britain has been paying, by comparison, $33 monthly to each needy person. Our gifts to the British Socialist Government in recent years have averaged $1,500,000,000 annually; and in dispensing money under the European recovery program Great Britain will receive approximately one-third of the money that American taxpayers are contributing to support the so-called Marshall plan. It is a ridiculous situation to realize that American taxpayers are doling out billions of dollars to foreign nations and permitting them to pay to the needy nearly three times the amount we expend for our own elderly citizens.

Even though we approved legislation to enable States to increase old-age assistance $5 monthly, is there anyone in the United States that when he reaches age 65 can be expected to live on $12.75 monthly, $25 monthly, or $38 if married? The answer is so apparent that it is an insult to question one's intelligence to even ask such a ridiculous question. Yet that is exactly what we have been asking the elderly citizens to do the past several years.

I feel it is needless for me to continue to describe the plight of the elderly citizens of this Nation.

You have listened to the testimony of Mr. Russell Saville, of the American Pension Plan, Inc., and to Dr. Francis Townsend and his son, Robert Townsend, who explained the merits of the Townsend plan. Other pension leaders have added their voice in pleading that something be done for our aged and without further delay.

Members of Congress like myself have introduced legislation for the American pension plan and for the Townsend plan. We are serving as members of the congressional steering committee for both groups. We are giving our time and devoting our efforts toward securing some relief for our elderly citizens.

Before coming to Washington for this session of Congress I talked with honest, God-fearing Americans whom I know personally and in whose homes I have visited. I learned of their poverty and the fact that the very roof over their heads is mortgaged to the State in return for the paltry sum they receive in the form of old-age assistance.

Mr. Chairman, there are many Members of Congress who share my belief that something must be done to relieve the want and suffering of our aged.

At this very moment Congress is showing great effort to hurry through the Senate and House an appropriation of nearly $6,000,000,000 for the relief of the people of Europe. Petitions are in circulation asking relief for the people of China. As I said previously, this week we approved an appropriation of $16,000,000 for destitute Arabs and Jews.

Why not apply the same concern and attention to the plight of our own American citizens?

All I ask is action by this committee in getting to the floor of the House a bill that will bring relief to our own American people who are victims of neglect by their Government.

Give Man a Chance To Grow as God Intended and Not Seek To Make Him Economy Model

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following column which appeared in the Brooklyn Eagle of March 17, 1949:

(By Robert M. Grannis)

The average man comes into this world with only the standard equipment. There are never any de luxe models with fog lights, heaters, and radios. Thanks to modern medical science his life expectancy is pretty high and our educational system puts the right words in his mouth and urges his brain to maximum effort. What he does with the balance of his life as long as he doesn't murder his mother-in-law or get caught with his hand in the boss' till should be his own business.

Give him a copy of the Bible and an admonition to read it whenever he gets a chance and give him some incentive for working his fool head off and chances are he will turn out to be a pretty good Joe. And maybe he'll end up as a de luxe model and other folks will look at him and murmur, that's for me.

But there is a catch. We are so darned enlightened that we—that is the professional perfectionists among us—are forever sticking poor homo sapiens under a glass and telling him what a bum he is. After a while he begins to believe it himself and lives accordingly. Modern technology is determined to eliminate the human element in everything and professional do-gooders are equally determined to make every citizen eligible for a mail order halo. And the politicians! With certain few exceptions they are a race of skywriters in mad pursuit of a Utopian state where the individual can live by merely sticking his hand out the window like a dispatch hook alongside a railroad track. A complete lifetime with all the basic necessities is put in a bag with every one's name on it.

Life in the future at our present rate of progress threatens to become a pain in the neck for anyone over the grade of a moron. If I ever live to see the day when this grand and dizzy country of ours becomes perfect I'm going to get me a sleeping pill and curl up somewhere until the pendulum swings back to sanity.

I'm all for improving the lot of the human race but I resent the idea there are supermen who know all the answers and can wind up the job overnight. The imperfections are what make life interesting and what make one man different from another man. You can dream all you want but the day always comes when your pet dog bites you, your neighbor calls you a nasty name or your favorite newspaper prints your picture upside down or spells your name wrong. But none of these incidents mean that dogs, neighbors or newspapers need immediate or complete reformation.

Take me and rabbits for instance. The other day I started making out an order for seeds. After all, Spring is next week. And like the actors in Harvey, I had an uneasy feeling all the rabbits on Long Island were peering over my shoulder. They couldn't wait for the tender shoots to show. Well, every year I strengthen the fence around my garden and say, there now, no rabbit is gonna get through that. But a few do. Yet I can't feel too mad because the critters have to live and I get my share. I hope I never build the rabbit-proof fence, because some of the fun and the hazards of gardening would be taken away and I'd hate to think the average American rabbit was just a dumb bunny.

Anyway let's take it slow and easy and give a man a chance to live and grow as God intended he should and not seek to make him an economy size model—one just like another all in neat rows, all with labels and all without sin, without hope and without the joy of being different when the spirit moves him. I have a hunch St. Peter hands out halos on a percentage basis and when a perfect man steps up he probably says, "Go away, you never really lived."

Veterans' Legislation

REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, it is my understanding that on tomorrow the veterans' pension bill

will be called up for consideration in the House. It is no secret that I am opposed to this particular piece of legislation. My opposition, however, does not stem from any belief that pensions and compensations now paid to veterans and their dependents are just and equitable. I believe there is ample room for correction of certain inequities that now exist. However, Mr. Speaker, the bill to be considered tomorrow should be returned to the Committee on Veterans' Affairs for further study, and I hope that is done.

I have today introduced a resolution directing the Committee on Veterans' Affairs to conduct a full and complete investigation and study of existing programs providing monetary benefits in the form of compensation or pensions to the veterans of World Wars I and II.

That resolution reads as follows:

Resolution to authorize and direct the Committee on Veterans' Affairs to investigate and study the Federal compensation and pension system for the veterans of World Wars I and II

Resolved, That the Committee on Veterans' Affairs, acting as a whole or by subcommittee, is authorized and directed to conduct a full and complete investigation and study of existing programs providing monetary benefits in the form of compensation or pension to the veterans of World Wars I and II with the view of recommending which, if any, of such programs should be revised or expanded and of recommending the policies and procedures that should be followed with respect to such program in order to place them on a sound and equitable basis.

That the committee shall fully examine the relationship between existing or proposed compensation and pension programs for veterans and other Federal programs providing monetary or other benefits for veterans or for veterans and other citizens alike, the present and projected cost of present and proposed compensation and pension programs, and the effect of such cost upon the present and future economy of the Nation, keeping in mind the special obligation of the Nation to the welfare of the veterans and their stake in the future economic stability of the country.

That the committee shall solicit the testimony of outstanding citizens from public and private life, Government agencies concerned with veterans' affairs, fiscal policies, economic conditions, and welfare programs, and representatives from veterans, civic, and educational organizations.

The committee shall report to the House (or to the Clerk of the House if the House is not in session) on or after the 10th day of December 1950 the results of its investigation and study, together with such recommendations for legislation as it deems advisable.

For the purpose of carrying out this resolution the committee or subcommittee is authorized to sit and act during the present Congress at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, and documents as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

The Proposed Atomic Nuclear Reactor Plant Should Be Placed in the Vicinity of Fort Peck-Glasgow, Mont., Area

REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. MANSFIELD. Mr. Speaker, since February 18 of this year I have been in touch with the Atomic Energy Commission urging them that they place their proposed nuclear reactor plant in the vicinity of Fort Peck and Glasgow, Mont.

I feel that in view of the natural advantages it would be an ideal site for the Atomic Energy Commission to build and operate the experimental pilot plant that they have in mind. We have the necessary land. We have good weather conditions. We have people who are all out in behalf of this project and will do everything in their power to have it located there. Not only have I seen Mr. Lilienthal personally in behalf of this project for the Glasgow area but I attended a meeting last Tuesday, March 15, at the Atomic Energy Commission Office with Senators Murray and Ecton and Mr. Gerald Skibbins, who is back here representing the Governor of Montana and interested people in the Fort Peck area.

At that conference certain points were brought out; notably, one having to do with the drainage nature of the ground in that vicinity, which was entitled to serious consideration. However, since that time, this situation has been brought to the attention of the people of northern Montana and they are very much in favor of this particular project being built in their locality.

On Saturday last the Governor of the State of Montana, John W. Bonner, arrived in Washington in behalf of this project and had a meeting with Senator MURRAY and me on that date. On that date I also called up the office of Mr. Lilienthal and asked for an appointment at the earliest possible opportunity so that the Governor of Montana could know all the facts and be able to report the full story directly to the people on his return home. This morning I was informed that Mr. Lilienthal will meet with the Governor and me tomorrow at 11:15 and I have asked Senators MURRAY and ECTON and Congressman D'EWART to accompany us to this meeting with Mr. Lilienthal and members of his staff.

It is of great importance that Montana, which has had no new industries in years and is only now getting started in the western part of the State, should be given consideration in this proposal for an atomic-energy plant in the Glasgow-Fort Peck area. Sufficient power can be made available from Fort Peck for the use of this proposed plant and it is my sincere hope that the Atomic Energy Commission will see all these things which are in Montana's favor and give to our State this plant which we want and need so badly.

With the construction of the Hungry Horse Dam and the building of transmission lines in western Montana, we are on the threshold of being able to use that power for our own development. The proposed 230-kilowatts transmission line from Kerr Dam or Hot Springs to Kalispell will be used for the development of Montana resources in that particular area. The proposed transmission line from Hot Springs or Kerr Dam to Anaconda will be used for the development of plants to fabricate our manganese and phosphate deposits in that area which, at the present time, is shipping its raw phosphate to British Columbia for processing. The proposed extension from Kerr Dam or Hot Springs to Spokane will mean that Montana will get more power in return on a steady yearly basis from the Hungry Horse than she would have were Hungry Horse to remain an isolated unit. These transmission lines are necessary for the development of western Montana because if Hungry Horse unit operates only as an isolated project, it will mean that western Montana will have the use of less than one-half of the power potential of Hungry Horse which could be used in western Montana if these transmission lines were not built and made a part of the Bonneville grid system. Because of the different water seasons, the grid could be regulated in such a manner as to make sure that western Montana at all times receives the largest possible amount of power. In other words the building of these transmission lines is necessary if western Montana is to get the maximum low-cost power benefit out of the Hungry Horse Dam.

Mr. Speaker, I intend to do everything in my power to see that the proposed atomic energy plant is located in the Glasgow-Fort Peck area. I know that I speak for the full Montana delegation when I say that they too are wholeheartedly for this project. Montana, and especially the Fort Peck-Glasgow area, is entitled to this consideration in this particular matter.

Mr. Speaker, I have just learned that arrangements have been made to meet with President Truman on this proposed atomic-energy plant tomorrow morning. In view of the fact that the House meets tomorrow at 11 o'clock for a vote on the 70-group air-force bill—H. R. 1473—I will not be present but I do want to record that I am in favor of this bill and support it wholeheartedly.

After the vote on H. R. 1473, the Rankin bill providing pensions for veterans—H. R. 2681—will be brought up. I will try and be present for the debate and vote on this measure but first I will attend the conference with the President, then the conference with Lilienthal in support of an atomic-energy project for northern Montana and then I will return to the House.

Responsibility of the Use of the Ballot

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. BRYSON. Mr. Speaker, at the thirty-ninth annual banquet of the Federation of Citizens Associations of the District of Columbia, held at the Mayflower Hotel on March 9, 1949, our former colleague the Honorable Jennings Randolph, of West Virginia, was the principal speaker. I ask unanimous consent to insert Mr. Randolph's address in the Appendix of the RECORD.

(Excerpts from an address by Jennings Randolph, assistant to the president, Capital Airlines)

We are in danger of losing democracy by default in the United States if we continue to disregard the responsibility of the use of the ballot. There is a shocking shrinkage in the total number of votes cast in this country as indicated by the figures over a period of years.

In 1896 there were approximately 83 out of every 100 eligible voters who went to the polls and cast their preference for either William Jennings Bryan or William McKinley. In that year, 17,000,000 Americans were of voting age. Twenty years later when Woodrow Wilson defeated Charles Evans Hughes for the Presidency, almost 72 percent of the eligible voters exercised their franchise. It is estimated that in 1916, there were 26,000,000 individuals eligible to vote.

In 1936 there were 80,000,000 eligible voters in this country and 57 out of every 100 cast their votes for either Franklin Roosevelt or Alfred Landon. Twelve years later, in the election of last November between President Truman and Governor Dewey, it is believed that only approximately 51 out of every 100 eligible voters went to the polls. There were about 96,000,000 potential voters in the country.

This definite downward trend in voter participation is a clear-cut challenge to citizens, regardless of party. Why do people fail to vote? Thoughtful men and women must determine the answers because a failure to do so may conceivably find our free elections turning into a rule by the minority instead of the majority.

It appears that the American people are not participating to the extent that voters are in England, Canada, Italy, and France. In recent elections in Australia and New Zealand, 95 percent of the eligible voters in those countries expressed themselves. In the 1948 election in Korea, 90 percent of the registered men and women were at the polls.

It is entirely possible that we have too many so-called outside interests in these days which divert Americans from a keener understanding of their responsibility to vote. There are those who also feel that their votes do not count for much and so they say to themselves, one more vote, more or less, is not important among the millions cast. Other individuals declare they are disgusted with politics. Still others say I am confused about the issues so I'll let John Smith and Mary Jones do the voting.

The reasons set forth for their not voting are certainly not valid but they do exist. We must accept them and set to work at once, before it is too late, to remedy an admittedly bad situation. Individually and collectively, Americans must wage an all-out campaign to increase the interest in voting. Although it may sound farfetched, there is the possibility that almost overnight we may lose our democratic rights because of our failure to use the instruments which have been given to us through generations of devoted men and women who practiced, as well as preached, the system of government which we now inherit and enjoy.

It certainly comes with ill grace for us to continually point the finger of carping criticism at certain peoples and nations as being dictatorial and ruled by small cliques. We cannot expect men and women of other countries to embrace our way of life if we fail to embrace it here at home.

In the District of Columbia nonvoters do not contribute to this franchise delinquency because there is no right of the ballot extended to those eligible men and women who cannot establish legally and properly a bona fide residence in one of our States. Tens of thousands of persons born here, now of voting age, should not be denied the right to vote.

The United States must build now the world's greatest air power, not to win a war, but to prevent it. Russia, or no other country, would dare attack America if it were known that we have ready the unequaled air supremacy to be used for offense as well as defense. Communist leadership is seeking widened circles of domination, but the Soviets will stop short of shooting if they realize that we mean to eliminate appeasement and replace it with strength.

The men in the Kremlin have not moved hastily toward a new war, because the United States is making a success of the Berlin airlift. We must avoid any show of weakness.

We cannot take a backward step. If we do, the harassment we suffer today will become something far more terrible. In the event of another war, those modified versions of the B-29 bomber which we know the Russians possess, will drone the 4,000 miles over the roof of the world.

In our present condition, if war came, the front yards of this Nation might become the front lines. Strategically important centers of population and production would be the targets—not for months after fighting started but for the opening hours or days of battle. Air power means not only fighting craft, with emphasis on long-range bombers, but also industrial and commercial aviation.

The concentration of power in nazism and fascism were as nothing, in comparison with the power wielded by the 12 men of the Kremlin, with Stalin at the top. We've heard it said that the masses of people in Russia don't want war. That's true. The masses of all countries are against war—they're tired of blood, poverty and tyranny.

But when those 12 men and Stalin decide on war, the masses will have had nothing to do with the decision. Their wishes and hopes will not be consulted. Communism is not a political party. It is conspiracy. It operates through treason. No negative attitude can stop it. We must present an affirmative program on every front.

We've also heard it said that there'll be a bust-up in Russia. Was there any break-up when Lenin passed on? The power passed to Stalin. And when Stalin dies someone else will take over.

We must remember that there are many more dues-paying Communists outside of Russia than there are inside. Just 30 years ago communism was fighting a last-ditch battle to hold a small bit of ground. Today, 30 years later, the Communists hold power over one-quarter of the earth's population, and they hold dominion over one-fifth of the world's surface.

The job the United States has in front of it is that of helping to eliminate the breeding spots of communism. Communism does not thrive on freedom, plenty, and security. At least 70 percent of the people in the world are in varying stages of poverty.

Our job, collectively and individually, is to see that such conditions are eradicated and our good economic and political freedom understood around the earth.

World war III is preventable in the degree to which our people are realistic and make an all-out frontal attack on the basic causes of war, as we courageously undertake the challenging task of world leadership for peace and mutual respect. The plain people of Russia do not want war, especially with the United States, and if we vigorously use the press and radio and motion picture—and every legitimate means of information and communication—men and women in other lands will ultimately lift the iron curtains themselves, and individual freedom will replace controlled dictatorship.

But we must have the necessary cushion of time in which to do this job—and that can be gained for us with the air power and the complements of land and sea units—plus a top production attainable by the absence of strikes and the clash of one pressure group against another.

America was great enough to possess the leadership for winning two world wars. Now we must work and pray to be given the determination and the goodness to win the peace for the weary peoples of the earth. It is an individual and collective responsibility which all true Americans share—whether native born or naturalized.

In World Wars I and II we had not only manpower and productivity, but also time and distance on our side. If world war III comes, we might have the first two, but the latter two elements would be gone. A pilotless plane flies 5,000 miles in about 20 hours. Germicidal warfare is ready to be used, and atom bombs are 50 times more destructive than when first dropped by this country from planes over Hiroshima. A jet-powered plane streaks across the continent from Washington State to Washington, D. C., in 3 hours and 46 minutes. Giant planes, fueled in flight, fly around the world—23,452 miles, in 94 hours and 1 minute.

This country is far in advance of any other, partly because of unprecedented transportation developments. First it was the waterways, and Federal funds in the amount of more than $5,000,000,000 have been spent in this task. Next came the railroads with the Government giving in outright land grants more than 155,000,000 acres, that the tracks might open up new empires for trade. Highways were the third method, and more than $8,000,000,000 of national money has gone into the effort for the finest road system in the world. Now airways are being fashioned—with airports and planes and personnel doing a magnificent work in civilization's onward and upward flight. Funds spent on transportation are usually returned 100 percent with a dividend in better living as well.

Our growing air transport industry, now possessed of more than 1,000 planes, is a vital segment of strength. Scheduled domestic air lines carried approximately 3,000,000 passengers in 1941. Following the war in 1945, the figure was raised to about 6,000,000. In 1946 it had jumped to 12,000,000, and last year, with the national travel trend by rail and bus being down, the air lines handled slightly less than 13,000,000 individuals. In 1948, it is believed that more than 13,000,000 passengers were carried in the United States, and an over-all world figure of 25,000,000.

A hundred years ago, it took 25 to 30 days to make the trip from the east to the west by boat. Ten years later a combination mail coach and train service was established with

about the same time requirements. In 1861, the first pony express-rail combination was used to cut the time to 12 days. In 1860, the first transcontinental train service was inaugurated with 7-day schedules. The first transcontinental air mail services came in 1921 with flight time of 33 hours. Six years later, the first commercial air travel service was furnished with 35 hours of flight time.

It now requires a motorist 10 days to travel from coast to coast driving 10 hours a day at an average of 45 miles an hour. The fastest transcontinental buses require 5 days, and the best trains 2½ days. The nonstop time for transcontinental air-line flights for scheduled air carriers is 11 hours.

St. Patrick and Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. MULTER. Mr. Speaker, it has often been said in jest that the only difference between the sons of Erin and the sons of Aaron is in the spelling of the names. The following column which appeared in the New York Post on March 17, 1949, further evidences how well people of diverse origin can get along together:

ST. PATRICK AND ISRAEL

(By Frank Kingdon)

Here is a story out of Israel that I have been saving for St. Patrick's Day.

The Republic of Eire knew by experience the difficulties that Israel faced when it began its fight for independence.

It decided to offer what aid it could. Accordingly it notified Israel that it would provide several hundreds of tons of beef. Israel was only to glad to accept. Thus Eire gave beef to Israel.

A problem arose. Not all the people of Israel nor all those who seek admission are strict adherents of the kosher dietary laws. But some are, so any beef provided for general distribution had to be kosher.

Israel told Eire its difficulty. The trouble was quickly overcome when Eire agreed to have a rabbi come to supervise the killing of the beef creatures. A rabbi went to Dublin.

He did the best he could but too much meat was on its way for him to give attention to all of it. The result was that additional rabbis had to go to help him.

Thus there developed quite a colony of rabbis in Dublin.

They were accepted without difficulty. There is no anti-Semitism in Eire. They are not unattractive men. Some colleens have found them positively attractive. There is romance in the air.

The rabbis and the butchers have worked faithfully. The flow of this beef to Israel and to Jewish agencies throughout Europe has been steady.

It has been put to good use.

I have seen refugees boarding ships at Marseille, airplanes at Munich, a ship at Cyprus.

As they board these ships and planes which carry them to Israel each one is given a loaf of bread, a pound of meat, some cigarettes and fruit.

In every case that pound of meat comes from Eire. So every refugee starts for Eretz Israel with a pound of Irish kosher meat under his arm.

Marcella says: St. Patrick proves himself a Christian still.

Hon. Thomas P. Gore

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial tributes to a great Oklahoma statesman who died in Washington this week:

[From Washington Daily News of March 17, 1949]

THERE WAS A MAN

No one who knew Senator Thomas Pryor Gore will ever forget him. He was a remarkable man, great of mind and heart. In a time when there were giants in the United States Senate he towered among them.

Here we are using clichés, something Tom Gore never did. His ready tongue could always deliver new and colorful phrases. He liked to quote Talleyrand: "It's worse than a crime; it's a blunder."

He was a scholar of restless curiosity, a historian who knew the why and when of everything that had been tried before and failed in Babylon or Athens or ancient Rome. He thought America should stay out of World War I and voted against all measures leading up to our entry, well knowing that the voters of his State would defeat him for it, which they did. He did not believe in the New Deal philosophy that the Government owed voters a living, and opposed that after he was returned to the Senate in 1930, knowing that the voters would defeat him again, which they did. And when he was beaten, he said: "The law of evolution is adapt or die, and I didn't adapt."

Totally blind since childhood, he was fortunate enough to have a devoted, helpful wife. With her aid and through his own tireless efforts, he rose above his physical handicap, and he did not believe the Government should feed or pamper anybody. When Senator WAGNER'S social-security law provided aid for the needy blind, Senator Gore observed: "You will find that this legislation will have a very bad effect upon the eyesight of the Nation."

If there is a Valhalla to which brave old Senators go, Tom Gore of Oklahoma sits there today, swapping yarns with John Sharp Williams, Ollie James, Jim Reed, Bill Borah, and old Bob La Follette.

[Editorial from the Washington Post of March 18, 1949]

THOMAS P. GORE

The career of Thomas Pryor Gore, the Oklahoman who became the first blind member of the United States Senate, was an inspiration to the afflicted. In childhood Mr. Gore lost the sight of both eyes in two successive accidents. It was an extraordinary mischance, but, far from embittering the young Gore, it seems to have released a store of grit and ambition which landed him in the front rank of the legal profession and then put him in the Senate. Nor did his success seem the result of conscious compensation. If there were any compensation for the hard blow that life had dealt him, it came in the woman he married. Their life together was a long and enduring and enriching companionship. Gore had a serene disposition, a disposition that may indeed have been sweetened by his adversity. Nevertheless he had his own brand of ruggedness, expressed in his isolationist and free-enterprise convictions. If, as Mr. Churchill has said, a man ought to be judged by his sincerity, Mr. Gore passed the test with honors. He never let the sweets of preferment influence either his judgment in the Senate or his appeal to the electorate. He was rejected by the people because he refused to allow himself to be swept along by the New Deal tide. Mr. Gore remained philosophical as he went back to his law practice. He was one of the best-read men in the Senate, an accomplished orator who had a Taftian knowledge of the facts about any matter on which he spoke, and he had a handsome presence. It is a question for the psychologists whether he would have attained his laurels without the spur of his disabilities.

Thoughts on the One Hundredth Birthday

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. MURDOCK. Mr. Speaker, there are few and perhaps no comparable areas that has as many scenic attractions set apart as national parks and monuments as has northern Arizona. The people of Arizona are duly appreciative of that fact and invite the rest of the world to come and enjoy these great natural features and along with them the man-made evidence of prehistoric past. All this is indicated by editorials in the Arizona Daily Sun of Flagstaff, Ariz., early this month on the occasion of the one hundredth birthday of the Interior Department.

While the editorial criticizes the Government in certain respects, it has high praise for the Park Service and regards that great Service as having done an outstanding piece of work, although it is often regarded as a stepchild in the great Department of Interior. A part of the editorial pertaining to the National Park Service is as follows:

INTERIOR DEPARTMENT HAS A BIRTHDAY

This stepchild of government has done an outstanding job in the face of a chronic lack of funds.

Employees are poorly paid (in comparison with the pay for highly skilled work in other fields) but for some unaccountable reason those same workers have probably the highest service morale to be found in any governmental organization with the possible exception of the Marine Corps.

Perhaps this is because people who work for the National Park Service are not there for the money (!) but because they love their jobs and choose to work at what they like in spite of the lousy pay scale.

Few areas in the Nation benefit from the activities of the Park Service to as great an extent as does northern Arizona, with its many monuments and parks.

We wonder how many of our residents, including those whose income may be traced directly to the tourist business, realize the value of the Park Service in maintaining and protecting these wonderful attractions.

Frankly, if the areas were not protected, it goes without saying that they would long since have been destroyed with the exception, probably, of the Grand Canyon, which is a little too big to be messed up even by those strange people who go about tearing up, marking up, initialing, and otherwise spoiling public attractions and conveniences.

If the figures were at hand we would discover, we believe, that the money spent in northern Arizona by visitors brought here by our parks and monuments represents the most important single factor in the economic life stream of the area.

And so, on this birthday of the Department of the Interior, we say congratulations to the National Park Service and its loyal, enthusiastic, hard-working employees. And it is our sincere wish that the good Lord and a more benign Congress will look with kindlier eyes on the National Park Service in the years ahead!

Gov. G. Mennen Williams, of Michigan, Supports Veterans' Hospital Construction Program

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to submit the testimony of Hon. G. Mennen Williams, Governor of the State of Michigan, relative to proposed curtailment of the veterans' hospital construction program that was presented on March 18, 1949, to a special subcommittee, composed of Senator PEPPER, chairman, Senators HUMPHREY and MORSE, of the Senate Committee on Labor and Public Welfare:

Gentlemen, the recent action of the Veterans' Administration canceling a portion of its proposed construction program deleted two hospitals planned to serve Michigan veterans—one a 200-bed general medical and surgical unit at Grand Rapids and the other a 500-bed tuberculosis sanatorium at Detroit. Announcement of this decision led me to investigate the adequacy of all hospital facilities for veterans in Michigan.

My investigation reveals that Michigan has 1 veterans' hospital bed for every 197 veterans, whereas the national average is 146. On the basis of this information and further information which I am submitting, I am thoroughly convinced that the cancellation of the above two projects would be a distinct injustice to the veterans of Michigan and I urge this subcommittee, as strongly as I can, that every step must be taken to give Michigan veterans justice in this matter.

Michigan's population has grown tremendously in the past decade; the 1948 official estimate shows a total of over 6,000,000 persons of whom approximately 15 percent are veterans. This is well above the national average. The latest estimate of the number of veterans in Michigan is 885,000, of whom 648,000 are veterans of World War II and the remaining 237,000 served in World War I or other wars.

The Veterans' Administration has the following facilities in Michigan for treatment and care of veterans:

1. General Medical and Surgical Hospital, Dearborn, 1,100 beds.
2. Marine Hospital, Detroit, 175 beds.
3. Percy Jones Hospital, Battle Creek, 200 beds.
4. Neuropsychiatric Hospital, Battle Creek, 2,148 beds.

Making a grand total of facilities now in operation, 3,623 beds. In addition, the following facilities are under construction:

General Medical and Surgical Hospital, Iron Mountain (open September 1, 1949), 250 beds.

General Medical and Surgical Hospital, Saginaw (open January 1, 1950), 250 beds.

General Medical and Surgical Hospital, Ann Arbor (open January 1, 1950), 500 beds.

After these hospitals are completed, the total number of beds available under the Veterans' Administration hospital program will be 4,623.

That number will represent 1 bed for every 197 veterans domiciled in Michigan. Every adjacent State has a much larger number of veteran hospital beds available, in relation to population.

After all projects now under construction are completed, the Veterans' Administration reports ratios of beds to veterans as follows: Wisconsin, 1–134; Illinois, 1–135; New York, 1–141; Minnesota, 1–138; Indiana, 1–158; and Ohio, 1–175.

Throughout the Nation there will be one bed for every 146 veterans.

Present facilities, including those under construction, plus the two additional veterans' hospitals requested at Detroit and Grand Rapids, would provide only one veteran hospital bed for every 168 veterans in Michigan. This would still leave Michigan far short of the national average.

Perhaps one reason for the failure of the Veterans' Administration to provide adequate bed space for Michigan voters is the fact that this State is making unusual efforts itself to provide for the welfare of its veterans. At Grand Rapids we have the Michigan Veterans' Facility furnishing domiciliary care and temporary hospitalization for veterans and their wives or widows. It has a rated capacity of 1,050 beds, of which over 850 are currently filled although the newest wing was just recently completed. Less than half the cost of operating this facility is reimbursed from the Federal Treasury.

In addition to services at the Michigan Veterans' Facility, the State provides many other benefits for its veterans. These include a newly-constructed Veterans' Readjustment Center at Ann Arbor providing medical, psychiatric, and vocational assistance to more than 500 veterans per year and the Veterans' Vocational School near Kalamazoo, which is a rehabilitation center serving at least 200 veterans per year. The Michigan Veterans' Benefit Trust Fund also provides funds for emergency hospitalization and other assistance to World War II veterans, administered through local veterans' committees. In addition, the State has 140 veterans of World War II and 147 veterans of earlier wars who are patients in State-supported hospitals for the mentally ill. Because no Veterans' Administration facilities are provided in Michigan for tubercular veterans, our State has had to assume a large portion of the financial responsibility for the care of approximately 600 veterans now hospitalized in State, county, or private sanatoria. I will later discuss this particular phase of the problem in greater detail.

Michigan faces a serious crisis in the matter of providing an adequate number of hospital beds for its citizens—nonveterans as well as veterans. I am firmly resolved to do all in my power to press forward with new hospital construction on every front—hospitals for the tuberculous, for the mentally ill, for the aged and for children, and for the general medical and surgical care needed by our citizens. Especially, I am determined to push ahead with the State's own hospital construction program, including one new mental hospital and additions to another, and the construction of a tuberculosis sanatorium at Houghton on the upper peninsula.

One of the factors contributing to the seriousness of our situation has been the failure of the Veterans' Administration to provide a sufficient number of hospital beds for our veteran population. This failure is apparent in the unfavorable ratio of 1 bed to 197 veterans to which I previously referred.

Existing Federal statutes provide that all veterans having service-connected disabilities are entitled to hospitalization in Veterans' Administration facilities. However, the Veterans' Administration maintains no facilities for the treatment of tuberculosis in Michigan, and as a result there are 150 service-connected cases recognized as such by the Veterans' Administration but hospitalized in State, county, or other sanatoria within the State. There are 200 other cases on which claims for service connection are pending. There are an additional 250 veterans whose claims have been denied and who are in tuberculosis sanatoria in this State. Some of these cases are being appealed, but at the present time the total cost for approximately 400 tubercular veterans is being paid by the State of Michigan. It is to be regretted that many veterans who are residents of Michigan are of necessity being treated in Veterans' Administration facilities in several other States. The nearest VA facilities for tubercular patients are at Dayton, Ohio, or Milwaukee, Wis. The total number hospitalized outside the State is about 450; and when these are added to the 600 who are in nonveteran hospitals in Michigan, it appears that we have a total of 1,050 tubercular Michigan veterans for whom no Veterans' Administration beds are available within the State. This number does not include the many veterans needing tubercular care who have refused hospitalization because it required separation from their families for a long period of time and at a considerable distance from their homes. It is also known that many of those who do go to out of State facilities do not stay for the full time required, but return home before being completely cured.

This situation is particularly significant in southeastern Michigan (including Detroit and Wayne County), which is one of the three areas in the State deficient in facilities for the treatment of tuberculosis. Because of its rapid industrial growth, crowded urban-living conditions, and the shortage of facilities, this area has 50 to 60 percent of the total number of cases in the State and the death rate has been more than twice that of the remainder of the State.

To further substantiate my request that the 500-odd tuberculosis hospital at Detroit be restored to the construction program of the Veterans' Administration, I would like to point out that figures just received from local officials show that at the present time there are 415 tubercular veterans from Wayne County alone who are hospitalized in Michigan, of whom 62 are service-connected cases for which the Veterans' Administration is paying the charges. On the remaining 353, service connection either has not yet been determined or has been denied, and the State is paying all expenses. While no definite records are available, representatives of veterans' organizations and the Michigan Veterans' Benefit Trust Fund have knowledge of a large number of veterans in the Detroit and Wayne County area who are not at present hospitalized for the reasons stated previously.

There are at the present time 2,200 tuberculosis beds operating in Wayne County, with 75 more to be opened immediately. Nevertheless, the area has an urgent waiting list of 125 nonveteran cases. To these should be added many other cases needing hospitalization but not reported. Removal of veterans from existing facilities in the area would make it possible to care more adequately for the nonveteran population. I cannot urge too strongly that full consideration be given to all these factors and that the 500-bed hospital for tubercular veterans be reinstated at this time.

The 200-bed general medical and surgical hospital at Grand Rapids is also a very badly needed facility. For many years, until 1935, there was not a single general medical and surgical hospital bed for the 196,000 veterans then in the State. Michigan was given the

first hospital of this type with the erection of the Dearborn facility, where medical care can now be given to 1,200 veterans. The additional facilities now under construction will serve the eastern Lower Peninsula and the Upper Peninsula. Unless the Grand Rapids hospital is built, no facilities will be provided for approximately 200,000 veterans now living in the 30 counties of Western Michigan. At present, many veterans from this area are sent to Illinois or Wisconsin for needed medical care. This situation is made more acute by the lack of a sufficient number of hospital beds for the general public, as shown in the Michigan hospital plan prepared in accordance with the Federal hospital construction act.

I firmly believe the above facts completely justify the reinstatement of this project.

In conclusion, gentlemen, I wish to assure you that Michigan is only interested in its just needs. As I have pointed out, our ratio of veteran hospital beds to our veteran population is only one bed for 197 veterans under the present schedule, and will be only one bed for 168 veterans if the two canceled hospitals are reinstated in the construction program. On the other hand, the average for the Nation is one bed for each 146 veterans.

Michigan, as a relatively high-income State, contributes a larger than average percentage of total Federal tax revenues. In return all that the people of Michigan ask is that the benefits they receive be proportionately the same as in other States.

Although these figures fully justify our claim to the additional facilities, I would not ask that they be reconsidered unless there were a real need for them in the areas they would serve. I believe that the foregoing information demonstrates the importance of these two projects to the Detroit and Grand Rapids areas.

The need is substantiated; the citizens of Michigan expect the support of the Veterans' Administration in providing for the veterans of Michigan hospital service equal to that given to veterans in other comparable States. I strongly urge reinstatement of these two essential projects.

A Strong Atlantic Pact

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Boston City Council:

Resolved, That the City Council of the City of Boston, in meeting assembled, hereby memorializes and petitions the Congress of the United States to pass, and the President of the United States to approve, a strong Atlantic Pact with teeth in it, taking full advantage of every provision in the Constitution of the United States for the peace and security of the people of our own land, and the peoples of every other land who are now in danger of losing their God-given rights because of the machinations of the Soviet Union; and be it further

Resolved, That the City Council of the City of Boston favors enactment of appropriate legislation which will curb the treasonable activities of the Communist Party and its members, and its sympathizers, in our land, to the extent of outlawing, if necessary, the existence of said party within our shores.

In city council March 7, 1949, adopted.

Pittsburgh Promotes Progress—Plant Expansion Leads in Pittsburgh

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article appearing in the New York Times of March 20, 1949:

PLANT EXPANSIONS LEAD IN PITTSBURGH—BUILDER COMPARES PROGRAM WITH 6½-YEAR BACKLOG TO COST $43,780,000,000

In the record business expansion and civic development under way in Pittsburgh, more than two-thirds of the almost $1,000,000,000 worth of plants and facilities are represented by industrial and commercial construction. For two of the largest individual projects the Turner Construction Co., of New York, has been selected. More than 25 large industrial expansion programs are under way in the greater Pittsburgh area at this time, according to the Pittsburgh Industrial Development Council.

The grand total of improvements newly completed or scheduled for construction in the Pittsburgh area, included in the active list of the PIDC, amounts to $924,521,000. These projects are providing more than $25,000,000 in new office buildings, more than $211,000,000 in civic improvements, more than $36,000,000 in expansion of educational facilities, and $652,221,000 in industrial-plant expansions.

In commenting on the significance of this report, J. P. H. Perry, vice president of the Turner Construction Co., said that a tabulation he had received in February showed the national backlog of proposed construction at $43,780,000,000. Even with construction activity declining slightly, he continued, this backlog represents probably 6½ years of construction at the present annual rate.

He called attention to the fact that in spite of the general belief that industrial building construction has passed its volume peak, industrial building activity recorded the greatest gain of any type of construction in the backlog of 1948 compared to 1947.

TYPES OF BUILDING SHOWN

The Pittsburgh report for the first time shows a cross-section of details of the kinds of industrial construction programs now being pushed. Steel, chemical, food, and automotive manufacturers appeared foremost in volume of construction in the projects in the Pittsburgh area.

In a recapitulation of steel-plant expansions, PIDC cited the following:

Allegheny Ludlum Corp. is carrying out a 5-year expansion program amounting to $31,000,000.

American Cladmetals Corp. has taken over a steel plant in Rosslyn for $500,000 and will produce a new clad metal of copper sandwiched between sheets of stainless steel.

Crucible Steel Co. of America has planned a $30,000,000 expansion program which will include a new hot-strip mill.

Jones & Laughlin Steel Corp. is spending $210,000,000 on improvements, mostly in Pittsburgh areas.

Pittsburgh Steel Co. has spent $10,000,000 on expansion since the war.

Pittsburgh Steel Foundry Corp. bought a Government-owned plant at Glassport for $1,250,000.

United States Steel is reported spending $135,000,000 on construction and equipment, but isn't certain what totals will be spent in Pittsburgh.

Taylor Forge is reported to be establishing a $200,000 plant.

Superior Steel Co. has installed a new 20-inch continuous hot strip mill at Carnegie for high-luster steel.

CHEMICAL EXPANSIONS

In the chemical industries, the following expansions were cited by PIDC:

Consolidation Coal Co. has built a $500,000 pilot plant for the carbonization and gasification of coal.

Koppers Co. bought 129 acres of the 350-acre Government-owned plant at Kabuta and is using its part of the plant and a $2,000,000 addition for the production of plastics chemicals.

Pennsylvania Industrial Chemical Corp. plans to build a million-dollar distillation plant.

Pittsburgh Coke & Chemical Corp. has built a $2,000,000 new unit at its Neville Island plant.

In the food industries, PIDC cited the following plant projects as significant:

H. J. Heinz Co. will begin a $15,000,000 building program of four buildings and extensive improvements in existing buildings.

National Biscuit Co. has a $5,000,000 expansion in East Liberty, to include a new cracker bakery covering 326,000 square feet and complete remodeling of an old building.

Rieck-McJunkin Dairy is planning a new $1,000,000 ice-cream plant.

In utilities, West Penn Power Co. is in the midst of a 5-year expansion program reported by PIDC to involve about $85,000,000. Sanderson & Porter, New York consulting engineers, have been active on parts of this program. Duquesne Light Co. has an $80,000,000 expansion program under way. When completed, this will include two new 81,000-kilowatt generators at the Phillips power station and expanded distributing facilities.

Among automobile plant expansions, leading projects include two new General Motors plants involving an estimated $20,000,000 and to employ about 2,700 employees.

The Cheap Way To Effectively Combat the Devastating Spread of Communism in America

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. GOLDEN. Mr. Speaker, the United States Government is embarking upon a program of spending approximately $17,000,000,000 to assist the European nations on their program of recovery.

One of the principal reasons and purposes that causes this Government to tax its people to furnish the money for such a program is the hope and belief that it will assist European countries in resisting the spread of communism.

In addition to this program, we are now beginning to seriously contemplate furnishing the money to rearm certain European countries and England; and if we embark on this program, several billions of American dollars will be expended in addition to the $17,000,000,000 required over a 5-year period to complete the European recovery plan, ordinarily called the Marshall plan.

I do not wish to discuss in Congress of the United States at the present time the merits or the necessity of either of these programs. What I wish to call to the attention of the Members of Congress, whose obligation it is to preserve the American way of life, and to secure this country from our enemies is this: Without spending a dollar we can place laws on the statute books of this country that will go a long way toward locating, identifying, prosecuting, and convicting the enemies of our country that live among us. The laws which we have at the present time are wholly inadequate to meet the menace of communism here in America. For more than 4 years this country has been a prey to hundreds of thousands of Communists that live in America and who take orders from and owe allegiance to Moscow. While we have learned of some of their traitorous acts, the story will probably never be told fully, as to the great damage that these parasites and termites have done to the American people, and up to this good hour we do not have adequate laws to protect ourselves from them.

The ancient law against treason is so circumscribed and limited as to be inadequate to meet the many crimes that are being committed by people who live in America and who have been awarded citizenship here, in times of peace. The law against treason was primarily to catch national criminals that commit the act of treason and try to overthrow this Government in times of war. For 4 years we have had a war going on. While it is not a shooting war and is referred to as a cold war, yet the devastating effects of the present war may be as bad as if it were a shooting war. If we have no adequate laws in America that will mete out just punishment to the traitors who live among us and apply their trade in peacetime, we cannot protect this Government. The thieves and traitors that have honeycombed our Government, stolen secret plans and military data, not only on the atomic bomb but including much other material that is vital to the very existence of this country, is well known to the American people. If we have a shooting war which we all hope and pray will not occur, the damage that has already been done by these traitors that live among us may cost a million American lives.

We are existing under a set of laws that does not furnish adequate punishment in peacetime for these high crimes. We are confronted by a situation where every State in the Union and the National Government have, through long experience, built up a great wall of protection for our people against ordinary crimes. If the crime of murder is committed anywhere in the United States, adequate laws exist to punish the criminal and deter other potential criminals from committing the same crime. Yet, crimes are being committed among us that may cause the murder of tens of thousands of American citizens and in peacetime we have no adequate law to protect ourselves. Furthermore, some of the laws that we have against espionage and sabotage have statutes of limitation attached to them where the lapse of time constitutes a perfect cloak of protection for the men and women who commit these crimes. If it happens that they commit these crimes and are not discovered within a comparatively short period of time, then after exposure and apprehension they can plead the statute of limitation and go scott free. In addition to our inadequate laws against these high crimes, the Federal Bureau of Investigation and the committees of Congress, in the past 4 years, have discovered that there are more than 100 subversive communistic organizations of people living in America and who go about day after day spreading propaganda by word of mouth and through the mails to corrupt and destroy our people. These traitors who are organized and banded together under many names and titles are under the direct command of Stalin and Moscow. Our Federal Constitution which we all hold sacred gives to these Reds a certain amount of protection but it is my belief that we can place laws on the statute books of the United States within the limits of the Federal Constitution that will identify and expose these organizations so that the American people may know who they are and so that the American people, when they receive letters through the mail with this subtle Red propaganda in them, will know from whom these letters and this mail comes.

These Communists are busy undertaking to stir up strife all over America. They seize upon every opportunity to create class hatred. They sneak in the back door of our great colleges and universities with cunning literature that corrupts the youth and future leaders of America. They stimulate race hatred. They have been smart enough to induce many good American citizens to join their ranks not knowing that buried beneath their polished language, their subtle approach, is the monstrous design of Moscow to destroy America. We ought to protect our mails insofar as the Constitution will permit us under the free-speech clause and when the mails of this Government are used by a band of Communists for this purpose a law could be enacted to require that the envelope or the outside wrapper of this mail coming from a Communist organization have plainly marked on it that it is coming from Communists. This will let the people who get this mail know that even if it reads good, it is coming from the enemies of America.

A law ought to be passed within the bounds of the Federal Constitution making it a felony to use the mails for subversive purposes. We now have statutes which protect the people of America from the use of the mails for fraudulent purposes or for the circulation of obscene literature. Our Pure Food and Drug Act protects the people of America from false and fraudulent advertising. Why can we not protect the people of this country by requiring the Communist organizations and the Communist individuals who use our mails to distribute their subversive literature to plainly identify themselves on the outside of the mail so that our people will no longer be deceived by them?

There is a great field lying open to this Congress where we can place protective laws that will not cost America a cent and that will go a long way toward stopping the various Communist movements in America from making victims of tens of thousands of our people and which will go a long way toward protecting the security of our Government. I think that the Members of this Congress, regardless of politics, should be greatly concerned about improving our body of laws on this subject. Members of Congress who are experienced lawyers should give their combined effort to writing laws that will protect America from the evil that is running rampant and wide open among us.

I sincerely hope that we may, before it is too late, identify these scoundrels for what they are and enact a body of laws that will enable us to apprehend, try, and convict them, for the crimes they are committing every day.

Increase in Price of Central Valley Water

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. WELCH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ruth Finney, the Washington news staff correspondent for the San Francisco News:

CENTRAL VALLEY PROJECT WATER PRICE TREBLING IS FEARED—STAND TAKEN BY CALIFORNIA OFFICIALS IS HIT HARD BY WELCH, STRAUS

(By Ruth Finney)

WASHINGTON, March 9.—The price of Central Valley water will treble, not double, if California officials have their way and prevail upon Congress to forbid the Interior Department to use the power interest component to help pay out Central Valley project. This was disclosed in testimony here before the House Public Lands Committee. Representative RICHARD J. WELCH, after studying the testimony of the California officials, questioned Reclamation Commissioner Michael W. Straus on the effect of amendments they sponsor.

The three officials are Arvin B. Shaw, Jr., an assistant attorney general of California who appeared as spokesman for the Irrigation Districts Association of California; Edward Hyatt, State engineer and executive officer of the Water Projects Authority of California, appearing at the direction of C. H. Purcell, chairman of the authority; and Northcutt Ely, special counsel for the authority, who testified for the Colorado River Board of California.

STATEMENT CITED

At a hearing, called 2 days after these Californians had testified, Representative WELCH read this much of the Hyatt statement:

"The interest component of revenues, including the power revenues, should not be assigned or otherwise applied to repayment of capital or other costs, but should be ac-

counted for and paid as compensation for use of the funds advanced. When costs allocated to irrigation have been assigned for repayment from net power revenues and net revenues from municipal water supply, or miscellaneous purposes, such net revenues should be reasonably apportioned each year so as to apply to the annual payment required for such assignment."

Representative WELCH: "May I ask of Commissioner Straus: If this aid were removed, and irrigators in Central Valley required to pay directly the full amount of the capital investment allocated to irrigation, is it not a fact we would have to pay approximately three times as much for water?"

REFERS TO REPORT

Mr. STRAUS: "I think the answer to that is generally 'Yes,' and I would like to explain the basis. There is before the Congress, and there has been since 1947, the allocations report of the Secretary of the Interior on the CVP, known as House Document 146. That clearly sets out the allocation to power and to irrigation; the amount that will have to be repaid by irrigation, the amount that the irrigators will be expected to pay directly, and the amount that in behalf of irrigation will be repaid by the power revenues in the CVP, and will be repaid by the application of the interest component in the CVP.

"As I recall that document, the amount to be repaid directly by the irrigation on the amortization for irrigation in the CVP is approximately $55,000,000, which is only a small part of the amount that will have to be repaid on the irrigation investment, an additional amount being repaid by the application of the power-interest component.

"The additional amount to be repaid in behalf of irrigation by the application of the power-interest component * * * is approximately $110,000,000. So power is paying through the application of the interest component, in behalf of the irrigators, approximately twice what the irrigators are paying directly.

"ADDITIONAL BURDEN

"If the power component was not to be so applied—if the power-interest component was not so applied, the irrigators would have to carry that additional burden, which would mean that in their repayment of the capital investment allocated to irrigation, they would have to repay directly a total of about three times as much as they do under the present allocation procedure and under the present law."

Representative WELCH: "Mr. Commissioner, is it not a further fact that this is the first time that a high California State official has publicly recommended such an enormous increase to the water user and reclamation farmer in the Central Valley?"

Mr. STRAUS: "I am not personally familiar with any instance in the Central Valley or in any other of the 17 Western States in the course of a good many negotiations where any representatives of irrigators has been desirous of paying a larger amount than required."

Representative WELCH: "The water commissioner, Mr. Hyatt, was addressing himself principally to the great Central Valley. That was the reason I applied my question to the Central Valley."

HOW COULD THEY PAY?

Representative D'EWART: "I would like to know how the irrigators of the Central Valley could pay three times as much under the irrigation law as they are now paying, when they are required right now to pay according to their ability to do so."

Mr. STRAUS: "I do not think they could pay three times as much as they are now paying. That is why the Congress has provided, and the administration has provided, that they be relieved of this burden by the application of the interest components from power revenues. Perhaps they could, but the rate now is, on the CVP at canal side, including the annual O. and M. charge, $3.50. That is not a high charge as compared to some existent charges, but I could not recommend, with respect to the congressional policy of not setting up projects that impose an intolerable or unbearable burden beyond the irrigator's ability to pay, any large increases. The policy of the Bureau of Reclamation, of course, is to figure the costs so as to provide the return that the law requires obtained, but not to operate it on a what-the-traffic-can-bear philosophy."

INFEASIBLE PROJECT

Representative D'EWART: "You are saying that even though this interest component on power investment was not applied on irrigation, that they would not have to pay three times as much, because it would still be based on their ability to pay."

Mr. STRAUS: "I think you would just have an infeasible project. Of course, the other alternative is that you could extend the time a tremendous amount."

Representative D'EWART: "But not under the present law."

Mr. STRAUS: "That is right."

Representative WELCH: "If the aid were removed, is it not a fact that irrigation would either have to pay or go without water?"

Mr. STRAUS: "That would be the end result, because it would be an infeasible project."

The Interior Department based its CVP allocation on an opinion of its Solicitor that the power-interest component could be so used to aid irrigation. That was the start of the present attack on the reclamation law and reclamation officials.

GOP OVERRIDES WELCH

In the Eightieth Congress, the Rockwell bill was introduced to forbid use of the interest component in this way. Representative WELCH didn't let the bill come out of his committee until this was taken from the bill. But on the floor of the House, A. J. Elliott, aided by Republicans Forest Harness and Ben Jensen, and the House Republican leadership, put it back in.

This year's reclamation bill, now before the House Public Lands Committee and drafted jointly by the National Reclamation Association and the Bureau of Reclamation, leaves the Solicitor's opinion and the interest component untouched. Representatives SHEPPARD and PHILLIPS, of California, introduced bills to forbid use of the power-interest component to aid irrigators. Arvin B. Shaw brought before the committee a series of amendments which, if adopted, would make the pending bill resemble the Sheppard and Phillips bills. And Mr. Hyatt and Mr. Ely testified they favored forbidding use of the interest component to aid irrigators.

SHAW IS ALONE

The Public Lands Committee concluded its hearings with a statement from Clifford H. Stone, head of the NRA's legislative committee, that Arvin Shaw is alone, in the committee, an advocate of his amendments.

Mr. Speaker, there is a large number of new Members in the Eighty-first Congress. It might be well at this time to give them an idea of the size of the great Central Valley. The Central Valley is as large as the State of Massachusetts, the State of Connecticut, the State of Rhode Island, and one-half of the State of New Jersey.

It is an empire in itself with two great navigable rivers, one running from the north and one running from the south into the Bay of San Francisco, which is an arm of the Pacific Ocean.

Moses Austin and the Lure of Lead

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Adella Breckenridge Moore:

MOSES AUSTIN AND THE LURE OF LEAD

(By Adella Breckenridge Moore)

Moses Austin was born at Durham, New Haven County, Conn., on October 4, 1765, and died at the home of his daughter, Emily, the wife of James Bryan, who lived on a farm which bordered Hazel Run on the east, in St. Francois County on June 10, 1821. He was the son of Elias and Eunice Austin and was the youngest of 10 children.

His mother died when he was 10 years old and for a period of weeks or months he lived, as also did the two children nearest him in age, in the home of my great-grandfather, Daniel Phelps.

Of those days the story has been handed down in my family that my great-grandmother, Elizabeth Greene Phelps, was forced to take extreme care in making her biscuit with butter instead of lard for the lard used for shortening would nauseate the older brother extremely. It was this Daniel Phelps, who became very dissatisfied to remain in Connecticut after the drowning of his wife and baby daughter, Ruth, for which he blamed himself and followed Moses Austin to Mine-a-Breton in the very early days of the past century.

He had spied out the land and was returning to Connecticut to settle up his business affairs there preparatory to going into business in Mine-a-Breton in 1804. Moses Austin took the opportunity to send his son Stephan F. Austin, then a lad of about 12 years, to Connecticut to be placed in a school of Phelps' choosing, which was Colchester Academy, where he remained 3 years. Daniel Phelps lived to know that Stephan F. Austin was carrying out his father's wishes in Texas.

It is known that Moses Austin spent his early and formative years in Connecticut. A part of it was spent at Middletown, where there was a lead mine which furnished lead to help win the Revolution against the British. In 1783, in Philadelphia, he was a member of a drygoods importing firm and married Maria Brown. In 1784 this firm had expanded enough to send him to Richmond, Va., at the head of a branch firm. It must have been in these years that he visited Europe to buy goods, and while there took some side trips to visit lead mines and inform himself as to the most improved lead machinery of that day. From things read in his printed letters I believe Moses Austin to have been a Mason and it might have been that on some of his trips abroad he was made a Mason in London, where there were strong Masonic lodges in that day.

It seems that it was this drygoods firm in Richmond that acquired the Chiswell lead mine in Wythe County, Va. Here he moved with his family and his brother, Stephan Austin, in 1791, and here his son, Stephan F. Austin, was born. That there were others Austins at the Chiswell mine is proven by the fact that there one James Austin became the first postmaster at Austinville, Va. There were vast supplies of lead there and also zinc. The St. Joseph Lead Co. is known to own shares in a zinc mine there. The James Austin who was the first postmaster there was probably

the first postmaster of Ste. Genevieve and rendered his first account as January 1, 1805. The Ste. Genevieve post office was the second established in upper Louisiana, being established very soon after St. Louis. And this was probably the same James Austin who was one of our first county judges of St. Francois County.

It was while living at Austinville, Wythe County, Va., that Moses Austin was associated with my Breckenridge ancestors. We quote from the Calendar of Virginia State Papers: "One John Bullett had been kept in jail all winter without any fire and broke jail. Mr. Austin, William Breckenridge, and 86 others signed a petition to Gov. Henry Lee for reprieve. Date on margin, October 12, 1793."

By 1796 the lead from Austinville was probably meeting the lead from upper Louisiana in the fast settling up of the present State of Kentucky. This fired the spirit of Moses Austin and he set out in December with a lone companion, Josiah Bell, traveling westward to the mine of Mine-a-Breton. He was sent to the commanding officer at Ste. Genevieve, but before he decided where to locate his grant he, with John Rice Jones, later one of the first supreme court judges of Missouri, left Ste. Genevieve in a buckboard on January 21, 1797. They traveled over a good wagon road and reached Mine-a-Breton on the second day out. We are told that they spent 2 nights and 1 day in investigating the lead situation there. They wanted to have stayed longer but a January thaw was on its way and they hurried back to Ste. Genevieve while the road was frozen.

Again lead was calling M. Austin (many of his letters and other papers were signed M. Austin). As soon as the necessary papers were signed, he set out on his return trip to Austinville. The first part of the Austin grant was consummated in May 1797. In June, Austin relinquished his holdings in Austinville to his brother, Stephan. Then we find the following record: "On the 8th day of June 1798, Moses Austin and family, consisting of Maria, his wife, Stephan F. Austin, his son, and Emily M. B. Austin, his daughter, together with Moses Bates and family and others, whites and blacks to the number of 40 persons, 9 loaded wagons and a coach, and 4 horses, left Austinville and took the road for Morrises Boat Yard on the great Kanhawa, and on the 4th of July entered the Ohio and arrived at Kaskaskia September 8, 1798. Mrs. Bates and Parson Bates paid the debt of nature and Henry Bates unhappily was drowned passing the falls of the Ohio. The first wife of Moses Bates was my (Austin's sister. She died at Middletown, Conn. Parson and Henry Bates were her children as was also Elias Bates who arrived in the Province of Louisiana the spring before. On September 20 Moses Austin and family passed the Mississippi and took residence in the little village of Ste. Genevieve, until 1799 when his family removed to Mine-a-Breton."

At this time the Mine-a-Breton as well as all the district of Ste. Genevieve was a wilderness except the village of Ste. Genevieve, which contained about 120 families, and on the Saline four or five families had commenced a settlement within 8 miles of the village.

Goodspeed's history tells us that the consideration on which the grant was made to Austin was that he should erect a furnace and other works for mining and smelting lead and build a shot tower. Soon he erected a shot tower near the creek, about a mile northwest of now Potosi, and about the same time Elias Bates manufactured sheet lead near. A little later he sunk the first deep shaft in what is known as cap rock with such success that the mining character of this region was firmly established. And Moses Austin became the "father of deep lead mining west of the Mississippi River."

After March 10, 1804, the American flag floated over Louisiana and the President of the United States asked Austin to make a report of the mines in the upper Louisiana territory. This report is found in the American State papers and covers many pages. In describing the Mine-a-Burton (note spelling), he says: "Perhaps no part of the world furnishes lead ore in greater quantity and purity. No country yet known furnishes greater indications of an inexhaustible quantity of lead and so easily obtained. It is also evident that there are valuable discoveries yet to be made. Thus situated, the time cannot be far distant when the country will furnish lead sufficient not only for the consumption of the United States but of all Europe, if moderate encouragement is given by the Government and protection against the Osage Indians, who yearly plunder the inhabitants. The mines on the waters of the St. Francois River are capable of furnishing vast quantities of lead. The Mine-a-la-Mott has been styled the 'gold mine,' as descriptive of its wealth, and if under proper management would verify the observation."

On February 6, 1811, the post office of Mine-a-Burton was established, with Moses Austin as its first postmaster. The Austins were interested in a tower at Herculaneum and were promoters of the town of that day. On October 1, 1811, Charles A. Austin was ready to render his account, as first postmaster, to the Government. But the War of 1812 began to paralyze the business interests of Moses Austin. Instead of the people going into new business as the resources of Louisiana would allow, they were crossing to the east side of the Mississippi for more protection to their families from the Indians. Some of them never returned to Louisiana to live. Business was in a chaotic condition.

On April 20, 1816, Moses Austin and family gave up Durham Hall, Negroes and plantation, together with lead mines and furnaces, to his son, Stephan F. Austin. And then Moses Austin began to describe himself as of St. Louis County, but this was probably because Herculaneum was in St. Louis County until Jefferson County was organized in 1818. His going to Texas and getting permission again from Spanish authorities to make settlement, this time with 300 families, belongs to Texas history. This was another trip of extreme exposure for Austin in the saddle.

Mrs. Austin in her letters to her son, Stephan F. Austin, tells us that on his return from Texas he went first to St. Louis to settle up with the failed bank. This took 6 weeks of worry and uncertainty. Then he came in to Potosi to make arrangements with his creditors there to move to Texas. He was already weak from the hardships of his Texas trip and realized that he must reach the home of his daughter, Emily, at Hazel Run, St. Francois County, as soon as possible.

His first stop was at the home of his friend and follower from New England to Louisiana, Martin Rouggles, who lived on a farm now owned by Martin Montgomery, 2 miles north of Caledonia, on Highway No. 21. They urged him to stay longer and rest up, but on the third day he pushed on and stopped that night with the family of my great grandfather, Squire Robert M. Stevenson, who lived then on the farm now owned by E. C. McMullin near Rest-Awhile-Lake, on the road from Bismarck to Caledonia.

Mrs. Austin does not tell us, but from other sources we learn that the last night before he reached his daughter was spent at the home of Salmon Ruggles, who had built a mill on Flat River near the present town of Flat River.

Just when his wife was expecting him home to Herculaneum, a messenger came to take her to Hazel Run to the bedside of her dying husband. There he died on June 10, 1821, and was buried on Bryan farm. How long did his remains stay a part of St. Francois County soil? Judging from a train of circumstances, we should say about 10 years. It is supposed that Mrs. Austin then came to her daughter's home as her letters from then on are headed Hazel Run.

From the St. Francois County records we learn that Bryan died before August 20, 1823. Then the talk between mother and son on paper is that the entire Austin family should go to Texas and there was talk interchanged on paper as what to do with Moses Austin and there was some thought of taking the remains to Texas. But on January 8, 1824, Maria Austin died and her body was laid beside her husband on the Bryan farm at Hazel Run.

It must have been only a few months later that the rich bachelor of Potosi, James F. Perry, came to Hazel Run a wooing and won the hand of Emily Austin Bryan and took her and her three Bryan sons to Potosi to live. Then Stephan F. Austin wanted the Perry's to come on to Texas, but at first Perry was not favorable to the idea. Then Stephan F. Austin wanted his parents remains removed to some enclosed burying ground and there was nothing of the kind at Potosi, and he mentioned St. Louis. One of the printed letters suggests the proposed epitaph for their graves which closes with the words: "In 1820 he opened the door for the settlement of Texas for North American emigrants. He was distinguished for enterprise, liberality, and an honorable character. She by all of the virtues of an affectionate wife and mother."

Then we find a note to the effect that on June 7, 1831, James F. Perry and family left Potosi for the Province of Texas and arrived at San Felipe de Austin, the capital of Austin's colonies on August 14, 1831. Then Goodspeed's history tells us that in this same year William Milam, the then owner of at least part of the Austin grant, proposed to donate to the citizens of Potosi a lot between Breton and High Streets for a cemetery.

A subscription was at once commenced to raise funds to clear and fence the lot. Only one man signed to give more for the work than James F. Perry. When the remains were first brought to Potosi a rock wall was built around the spot with an inscription on the side and a cherry tree grew up within the enclosure. Then about 1,900 Texans asked for the remains but Potosi refused to let them go.

At the time the rock wall was torn down and a concrete flat topped tomb built standing about 5 feet high. The original inscription was effaced in some way and the only wording on the tomb is Moses Austin—1820. So far as I know those simple words are all there is to show within the State of Missouri that Moses Austin, "The father of deep lead mining west of the Mississippi," lies buried there. After the last attempt to secure the remains of Moses Austin, the State of Texas erected a beautiful five-faced monument to his memory at San Antonio.

MOSES AUSTIN IN TEXAS

How long Moses Austin had a vision of colonizing Texas definitely in mind is hard to determine from the evidence on hand. Stephan F. Austin must have left Missouri Territory for the Red River country in 1817, and Moses Austin about the same time describes himself as of St. Louis County. The next year he describes himself as of Jefferson County, which is explained probably by the fact that Jefferson County was created out of St. Louis County in 1818. Herculaneum was probably as close as he ever lived to St. Louis.

It would seem that the plan was discussed between father and son in 1819 after the signing of the Florida Treaty and the son's farm on Red River in Arkansas was considered as a base of supplies, resting place for emigrants on the long journey to the Spanish country. After the father's death and the entire responsibility rested on the younger man he became convinced that the Red

River farm was too unhealthy and decided in favor of the route through New Orleans or Natchitoches. In 1820, the Austins met at Little Rock. They agreed that the elder Austin should go to the capital of Mexico and apply for permission to establish a colony while the younger should go to New Orleans to prepare for the transportation of families, if the petition was granted. In the same year, Moses Austin requested a friend at Washington to obtain for him a copy of the passport that he carried to Missouri in 1797. It was in November or December, 1820, that he set out from Little Rock for Bexar with a gray horse, a mule, a Negro man, and $50 in cash—a total of $850—for which he was to account to Stephen F. Austin or return them. On November 27 he was at McGuffin's establishment about halfway between Natchitoches and the Sabine River.

Two days before Christmas, 1820, he reached Bexar and was subjected to a searching examination. He answered that he was 53 years old, a Catholic, and a former subject of the King of Spain—as was proved by his passport of 1797, that with his family he wished to settle in Texas and cultivate cotton, sugar, and corn, and that he had brought with him no goods to trade, having only a pistol, two horses, some clothing for personal use, and the necessary traveling funds. There was some additional information to the effect that he was a native of Connecticut and a resident of Missouri, that he was moved by the reestablishment of the liberal constitution in Spain to request permission to settle in the empire, and that he represented 300 families who also desired to carry out the same object and thereby fulfill the King's intention at the time of the sale of Louisiana to allow his subjects to move into any part of his remaining dominions.

It was a cool reception that Governor Martinez gave Moses Austin. Without examining his papers he ordered Austin to leave Bexar instantly and the province as soon as possible. But fate decreed otherwise. At Bexar was Baron D. Bastrop, a former acquaintance of Austin. By chance they met on the plaza.

The baron himself took the Austin credentials to Governor Martinez. A second interview was allowed. After 3 days' deliberation, Martinez agreed to forward Austin's application to the commandant general and recommend its approval. Austin's Spanish citizenship must have turned the trick. So on the chance meeting of a friend hung Moses Austin's greatest claim to fame.

Texas was at the time one of the four eastern interior provinces of New Spain. The commandant general was Joaquin de Arredondo. He had both civil and military jurisdiction over the four provinces. There was a sort of federal council representing the four provinces which advised the granting of the application on January 17, 1821.

Moses Austin, with characteristic Yankee grit, spent no time in waiting to hear the outcome of his petition but pushed back to Missouri to attend to personal business affairs and rally a sufficient number of colonists to make the move. He was again at McGuffins on January 15, and made a note to the effect that the total expense of the trip for himself and his Negro man Richmond had been $25.78.

Being determined to settle in the province himself whether his petition was granted or not as soon as possible, he asked Bastrop to obtain permission for him to land tools and provisions for some 15 hands at the mouth of the Colorado River. He pledged himself to be responsible for the 15 hands and felt that such number of men could protect themselves from the Indians.

For some reason the hardships of his return trip were terrible, for he wrote, "I have returned from San Antonio in the Province of Texas—after undergoing everything but death." The Negro man, Richmond, became so exhausted that he had to be left at the Sabine with Douglas Forsythe. He reached his home on March 23, 1821.

Austin's grant was for 200,000 acres of land on the Colorado River. First he wanted the land surveyed in parcels and had selected 25 men who were to go to Texas at once and begin the work of surveying. These men in exchange for transportation and living expenses until January 1, 1822, were to build a house, enclosure, stockade, and blockhouse, and to fence and cultivate "a piece of untimbered land in corn" and to gather the crop into corn houses. Each man was to furnish his own gun for protection and pledge himself to respect the King and Government of Spain. Austin was to provide farming tools, mules, and oxen, and at the end of his service would give each man 640 acres of land and 5 bushels of corn from the storehouses.

During April and May he worked hard in preparation for the expedition, but his recent exposure and hard work was gradually overtaxing his strength. In his weakened condition he made an effort to reach the home of his daughter Emily Bryan, wife of James Bryan, who lived at Hazel Run, near the present town of Bonne Terre. Night overtook him at the home of Salmon Ruggles who had left Bellevue Valley and built a mill on Flat River near the present town of Flat River. His nights on earth were numbered. When he reached the home of his daughter, young Dr. John Bernhisel was called. He was said have been in medical thought and practice, a follower of Dr. Physic, of the University of Pennsylvania. According to rule he duly blistered and copiously bled but relief was only temporary. On June 10 he died, and his wife wrote thus to her older son, Stephen F. Austin: "He called me to his bedside and with much distress and difficulty of speech, begged me to tell you to take his place and if God in his wisdom thought best to disappoint him in the accomplishment of his wishes and plans formed for the benefit of his family, he prayed him to extend his goodness to you and enable you to go on with the business in the same way he would have done." So Moses Austin could plan as well as wait and work.

Dr. Eugene C. Barker, professor of American history at the University of Texas at Austin and who is conceded to be the best authority on Texas history living or dead and from whose writings much of this information has been compiled says: "Moses Austin was enterprising, industrious, and of indomitable energy, but it is doubtful whether he could have accomplished the task to which he set his hand. It required deliberateness, patience, tact, ability to make allowances, diplomacy of a high order. He was as we have seen, impetuous, irascible, belligerent, even litigious in defense of his rights—all of which would, on the one hand, have kept him in a state of perpetual warfare with the frontiersmen of similar qualities who formed the colony, and on the other hand have rendered him entirely unfit to pilot the settlement successfully through the labyrinth of Mexican suspicion and jealousy." See Readings in Texas History edited by Eugene C. Barker, page 63.

However, Moses Austin could pray.

THE LAST DAYS OF MOSES AUSTIN

Maria Austin to Stephen F. Austin

HERCULANEUM, August 25, 1821.—This day's mail brought my dear son's welcome letters of the 13th and 14th of July, which afforded me much real satisfaction. I had received one from you dated the 7th ult, but as you had not heard of your dear father's death I postponed answering it until I heard from you again. Yes, my dear Stephen, this unexpected stroke of Divine Providence must have afflicted your affectionate heart most sensibly. Even at this time, when more than 2 months has passed away in sadness and sorrow, I can hardly realize the reality of the melancholy event, to have him taken from us at a time when his prospects appeared so flattering and his expectations of future happiness and prosperity raised to the highest pitch. Oh, what a lesson for those he has left behind to struggle a few years longer in this vale of tears. My dear Stephen wishes to know the particulars of his father's death. I wrote you soon after it took place and sent the letter by Mr. Bruffey to Orleans, what he did with the letter I have not learned, but at least they never reached you. I will again give you a short detail. Your dear parent was in very bad health when he returned in March and was but a shadow of his former self but such was his anxiety to arrange all of his business in this quarter, I could not prevail on him to attend to his health and take those medicines necessary to restore it.

As soon as he was able to ride he went to St. Louis, where he was detained 6 weeks settling with the directors of the bank. This might have been done in 1 had they been disposed to do him justice. At length, one generous and disinterested man, a lawyer, stepped forward and volunteered his services to your persecuted father. He said the sale of the lead mine estate was an illegal one. That he would undertake to recover it and not receive $1 till he had gained it. He stated this to the board of directors which brought them to a compromise and your father, after the greatest perplexity and delay, at length, obtained a full receipt from the directors, exonerating you and J. B. (James Bryan) and bringing the bank $5,000 in his debt. He returned home, spent and exhausted with fatigue but he would take no rest. (He) started in 4 days to Potosi to make a finish of business there. I felt greatly alarmed and did all I could to prevail on him to postpone his journey a few days. You know his determined and perservering disposition. He had fixed the 25th of May for leaving this country and he had not a moment to lose. He lay sick at Dr. McGready's several days, then finished his business and started to Bellevue, laid 2 days to Squire Stevenson's and finally the 7th day after he left the mines arrived at Hazel Run (the home of his daughter, Mrs. James Bryan, who lived near where Bonne Terre was afterward located) so ill he had to be helped off the horse. This was the 2d of June, he appeared, even then, very unwilling to give up. The next day commenced settling his accounts with James Bryan and thought that he would be able to ride to this place in 2 days. All of this time the disease was gaining fast on his system. The day I expected him home an express was sent for me. I took Dr. Bernhisel with me. He is from Philadelphia and came highly recommended. He said his disorder was a violent inflammation of the lungs. He bled and blistered—stayed a day and night and pronounced him out of danger. I watched by his bed day and night, gave him his medicine every hour and for 2 days we all thought him on the mend. My sister and a young man who was to go with him had sat up Thursday night. His fever was higher on that night than it had been. At 4 o'clock I discovered that St. Antony's fire was all over his face and he had great difficulty in breathing. We sent instantly for Dr. B., and I asked him if he did not wish McGready sent for. After considerable exertion to speak, he drew me down to him and said that it was too late; that he was going; that he would not live 24 hours.

Tell dear Stephen that it is his dying father's last request to prosecute the enterprise he had commenced; that he had set his heart too much on it but for some wise purpose, God had prevented his traveling the road he had planned out. He had opened and prepared the way for you and your brothers (brother and brother-in-law) and that he felt a conviction you would be successful and independent in a few years. He begged that

I should soon follow him. He said that he had done all that he could do for his family. He saw his errors when it was too late. It had been the first wish of his heart to make his family happy and independent. He had lost them a fortune and fully expected he would be permitted to make another one for them. The all-wise God had in His infinite wisdom thought proper to call him from the scene of action and he submitted to his will. He continued in his senses and though his sufferings were greater than I ever saw any human being he never murmured or complained, but left this troublesome world with an assurance of never ending felicity in the Kingdom of Heaven where he should sooner or later meet his dear family to part no more.

I can say no more at present. If you receive my other letters together with this hasty communication it will satisfy my dear son that his father died like a man and a Christian.

Farewell, my dearest son, may guardian angels watch and protect you by day and by night and hasten the period that will restore you to the anxious arms of your affectionate mother.

MARIA AUSTIN.

Twelve o'clock at night.

(Addressed: Mr. Stephen F. Austin to the care of Dr. J. Sibley, Natchitoches Mail.)

NOTE.—Maria Austin died January 8, 1824, and never saw Stephen before she died.

NOTE.—It is a tradition that Moses Austin spent the last night before reaching the home of his daughter on Hazel Run at the home of Salmon Ruggles who had left Bellevue some time previous and built a mill near the present town of Flat River. Flat River would be on his way from Bellevue at Squire Stevenson's to Bonne Terre.

A Letter to the President

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter, dated February 11, 1949, addressed to the President by Mr. H. George Constantine, Jr., 210 Fifth Street, Chickasaw, Ala.:

MOBILE, ALA., *February 11, 1949.*

President HARRY S. TRUMAN,
Washington, D. C.

DEAR SIR: It is only after long hesitation can I bring myself to write. Partially because the subject is profoundly delicate. However, for points of shocking realism, I intend to deal bluntly and crudely with them. My deep respect for the high office you successfully hold, makes me feel conspicuously inferior. The thought that I might suggest something of national concern which you had not already deeply considered, has the outward appearance of conceit, or a form of scholastic insubordination. If this be so, sir, or if by any manner, I seem crude or unmannerly in what I write, it is only that I am respectfully submitting my point of view in a suggestive way, to be scanned for what small values may be found therein. But do me the courtesy, sir, though I be bold to ask, of reading this through and weighing what I write, for I think when you have finished, you will view with a graver concern the depth of the racial problem confronting you and me.

For a rough sketch of the writer—I am a machinist by trade, a supervisor of a steamship company by present occupation, and a cattle breeder by hobby. I am not a member of any southern racial block, I am not anti-Negro, anti-Jew, anti-Mexican, or anti-anything else; except, I am opposed to communism or anything that might deride this country in which I was born, or the perpetuation of the race to which I was born. I am white. The responsibility to my country is self-evident. To my foreparents and my God, I am responsible that the race to which I was born will be perpetual in its original form.

In cattle there are many breeds; as in horses, dogs, or any other animals; including human beings. In beef cattle, the Herefords are a distinctive and fine breed. Their white blaze face and low, square, stocky body are a symbol of fine beef. They are a hardy and intelligent breed (if cows can be called intelligent). They can stand the blazing hot sun of a summer desert, and stand the extreme cold and privations of winter. Evidence the fact, this is the breed that has been enduring the blizzards of the Middle West for these many weeks. Crossbreeds would have long since perished. A "piney woods" cow, crossed up and bred with cows of "come what may" would have died the second day. It takes a thoroughbred for stamina—stamina of the kind you exerted in your recent campaign—when the experts predicted you had lost.

There are exceptions to the rule, sir, but these are exceptions, not the rule. The winning horses in racing, as well as all horses in a racing stable are thoroughbreds. There is an old saying, but very true, "you can't make a race horse out of a mule." When you cross breeds you are breaking one of the fundamental laws of God. Now these animals know not the laws of God. Man is the only animal supposedly possessed with concepts of spiritual beings and their rules, endowed with a conscience, and a knowledge of right from wrong as devised by himself or others. The animal knows not of the man-made and God-made rules. He acts solely on the laws of nature, his inborn instincts, the traits of character he inherits, and the qualities controlling his hormones inherited from his parents. So would a man, except for his teachings. For most of man's desires are spurred by instinct and held in check by his teachings.

Now the first law of nature, so they say, is self-preservation, I feel this needs no illustrating, but permit me—a thoroughbred race horse would kill himself in running for the gratification of excelling. A mule never would. The thoroughbred, desiring to "out do," might run beyond his designed limits. Feeling the laws of nature demanding of his tiring legs to slow down, this he would ignore and race on and on.

A soldier may be secure in a trench. A law of nature tells him to preserve himself by staying there. Yet his knowledge of the game tells him he should advance into a personal danger for a fine and noble cause; which drives him on against his fears. How fine it is to be able to overcome the many laws of nature. To compel ourselves to do our mind's bidding as designed by man and God.

Most of the Ten Commandments were written to establish a standard whereby we might overcome some of the natural laws of nature and elevate ourselves above other forms of animal life. Were it not for the man-made rules and customs, and those of God, most of the laws of nature would be as compelling in us as in animals. I have a registered double standard polled Hereford bull yearling. I have also a Black Augus heifer. The bull does not know of his pedigree—nor does the heifer (she incidentally has none). He knows nothing of the opinions of society or the rules of man. His desires for the heifer are keyed by a law of nature alone—"reproduction"—second only to "preservation." So strong is this law that he will fight and die because of it, as will all members of his gender—including man. The latter alone can bring himself to subdue his passions and abide by the rules of man, of God, and of society, if he chooses; and then but reluctantly.

A thoroughbred mare will take a jackass to stud and jump a 5-foot fence to get to him when nature calls. The offspring may be a big animal, but a far cry from the mother. But this union is too much for God or for nature, and the offspring can't reproduce. To keep the white face bull from the black heifer, a good strong fence is needed—too high to jump and too strong to break.

Sir, if I seem farfetched, or writing in riddles, please bear with me, as I am leading to very pointed and undeniable facts.

Originally in nature, had not man brought dissimilar animals of the same species together, they would have had a natural fence; such as oceans, mountains, etc., to separate them. Of all the animals of the jungle, to my limited knowledge, none will interbreed unless brought together by man or other conditions, are very compelling. Man being the only exception—the fence constructed of the materials of social opinion, rules of God and of man, is the retainer in his case.

In the history of white man's vast travels his many exploits have cast him together with many races. When the natural law reproduction outweighs those of man-made morals, rules of God, etc., he seems to forget race and color quite as quickly as does my white-face bull.

With absolutely no disrespect intended to the armed forces—for they are to be held in the highest of esteem—what of the soldiers and sailors when in China, Japan, or the South Seas? They are men of this time. But go back a hundred or so years to the mutineers of the *Bounty* who each took themself a native wife.

Several months ago Life magazine published pictures of little half-black babies born to English girls, supposedly fathered by colored American soldiers. This is only the result of a natural function compelled by one of the strongest laws of nature, wherein no barriers or fences existed. Sir, though I be a southerner and I find it difficult to repress a feeling I can't even name in viewing this, I hold no malice, feel no ill will, and only a profound deep feeling of sympathy for the little cross-breeds.

I have heard it reported, some of the white French girls preferred the colored American soldiers to the white soldiers. They had a hotter rhythm for jitterbugging. Be this true or false, I don't know, but I have seen pictures of them together. (My black heifer also lets instinctive pleasure override reason.)

Sir, if you lower the fence of man's rules, opinions of society, and so forth, just one bar, interbreeding will surely result. With fear of reprisals, retaliation or the silly tommyrot of our southern extremist, deeming it cause for social outcast, or lynch codes (the latter of which I do not condone), these and many other things go together to prevent fraternization, intermingling, intermarrying, or anything, however trivial, that may eventually lead to blending the colors.

Over a period of 6 or 8 generations the South for a number of reasons (some of them selfish) has established certain customs designed always to keep the races apart socially. A fence built between them in all things social. Every possible feature to prevent fraternization in any capacity has been carefully guarded. While throughout the rest of the Nation where the colored race has been very small by percentage these things have been completely ignored.

I hold that if the two races are to be retained separate in blood lines, they may work together in harness, but, they must graze in separate pastures, and the fence to be stoutly maintained. Isolation is not necessary, sir, but the removal of zoning restrictions for races and the breaking down of features classed as discrimination, and so forth, is surely paving the road to interbreeding. Herein we are confronted with a technicality, breach of the good American prerogative. To be able to buy, rent, or live in, or go anywhere, as long as we have the means to pay for it; regardless of color.

The race issue is pierced in many places by the privileges of our democratic heritage. The truly democratic way to accept the colored race would be to remove all barriers between the races. Remove those established by society, by public opinion, by the church, by our morals, and our man-made rules. Resort ourselves to fundamental natural laws only and the white race of America would wind up in another six generations like the Panamanians, the Hawaiians, or any of the several Mediterranean countries that cast aside racial barriers. There would be few pure whites and no colored.

Portugal, in the seventeen hundreds, imported slaves, and in 100 years they had completely assimilated the race. And Portugal, the country that gave to the world men like Magellan, has never given another since. The depth of their present illiteracy, stagnation, and degeneracy is appalling. Mayhap this be a just and fitting end for a people, who in their might, had forced man into the bonds of slavery.

Of course, sir, in another generation you and I will be gone, so to us the realistic effects are ineffectual. I to be forgotten that I had feebly attempted the retention of the breed. You, sir, to be honorably remembered for all posterity—to go down in history as a supreme executive of our great and glorious nation. The serving of an unexpired term of a former massive politico left few spots wherein to excel, but now, sir, you have a term of your own—gallantly fought for, almost alone, against great odds; and a chance to carve history. You have the full power of the Congress, the good will and best wishes of the masses, including myself. There is, sir, now a chance for you to make a mark in history. It is a chance to perform the second step to right a great wrong which was brought on a race of people by my forefathers. Mr. Lincoln freed the darkey's body from slavery; by law and war, but his untimely end prevented his engineering the abolition of discrimination. For the removal of the mass inferiorism, to oversee the long painstaking task of uplifting the colored race and other minority groups, socially, culturally, and economically. This is a far greater task than that accomplished by Mr. Lincoln. It should be done, and can be done by you. Sir, your's is now the chance to be a second Lincoln. But if you please, sir, without wrecking the fences that preserves the black and white races in their original pure strains.

I regret very much to see the progressive State of California repeal the act of legislation prohibiting interracial marriages. If my little white-face bull wants the little black heifer, let him have her (they think). It's his constitutional right. But what of the rights of the unborn?

Little more than a hundred years have passed, four to six generations, since the blacks were led down the gangways of slave ships, their shackles cut loose and led to the tobacco and cotton fields. What culture did the savage blacks bring with them? What beyond their natural instincts; a knowledge of mumbo jumbo and a gift for rhythm? What of their economic status in the lands from whence they came? Did they bring a knowledge of how to build an arch bridge, or to fit stones in a building? What of their dress or customs? A substantial number of the tribes they came from in Africa have not to this day learned to domesticate animals or to till their soil. They have not adapted or learned the use of the simplest conveyance—the wagon—though they have seen those of travelers. Few have evoluted beyond the mud and thatched huts. Few have any ambition, push, or desire to go farther. The only ones that have, have done so under the compulsion or dominance of other races in or around coastal towns, or other upper fringes of their continent bordering on the Mediterranean. Here they have been influenced by whites and others for a few thousand years, but the effects have failed to penetrate into the Dark Continent. Even though their continent fringes the very cradle of civilization, the radiation from same seems to have left their minds as black as their skins. How many thousands of years have passed since the forerunner of the white race on the European Continent was in a similar state of cultural and intellectual metamorphosis in which a black man of the African Continent finds himself today? It may have been 20,000 years since a European was a savage.

For a comparison, sir, examine any of the other of the five human races for their speedy advancement, intelligence, push, or in any way you choose. The yellow race—the Japanese—in the late eighteen hundreds our Commander Perry barged in on their island kingdom with gunboats and they met him in ancient war canoes. He compelled them to participate in world commerce. They were alert, intelligent, though completely lacking in knowledge of his warships. Yet in the short span of time from then until 1941 they had converted their war canoes into battleships, learned the white man's method of waging war, and nearly drove our fleets from the Pacific. In a hundred years they had become a world power.

The red race of the American Continent developed beautiful architecture, cities, pyramids, temples, of the highest of culture and fine civilization throughout what is now Mexico and Central America, Peru, and other countries. The same climatical and geographical conditions prevailed as on the African Continent.

Equally outstanding traits can be named in connection with the brown race, and, of course, civilization of the whites bear testimony of their worth.

So, sir, it seems as though the only intelligent view to take is the rather crude one I started with—as though we are all animals. By cross-breeding you might result in a breed with improved size, a little hardier physically, a different skull structure; but never can you get the desirable features of stamina, intelligence, determination, and all of the features for which straight breeding or thorough breeding is maintained.

The next time you look at a colored man with predominant African features remember you are looking at a man who after 20,000 years of utter stagnation has made tremendous advancement in 150 years. Help him all you can to advance farther. It is a duty to God to help a fellow human to advance himself—but in so doing avoid anything, however trivial, that might lead to fraternization and eventual interbreeding as a means of advancing him. Lowering our blood lines does no good to either breed. It does, in fact, do harm to both.

I like to think of the good old average American as pure red, pure black, pure white, pure brown, or pure yellow; not a mixture of all.

Respectfully,

H. GEO. CONSTANTINE, Jr.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. HUBER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter and copy of resolution passed by Lorain (Ohio) City Council, memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in Congress:

THE CITY OF LORAIN, OHIO,
March 11, 1949.

HON. WALTER HUBER,
United States Congressman, Fourteenth Ohio District, Washington, D. C.

HONORABLE SIR: Enclosed please find copy of resolution passed by Lorain City Council at its regular meeting.

Your consideration and support is expressly solicited.

Very truly yours,

ANTHONY VAZZANO,
Clerk of Council.

Resolution memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day Resolution now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in the United States of American: Now, therefore, be it

Resolved by the Common Council of the City of Lorain and State of Ohio:

SECTION 1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

SEC. 2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States,

the Vice President of the United States, and each of the United States Senators and Representatives from Ohio.

CERTIFICATION

I, Anthony Vazzano, clerk of of Lorain City Council, hereby certify that the above resolution was passed by Lorain City Council at the regular meeting held February 7, 1949.

ANTHONY VAZZANO,
Clerk of Council.

Capitol Watchtower

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Tom L. Munger:

CAPITOL WATCHTOWER

(By Tom L. Munger)

WASHINGTON—It was told here previously how by limiting acreage allotments under the farm price-support program the Democratic administration will put an end to exceptionally high farm incomes, even while it is increasing price-support payments to a flat 90 percent of parity. This is a direct though partially concealed repudiation of President Truman's campaign promises to farmers.

Now it will be shown how by the same means the Democratic administration is proceeding indirectly to repudiate the President's campaign promises to organized labor. Indirectly, it is true, but just as effectively as if done right out in the open.

President Truman promised farmers high prices for things they sell and low prices for things they buy. At the same time he promised organized labor high wages and low living costs, in which food prices are the dominating factor. All basic foods are products of the soil. Thus, the insuperable inconsistency of the President's campaign to rope in the votes of special-interest groups stands revealed.

Manifestly high farm prices tend to create high living costs for industrial wage earners, while low prices for things farmers buy necessitate low industrial wages. By the same reasoning, low living costs necessitate low farm prices, while high industrial wages tend to create high prices for things farmers buy. None but a politically inspired government economist would attempt to deny these statements. Here is their significance in respect to the President's campaign promises to organized labor.

It has been intimated here that farmers will get larger price-support payments on crops raised under the price-support program, but payments will be on harvests from drastically reduced acreages. This because of the administration measure enacted by the present Democratic Congress prohibiting use of 1949 plantings of basic crops in determining future acreage allotments. Farm incomes generally will go down.

Several things may be expected to happen as a result of this cut in farm production and hence in net farm income. And here is where repudiation of President Truman's campaign promises to organized labor comes in.

Farmers will have less money with which to buy output of industrial plants. This in some degree will reduce demand for industrial labor; fewer jobs, in other words, and fewer hours of work for those employed. Less income for industrial workers.

Smaller industrial output will tend to increase costs and hence prices of things farmers buy. Industrial stockholders will suffer because consumer resistance to high prices will narrow profit margins and hence reduce dividends.

The cut in farm production will be reflected in lesser available supplies of food in retail stores, causing excessive price markups. With respect to agricultural production and resultant food supply for industrial and other city populations, the country will tend to operate again under an economy of scarcity instead of an economy of plenty.

These things add up to a situation wherein everybody loses. Reduced farm income will adversely affect incomes of industrial wage earners, industrial stockholders and, of course, small-business men and white-collar workers, who always are caught in the middle by Government tampering with any segment of the national economy.

Nobody in the cities, and especially people in the labor category, will have quite so much money with which to buy the food products of the soil. But at the same time, larger price-support payments on reduced farm production will maintain food prices at high levels. This in spite of the fact farmers will have less money wherewith to buy industrial output. A vicious circle, indeed.

The only alternative to this situation, as it appears to be shaping up, would be one wherein farmers planted extensive acreages outside of the farm-price-support program. As good Americans, and as men who prefer to make one additional dollar instead of two rather than no additional dollar at all, many of them will do this. But the over-all situation is likely to remain unchanged. Less money and higher prices for everybody.

There are those who insist that food exports by the Economic Cooperation Administration and world food shortages in general will take care of everything. But crop production is increasing in nearly all countries abroad, and those countries will lack dollars wherewith to buy extensively in the United States after the ECA shipments cease 2 or 3 years hence.

The failure to negotiate a satisfactory international wheat agreement is proof enough of unrealistic farm prices in the United States with respect to the world market for products of the soil. That is, unless American taxpayers, like the woman in the adage, continue to pay and pay and pay.

In conclusion, it should be pointed out that the present Hope-Aiken Act, passed by the Republican Eightieth Congress and signed by the President, and which the Chief Executive promised to have repealed, is the best answer thus far conceived to the farm price problem.

Its sliding scale price support payment system is apparently the nearest possible approach to an application of free marketing to controlled farm production. The more the farmer produces, the less he gets in proportion to parity, but he is free to produce at the peak of his ability. He gets less for more, instead of more for less, but in the end he is better off.

An economy of plenty makes available more food for everybody. Prices tend downward, but farm incomes stay up in proportion to the cost of living for those willing to do their share for the common good. Henry Ford got rich, it should be remarked, by cutting unit profits and increasing production. Nearly everybody got an automobile, too, at a price he could afford to pay.

All that has been said, of course, is merely a restatement in many words of the oft-repeated fact that farm prosperity means national prosperity, and vice versa. But saying it here serves to reveal the almost certain result of the frantic efforts by the Democratic administration and majority in Congress to fool both farmers and organized labor into believing that campaign promises are being kept.

Address by the Honorable Louis Le Baron, Associate Justice of the Supreme Court of Hawaii

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. DOYLE. Mr. Speaker, I am pleased to call to your attention the following address of a most distinguished jurist on a memorable occasion at Honolulu. His appropriate words formed part of a Nation-wide observation of memory of one of our national inspirations:

(Address by the Honorable Louis Le Baron, associate justice of the Supreme Court of Hawaii, to the Democratic Party of Hawaii at its Jackson Day dinner on February 24, 1949, in Honolulu, T. H.)

For the past 20 years since the founding of the Jackson Club, it has been my ambition to address the Democratic Party of Hawaii in memory of Andrew Jackson. This ambition was nurtured on family history. My great-grandfather, William Taylor Barry, was a lifelong friend of Andrew Jackson, and as a tribute to that friendship named his firstborn son Andrew Jackson Barry, who grew up to become my grandfather. My great-grandfather had been chief justice of the Supreme Court of Kentucky. He was Kentucky's secretary of state. He delivered his State to Jackson in the Presidential campaign of 1828, and served in Jackson's Cabinet. In my home today is a pair of silver sugar tongs made from various coins which Andrew Jackson had from time to time tossed to his little namesake, Andrew Jackson Barry, on his many visits to the boy's home in Kentucky. The molding of those tongs is symbolic of my family's continued admiration of the sterling qualities of its beloved Old Hickory.

There could not be a more fitting time to do public honor to the memory of Andrew Jackson, coming as it does so soon after the great victory of 1948, when Harry S. Truman was first elected President of the United States. That victory has but one parallel in American history. It is the victory of 1828, when Andrew Jackson was first elected President of the United States. During the campaign of 1828 every newspaper, college professor, banker, and other intelligent person in the know predicted that Adams would be elected to the Presidency—as their prototypes a hundred and twenty years later predicted that Dewey would. The parallel, however, does not stop there. Both victories were victories of the people themselves over those who feared and distrusted them. In short, both were victories of the Democratic Party which, both nationally and locally, has steadfastly held to the Jeffersonian principle that "nothing is unchangeable but the inherent and inalienable rights of man" and consistently believed that it should identify itself with the people. have confidence in

them, cherish and consider them the most honest and safe, although perhaps not the most wise, depository of the public interests.

Jackson, like Truman, believed this fervently. During the short 8 years of his Presidency, Jackson put that principle and belief into practice. He threw down the bars that hedged the people from effective participation in the conduct of their own Government. He destroyed the sinister alliance between politics and finance that was swiftly reducing the people to economic serfdom. He became a veritable sword against disunion and shattered the nullification movement, which had brought the people to the brink of civil war, thereby postponing for some thirty-odd years the day when a half-million Americans had to die to preserve the Union. In his proclamation against the acts of nullification taken by his former home State, Jackson declared that "armed disunion is treason," and that powerful stand pointed the way to Abraham Lincoln when he subsequently entered upon his task of holding the United States together.

Jackson is one of the finest symbols of a free man who ever lived in a free climate and moved in a free society. No other land than America could have produced him. His parents were immigrants—his father a linen draper from Belfast, Ireland, who died a few months before his son Andrew was born on the western frontier of North Carolina. Shortly thereafter Andrew Jackson's widowed mother took her three small children to South Carolina where she reared and supported them by working as a housekeeper in the home of relatives. Young Andrew faced a rugged world and fought for every advantage from the time of birth to the day of his death. His was a roaring career—resounding to the roars of cheering multitudes, of musketry, of artillery. He was a great duelist, a great soldier, and a great statesman. He was fiery, quixotic, honest, and loyal, but withal a man who had a code and lived up to it. But he did not cringe; he did not fawn; he did not carry water on both shoulders. When he lost—and he lost heavily and frequently—he paid without whimpering. He loved a woman and lost her and, of all his innumerable wounds, that hurt the worst and longest. Even a superficial examination of the record of his life reveals that few men who have figured largely in public affairs have exhibited more conspicuously the traits common to all humanity.

Thomas Jefferson envisioned that a free society of freemen would be the strongest government on earth—an example toward which the whole future of man would gravitate, but Andrew Jackson demonstrated that that experiment worked. When Jefferson acquired the great Louisiana Territory and increased the domain of the United States by 140 percent, there were many who wailed in despair. They said that our country would be too big for Union, too sordid for patriotism, too democratic for liberty, and that the weight and importance of the Eastern States would be destroyed. They merely voiced the old fear and distrust of the people on the theory that the greater their number the greater the danger. They particularly feared the rough and tough denizens of the western plains, the descendants of whom easterners in later years contemptuously dubbed "the sons of wild jackasses." The momentum of Jefferson's empire of liberty, however, was too great to be so contained and fenced within the original States. In step with the Nation's destiny of world leadership, Jackson at the Battle of New Orleans repelled foreign invasion and in the White House proved to the world that democracy was a growing and vital force. Since then new stars out of the West have been added to the flag and the empire of liberty has rolled across and beyond a vast continent. Hawaii is a part of that empire and today stands at the threshold of statehood awaiting its opportunity to assume the responsibility of a State as a sister to the other 48 States of the Union. The empire of liberty is thus acquiring its full stature and its fruits are strengthening democratic nations everywhere. Jefferson's dream has become a reality and the burdened and oppressed throughout the world know that America's free society of freemen holds the answer to their problems. We must keep faith. We cannot falter.

So long as truth prevails over falsehood, the foundation of this Nation will be secure. The potency of America's faith rests on the proposition that its people shall know the truth and the truth shall make them free. The strength of America lies in the righteousness of its people and an enlightened public opinion expressed in free elections and by secret ballot. Keep the ideals of Jefferson and Jackson alive and democracy will always flourish like the green bay tree, to which no subversive parasite can attach.

What American would trade his glorious heritage for a system where the sons of darkness can torture men of God and enslave the workingman? What American would give comfort to an agent of a malevolent foreign power who insidiously attempts to destroy our people as a nation, whether that agent acts wittingly or unwittingly? No real American would do so knowingly, no matter what glittering promises are held out to him. Truth alone swings wide the door to freedom, which is nothing more than truth in action. It has been said, and truly, that while it is possible to send a message around the world in a fraction of a second, it requires generations to drive an idea through a quarter of an inch of human skull. Thank God that the idea of a free society of freemen has penetrated the present-day American skull and that there can be no iron curtain in this land. But every American has the personal concern not to be deceived where the public order is at stake and to be distrustful of those of doubtful loyalty and of those who dare not deny allegiance to a God-hating ideology of an alien government. Every American has the solemn obligation to welcome the truth and help hold its torch high so that the vile things which thrive in the darkness may be clearly seen for what they are. The satisfaction of this reasonable service is all that is necessary, and that is the American way.

The victory of 1948 being comparable to that of 1828, let us pray that its gains may be preserved—that Almighty God guide and strengthen His servant—Harry S. Truman—against the Nation's enemies, both foreign and domestic—as He guided and strengthened His servant—Andrew Jackson.

In revering the memory of Andrew Jackson, we do not purport to live in the past, but are dedicating our lives to the living principles which make our Nation the greatest on earth, and by which that Nation may solve the problems of the present and prepare for the future. The immigrant linen draper's son touched the height of human glory by never attempting to win freedom by appeasement, but fought for it with fearless and unswerving loyalty—giving no quartre and asking for none. This Nation through a revitalized Democratic Party must do likewise.

"For no man escapes
When freedom fails,
The best of men rot
In filthy jails;
And they who cried:
'Appease, appease,'
Are hanged by men
They tried to please."

The Marine Corps

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks, I include an article entitled "Michigan Men Fight To Save Marine Corps," from the Michigan Veteran Review of February 12, 1949, the official publication of the Michigan Consolidated War Veterans' Councils.

This article is significant for some very important reasons: It pointedly demonstrates the intense interest and alarm with which veterans view efforts to humiliate and destroy the Marine Corps. I can assure the Members of this House that disclosures made in the recent article in the Saturday Evening Post by Richard Tregaskis, and referred to in this story from the Michigan Veteran Review, have been cause for grave apprehension by American citizens, and particularly our veterans. They do not look favorably upon the activities being conducted against the leathernecks, and they will not permit opponents to wield a pruning knife on the Marine Corps.

This article is also of significance because it tells of the important role played by Mr. Merle E. Hopper in the battle to save the corps from the destruction planned for it by the Army and Air Force. Mr. Hopper is a past commander of the Veterans of Foreign Wars of Michigan. He is at present a member of the national legislative committee of the VFW, in which capacity he has continued his lifelong interest both in the welfare of veterans and matters of national security. Mr. Hopper's activities in the protection of the Marines constitute another example of the alertness and fair-mindedness he has so consistently demonstrated as a State and national leader of the Veterans of Foreign Wars.

Also, I wish to invite attention of Members of the House to the fact that this article indicates a wider appreciation of the manner in which the former chairman of the House Expenditures Committee, Representative CLARE HOFFMAN, fought against efforts to eliminate the Marine Corps as a combat force. Michigan is proud of the combined efforts of Representative HOFFMAN and Mr. Hopper, who, along with numerous others from all parts of the Nation, were determined to protect the Marine Corps from those who sought to destroy it.

Should such efforts against the Marine Corps continue, I firmly believe that the Armed Services Committee should determine what elements of the armed forces, if any, are more interested in warring against the leathernecks than preparing for the defense of our Nation. Such an investigation could be very profitable from the standpoint of our national security.

The article from the Michigan Veteran Review is as follows:

MICHIGAN MEN FIGHT TO SAVE MARINE CORPS

Two Michigan men—Congressman CLARE HOFFMAN, of Allegan, and Merle Hopper, of Charlotte, past department commander of the VFW—put up a valiant fight in the Eightieth Congress to save the Marine Corps from being reduced in status, prestige, and numerical strength.

It is expected the battle will be renewed in the present Congress, as top brass in the Army and Air Force are expected to support the bill introduced by Senator MORSE, of Oregon, to provide for a stronger centralized control of the armed forces, with the Marine Corps pushed to the sidelines.

The Morse bill reached the Senate too late for action last year but is slated for reappearance.

Referring to the battle in the previous Congress, it is related by Richard Tregaskis in February 5 issue of the Saturday Evening Post: "Two men on the national legislative committee of the VFW, then meeting in Washington, became exercised about the Marine Corps. They were a burly ex-marine sergeant of World War I, Merle E. Hopper, and, strangely enough, a former World War I second lieutenant in the Army, J. R. Klawans."

The article states that shortly after, the VFW legislative committee passed a resolution declaring it the official VFW policy to protect the interest of the Marine Corps before Congress. Louis E. Starr, then national commander of the VFW, declared himself a strong supporter of the Marine Corps.

The bill to unify the armed forces was referred to the House Committee on Expenditures in Executive Departments, of which Congressman HOFFMAN was chairman. He had been tipped off by Hopper and some others, including another VFW man from Michigan, on the stunt the Army brass was trying to put over at expense of the Marine Corps.

The lid was blown off the Capitol Dome with some sharp questioning by HOFFMAN of General Eisenhower, the then Chief of Staff, who supported the unification bill but denied he had any thought of eliminating the marines.

A long battle ensued in which General Vandegrift, Gen. "Lucky" Gates, and "Red Mike" Edson battled to save the marines from the pruning knife that the Army and Air Force had up their sleeves.

Eventually "Red Mike" felt it necessary to apply for retirement from the marines so he could continue the fight as a civilian.

General Gates makes a point that "a marine is not only America's best shock trooper but the cost of maintaining a marine is just a little more than half the cost of maintaining an Army man."

Idaho Farmers Oppose a CVA

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. SANBORN. Mr. Speaker, I desire to bring to the attention of my colleagues a resolution sent me by John Lee, secretary of the Upper Snake River Valley Protective Union. This resolution was passed at a meeting of 200 directors and officers of canal companies who use water for irrigation from Snake River in southeastern Idaho. These 200 directors and officers represent several thousand water users and present their position on this highly controversial issue—the CVA.

The proponents of a CVA have repeatedly accused the opponents of CVA to be private power lobbyists and tools of the private power companies. This accusation is without foundation and represents willful misrepresentation of the picture. It appears this approach is being made to prejudice the public in favor of CVA. The farmers in Idaho oppose the establishment of a Columbia Valley Authority, as shown by the following resolution:

RESOLUTION ADOPTED BY THE FARMERS OF THE UPPER SNAKE RIVER WATER USERS PROTECTIVE UNION

Whereas the farmers, at a meeting held at Idaho Falls, February 28, 1949, desire to express their conviction that the principle of State's rights should prevail throughout Idaho in all matters involving public resources; and

Whereas legislation which runs counter to this principle will be pending in Congress; and

Whereas the pending legislation to create a Columbia Valley Authority, proposes to invest in Federal agencies authority to control the resources and economy of the State of Idaho that should remain with the people of the State; and

Whereas we believe that these rights can be best preserved by cooperation between the present agencies, and State reclamation engineer of the State of Idaho, and the executive department of the State, the United States Bureau of Reclamation, the United States Corps of Engineers, and other agencies now in existence; and

Whereas the proposed Columbia Valley Authority will supersede these agencies and interfere with and delay the present plans of development in Idaho; and

Whereas no provision has appeared in any of the so far proposed legislation which will adequately safeguard the State or protect vested water rights under the laws of the State: Therefore, be it

Resolved, That we do hereby voice our opposition to all proposed legislation for creating a Columbia Valley Authority by act of Congress, and express our approval of the development of the resources of the State of Idaho, through the present State and Federal agencies; and propose that if a change is needed, no authority be created, and that this resolution be a part of the minutes, and that copies be sent to our Senators and Congressmen in Washington, D. C.

JOHN LEE, *Secretary.*

Alternative to Socialized Medicine

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from Collier's for February 26, 1949:

CALIFORNIA CALLS THE DOCTOR

(By George Creel)

On December 1, 1946, a fairly young and seemingly husky workingman walked into the San Francisco office of the California Physicians' Service, an organization of doctors formed to provide people in the lower-income brackets with cheaper and more adequate medical care. He paid the girl at the desk $7.90, and agreed to pay a similar amount each month in return for a guarantee that he and his wife and four children would be given complete health protection.

Fearful that it might turn out to be anotherfake insurance scheme, he was not overly enthusiastic, but that was not for long. Within a month he developed a brain tumor. The X-rays, laboratory work, operation, and home visits cost the CPS $509.50. His hospital bill was paid in full for 21 days at $9.50 a day, after which the CPS stood 50 percent of the expense for 76 days. A total of $1,298.25 for that man alone was paid out by the CPS.

In September 1947 his wife became pregnant and when the baby was born, a Caesarean had to be performed. The operation, hospitalization, and necessary care came to $260. Meanwhile the four children had an unhappy succession of troubles of their own.

Eventually this family cost the CPS exactly $3,565.75. The dues for the period were $150.10.

Fortunately for the CPS, not all of its 750,000 dues-paying members suffer the hard luck of this family. Nevertheless, the cost of service in any one case is not a consideration. Once a man has signed up for himself and his dependents, he is entitled to the best in medical and surgical care and hospitalization, regardless of the total expense to the organization.

It all started back in the late months of 1938, when the California Medical Association called a special meeting to consider a measure for compulsory health insurance then being pushed by a liberal governor. Discussion on the floor revealed overwhelming sentiment for some sort of positive program, and out of the conference came the California Physicians' Service. It was a voluntary plan, and under private control, but it was frankly committed to immediate reforms in medical and surgical practice.

The CMA authorized a loan of $37,000 to take care of initial expenses, but for a long while failure threatened. Many doctors did not like the idea of fee fixing. They were afraid it meant regimentation and reduced incomes. And wage earners were inclined to regard it as some new kind of gyp.

But today, after 10 years of struggle and experimentation, the CPS has a panel of 9,500 physicians ready to minister to the ailments and injuries of over 750,000 dues-paying members. This figure does not include the 10,000 to 12,000 ex-servicemen handled each month through an arrangement with the Veterans' Administration. The CPS confidently expects to have 1,000,000 members by the end of this year, a goal that would seem to be justified by the plan's steady increase in popularity.

Far from being a grab bag, the panel includes every top-flight surgeon, specialist, and general practitioner in California, and their services are on call at a cost ranging from $37.80 a year for individuals to $94.80 for families of three or more. These might seem to be comparatively small amounts, yet the CPS makes an annual disbursement of $12,000,000 to its physician members, and an additional $3,500,000 to doctors and laboratories through its contract with the VA.

The plan, to be sure, does not take in the State's population as a whole, for it is not concerned either with the well-to-do or the indigent. At the outset the trustees picked as their particular field the large group of workingmen and workingwomen whose incomes do not exceed $3,000 a year and who, therefore, are neither sufficiently hard up to receive free treatment nor rich enough to meet sizable doctors' bills.

In an effort to fit charges to lean purses, the plan started off with dues as low as $1.70 a month for individuals. This was a

blunder that nearly wrecked the venture. Physician members very naturally voiced their dissatisfaction when they found themselves getting as little as 50 percent of their fees. The dues were upped in 1944, but it was not until 1946 that actuaries worked out the following rates as essential to a firm financial basis for the venture:

	Per month
Single male	$3.15
Single female	3.90
Two-person family	6.15
Three or more	7.90

For their dues, members are guaranteed the last word in medical and surgical practice. A full surgical team is on hand for all operations, and hospitalization includes laboratory tests, complete X-ray examination, radium, cardiographic equipment, nurses, and medical supplies.

The California Physicians' Service pays all expenses for 21 days in a room of three or more beds, and if a longer stay proves necessary, it stands 50 percent of the cost for a full year.

LIMITATIONS OF THE SERVICE

There are, of course, certain exclusions. The CPS, for example, does not provide dental services and will not take workmen's compensation cases or cover quarantinable diseases and congenital malformations. Chronic ailments and recurrent conditions are not rejected, but treatment is limited to 90 days, after which the patient must make his own arrangement with the doctor.

Bitter experience has resulted in adoption of certain other restrictive rules. Operations for hernia, hemorrhoids, and varicose veins are performed only after dues have been paid for 12 months because many persons waited until they were ready for surgery before joining up. For much the same reason, maternity care is provided only after 10 months of continuous membership.

The CPS is not a charitable organization. While the fees paid doctor members are far below what would be asked of the well-to-do, they are close to what the average physician has been in the habit of charging people in the $3,000-a-year income group. The large majority run from $5 to $100, but as much as $200 is allowed for some 22 major operations, such as those for spinal fusion with bone graft, laryngectomies, kidney incisions, and other difficult procedures that call for top-flight skill and experience.

But physicians may not collect the full amounts set down in the fee schedule. Because the Californians had the advantage of being able to study the fate of similar plans in other States, they have learned what not to do. Having noted that many of these plans went broke by guaranteeing doctors a fixed sum, the CPS limits its obligations to current funds.

At the end of each month all receipts are divided into two parts: one to take care of administrative expenses and the other for service rendered. If the total of the latter is not sufficient to meet medical and surgical charges, the doctors get only their pro rata share of the money on hand.

This policy gives the CPS its firm financial foundation.

In the 10 years of the organization's existence its doctor members have collectively taken losses in reduced fees amounting to $3,000,000. At first there was a good deal of complaint, but now the doctors have come to realize that they are actually ahead of the game when everything is considered. The plan does away with collection costs, and in general practice 25 percent of patients' bills are never paid anyhow.

The CPS is blessed by a lack of red tape. Neither a physical examination nor a health statement is required for membership, and there are no complicated forms and claim blanks to be filled out. When ill or injured, a member simply goes to a doctor and presents his identification card. At the end of the month the physicians and hospitals send in their bills.

As the method of recruiting members and collecting dues that would be quickest and require the least bookkeeping, the CPS started out with the requirement that any group of employees wishing to join had to be composed of a minimum of five persons.

Now that a sufficient enrollment has been reached, the plan is experimenting with individual contracts, with certain restrictions. If this idea proves practical, a drive will be made for every Californian in the $3,000 income bracket.

LABOR HOSTILITY OVERCOME

Meanwhile, a force of 72 trained salesmen travel the length and breadth of the State, not overlooking small shops and stores but concentrating on large-scale employers. Organized labor, hostile at the outset, has been won over through the work of a labor-relations division headed by a former high union official, who goes from local to local, explaining and exhorting.

Industries and metropolitan areas, however, are not the sole concern of the CPS. Even in early years the trustees gave thought to the rural districts, but it was not until 1945 that they felt able to approach the California Grange with an offer of health protection for its farmers and their families, representing a total of 75,000 persons. Today, adequate medical care is available to the most remote mountain ranch.

Signing up the powerful farm organization was a long forward step, but the biggest boost for the plan has been its contractual arrangement with the Veterans' Administration. This came about as the result of a situation that had been burdening the VA with heavy and seemingly unnecessary expense, and working a hardship on every ailing veteran. As the law made no adequate provision for home-town treatment, even in cases of minor illness, ex-servicemen were compelled to journey to a veterans' hospital. Since there are only eight in huge California, the travel distance was often as much as 250 miles.

Eager to remedy this, Dr. Paul R. Hawley, then the able chief medical director of the Veterans' Administration, decided to take a look at the California Physicians' Service, and after thorough study was sufficiently satisfied to draw up a contract.

Under its terms the CPS handles all cases not requiring surgery or hospitalization, so that veterans are now treated in their own home towns, and by their own physicians.

UNFAIR TAX RULING DEFEATED

What makes the growth of the CPS the more remarkable is the rocky road that it has had to travel. As if birth pains were not enough, in the very first year antagonistic State officials ruled that the plan was just another insurance scheme, and therefore subject to a tax of 2.6 percent on total income. The legal battle raged until 1946, when the Supreme Court of California held that the service was truly a nonprofit medical and hospital plan, and not taxable.

From the moment that its success was assured, the CPS turned its attention to the national medical-service problem and the Wagner-Murray-Dingell bill. CPS trustees realized that socialized medicine would remain a constant threat unless the medical profession, as a whole, put itself behind a countermovement that would work for necessary reforms. In the early months of 1946, therefore, California, together with eight other States that had well-established plans, went before the American Medical Association with a plea for aggressive action.

The AMA decided, in a resultant resolution, to proceed as promptly as possible with the development of a specific national-health program with emphasis on the Nation-wide organization of locally administered prepayment plans sponsored by medical societies. The sum of $25,000 was advanced as a promotional fund, whereupon the nine States formed the Blue Shield plan and set about selling the idea from coast to coast.

Today 42 States have prepaid medical-service plans that provide for treatment, surgery, and hospitalization on a strictly voluntary basis at a cost well within the means of the average wage earner, and it is only a question of time before the other 6 States will fit themselves for membership.

Already the Blue Shield is compiling statistical data on actuarial experience, and standardizing contract provisions, enrollment regulations, rate structures, and other details of operation. When the goals of uniformity and reciprocity have been reached, large-scale employers with branches in every State will be able to purchase prepaid medical care for their employees without being forced to reconcile varying procedures, and membership in one plan will entitle the wage earner to the benefits of all.

Whatever the outcome, from now on the proponents of socialized medicine are in for a battle up and down the line. With a voluntary plan in operation in every State, the medical profession will meet the issue with a solid formation—a set-up vastly different from the old disorganized reactionary force that championed the outworn traditions of a vanished day.

Keyserling Defends Economic Platform

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks I wish to include an article by Leon H. Keyserling, in the Washington Post of March 18, 1949, and entitled "Keyserling Defends Economic Platform."

Also an editorial appearing in the Washington Post, entitled "Behind the Times," in answer to the above-cited article.

KEYSERLING DEFENDS ECONOMIC PLATFORM

(By Leon H. Keyserling, vice chairman, Council of Economic Advisers)

I should like to comment on your editorial of March 14, Behind the Times. Our country's vital interests require that men of good will, even when they disagree on some points, should strive to broaden their areas of agreement so that workable policies may be achieved. Exchange of views, including objective criticism, should contribute toward this end.

Your editorial surprised me somewhat, in view of an earlier editorial in the Washington Post on January 8, dealing with the economic report of the President. That earlier editorial seemed, indeed, to support the President's stabilization program, saying that "the President's program is based on expert analysis of economic conditions and prospects by advisers with a reputation for conservatism whose chief aim is to stabilize the economy of free enterprise. There is nothing revolutionary, nor even radical, in requests to extend existing emergency controls and to authorize resort to mandatory controls over allocation and prices of scarce commodities, to be employed only if needed."

True, there have been changes in the price situation since January. But these changes have not been as sensational as those attendant upon the commodity price break in early

1948 which led many to feel that all danger of rising prices was over; and reports thus far for March 1949 show the wholesale price index for all commodities and for farm products in particular moving generally upward from the February level.

One may wonder whether, in view of ambiguous trends and outlooks, the stand which the Post took in January is not still valid today, or at least not sufficiently disproved to justify questioning the motives of those who still hold that the Government should be prepared on a stand-by basis for alternative contingencies.

Your ostensible change of position seems based upon the conclusion that the economic situation has changed radically since January. In this connection, you say that the President was evidently not abreast of price developments at a news conference on March 3, where you report the statement as having been made that "lead, zinc, iron, and so forth, are on the same old upward spiral." At the time of the conference, the most recently reported facts, in brief, were these: "The price index—on a June 1946 base—for lead was 262.2; for zinc, 209.2; for iron and steel, 153.6; for brick and tile, 133.9; and for farm machinery 139.7, and each of these figures represented an all-time peak. For metals and metal products as a whole, the price index had reached an all-time peak in December 1948, risen a bit higher in January 1949, and risen still a bit higher, according to the last weekly report for February 1949 (the full monthly report for February was not yet available).

According to figures made available after the conference on March 3, the commodities specifically enumerated above have not decreased in price except for lead, which is down 2 cents a pound but still about 30 percent higher than a year ago. The wholesale price index for all commodities other than farm products and foods, which declined slightly in February from the January level, increased slightly during the first two reported weeks in March to within less than 1 percent of the all-time peak.

Any brief discussion of price trends is likely to be selective and not to present the whole picture. For example, on the same day that your editorial of March 14 cited some falling prices, both present and prospective, a feature story on the front page of the Washington Post was headed "Commodity prices stage come-back."

My detailed analysis before the joint committee on the Economic Report on February 8 did not rest upon any claim of inflationary price developments throughout the economy or fail to take account of falling as well as rising prices. I said: "Continued and disproportionate price increases are now an even greater danger to the economy at a time when soft spots are beginning to show in other areas than they were when the pulse throughout the economy was uniformly strong.

"The economy contains a mixture of trends. Some prices are too high and rising too fast, and some activities are too hectic, and these have an inflationary cast. Other prices may be too low or falling too rapidly, and some activities are softening too much or not expanding rapidly enough, and this has a deflationary cast.

"We need a discriminating and selective combination of policies, to deal with the inflationary cast and the deflationary cast at the same time, and we should not look for the all-out one-way solutions called for during a period of galloping inflation or paralyzing deflation. The best time to act is before we are caught in either of these extremes, and if we act in time we can prevent them both."

I think that these comments are still valid today.

I have been careful not to rely on forecasts which you consider unrealistic. In my February 8 statement, I said: "The main task of economic policy under current conditions is to address ourselves vigorously to trends that have already appeared and facts that are already known. This gives us a sound foundation on which to stand, and if we are both clear and courageous in dealing now with the situation confronting us now, we may with some confidence rely upon our ability to deal with any changed situation which may appear later on. But if we underestimate the importance of what we know has happened, and overestimate the importance of what we think is going to happen, our perspective may become distorted and our decisions unsafe."

More careful scrutiny of my available statements should dissuade anyone from saying, as your editorial does, that my argument for expanding certain industrial capacities rests upon failure to perceive that some demand may be falling off. My view has been clearly stated that our national and international interests require us to make maximum use of our productive potential by working toward the effective operation of our distributive system, instead of allowing supply to scale downward toward a decreasing level of demand. The latter course is the road first toward a stagnant economy and then toward depression. Even in 1932, the supply satisfied the demand—but what was the level of demand?

Your editorial also undertakes to undermine my analysis by stating that my record in helping to shape and administer regulatory legislation indicates a bias in favor of Government intervention. The only program that I have ever helped to administer prior to my present work was the housing program, which is not regulatory; and for at least 14 years the Post has vigorously supported the analyses I have voiced and the proposals I have advocated with respect to housing.

I was also closely interested, during the thirties, in proposed legislation relating to public works, social security, labor relations, and railway pensions, as well as in the Employment Act of 1946. Aside from the Labor Act, these measures were not regulatory and I believe that the Post now regards most of them as timely when proposed and now advocates the extension of some of them.

As for the labor act, most people now say that while some abuses occurred in its administration and some amendments were needed from time to time, the original act represented in the main a step overdue when taken. Thus far, most of the trade papers which have censured my comprehensive statement before the Joint Committee on the Economic Report last month have shrunk from endeavoring to answer either the facts or the analysis presented, but instead have sought to prove that I am wrong by calling me a New Dealer.

The Washington Post has, according to my observations, a 99-percent good record of dealing carefully with the merits of public issues instead of using smear techniques, and I hope that it may make its record 100 percent perfect by including me within the rule. I would be the first to welcome constructive criticism directed to the substance of anything I have said.

I recognize that all fair-minded analysts will not agree on the current necessity for the President's economic stabilization program. I hope that this communication may serve to dispel some of the misimpressions which may interfere with its objective consideration.

BEHIND THE TIMES

The communication on another page from Mr. Leon H. Keyserling, vice chairman of President Truman's Council of Economic Advisers, says that our position in regard to authorization of stand-by controls over allocation and prices of scarce commodities has changed and that our shift of position seems to be based on the conclusion that the economic situation has changed radically since January.

To be sure, price declines since early January have, we believe, weakened the administration's case for an extension of stand-by controls, although these might still be a useful weapon to hold in reserve against a possible flare-up of inflation. However, this was not the point of the editorial to which Mr. Keyserling refers. The criticism that brought forth his communication was directed at the President's assertion that only farm prices had dropped and metal prices are still spiraling. Evidence to the contrary is there for all to read in daily news reports. In an effort to bolster the President's position Mr. Keyserling cites an over-all index of metals and metal products that is not up to date, while omitting all mention of the declines in premium prices for metals and other indications of a softening of the metals-price structure, not reflected, as Mr. Keyserling well knows, in market quotations.

Of course, the present price trend is mixed. But there is no inconsistency, as Mr. Keyserling implies, between a Post news story headed "Commodity prices stage a comeback" and the editorial in question that appeared the same day. The former dealt exclusively with agricultural prices and merely pointed out that prices of wheat, corn, cotton, etc., had recovered somewhat from the low levels of February 8, but were still far below recent tops. The editorial, on the other hand, discussed the current downward trend of certain nonagricultural prices and cited those declines as evidence that the President was not up to date on price developments.

The President's failure to look at the facts as well as Mr. Keyserling's attempt to minimize the significance of the declines that have recently occurred in prices of basic metals is most disquieting. Presidential requests for stand-by controls have been supported by this newspaper on the assumption that such controls would only be invoked in case of need as demonstrated by an objective study of business conditions and price trends. The assumption itself is now open to question. We agree heartily with Mr. Keyserling that the country needs a discriminating and selective combination of policies to deal with the inflationary cast and the deflationary cast at the same time. But what assurance is there that policies will be discriminating when the President emphasizes the dangers of spiraling inflation at a time when prices of many industrial products are declining and workers being laid off, while one of his chief advisers, Mr. Keyserling, insists that industrial capacity expansion is required far in excess of that indicated by current or revealed business plans?

Quite aside from the fact that actual demand now and for the foreseeable future far exceeds supply in those critical areas where capacity expansion is most needed, the proposition that our national output should be reduced downward to meet falling demand is a defeatist rejection of the central purpose of the employment act, accrding to Mr. Keyserling. Evidently he has already prejudged the issue raised by the President's proposal to Congress to conduct an investigation to determine the adequacy of productive facilities for making steel and other vital commodities. The Washington Post supported the request for an impartial inquiry of this sort, but it certainly does not concur with Mr. Keyserling's view that the best way to avert a depression is to expand productive capacity in the face of declining demand. Nor do we think it makes sense to advocate further wage increases as a means of keeping purchasing power high and forestalling a depression. We are still of the opinion that this kind of analysis is unrealistic—that it is designed to support demands for price con-

trols and Government-financed expansion of steel and other basic industries. Incidentally, we never said that Mr. Keyserling's argument for productive expansion rested on a failure to perceive that some demands were falling off. However, the Keyserling thesis that production should not be limited by a confession of inability to find markets for what we can produce is one that leaves us speechless.

What Has Happened to the United States?

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. KEEFE. Mr. Speaker, Hon. Richard Lloyd Jones, editor of the Tulsa Tribune, is an independent, courageous editor whose editorials are always thought-provoking and inspiring to those who believe in the American way of life. Such an editorial appeared in the Tulsa Tribune on Saturday, March 12, and I desire to include it as part of these remarks in order that the Members of Congress and the people of the country may have the opportunity to read a courageous statement in answer the the question, What has happened to the United States?

WE GIVE AID AND COMFORT TO OUR FOE
(By Richard Lloyd Jones)

What has become of the United States? Congressman DANIEL A. REED, of New York, recently said, "Sometimes I wonder whether the United States as such still exists. It is a rare thing to hear any person express the slightest interest in anything but the philosophy of spending the taxpayers' money." And Congressman RALPH W. GWINN, of New York asks, "What ails America? Have we the political poisons so evident in the rest of the world?"

Another said, "It is now bad taste to expose the fact that Government documents of great importance are being stolen."

What has happened to the United States? We are no longer the land of the free and the home of the brave, as we used to sing. It has become fashionable to question the nobilities of our Republic.

It has become fashionable to be a liberal. That word liberal has degenerated through academic abuses into meaning a largeness that allows for no love of our country. People who affect an intellectual largeness, and little people always do, join up with fellow travelers who would put us under Russian rule. They became pink. And a pink is an intellectual punk. And it has now come to pass that it is no violation of citizenship to be a Red. And the Red is committed to the destruction of this Republic.

To give aid and comfort to our enemy is treason. And the evidence of treason talks through our courts.

The capitol of Illinois was filled the other day with University of Chicago students who traveled to Springfield to protest a bill designed to apprehend those guilty of the subtle acts of treason. College students brazenly defending treason and we are no longer even shocked.

We have so far lost our devotion to our country that the President of the United States insists that any attempt to apprehend our enemies is just "red herring."

Contrast Truman with George Washington. Go back to the time when Benedict Arnold was found to be a traitor. George Washington did not request that the loyal Colonists lay off. George Washington did not seek to get and conceal the evidence against Arnold. But just that is being done today. It is being done with our President's sanction and aid and with all the procrastinating help our courts can give.

We have a President now, and the one before him, who with the approval of our so-called liberals tried to kill the congressional committee that is investigating the activities of our enemies here at home. Communists on the witness stand refused to answer proper questions on the constitutional ground that their answers might incriminate them. They were confessed cowards. They were afraid of truth. They were defended by American lawyers. There were no American lawyers defending Benedict Arnold. Our lawyers today have failed us.

What has happened to the United States? The American Bar Association is supposed to be dedicated to the Constitution of this Republic, but it finds nothing unethical or disturbing in the American lawyers who refuse to state whether they are for or against our country. If the American Bar Association is American it would declare that every such lawyer is unfit to practice in our courts. It would disbar them. But it doesn't care.

What has happened to the United States? Even some of our courts have fallen so low in their comprehension of duty that they have held that no lawyer, nor his client, can be disciplined for refusing to declare whether he is foe or friend of this country. All puffed up like pouter pigeons too many of our judges in their court ponderosity have lost their patriotism.

What has happened to the United States? Every soldier who enlists in our armed forces is compelled to take his oath to support our Republic and defend its flag. Until recently it was never suggested that such a thing is necessary with our teachers. But now concerned citizens demand it. And why not? Such a simple thing to do. Something is wrong when teachers hesitate.

Something has happened to the United States when a college like Harvard, once famous for its crusading culture and its lofty consecrations, has so far lost its comprehension of America that it trains indifference to and contempt for the highest altitude of civilization.

The New Deal departures from the American way of life were born out of Harvard's repudiation of its own rich traditions. Recently one of its teachers, one A. M. Schlesinger, with a group of alleged historians of his selection, announced to the Nation that the promoter of our national debauch was in the class with Washington and Lincoln.

The ant can see its hill, but it cannot see the mountain. History will appraise these alleged historians whose eyes can focus on little sins but cannot see monumental corruptions. Such little chaps, whatever their scholarship presumptions, would have been total strangers in the presence of Washington or Lincoln, of Webster or Clay, Hamilton, Jefferson, or Jackson, Cleveland, Wilson, or any of the great men in our country's story.

Something has happened to the United States. When our Republic was young communities built town halls in which town meetings discussed ways to make our country better and our freedoms secure. But no one ever dreamed of debating such an issue as: "Shall the Republic live or die?", or "Shall we hire our enemies to teach us?"

A one-time theatrical player by the name of George V. Denny, Jr., saw in the old town hall idea the possibilities of dramatic entertainment. He organized the Town Hall of New York. He staged debates. It became a dramatic attraction. Recently he staged a debate on the question: "Should Communists be allowed to teach in our colleges?"

His Town Hall audiences, by the demonstrations of their enthusiasm, have pretty well established the impression that at least a considerable number are citizens who haven't the faintest idea what America is, and his debating shams are not designed to teach them.

The Communist is an enemy of this Republic. Should the enemy of America teach the youth of America?

Something has happened to these United States when any Denny can find any college president to defend the idea that the enemies of our country should teach our youth. "Should the police or the gangsters prevail?" Just as good a subject as the one Mr. Denny used. Mr. Denny has the genius to attract listeners who applaud contempt for our country.

Had Mr. Denny, with his present-day practices, operated a Town Hall in Washington's time he would not have dared debate, Should We Hire the Tories to Teach Us? Prof. T. V. Smith, of Syracuse University, answered bluntly the silly and seditious issue Mr. Denny raised by saying, "We can well do without those who cannot do with us."

Denny is a showman. He does not appear to be an advocate of consecrated devotions to the security and the refinement of this Republic. The early Town Hall never debated Shall We Have America or Something Else? Denny does that.

Something has happened to the United States. Great minds have great convictions. Great minds know right from wrong, the true from the false, the difference between slavery and decent living, the difference between corruption and a decent public and private life. Are we to allow ourselves to lose the last best hope on earth?

Foot-and-Mouth Disease

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. WHITE of California. Mr. Speaker, last Monday the gentleman from Louisiana, the Honorable HENRY D. LARCADE, Jr., called attention to a resolution adopted by the senate of the State of California. The resolution asked that the work of the Joint Commission for the Eradication of Foot-and-Mouth Disease in the Republic of Mexico be continued.

We of the California delegation are in full sympathy with the importance of continuing this work and we appreciate the interest in the matter by the gentleman from Louisiana. We have not been asleep regarding the constant threat to our own livestock industry of the prevalence of foot-and-mouth disease in our neighboring country.

About a month ago a group of California Congressmen met with several State senators from California to hear an up-to-the-minute report on conditions in the Republic of Mexico regarding this disease and to discuss the need for further action.

Since that time I have been in close contact with the Department of Agriculture and I am satisfied the work of the joint commission for the eradication

of the disease in the Republic of Mexico is continuing satisfactorily.

At the present time there are sufficient funds to carry on this valuable work. Additional requests for appropriations will probably be contained in a later deficiency bill at which time we shall seek the cooperation of the entire membership of the Congress in seeing that no stone is left unturned to eliminate the existence of foot-and-mouth disease.

Blacksmith's Wife Puts Communism on the Anvil

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include a most edifying reply from an ordinary citizen to a letter written by an adherent of communism.

Mrs. Santi, in her letter to the editor of the Waterbury American published on March 15, outlines a true conception of the differences inherent in the communistic and capitalistic systems of government.

I commend this letter to my colleagues and to citizens everywhere for its pithy context.

The letter follows:

THE VOICE OF THE PEOPLE

To the EDITOR OF THE AMERICAN:

What a perfect description of communism, Mr. Kinch: "A social evil dressed in the raiment of the guardian angel."

Yes, I am a capitalist. My husband will sharpen all picks or chisels in competition with any other blacksmiths both as to price and quality of workmanship.

I am also bringing my children up to be capitalists; my 12-year-old son buys "Waterbury Americans" for 21 cents a week, delivers them to his customers for 30 cents and everyone is happy. What is more, I tell him and his sister that nobody owes them a living. When they complete their education they will have to go out and get a job. If there is none to be had they will have to create their own.

In all world history the men or women who have contributed most to world progress are the ones who have created their own jobs.

On the positive side there are the Benjamin Franklins, Henry Fords, and Thomas Edisons of every nation who have created jobs, not only for themselves, but for millions of others without any real cost to anyone of their liberty—taking no lives, bringing tangible benefits to all mankind.

On the negative side there are the Lenins, Stalins, Hitlers, and Mussolinis who also created their own jobs, first by murdering thousands of people, confiscating wealth, then making more new jobs by turning the administration of that wealth over to faithful party members, who of course always turn out to be incompetent opportunists like themselves, so that it takes at least two men in their country to produce as much as one in capitalist America.

Now, as to "either war or depressions," let's get the record straight: Socialist Germany, Communist Russia, and Fascist Italy were keeping their workers fully employed all through our last depression making instruments of war; the first two together marched in an aggressive war against Poland before capitalist America even seriously considered converting the major part of its great industry to war production.

While this Marxist honeymoon lasted, the English held on by the sterling quality of their nerves alone, for, being capitalist, they were not prepared for war, either.

When the two major dictators turned on each other they both had a great military establishment so that they were able to pound each other for 2 years, giving American and English industry time to build and train for the final blow that brought victory to our side, which, unfortunately, also meant victory for Red fascism and defeat only to the brown and black varieties.

Capitalists, like men everywhere, make many mistakes. They are usually quick to correct when those mistakes are recognized. Marxism admits no mistakes, so if some corrections become imperative they must be made by accusing someone of divergence from the Marxist line, make it sound good, and purging the unfortunate individual. That is why it can never be truly progressive, even if a theory 100 years old could be progressive today.

It would take volumes to answer your letter in full, so this must do.

THERESA SANTI.

WATERBURY, *March 13, 1949.*

What Labor of the Largest Local in the World Thinks About the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from the largest local in the world:

Hon. JOHN LESINSKI,
Chairman House Labor Committee,
House Office Building,
Washington, D. C.

DEAR SIR: In the interest of the 60,000 members of local 600, UAW-CIO, the largest local union in America, we are paying extremely close attention to the discussion currently taking place in the House Labor Committee relative to the repeal of the Taft-Hartley Act.

The coming of the Taft-Hartley Act, with its oblique view of labor unions and its utterly blind disregard of the enormous benefits that organization has brought to millions of workers (union members and nonunion members alike) and their families, has aroused the keenest kind of resentment among workers since the days of the yellow-dog affidavits.

The position of local 600 on this question is that the Taft-Hartley Act should be repealed immediately and that the Thomas-Lesinski bill, S. 249, should be enacted into law, without further amendments.

The history of the union labor at Ford's is one of orderly and responsible recognition of contractual agreements. When differences of opinion on policy, procedure, and other issues have arisen between union and company, they have been discussed and resolved at the collective-bargaining table, and when final decisions have been reached, the union has honestly respected them.

The first contract ever signed between the Ford Motor Co. and a labor union was the one signed on June 20, 1941, with the UAW-CIO. In that contract and in every subsequent contract, including the current one, an important feature of the contract was the inclusion of a union-shop clause.

Under the union-shop clause, the irritations that can arise out of situations in which membership or nonmembership are involved, have been entirely eliminated.

Within 6 months after the date of the signing of the first UAW Ford contract, Pearl Harbor was attacked, and America was at war.

The production-for-war record of Ford workers won high and well-deserved praise. P. & W. motors, airplane parts and sections, jeeps, tanks, trucks, and many other essential items were produced in amazing quantities and of unmatched quality.

Bond drive after bond drive went over the top. Blood banks overflowed with patriotic outpourings. A score of committees were formed and maintained throughout the war to keep contact with the 20,000 members of local 600 who entered their country's service. Men from local 600 fought on every front where Americans were engaged and every service cemetery has its quota of our union's dead.

The men who worked so loyally and well, who bought the bonds, donated their blood, and helped fight the Nation's battles were the same men who, in the difficult depression years, planned, fought for, and eventually organized the union that freed them from a despotic industrial system that would have men be mere, meek robots, without individual human rights or dignity.

The UAW-CIO is patriotic, practical, and constructive. It lives, breathes, and practices true democracy. It brooks no intolerance. The rights of every man, irrespective of race, creed, color, or station is respected and protected.

In the councils of the UAW at local 600, as elsewhere in CIO, the most obscure worker, when the chips are down, has a vote in deciding the policies of his union, equal to the vote of the president of local 600's 60,000 members.

Through the years, since the first contract was signed, the Ford Motor Co. has never seriously disputed the merit of the union-shop clause. It remained for the Taft-Hartley Act to make it an issue and to force an expensive election to determine whether the clause should be deleted or retained in the contract.

As the Taft-Hartley Act became better known and its antiunion design became more and more apparent, there arose from Ford workers, a spontaneous outburst of indignation. Men who formerly appeared apathetic and complacent joined in the anger of their fellows and vowed their determination to defend their union.

The election on the issue of the union shop was held in July 1948. It was conducted by the NLRB. Young workers, old workers, cripples, and people who lived many miles away from the election place came to vote.

The election attracted Nation-wide attention. Newspaper and newsreel services covered the event extensively. Radio commentators featured stories of the election on their broadcasts.

The election occupied 5 days, from 6 a. m. to 8 p. m. each day. When the votes from all Ford plants throughout the country were heaped together on the sixth day and the count was completed the results showed a 98.64 percent in favor of the union shop. (And it should be pointed out that the peculiar reasoning of the Taft-Hartley Act requires that the votes of those who do not cast a ballot, whether because of sickness, at home or in hospital, or away on vacation, or for any other reason, are all counted as votes against the union.)

Truly Ford workers had demonstrated their intention to protect their union against the insidious designs of Taft-Hartley or any other such antiunion acts or circumstances.

As the elected officers of Local 600, UAW-CIO, we are proud of the forthright loyalty of our union membership. And, speaking, as we do, for our local's 60,000 members, we say to the honorable members of the House Labor Committee, that the Taft-Hartley Act should be repealed and the Thomas-Lesinski bill, S. 249, without further amendments, should be reported out of committee and passed by the Senate.

Surely 98.64 percent of Ford workers cannot be wrong.

We remain,

Respectfully yours,

Thomas W. Thompson, President; Lee Romano, Vice President; William R. Hood, Recording Secretary; Paul Good, Financial Secretary; Joe Rivers, Guide; Andy Dewar, Sergeant at Arms; Manuel Guardado, Jr., Trustee; Walter Connors, Trustee; Godfrey Franklin, Trustee.

Atlantic Pact Must Be Ratified

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from New Orleans States:

ATLANTIC PACT MUST BE RATIFIED

Now that the text of the proposed North Atlantic security alliance has been made public the paramount question to be held in mind in examining its 1,040 words is: Will the alliance provide effective security against Russia?

This Nation's chief concern in groping through a welter of words following yesterday's release of the document must be in the results to be implemented through it.

It is natural that major interest should be focused on the alliance's article 5 and whether it would bypass Congress in marching the United States off to war. In part, the article sets forth this:

"The parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defense recognized by article 51 of the Charter of the United Nations, will assist the party or parties so attacked by taking forthwith, individually and in concert with the other parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area."

What action the United States deems necessary would rest in the hands of the Congress. Moreover, article 11 stipulates: "This treaty shall be ratified and its provisions carried out by the parties in accordance with their respective constitutional processes."

In explaining the treaty, Secretary of State Dean Acheson underlined that it would obligate the United States to resort to arms only if that were the judgment of the Government—meaning the Congress. Such an explanation has already been accepted by the Senate Foreign Relations Committee in giving informal approval to the pact.

The principle of guaranteeing collective international security follows a trail blazed as long ago as the Monroe Doctrine and traversed again 2 years ago in the inter-American treaty for continental defense signed at Rio.

The antidote for force is force, and the greatest single force against totalitarianism today is the United States. It could have been, too, back in 1939 and the course of history would have been different. There are those who say bluntly, and not without merit, that we brought on World War II by refusing to be actively arrayed against aggression in those momentous days. Hitler's calculations were based on victory before the United States could switch from neutrality to a militarily powerful nation.

The same reasoning applies well a decade later. If the side of democracy is strong, not puny, it commands the respect even of world revolutionaries. It is not enough that the United States shall have identified itself on the side of peace and justice by committing itself to economic rehabilitation of war-torn democracies.

It must supplement its efforts with the security which can come from a North Atlantic insurance policy.

Norwegian Recovery

EXTENSION OF REMARKS

OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the following article which appeared in the Washington Evening Star of March 17, 1949:

HARSH AUSTERITY MARKS DRIVE OF NORWEGIANS FOR RECOVERY—CONSUMPTION STANDARDS ARE LOWEST, NEXT TO GERMANY'S, OF ANY NON-SOVIET COUNTRY

(By William H. Harrison)

On February 11, in a statement to the Senate Foreign Relations Committee, Augustus E. Staley, Jr., chief of the special Economic Cooperation Administration Mission to Norway, made a point of emphasizing that the Norwegian people were living at an austerity level that Americans would find almost unbearable.

Mr. Staley did not exaggerate. In prewar days, Norway enjoyed one of the higher standards of living in Europe, but that changed with the German invasion in April 1940. From then on, the country was systematically looted, and not long before VE-day it was laid waste in the north during the Nazi scorched-earth retreat from the Russians.

Counting its losses as peace came, it found that about half its 4,800,000 tons of merchant shipping had been destroyed in serving the Allied cause, and that it was poorer, all factors considered, by about $2,000,000,000—a staggering sum for a nation of little more than 3,000,000 people.

After what they had gone through during the war, it would have been understandable if the Norwegians had decided to forget the future and treat themselves to some creature comforts. But they did not do that. Instead, with the future in mind, with long-term recovery in mind, they tightened their belts even more, and there has been no loosening since, nor is there likely to be, to any marked degree, in the next 3 or 4 years.

STORE SHELVES ARE EMPTY

The biggest department stores in Oslo, the capital, and in the historic city of Bergen are largely full of empty shelves. Leather-soled shoes are practically unobtainable. If a man buys a pair of sheets for his home, he must surrender 6 months' clothing rations. He can get one suit and one shirt a year, but if he does get them, he will have no coupons left for underclothes. Comparatively, the Swedes, and to a somewhat lesser extent the Danes, are living amid plenty.

As for food—not to mention fuel for domestic use—hotels and restaurants do not require ration coupons and are equipped to serve the tourist trade adequately, but the Norwegian at home, though his calorie intake is about as good as ever, has to put up with a decidedly dull diet made up chiefly of fish and potatoes. If he lives in a city he is lucky if he receives slightly less than a pound of meat a month. He can have 2½ ounces of coffee and 7 ounces of sugar every week, and he is entitled to 40 eggs a year, though he seldom gets that many. On top of all this, he is taxed heavily, and if he has a wife and two children and owns a six-room house, he can be sure of only three rooms, for the government can requisition the rest to cope with the housing shortage.

In fact, according to Erik Brofoss—Norway's impressive Minister of Commerce, who seldom has anything but fish and potatoes for an evening meal and who pays a 30-percent tax on his $4,800 salary—Norwegian consumption standards are the lowest, next to Germany's, of any country west of the iron curtain. They are that by deliberate choice.

Rather than invest in imports calculated to make life more comfortable right away, Norway has determined to invest in the essentials needed for long-term recovery—to rebuild and enlarge its merchant marine, which in prewar days earned enough to finance a third of the country's total purchases abroad; to repair and modernize the whaling and fishing fleets, which are vital to the Norwegian economy; to develop new hydroelectric plants, and to increase production in the wood pulp, electrochemical, metallurgical, mining, and other industries.

PROGRESS TOWARD RECOVERY

With the $104,000,000 allotted to it by the ECA for the 15-month period from April 1948 to next July 1, Norway has surmounted what would otherwise have been a grave national crisis caused by a lack of dollars desperately needed for indispensable imports. With that aid, it has made definite progress toward recovery, and with continuing help on a descending scale, it hopes to achieve economic equilibrium by 1952–53.

The hope, however, is based on several assumptions, including the assumption that there will be a healthy revival of trade with Britain and Germany, Norway's most important suppliers and customers before the war. Without that revival, of course, the Norwegians, like the Swedes and Danes, will be hard put to get back on their feet before the Marshall plan expires.

As set forth and administered by the Labor government in Oslo, the long-term recovery program has not escaped criticism, though there is general agreement that it is essentially very good. What is objected to in many quarters is the mass of regulations and controls involved. Most of these are considered necessary, but some—including the tax laws—are being attacked as excessive and harmful to the individual initiative and incentives required for greater production.

Another objection is that certain of the goals set up for attainment by 1952–53, though desirable, are overambitious and call for too great an investment in too short a period. One of these is a road-building project in remote areas. According to the critics, the money could be more productively spent—in terms of acquiring dollar exchange—on expanding hotel and other accommodations. With its fjords and mountains, Norway is one of the world's most magnificent scenic spots and the Government itself agrees that more needs to be done to increase the tourist trade.

But of all the doubts voiced in connection with the long-term program, the biggest is that having to do with austerity. The Norwegian people have been denying themselves now for almost 10 years and the question is whether it is humanly possible for them to keep on that way, without any appreciable relief, for another 3 or 4 years.

Some fear that a continuation of the present severe rationing will undermine incentives to greater production. Others suggest that it may play into the hands of the small but aggressive Communist Party, which currently is harping on the potentially effective propaganda line that there should be butter before guns and that life would be a lot better in Norway if the government spent less on defense and refused to have anything to do with the North Atlantic security pact.

For its own part, the Oslo Government is not deaf to criticism, nor is it unaware of the risks involved in too much austerity. Accordingly, thought is being given now to the possibility of lightening the tax burden and also of relaxing rations, at least as regards clothing and shoes. At the same time, however, there is unyielding determination to spare no effort to get back to real economic health by 1952–3, and it is a determination that seems to prevail among Norwegians generally. In his statement to the Senate Foreign Relations Committee, Mr. Staley effectively summed up the situation with the following words:

The Norwegians are a proud, independent, and fearless people * * * true friends of democracy. They are willing to fight for it. To defend it successfully, they need the hope of a better tomorrow, the imports necessary to rehabilitate their economy and the strength to enable them to resist any aggression designed to impair their freedom.

A continuation of ECA assistance will provide the hope, the needed imports and the strength for a successful defense. American aid and American dollars have produced and will continue to produce results in Norway.

Executive Council of Nebraska State Bar Association Condemns the Picketing of Courts

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I would like to place in the RECORD a resolution recently adopted by the executive council of the Nebraska State Bar Association. The resolution is as follows:

RESOLUTION ADOPTED BY THE EXECUTIVE COUNCIL OF THE NEBRASKA STATE BAR ASSOCIATION

That the executive council of the Nebraska State Bar Association condemns the picketing of courts, Federal and State, as an interference with and obstruction of the administration of justice, the purpose of which can only be to influence, intimidate, and coerce the courts in connection with matters, prospective or pending, before them;

That ours is a government of laws and not of men; and that in the orderly administration of justice it is necessary that our courts be impartial and independent in the application and construction of the laws and thus free from any interference or acts which will result in a disrespect for law and constitutional government under law; that such picketing constitutes a clear and present danger and may constitute a threat to the integrity and independence of the judiciary and our form of government.

That a copy of this resolution be forwarded to Mr. Henry P. Chandler, Director of the Administrative Office of the United States Courts, with the request that this matter be brought to the attention of the judicial conference of the United States; and that copies of this resolution be sent to the President of the United States and to the Representatives of this State in Congress so that should additional legislation become necessary in order to protect the integrity of our Federal courts, such representatives will know the attitude of the bar of Nebraska with respect thereto.

Rent Control

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. LODGE. Mr. Speaker, I voted for H. R. 1731, a bill to extend until June 30, 1950, certain provisions of the Housing and Rent Act of 1947, as amended, and for other purposes.

The problem of rent control is a difficult one.

It is argued by those who oppose it that more rental units will be available if rent controls are removed since with rent controls in existence many people do not find it worth while to go to the expense of converting a dwelling for rental purposes. It is argued also that there is at the present time more residential floor space per capita in this country than ever before. It is argued that vacancies in rental properties increase almost proportionately as the national income decreases. It is argued that rent control creates slums since owners cannot afford maintenance and improvements. It is argued that rent controls constitute an interference with property rights and a deterrent to savings.

Surely, most of us look forward to the time when rent controls will no longer be necessary; when, because of decontrolled new construction, there will be enough rental housing to satisfy the demand; when, in an open market, owners can get a fair return on their investment and the people who desire to rent can find rentals at a reasonable price.

In the meantime, however, I believe that rent controls in the modified form contained in H. R. 1731 should be continued.

I take this position because while the bill for which I voted contains certain shortcomings the measure was substantially improved on the floor of the House and a rental emergency still exists in certain parts of the country. I voted for this bill also (1) because if rent controls were suddenly removed many rentals would rise exorbitantly; (2) because it is quite likely that the removal of rent controls would result in another round of wage increases; (3) because there are an increasing number of unemployed in Connecticut and in other parts of the country, and I believe, particularly at this time, that these people should be protected against the additional burden of increased rent; and (4) because while there may be more residential floor space in the country at large than heretofore (A) most of it is not rental housing; and (B) most of the balance is not within the financial means of those who need it the most.

The fact of the matter is that although rent controls are an interference with property rights, property rights have traditionally been interfered with when the public interest is involved. Surely the public have an interest in providing adequate rental housing for those many families who, because of the increase in our population and the postwar shortage of rental housing units within their means, are living under adverse conditions. Surely the general welfare of the country—the public interest—requires that young American couples should be able to start their family lives under auspicious conditions.

The fact that new construction is still decontrolled will, I believe, gradually reduce the need. An increasing number of rental units are being decontrolled as the need diminishes.

Furthermore, an amendment for which I voted and which was adopted on the floor provides that Federal rent control lapses with respect to any given State or community 15 days after that State or community determines that there is no further need for Federal rent control. In my opinion, this is a highly salutary arrangement, providing as it does for a maximum of local control.

I also voted for an excellent amendment which was adopted on the floor and which provides that landlords, many of whom are widows and old people, dependent entirely on the rent which they receive, shall receive a fair return on the rental property which they own. This is not only just; it is in the ultimate interest of the tenants since otherwise these rental units would eventually become slums.

I believe that on balance the rent-control bill for which I voted is in the public interest.

Gangway, Gangway, Here Comes the Elephant—Dead or Alive?

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949
